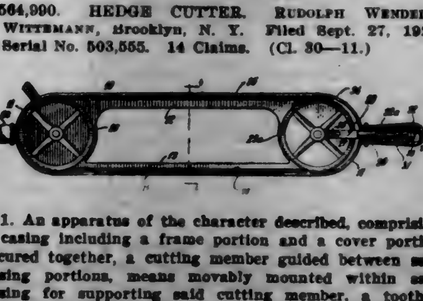
1. In an aeroplane, a fuselage, a driven shaft within the fuselage and extending transversely thereof, a propeller driven from the shaft, an arcuate track providing a guide for the propeller shaft, means for shifting the propeller shaft about said drive shaft from a position where it is horizontally disposed to a position where it is vertically disposed including a yoke rotatably embracing the drive shaft and having bearings for the propeller shaft, said yoke including a segment gear, a worm associated with the segment gear for rotating



the yoke about the drive shaft and means at opposite ends of the track for locking the propeller shaft at either end of the track.

---

1,564,989. RECEPTACLE FOR AUTOMOBILES. DAVID WEISBERGER, New Rochelle, N. Y. Filed Feb. 4, 1925. Serial No. 6,691. 1 Claim. (Cl. 224—29.)

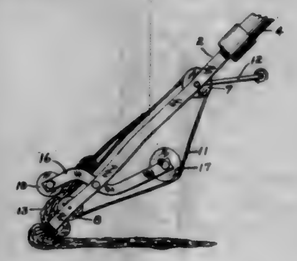
In a device to be attached to a closed body motor vehicle having a window and frame therefor, a bracket comprising telescoping parts, said telescoping parts being relatively wide and covering a relatively large area, whereby marring of the frame is prevented, one of the telescoping parts having a lip adapted to be inserted between the window and frame, and the other part being adapted to grip the frame and provide a support for a receptacle.

---

1,564,990. HEDGE CUTTER. RUDOLPH WENDELIN WITTEMANN, Brooklyn, N. Y. Filed Sept. 27, 1921. Serial No. 503,555. 14 Claims. (Cl. 30—11.)

1. An apparatus of the character described, comprising a casing including a frame portion and a cover portion secured together, a cutting member guided between said casing portions, means movably mounted within said casing for supporting said cutting member, a toothed portion on said casing cooperating with said cutting member, and means for actuating the supporting means for said cutting member, substantially as specified.

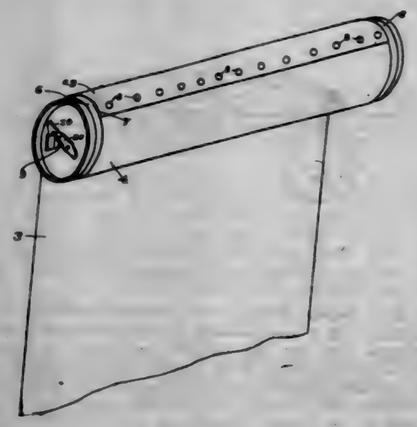
1,564,991. MOP. HARRY B. WOLFE, Oakland, Calif., assignor of one-half to Rudolf Wedler, Ione, Calif. Filed Aug. 27, 1923. Serial No. 659,527. 6 Claims. (Cl. 15—119.)



1. A mop comprising a rectangular frame, a pair of rolls mounted in spaced parallel relation in said frame, an endless belt passing around said rolls, a mopping cloth secured adjacent one end to said belt and adapted to move therewith over said rolls, and means actuated by said belt adapted to resiliently press against said cloth as it moves over one of said rolls.

---

1,564,992. ROLLER-SHADE-FASTENING DEVICE. FRANK L. WOOD, Lynden, Wash. Filed Dec. 17, 1924. Serial No. 756,577. 2 Claims. (Cl. 156—25.)



1. In combination, a roller shade the inner end of which is adapted for fastening to one side of a shade roller, and a strip of fabric one edge of which is fastened to said inner end of said shade transversely therewith and proximate thereto adapted for fastening to the other side of said shade roller and together with said inner shade end embrace said shade roller and the junction of said strip and said shade adapted to roll up on said shade roller without folding either said shade or said strip.

---

1,564,993. DASH RECEPTACLE FOR AUTOMOBILES. WILLIAM A. WOOD, Oakland, Calif. Filed Oct. 18, 1923. Serial No. 669,292. 2 Claims. (Cl. 40—10.)

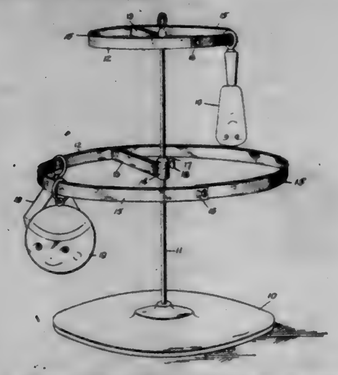
1. A dash receptacle for automobiles comprising a casing having an opening at the front thereof, a receptacle hinged to said casing arranged to close said opening and comprising a portion arranged to lie within said

opening and a portion arranged to extend outwardly therefrom when the receptacle closes the opening, said receptacle provided with a slot in its edge wall which

is adapted to lie within and be closed by a wall of said casing when the receptacle occupies said opening and a transparent outer wall for said receptacle.

---

1,564,994. DISPLAY DEVICE. ARTHUR ZADEK, New York, N. Y. Filed June 23, 1925. Serial No. 38,967. 2 Claims. (Cl. 211—24.)



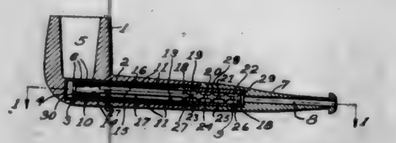
1. In a display device of the character described, the combination of a base member, an upright therefor, and adjustable rack for the upright, comprising a single piece of springy metal strip bent at its mid portion to form parallel portions having a loop at the inner end to embrace the upright and opposite curved portions adapted to be brought together at their ends to form an annular portion, and separable fastening means for the ends of said curved portions.

---

1,564,995. TENSION DEVICE. JOHN G. ALLEN, Philadelphia, Pa., assignor to A. W. Allen's Sons, Philadelphia, Pa., a partnership. Filed June 23, 1924. Serial No. 721,800. 2 Claims. (Cl. 242—149.)

1. In a tension device, a member having a thread engaging surface, and a second member cooperating therewith and having a plurality of thread openings whereby the tension on said thread can be varied in accordance with the opening selected.

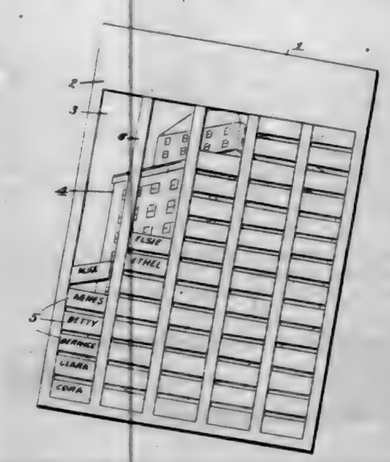
1,564,996. PIPE. ALBERT BACKUS, St. Louis, Mo. Filed Jan. 14, 1924. Serial No. 686,133. 3 Claims. (Cl. 131—12.)



1. A pipe of the class described comprising a bowl, a stem extending from the lower part of said bowl and provided with a longitudinally extending passage arranged axially out of the stem and opening at its inner end into said bowl and at its outer end through the end of the stem, a metallic tubular lining fitted in said passage and provided with closed inner end and perforations adjacent the inner end communicating with the bowl, a bit having a smoke passage therethrough terminating at the end adjacent the stem in an enlarged recess, a metallic tube open from end to end and having one end fitted in the enlarged recess of the bit and in the open end of the first tube, the other end projecting within the first tube and terminating short of its closed end, the last-mentioned end of the second tube being provided with an outer surface having reduced portions to form a smoke passage between the first and second tubes, the second tube further having openings in its wall affording communication between the smoke passage between the first and second tube and the interior of the second tube, a plug fitting the end of the second tube to close the same, a stem projecting from said plug towards the outer end of the second tube, and smoke deflecting means carried by said stem.

---

1,564,997. DEVICE FOR RECORDING SALES SUBSCRIPTIONS, ETC. WILLIAM M. BAKER, New York, N. Y. Filed Feb. 21, 1925. Serial No. 10,853. 4 Claims. (Cl. 273—139.)



1. In a device of the kind described, a body portion comprising layers of sheet material superposed on each other, the upper layer being partially cut into removable pieces fixed in position to prevent inspection of the inside of each and adapted to be released to permit inspection, said removable pieces being adapted to uncover a lower layer when removed and having inscribed

or printed on their outer surfaces suitably attractive legends and on their inner surfaces, characters distinguishing them from each other, said lower layer being provided with a reference to or representation of an object to which the device relates.

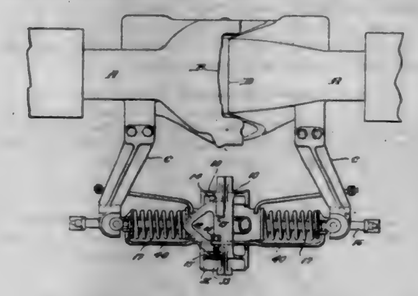
---

1,564,998. SHAFT AND SLEEVE TYPE AUTOMOBILE SIGNAL. FREDERICK M. BALDWIN, Los Angeles, and GALUSHA A. BURGESS, Long Beach, Calif. Filed Oct. 20, 1923. Serial No. 669,728. 3 Claims. (Cl. 116—40.)

1. In an automobile signal, the combination of: a supporting structure; an extensible signal member supported on said structure; a tubular member extending rearwardly from said structure, said tubular member being arranged for extension through, and attachment to the wall of an automobile body; and torsional transmission means extending through said tubular member for operating said extensible signal member.

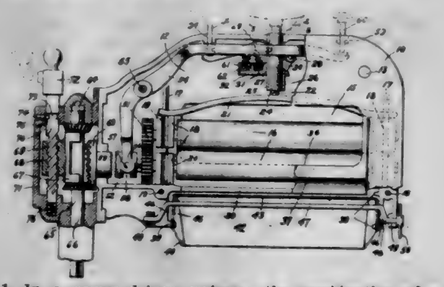
---

1,564,999. LOCK FOR AUTOMATIC CONNECTERS. MARTIN A. BARBER, Cleveland, Ohio, assignor to The American Automatic Connector Company, Wyoming, Del., a Corporation of Delaware. Filed Nov. 10, 1923. Serial No. 674,087. 4 Claims. (Cl. 285—24.)



1. In combination, an automatic connecter head, a support therefor, a universal joint between the head and the support including a spring seat, said head having a downwardly extending opening therein, a casing carried by the head adjacent the opening, a locking plunger slidably mounted within the casing, a spring associated with the plunger and tending normally to hold the plunger within the casing, said casing having lateral aligned openings therein, and a rigid member carried by the spring seat and extending through said lateral openings, said member having portions of different thickness in the region adjacent the casing whereby movement of the head with reference to the support causes the member to enter the casing and permits the spring to withdraw the plunger into said casing.

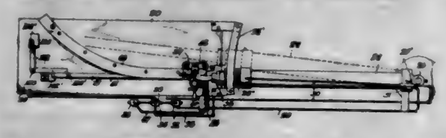
1,565,000. CLOTHES WRINGER. FREDERICK A. BARNES, Cleveland, Ohio, assignor to The Foote-Burt Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Nov. 17, 1922, Serial No. 601,664. Divided and this application filed Aug. 28, 1924. Serial No. 734,563. 7 Claims. (Cl. 68—32.)



1. In a power driven wringer, the combination of a frame, rolls therein, a drive shaft, reversing gearing for connecting the drive shaft to the rolls, a clutch interposed between the gearing and the rolls, said clutch being biased to open position, a lever pivoted inside the frame for moving the clutch to closed position, and a handle projecting from the upper portion of the frame for holding the lever in position to maintain the clutch closed.

---

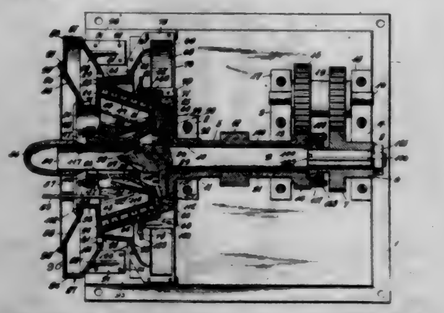
1,565,001. BENDING MACHINE. MATTHEW F. BAYER, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Feb. 28, 1921. Serial No. 448,475. 24 Claims. (Cl. 153—63.)



2. In a machine of the class described, a curved forming member, a corresponding curved guide, a bending head co-operating with said guide for bending an attenuated member around said forming member, and an actuator for moving said head along said guide and said forming member, said actuator being pivotally connected to said head to permit rocking of said head relative to said actuator.

---

1,565,002. MACHINE FOR SEPARATING LIQUIDS FROM SOLIDS. HANS C. BEHR, Scarsdale, N. Y. Filed July 24, 1922. Serial No. 577,130. 25 Claims. (Cl. 210—69.)

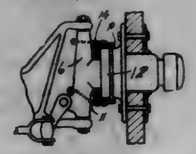


23. In an apparatus of the character described the combination of a pair of foraminous cone shaped members placed one within the other, the outer member provided

with a plurality of rings of rotating fan blades; a plurality of receivers associated with said cone shaped members provided with stationary ring like edges in which said fan blades rotate to force air into said receivers.

---

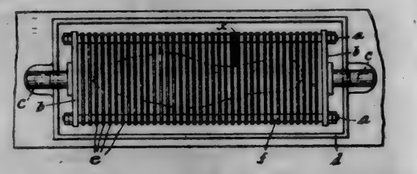
1,565,003. ADJUSTABLE HUB DUST GUARD AND MOUNTING. ROBERT M. BEMISDORFER, Des Moines, Iowa. Filed Sept. 12, 1925. Serial No. 55,977. 3 Claims. (Cl. 301—23.)



2. In a device of the kind described, semi-circular hub shields adapted to enclose the inner end of a vehicle hub, the said shield having rows of tabs formed along their edges adapted to be bent downwardly to form a packing box.

---

1,565,004. CEMENTING MACHINE FOR SHOE-BOTTOM LININGS. CARLOS H. BOWLEN, Haverhill, Mass., assignor to Irving L. Keith, Haverhill, Mass. Filed Nov. 20, 1923. Serial No. 675,860. 5 Claims. (Cl. 91—47.)



1. A machine for cementing shoe bottom linings comprising a horizontally disposed, vertically movable grid, composed of a series of suitably spaced transversely extending bars having cement carrying faces on their upper edges arranged in transverse alignment and sloping uniformly from the middle to each end thereof, to provide a longitudinally horizontal cementing surface having oppositely declining side portions, for partially folding the lining longitudinally as its under surface is cemented.

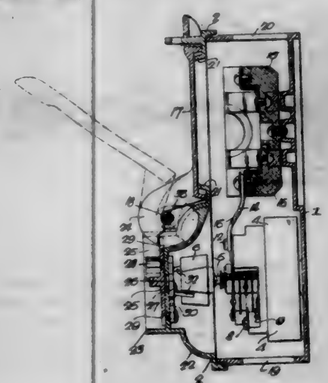
---

1,565,005. SWIMMING GLOVE. NORMAN C. BRASHEAR, Los Angeles, Calif. Filed Feb. 26, 1925. Serial No. 11,676. 2 Claims. (Cl. 9—21.)

2. A swimming glove formed of thin flexible material, webs of thin flexible material arranged between the fingers and between the forefinger and thumb of said glove, those portions of the web that are connected to and located immediately adjacent to the thumb and finger portions of the glove being tangentially disposed with respect to the walls of said thumb and finger portions so as to cause said webs to tend to fold inwardly when the thumb and fingers of the glove are brought together and the outer edge of each web terminating in a reinforcing selvedge.

---

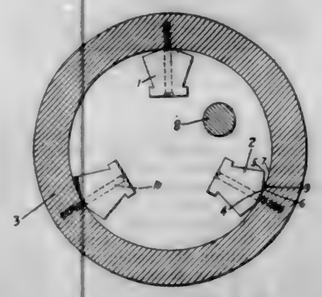
1,565,006. SAFETY SWITCH. JAMES F. BURNS, Philadelphia, Pa., assignor to V. V. Fittings Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 27, 1922. Serial No. 571,129. 5 Claims. (Cl. 200—50.)



3. The combination of a casing, a rotary snap switch mounted therein, a cover plate for the casing, a switch operating member carried thereby and operatively connected to the movable member of the switch, a door carried by the cover plate, cooperative means carried by the door and switch operating member for locking and unlocking the door according as the switch is closed or open, means to lock the switch operating member against retrograde movement at the "on" positions of the switch, and means to prevent retrograde movement of the operating member in case the switch closes before the operating member has reached said "on" position.

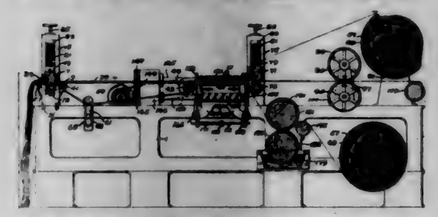
---

1,565,007. MOLD FOR CENTRIFUGAL CASTING. LEON CAMMEN, New York, N. Y. Filed Mar. 13, 1925. Serial No. 15,274. 4 Claims. (Cl. 22—65.)



1. A mold for centrifugal casting equipped with projection lugs made of pieces different from the barrel of the mold wherein the lugs are secured to the barrel by a continuous metallic joint.

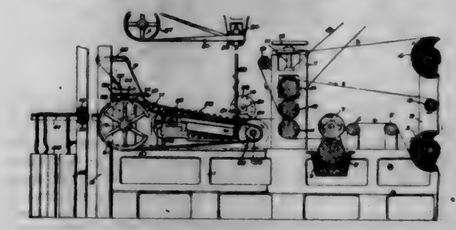
1,565,008. MACHINE FOR APPLYING REENFORCING FILAMENTS TO FABRICS. CHARLES H. HOWARD, Saugus, Mass., assignor to Paper Products Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 28, 1919, Serial No. 319,353. Renewed July 13, 1923. 46 Claims. (Cl. 154—1.)



1. In a machine for reenforcing a paper fabric, the combination of paper feeding means for feeding a paper fabric to be reenforced, means for applying an adhesive to the paper fabric, and means for advancing a sheet of reenforcing filaments at a slower rate of speed than the surface speed of the paper fabric that the individual filaments may be pulled lengthwise relative to the sheet by the adhesive surface of the paper fabric and applied thereto in attenuated condition.

---

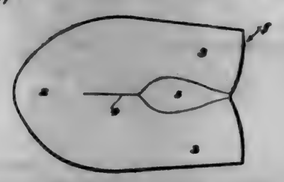
1,565,009. FABRIC OR PAPER REENFORCING MACHINE. CHARLES H. HOWARD, Cliftondale, and LEWIS SHARP, Attleboro Falls, Mass., assignors to Paper Products Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed June 24, 1920, Serial No. 391,433. Renewed Aug. 14, 1923. 37 Claims. (Cl. 154—1.)



1. In a machine of the character described, the combination of means for feeding a paper strip to be reenforced, means for feeding unspun fibres for application to the paper strip, means for attenuating the unspun fibres and placing them under tension on the paper strip, including a series of combs movable in different paths, and means for guiding the upper run of the combs along an oblique path to facilitate the projection of the comb teeth into engagement with the fibres, and withdrawing the teeth therefrom.

---

1,565,010. SHOE. MOE JACOB, New York, N. Y. Filed July 21, 1925. Serial No. 44,997. 1 Claim. (Cl. 36—48.)



A method of forming the complete upper of a shoe including the tongue which consists in cutting the material to form the body of the shoe upper and cutting from the said body an ankle opening and a slit extending forwardly from said ankle opening and then attaching the piece cut out to form the said ankle opening adjacent said slit to form a tongue.

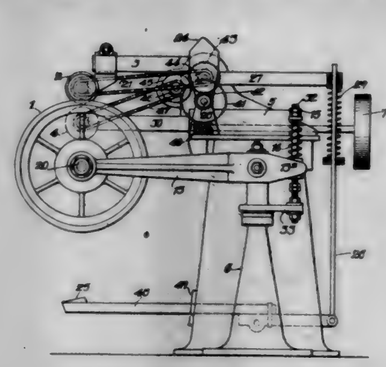
---

1,565,011. FLEXIBLE COUPLING. STEPHEN JENCICK, Cleveland, Ohio, assignor to Gustavus A. Schanze, Cleveland, Ohio; P. L. Schanze administrator of said G. A. Schanze, deceased. Filed Apr. 29, 1920. Serial No. 377,624. 7 Claims. (Cl. 64—96.)

2. A coupling member, comprising a flexible disc having a central opening, said disc being provided with reenforcing means around its periphery and the edge of said opening.

---

1,565,012. MANUFACTURE OF WHEELS. ARTHUR WILLIAM JONES, Birmingham, England, assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Jan. 16, 1925. Serial No. 2,920. 2 Claims. (Cl. 219—4.)



1. In the manufacturing of disc wheels, the method which consists in pressing two plates to form a body of such cross-sectional contour that they jointly form a hollow felloe portion, providing a rim having an inner annular projection, assembling the plates on opposite sides of said rim with the projection in engagement with said hollow felloe portion and electrically welding the felloe portion to said rim.

---

1,565,013. WATER GAUGE. HARRY JORDAN, Carbondale, Pa. Filed June 23, 1925. Serial No. 39,085. 3 Claims. (Cl. 73—54.)

1. In a water gauge, the combination with a glass gauge tube, a fitting associated with each end thereof, each fitting being provided with a socket, and a threaded extension, said extension being provided with a bore which registers with the socket, the respective ends of

said tube adapted to fit against the bottoms of the respective sockets in registry with the aforementioned bores, a metallic collar surrounding the outermost ends

of the glass tube and engaging the bottom of the respective sockets, gaskets in each socket surrounding the respective portions of the glass tube, and packing nuts threaded in said socket.

---

1,565,014. SWIVEL MANDREL. THEODORE T. KING, Oklahoma City, Okla., assignor, by direct and mesne assignments, of three-fourths to J. M. Watson, Oklahoma City, Okla., and one-fourth to F. B. Owen. Filed May 12, 1924. Serial No. 712,877. 8 Claims. (Cl. 255—26.)

2. In a tool of the class described, a socket, a swivel member disposed therein, and a cable securing member detachably interlocked with said swivel member by a bayonet slot and pin connection therewith.

---

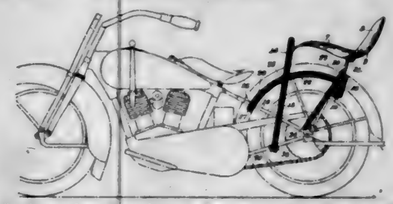
1,565,015. INTERNAL MANDREL FOR HEADERS. LOUIS F. KOELLNER, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 21, 1924. Serial No. 700,941. 20 Claims. (Cl. 153—78.)

1. An internal mandrel that is adapted to be arranged inside of a tube that is being deformed to produce a header, said mandrel being composed of a plurality of pairs of separable members arranged end to end and provided with die elements that are adapted to co-operate with external dies to form flat seat faces on the front

and rear sides of the header, and means for holding said members immovable or in rigid relation with each other during the deforming operation.

---

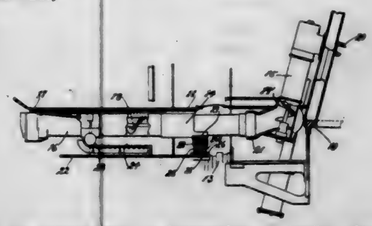
1,565,016. TANDEM ATTACHMENT. JAMES LAKE, Jr., Brooklyn, N. Y. Filed Mar. 25, 1925. Serial No. 18,199. 9 Claims. (Cl. 208—24.)



1. A tandem attachment for motorcycles comprising a frame made up of side bars provided with clips at their forward ends angled to fit the upper convergent frame bars of a motorcycle, a yoke connected to the rearward ends of the side bars and adapted to have the lower ends of the same secured to the fork of the motorcycle frame, uprights having means at the lower ends of the same for attachment to the lower frame bars of a motorcycle, said uprights being secured to intermediate portions of the side bars and connected at the top by a spacer forming a hand grip and a saddle yieldingly supported at its rearward end and having its forward end pivotally supported between the uprights.

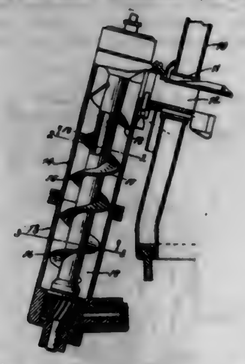
---

1,565,017. RESILIENT TROUGH SUPPORT. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed June 14, 1924. Serial No. 720,141. 8 Claims. (Cl. 198—15.)



7. In combination, a locomotive, a tender therefor, stoker mechanism located in part on the tender and in part on the locomotive, and resilient means on the tender for supporting in part both of such sections of the stoker mechanism.

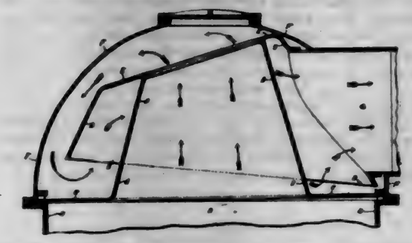
1,565,018. STOKER ELEVATOR. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Feb. 9, 1925. Serial No. 7,885. 6 Claims. (Cl. 198—15.)



1. In a stoker, an elevator casing, an elevator screw rotatably mounted in said casing, and means independent of said casing and associated with said screw for causing increased resistance between the fuel and the casing during the elevation of the fuel by said elevator.

---

1,565,019. LIQUID TRAP FOR EVAPORATORS AND LIKE APPARATUS. JOHN MCNEIL and CHARLES MCNEIL, Glasgow, Scotland. Filed Dec. 18, 1923. Serial No. 681,414. 1 Claim. (Cl. 159—31.)



A liquid trap for evaporators having a diaphragm plate, an inner truncated conical shell with its base supported on said plate, and a like shell of greater mean diameter than the first named shell, in combination with a closure between the upper ends of the shells, said closure supporting the shell of greater mean diameter and forming an annular conoidal passage between the shells a casing enclosing the whole and a trunk connecting the annular space with the outlet from the whole.

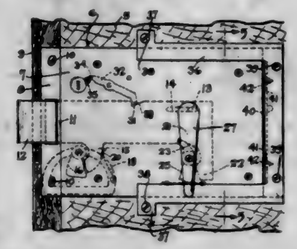
---

1,565,020. COLLAPSIBLE FAN. JOHN MARCH, Philadelphia, Pa. Filed Feb. 10, 1925. Serial No. 8,199. 5 Claims. (Cl. 230—33.)

1. In a fan construction, a handle, a collapsible frame pivoted to one end of said handle at one part and slidably connected to said handle at another part, and a cover arranged to fit over said frame in collapsed condition and to be distended in fan shape in operative position of said frame.

---

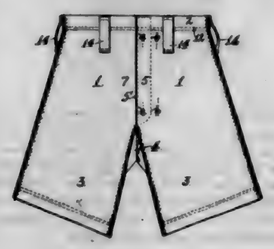
1,565,021. DOORLOCK. JULIUS MARMOROSKI, New York, N. Y. Filed Apr. 28, 1925. Serial No. 26,832. 3 Claims. (Cl. 292—138.)



1. A lock member comprising a base plate, a bolt slidable thereon and having an opening and cut outs therein, finger members disposed in said cut outs, one of said finger members being adapted to move the bolt longitudinally, and the other of said finger members being adapted to prevent longitudinal movement of the bolt, and means in said opening for guiding the movements of said bolt.

---

1,565,022. BATHING SUIT. GEORGE A. MATTERN, Berkeley, Calif. Filed May 6, 1925. Serial No. 28,381. 2 Claims. (Cl. 2—67.)



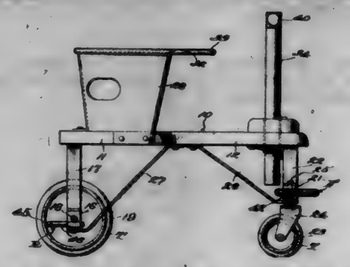
1. A garment of the trouser-type having at its front separate terminal portions overlapping, and extending from the waist line towards the crotch; a facing strip lying inside the overlapping portion and stitched thereto along the edge thereof; a folded facing strip stitched at its extremities to the edge of the underlapping portion and stitched at its foid to the overlying portion; and stitching inseparably connecting said facing strips.

---

1,565,023. CHILD'S VEHICLE. EMIL M. MAYER, Cincinnati, Ohio, assignor to Newport Manufacturing Company, Newport, Ky., a Corporation of Kentucky. Original application filed Sept. 12, 1924, Serial No. 737,807. Divided and this application filed July 27, 1925. Serial No. 46,309. 6 Claims. (Cl. 293—34.)

3. In a child's vehicle, a body, a wheeled supporting frame for the body adjacent one end thereof, and a protecting bumper embodying a length of spring material bent at the opposite ends to form frame engaging

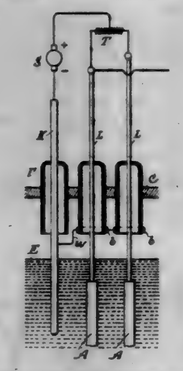
hooks, the said bumper mounted and secured in position extending across the frame outwardly beyond the adjacent



body end by the hooks engaged over opposite sides of the frame, respectively, said hooks extending over and around the frame sides to protect the same.

---

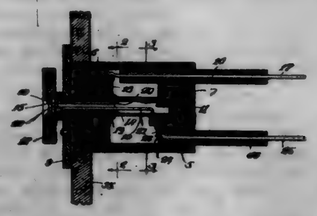
1,565,024. PREVENTING CORROSION OF ELECTROLYTIC CONDENSER LEADS. RALPH D. MERSHON, New York, N. Y. Filed Dec. 23, 1920. Serial No. 432,886. 10 Claims. (Cl. 175—317.)



6. An electrolytic condenser having means for impressing unidirectional current on the condenser anodes, and also having a wall through which leads extend for connection with an alternating current circuit and a source of unidirectional exciting current, in combination with means associated with said wall for causing alternating current leakage and exciting current leakage to take paths of substantially equal resistance.

---

1,565,025. IGNITION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. HERBERT J. MOLONEY, Chicago, Ill. Filed June 5, 1920. Serial No. 386,857. 4 Claims. (Cl. 175—183.)



3. An instrument of the character described comprising a cylinder; a head in each end of the cylinder; a rotatable tube of insulating material within the cylinder; a contact arm carried by the tube; a relatively stationary contact, cooperating therewith, comprising a switch to close an electric circuit; a knob, outside the cylinder to rotate the tube, having an axial perforation; a glass tube having a closed end closing said perforation and within the insulating tube; a spark gap within the glass tube and in series circuit with the aforesaid switch.

---

1,565,026. DISPLAY STAND. RALPH S. MOORE, New York, N. Y. Filed June 28, 1923. Serial No. 648,395. 3 Claims. (Cl. 211—24.)

1. A display stand formed from an integral blank, comprising a front wall, side walls formed integrally with and extending backwardly from the front wall, each side wall having a free upper edge and an upwardly extending portion to the rear thereof, a top connected with and extending backwardly from the upper margin of the front wall supported upon the free upper edges of the side walls and having free lateral margins extending laterally beyond the portions of the side walls, and a panel connected with the rear margin of the top and extending upwardly in engagement with said upwardly extending portions of said side walls beyond and in front thereof and locked in engagement with the side walls by means of forwardly extending lips on the upwardly extending portions of the side walls projecting through apertures in the panel for holding the side walls in proper spaced relation and in conjunction with the top section of the blank for maintaining the stand against collapse.

---

1,565,027. ADHESIVE OR BINDER. FRANCIS G. OKIE, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a Corporation of Minnesota. Original application filed Mar. 4, 1922, Serial No. 541,249. Divided and this application filed Oct. 24, 1923. Serial No. 670,541. 21 Claims. (Cl. 87—17.)

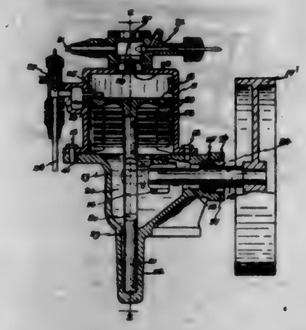
1. A waterproof adhesive including a mixture of substantially three parts drier materials, four parts white lead, and seventeen parts varnish material combined to render such adhesive stable and resistant to deterioration in the presence of friction and moisture when used in a water-abrading operation.

---

1,565,028. ABRASIVE ARTICLE. FRANCIS G. OKIE, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a Corporation of Minnesota. Filed Oct. 24, 1923. Serial No. 670,542. 24 Claims. (Cl. 51—279.)

1. The new article of manufacture in the nature of sand paper, comprising a flexible sheet of fabric, a grit or layer of abrasive particles, and a waterproof stable adhesive bond interposed between said grit and said sheet and of a nature to adequately maintain its bonding effect in substantially full measure throughout the effective abrading life of the abrasive article even under sustained application of or immersion in water, but not materially affecting the flexibility of said sheet when dry.

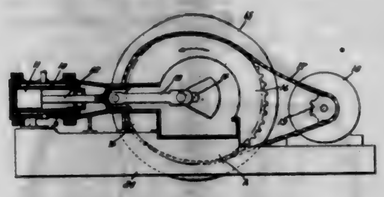
1,565,029. COMPRESSOR. CHARLES C. SPREEN, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 9, 1923. Serial No. 656,611. 2 Claims. (Cl. 230—6.)



1. In a compressor, a cylinder, piston mechanism comprising a piston head engaging and operating within said cylinder and operating means extending from said cylinder, and a member sealed at one edge to said cylinder and at the other edge to said piston mechanism and thus effective to hermetically seal the opening in said cylinder through which said mechanism extends, said cylinder being provided with an inlet port arranged to be uncovered by said head when said head is in advanced position to thus place said port at that time in communication with the space enclosed between said cylinder and said member.

---

1,565,030. SYSTEM OF POWER TRANSMISSION. ALEXANDER R. STEVENSON, Jr., Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 27, 1923. Serial No. 683,049. 10 Claims. (Cl. 74—14.)

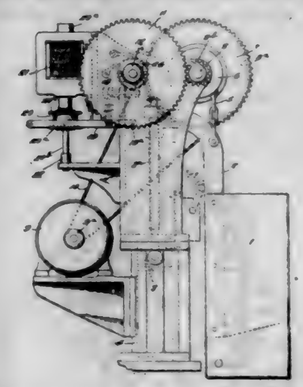


1. In a system of power transmission, the combination of a substantially constant-speed rotatable driving motor, a power consuming device having a fluctuating duty cycle, and means having a varying radius of power application connecting said motor and said power consuming device and cooperating with the latter for maintaining the load on and the speed of said driving motor substantially constant.

---

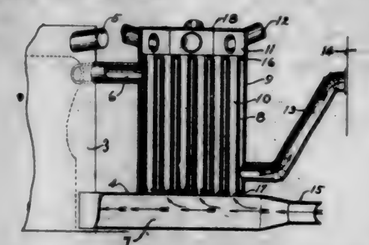
1,565,031. ELECTRICAL TRIP-BRAKE-OPERATING MECHANISM. CHARLES C. STROUT, Bangor, Pa., assignor to S. Flory Manufacturing Co., Bangor, Pa., a Corporation of Pennsylvania. Filed May 6, 1925. Serial No. 28,992. 10 Claims. (Cl. 192—2.)

1. Brake operating mechanism of the class described, comprising a drum, a weighted member adapted when released to operate a brake, means for raising said weight, motor means normally disconnected therefrom for operating said weight raising means, and electrically controlled means for operatively connecting said motor means with said drum.



---

1,565,032. HEAT ECONOMIZER FOR FURNACES. LOUIS D. SUMMERS, Springfield, Ill., assignor to Firm of Franz and Summers, consisting of Louis D. Summers, Fred Franz, Jr., and William J. Franz, Springfield, Ill. Filed Jan. 14, 1925. Serial No. 2,317. 1 Claim. (Cl. 126—108.)



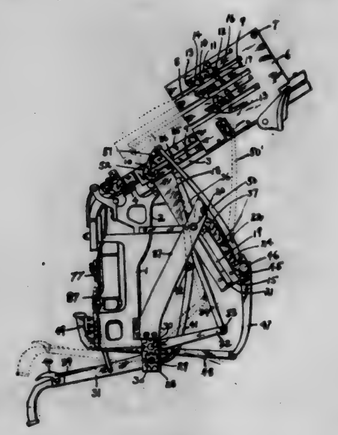
A heat economizer of the character described spaced from and operatively connected with an oil or coal burning furnace; said economizer comprising an upright drum including an upper detachable fresh air accumulating hood for heated fresh air, a chamber for the accommodation of the heated products of combustion from the furnace and a plurality of upright parallel fresh air communicating tubes extending through said chamber; a fresh air intake pipe adapted to simultaneously supply fresh air for the furnace to heat and fresh air for the economizer to heat; said hood provided with a plurality of heat distributing units and said chamber of the economizer connected with the flue of the furnace at the upper portion of the chamber and provided with an outlet flue communicating with the lower end of the chamber so as to utilize to the maximum extent the heated gases emanating from the furnace.

---

1,565,033. MULTIPLE-MAGAZINE-CHANGING DEVICE FOR CHANGING SPLIT MAGAZINES ON TYPESETTING MACHINES. HERMAN T. SUNDSTROM, Houston, Tex., assignor, by direct and mesne assignments, to Mergenthaler Linotype Company, a Corporation of New York. Filed May 24, 1924. Serial No. 715,533. 30 Claims. (Cl. 199—19.)

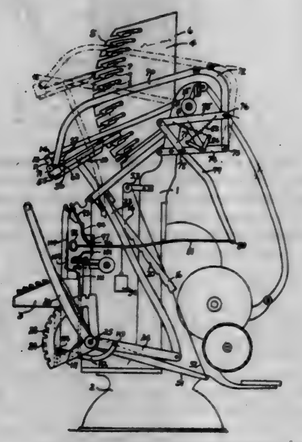
1. In a device of the character described, a matrix magazine rack, a magazine elevator adjacent thereto,

means to move said elevator into various adjusted positions relative to said rack, means to move said magazines to and from said rack and said elevator, and means when said elevator is returned to normal position to release the matrices from said magazine.



---

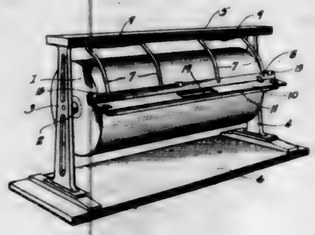
1,565,034. DEVICE FOR HANDLING AND STORING MATRIX MAGAZINES. HERMAN T. SUNDSTROM, Houston, Tex., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Mar. 5, 1925. Serial No. 13,383. 20 Claims. (Cl. 199—19.)



1. In a device of the character described, a rack having a series of compartments inclined upwardly from the forward end and adapted to slidably receive matrix magazines therein, said compartments having arcuate forward sides, an adjustable magazine support, a guide arm thereon extending perpendicularly downwardly from said support, a pivoted guide block for said arm, a pivoted arm holding said support against the curved side of said rack, and means to move said support into registering position relative to said compartments.

---

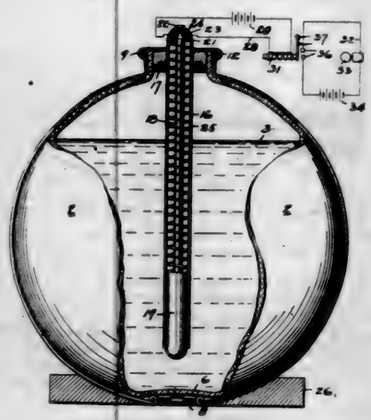
1,565,035. ATTACHMENT FOR ROLL-PAPER STANDS. KENZO TAKAHASHI, Seattle, Wash. Filed Oct. 15, 1923. Serial No. 668,539. 1 Claim. (Cl. 211—82.)



An attachment for paper roll stands of that type comprising means for rotatably mounting a paper roll and a tear off bar with yielding mountings for urging it against the roll, consisting of an auxiliary tear off plate substantially the length of said bar and bent along a longitudinal line with its upper edge portion adapted to underlie the first mentioned tear off bar and provided with clips formed therefrom and adapted to be bent over the bar to attach the plate functionally thereto; the lower edge portion of the plate being bent outwardly to extend substantially from the roll and provided with a lower tearing edge and a paper strip supporting bar disposed beneath the plate and having a recess formed in its outer edge, and having upwardly directed end portions attached to the underside at the ends of the out-turned portions of the plate to hold said bar in spaced relation to the plate for the purpose set forth.

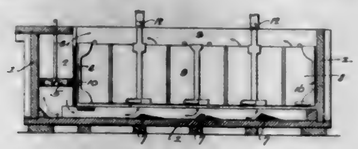
---

1,565,036. FIRE-EXTINGUISHING GRENADE. HENRY TANK, Alameda, Calif. Filed Mar. 2, 1921. Serial No. 449,124. 8 Claims. (Cl. 169—36.)



1. A fire extinguishing grenade comprising a frangible container having a quantity of fluid therein, breaking bands encircling said container and terminating in resilient ends, and a cap for engaging said ends to hold the bands in place.

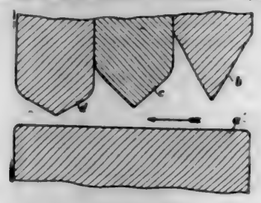
1,565,037. DYEING MACHINE. JAMES H. THOMPSON, Trenton, N. J., assignor to Hussong Dyeing Machine Company, Groveville, N. J., a Corporation of New Jersey. Filed Apr. 3, 1924. Serial No. 703,939. 4 Claims. (Cl. 8—19.)



3. The combination of a dye vat having a dyeing compartment and a circulating compartment; means for circulating liquor in the vat; and a series of deflectors in the bottom of the vat, said deflectors increasing in height from the circulating compartment to the opposite end of the vat.

---

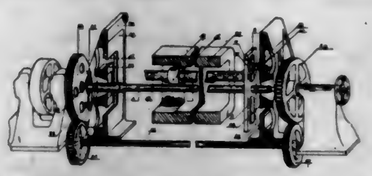
1,565,038. ZONE POLE FOR MAGNETIC SEPARATORS. GEORG ULLRICH, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Dec. 19, 1924. Serial No. 757,010. 4 Claims. (Cl. 209—223.)



1. A zone pole for magnetic separators in which the blade angle is varied in the different zones.

---

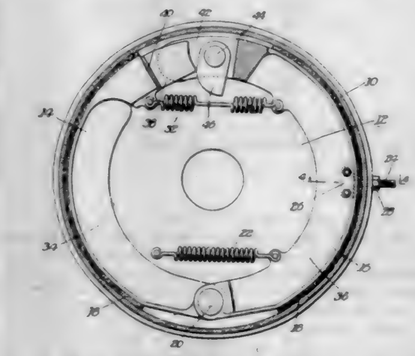
1,565,039. MACHINE FOR SMOOTHING AND RESMOOTHING THE MATRICES OF INGOT MOLDS AND OTHER HOLLOW BODIES. EDMOND VOITURON, Sclessin, near Liege, Belgium, assignor to Societe Anonyme d'Ougrée-Marihaye, Ougree, near Liege, Belgium, a Company duly Incorporated under the Laws of Belgium. Filed Apr. 10, 1924. Serial No. 705,663. 3 Claims. (Cl. 77—51.)



1. A machine for smoothing the internal faces of hollow bodies of varying sections and depths and of either parallel or non-parallel generating lines, comprising a relatively fixed rotary main shaft, fixed pattern-blocks, and guiding frames mounted upon and turning with the said main shaft, in combination with slidably mounted blocks carried by said frames and lying in the same radial plane and on the same side of the axis of said main shaft and having movement radially of said main shaft, a spindle connecting said sliding blocks, means extending from the respective sliding blocks and engaging the pattern blocks to cause said sliding blocks to move radially of the main shaft in accordance with the pattern as the main shaft rotates, a tool-holder slidably mounted upon said spindle, a tool carried by said holder, a feed screw carried by said sliding blocks and causing said tool-holder to slide longitudinally of said spindle, elements carried by the respective end portions of said feed-screw and parts periodically engaged respectively by said elements to operate said feed-screw.

---

1,565,040. BRAKE. CHARLES WASEIGE, Paris, France, assignor to Société des Aeroplanes Henri and Maurice Farman, Billancourt, France, a Corporation of France. Original application filed Feb. 9, 1921, Serial No. 443,556. Divided and this application filed May 2, 1925. Serial No. 27,469. 20 Claims. (Cl. 188—78.)



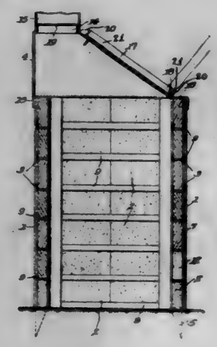
17. A brake comprising, in combination, a shoe forked at one end to provide a pair of arms, another shoe having its end projecting between the arms, and a brake-operating device between the shoes and between said arms.

---

1,565,041. ADJUSTING LOOP. FRANK J. ARNEY, New York, N. Y. Filed Sept. 9, 1925. Serial No. 55,878. 2 Claims. (Cl. 24—129.)

1. An adjusting loop, including a bar adapted at one end to be connected to a rope end, the other end of said bar being fork-shaped, lugs at opposite edges of the bar adjacent the fork-shaped end, a transverse web on one face of said bar in substantial alinement with the faces of said lugs, and said bar having an opening therein intermediate its ends, one face of the bar having a longitudinal groove extending from the fork-shaped end to said opening, and having a transverse groove in its opposite face in alinement with said web.

1,565,042. INCINERATOR. WILLIAM G. ARROWOOD, Hawthorne, Calif. Filed Nov. 13, 1923. Serial No. 674,535. 12 Claims. (Cl. 110—18.)



1. An incinerator comprising metal corner pieces each provided with two longitudinal channels, walls connecting the corner pieces and each including a plurality of horizontal metal bars and bricks separated vertically by said bars, the ends of the bars and adjacent ends of the bricks extending into aligned channels in the corner pieces, and a top embracing the upper ends of the corner pieces and walls and provided with an opening through which material may be deposited in the incinerator.

---

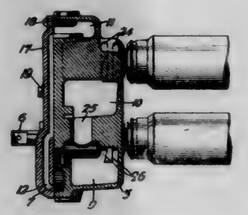
1,565,043. PROCESS AND PRODUCT FOR PREVENTING RUST. BRAXTON DAVENPORT AVIS, Clarksburg, W. Va. Filed Nov. 1, 1924. Serial No. 747,387. 6 Claims. (Cl. 167—3.)

3. A sterilizing bath comprising a weak solution of sodium nitrite and sodium sulphate.

5. A method of sterilizing metal instruments for preventing rust which comprises heating said instruments in a weak solution of sodium nitrite and sodium sulphate.

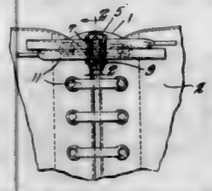
---

1,565,044. OIL PUMP. CHARLES C. BARBER, Freeport, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 5, 1922. Serial No. 558,769. 5 Claims. (Cl. 184—6.)



1. A bearing, a casing integral therewith forming a reservoir and provided with passageways communicating with said bearing, a cover for said casing serving as one side wall for said reservoir and provided with a vertical conduit communicating with said reservoir and said passage-ways, pump gears submerged in a lubricant in said reservoir, a drive gear partly submerged and meshing with one of said pump gears, and means for driving said drive gear to operate said pump gears whereby the lubricant is forced through said vertical conduit and said passage-ways for lubricating said bearing.

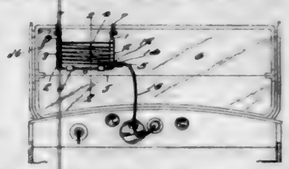
1,565,045. STRING CLASP. HERMAN R. BENSCH, San Antonio, Tex. Filed July 24, 1925. Serial No. 45,888. 2 Claims. (Cl. 24—117.)



1. A clamping device for the folded ends of shoe laces, designed to be secured on the outer face, adjacent to the upper end of the tongue of a shoe, said device comprising a body plate having bendable fingers at all of the corners thereof which are designed to be inserted through the tongue of the shoe, said plate, between the fingers, having its ends provided with upper and lower eyes, respectively, a bail-like clamping member having its ends journaled in the upper eye of the plate, and said lever having its lower end outturned to form a lip, a substantial U-shaped hook having its ends hingedly secured in the lower eye and swingable over the lipped end of the lever and the plate between the arms of the lever being bulged outwardly to provide a rib.

---

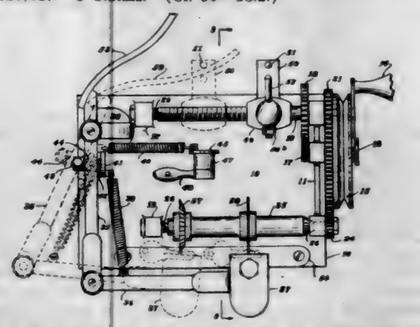
1,565,046. WINDSHIELD HEATER. HOMER S. BERGDOLL, Thomas, W. Va. Filed Apr. 6, 1925. Serial No. 21,108. 3 Claims. (Cl. 219—19.)



2. An electric warming device for the windshields of automobiles or like vehicles, including brackets fixed to the metal frame of the windshield, a substantially U-shaped frame having its arms pivotally secured to the brackets, insulators on the parallel arms of the frame, a resistance wire trained around the insulators, a metal connection between one end of said wire and one arm of the frame, a post for a conductor on the second end of the resistance wire and buffer members on the connecting element of the U-shaped frame.

---

1,565,047. KEY-CUTTING MACHINE. AUGUST BIONDI, Allentown, Pa. Filed Apr. 2, 1923. Serial No. 629,447. 4 Claims. (Cl. 90—13.2.)

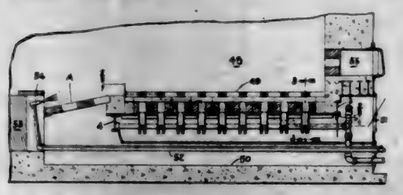


2. In a device of the class described, the combination of means for supporting a key blank, a plurality of cutters for co-operation with said means, and double

vises co-operative with said cutters for moving a key blank from co-operative relation with one of said cutters to co-operative relation with the other of said cutters.

---

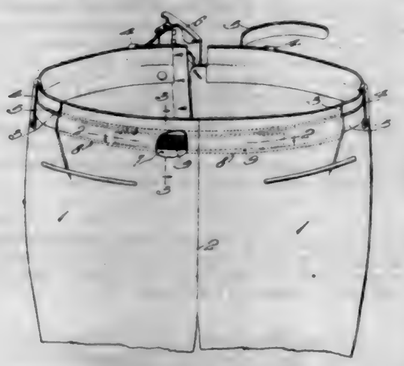
1,565,048. FURNACE. FREDERICK S. BITGOOD, Los Angeles, Calif. Filed Apr. 13, 1925. Serial No. 22,709. 2 Claims. (Cl. 158—1.)



1. In a furnace, a bank of gas burners comprising a metal platform having a series of vertical openings, metal mixing tube sleeves inserted downwardly through the platform and having stops to engage the platform, refractory sleeves having recesses in their lower faces to receive the upper ends of the metal sleeves, the refractory sleeves resting upon the metal platform and formed of square blocks approximately fitting to form a continuous bed, and plaster inserted in the crevices between the blocks.

---

1,565,049. BELTED GARMENT. ABRAHAM BLOCK, Bloomfield, N. J. Filed July 16, 1925. Serial No. 44,078. 1 Claim. (Cl. 2—237.)

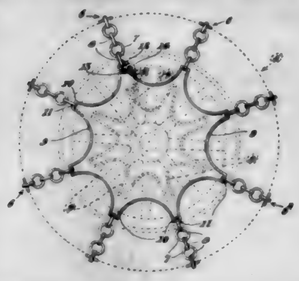


A garment provided with a pair of horizontally spaced darts at its rear portions, a flexible strip fixed to the inner side of the rear portion of the garment and terminating substantially at the darts to form an elongated belt guide, said darts having vertical openings communicating with the space between said flexible strip and garment, additional guides in front of said darts, a belt passing slidably through said additional guides, said belt having an elastic rear portion arranged within and obscured by said elongated belt guide, and means securing the elastic portion to the garment to prevent sliding thereof from the elongated guide.

---

1,565,050. ANTISKID ATTACHMENT FOR WHEELS. JOHN BOOSH, Cleveland, Ohio, assignor of one-half to Steve Kraus, Cleveland, Ohio. Filed Mar. 5, 1925. Serial No. 13,206. 1 Claim. (Cl. 152—14.)

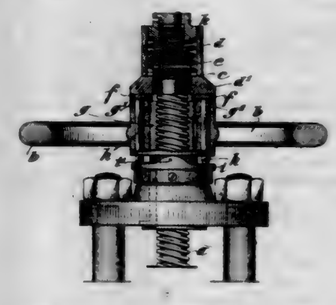
In an anti-skid attachment for wheels, a pair of circumferential side members each formed from a single strand of spring wire bent to form a plurality of bowed portions and straight connecting portions between the adjacent terminals of the bowed portions, means for detachably connecting the ends of each side member, and a plurality of cross tread members connected to the



said straight connecting portions, the bowed portions of the side members being partially straightened when the attachment is applied to a wheel to cause the same to exert an equal tension on all of the cross tread members.

---

1,565,051. DEVICE FOR OPERATING GATE VALVES. ARNO BÖTTNER, Sudenburg, near Magdeburg, Germany, assignor to the Firm: Polte, Magdeburg, Germany. Filed Dec. 27, 1924. Serial No. 758,378. 9 Claims. (Cl. 74—40.)



1. A valve operating device of the character set forth comprising a threaded spindle, a nut engaging said spindle to co-operate therewith and having recesses therein, a hand-wheel rigidly connected with the said nut, a sleeve on the end of said spindle and having lugs thereon which are adapted to cooperate with said recesses, lifting pins adapted to disconnect the lugs from the recesses, and a stationary cam cooperating with the said pins, substantially as and for the purpose set forth.

---

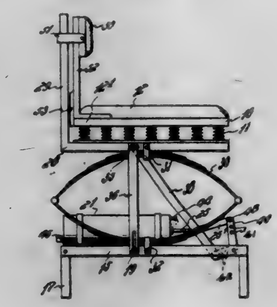
1,565,052. METHOD OF PRODUCING MINING-MACHINE BITS. NEWTON K. BOWMAN, Bowdil, Ohio. Filed Mar. 12, 1924. Serial No. 698,695. 8 Claims. (Cl. 76—101.)

1. The method of producing a mining machine bit from a blank having relatively angularly disposed wings, which comprises diagonally cutting off an end of the blank to produce a flat face diagonal to the back of the blank and the longitudinal edges of the wings, and forming the blank, including the said face thereof, to longitudinally curvilinear form.

1,565,053. WAGON STAKE. VIRGIL F. BOZEMAN and CHRIS E. JOHNSON, Moline, Ill., assignors to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 5, 1922. Serial No. 586,352. 4 Claims. (Cl. 280—147.)

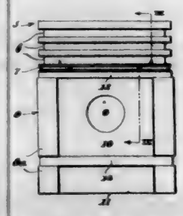
1. The combination with a wagon bolster, of a stake holder, a clamping member extending transversely of the holder, a bolt extending centrally through said member and the bolster and cooperating with said member to secure the holder on the bolster, and means to secure the holder from rotary movement.

1,565,054. VEHICLE SEAT. GEORGE N. BRUNKER and HENRY A. WOODLAND, Salt Lake City, Utah. Filed Oct. 29, 1923. Serial No. 671,567. 1 Claim. (Cl. 155—50.)



In a device of the class described, a supporting element, a leaf spring mounted thereon, a seat mounted on the spring, a cylinder mounted on the supporting element, a rocker arm mounted on this element, a piston for the cylinder and a piston rod, said rocker arm having two series of apertures, and the arm being pivoted at a point between the two series of apertures, a link connected with one of the apertured portions and with the piston rod, and a bar connected with the seat and with the rocker arm, at a point within the limits of the remaining series of apertures.

1,565,055. PISTON. NEWTON J. BUREN, Tacoma, Wash. Filed Sept. 22, 1925. Serial No. 57,872. 2 Claims. (Cl. 74—108.)

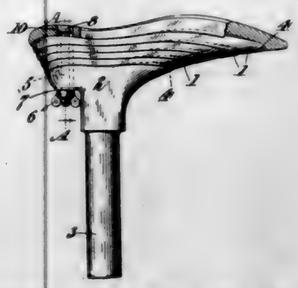


1. In a piston, a skirt portion having relief areas, and circumferentially extending areas formed truly cylindrical, of less diameter than the unrelieved portion of the skirt and traversing said relief areas.

1,565,056. WATER-CRAFT-PROPELLING MECHANISM. FERNANDO LOPEZ CERVERA, Tacuba, Mexico. Filed Aug. 6, 1925. Serial No. 48,520. 2 Claims. (Cl. 9—25.)

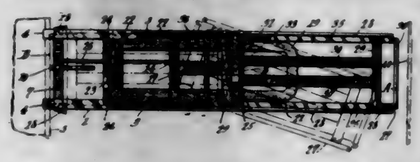
1. In a propelling mechanism of the type described, a housing supported to pivot on a horizontal axis, a pair of spaced shafts extending through said housing to depend therebelow, meshing toothed sectors rotatably mounted upon said shafts, a socket projecting radially from each of said sectors, a handle having a shank received in one of said sockets, a blade having a shank received in the other of said sockets, and means pivotally carried by the depending portion of said shafts connected to the shanks outwardly of the socket for adjustably holding said shanks in said sockets.

1,565,057. LAST FOR BOOTS, SHOES, AND THE LIKE. FREDERICK WILLIAM CHAPPELL, Pontardawe, Swansea Valley, Wales. Filed Mar. 10, 1924. Serial No. 698,253. 1 Claim. (Cl. 12—124.)



A shoemaker's last comprising a base piece, and a plurality of interlocking last plates, each plate being of the outline of a complete foot, said plates being arranged in a series progressively increasing in size away from said base, the plate next adjacent said base being formed to have interlocking engagement therewith, and said base and said plates each being provided with a perforation, the perforations in said plates and said base being in registry in their normal assembled relation, and the perforations in said plates being of the same size and shape and elongated in form, and said plates each being formed with a recess extending from and communicating with its respective perforation, in combination with a bolt extending through the registering perforations of the assembled plates and base and having an elongated head of such shape and size as to pass through the perforations in said plates when extending lengthwise thereof and to fit in the recess of the outer plate when turned crosswise of the perforation therein, and a nut engaging said bolt and adapted to draw said plates and base firmly together so as to hold them against movement either axially or radially of said bolt.

1,565,058. PACKING BENCH. PAUL P. COMMANDER, Dperun, Ga. Filed Sept. 15, 1924. Serial No. 737,839. 5 Claims. (Cl. 100—57.)

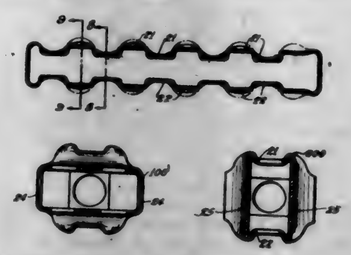


1. In a device for facilitating the packing of fruit boxes, a support, a slide mounted for reciprocation on the support, a box-carrying platform, and means for mounting the platform on the slide for combined pivotal and lateral translatory movement with relation to the slide.

1,565,059. PRINTER'S FEED GAUGE. GUY C. COOPER, Lithonia, and THOMAS A. BAILEY, Buckhead, Ga. Filed Jan. 8, 1925. Serial No. 1,247. 2 Claims. (Cl. 101—415.)

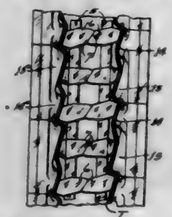
1. A printing press gauge comprising complemental clamp members having matching raised and depressed portions and having a gauge head in which is formed an opening, a stripper passing through the opening of the gauge head and having its rear end offset, and a holder having its rear portion bent to engage the rear edge of the upper gauge member and provided with an opening to receive the offset end of the stripper.

1,565,060. SECTIONAL HEADER FOR BOILERS AND THE LIKE. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 23, 1922. Serial No. 596,432. 7 Claims. (Cl. 122—360.)



1. A sectional header of substantially rectangular shape in cross section adapted to have a plurality of circulating tubes connected to same, said header consisting of a deformed metal tube provided on its lateral sides with diametrically-opposed, inwardly-pressed portions and diametrically-opposed, outwardly-bulged portions, bulges on the front and rear sides of the header arranged in staggered relation to the ouwardly-bulged portions on the lateral sides of the header, and tube holes and hand holes in the front and rear sides of the header, respectively.

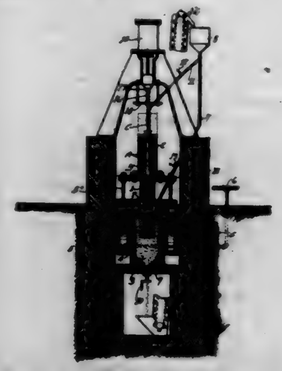
1,565,061. METHOD AND APPARATUS FOR MAKING SECTIONAL HEADERS. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 4, 1923. Serial No. 655,667. 22 Claims. (Cl. 153—78.)



1. A machine for producing a sectional header, comprising side dies spaced apart to receive a metal tube and provided with inwardly-projecting ribs arranged diametrically opposite each other and diametrically-opposed recesses located between said ribs, front and rear dies, and pressing portions on said front and rear dies disposed in such relation with said ribs and recesses that the inward movement of all of said dies towards the center of said tube forms opposed valleys and bulges in the lateral sides of the header and bulges in the front and rear sides of the header.

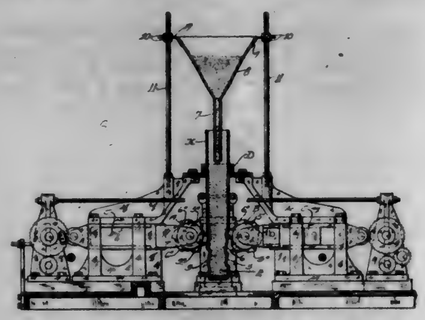
14. A method of constructing a sectional header, characterized by pressing opposed portions in alternate longitudinal sections of a metal tube inwardly towards each other, and pressing opposed portions in the intermediate sections of the tube inwardly towards each other but at right angles to the inwardly-pressed portions first referred to.

1,565,062. METHOD AND APPARATUS FOR PRODUCING SECTIONAL BOILER HEADERS. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 4, 1923. Serial No. 655,670. 3 Claims. (Cl. 113—44.)



1. A method of making a hollow member, characterised by arranging a heated tube in a die, expanding the portion adjacent one end of the tube into engagement with the die, and thereafter expanding other portions of the tube into engagement with the die in regular progression from one end of the tube to the other.

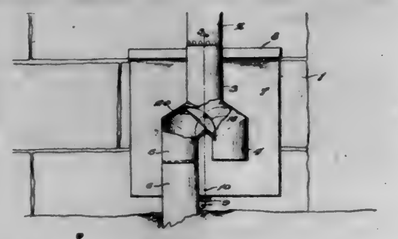
**1,565,063. METHOD AND APPARATUS FOR PRODUCING HEADERS.** ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 27, 1924. Serial No. 702,279. 11 Claims. (Cl. 153—73.)



1. A method of producing a header, which consists of progressively deforming a tube by rolls that press opposed portions of the tube inwardly and simultaneously form seat faces in the tube, and internally supporting the tube during the deforming operation by a column of granular material in the tube that is permitted to flow freely longitudinally of the tube but which imposes a sufficient load on the granular material in the zone of the deforming rolls to insure the formation of seat faces on the tube that are sharp-angled and flat.

---

**1,565,064. AUTOMATIC CUT-OFF FOR CISTERNS.** MAX E. CRANDALL, Kingfisher, Okla. Filed Jan. 26, 1925. Serial No. 4,894. 6 Claims. (Cl. 137—9.)

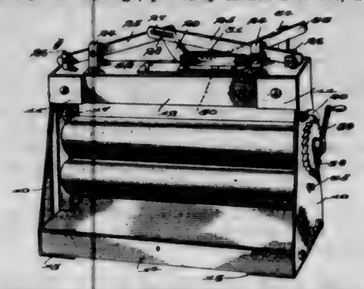


1. In an automatic cut-off for cisterns, the combination of a Y coupling connected with a down spout and having spaced discharge terminals, a tank disposed at the side of the said coupling and in communication with the upper portion of the same, a trough within the coupling below and immediately adjacent the point of communication between the coupling and the tank, a screen secured within the coupling above the trough and having its lower end fitting within the bore of the trough, a cut-off mounted within the coupling at the junction of the discharge terminals thereof, and float-controlled means within the tank for shifting said cut-off.

---

**1,565,065. WIRE STRETCHER.** JOHN BERNARD DOERR, Orlando, Fla. Filed Sept. 1, 1925. Serial No. 53,941. 4 Claims. (Cl. 254—51.)

1. A wire screen stretching device comprising a frame, a roller mounted for rotation in the frame, a second roller mounted for rotation in the frame, movable bearings for the second roller, means for positively rotating the second roller, and means for adjusting the bearings for moving the second roller towards or away from the first roller, said adjusting means consisting of rods connected to the bearings, pivotally mounted levers, a lever



being connected to an end of a rod, and means oscillating the levers whereby the rods are oscillated.

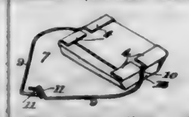
---

**1,565,066. HOSE-NOZZLE HANGER.** LOUIS A. DOUSSON, Cincinnati, Ohio, assignor to The American Oil Pump & Tank Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 2, 1924. Serial No. 729,794. 3 Claims. (Cl. 248—20.)

1. A hose nozzle hanger comprising an open housing with a hood to cover the open end of the nozzle when hung up therein, and a support secured to and within the housing from which the said nozzle may be removably hung.

---

**1,565,067. RAILWAY SIGNAL TORPEDO.** FRANK DUTCHER, Versailles, Pa. Filed July 22, 1925. Serial No. 45,328. 5 Claims. (Cl. 246—487.)



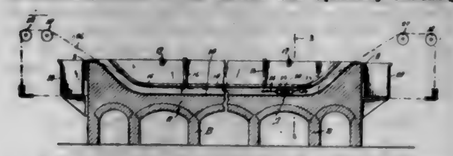
1. The combination in a railway signal torpedo, of a base; an explosive tablet secured to said base; a fastening device extending through the base; and means for locking the fastening device to the base when the ends of the fastening device are connected.

---

**1,565,068. DROSSER FOR GALVANIZING KETTLES.** HARRY CLYDE EBRIGHT, Youngstown, Ohio. Filed Apr. 3, 1924. Serial No. 704,029. 8 Claims. (Cl. 15—93.)

2. The combination with an elongated kettle having its bottom extending horizontally for a certain distance and then upwardly inclined at its ends, of a scraper operating over said bottom and ends, motor operated means for shifting the scraper longitudinally in opposite directions, and guides for holding the scraper against the bottom, said guides comprising longitudinally extend

ing guide strips attached to the walls of the kettle and extending parallel to the bottom and upwardly inclined



at their ends, the strips being reinforced at the junction of the horizontal portion with the upwardly inclined portion.

---

**1,565,069. GOLF CLUB.** EDWARD T. EDWARDS, Latrobe, Pa. Filed Mar. 6, 1924. Serial No. 697,289. 2 Claims. (Cl. 273—80.)

1. A golf club, embodying a shaft formed in sections of substantially equal length, united by a threaded connection formed of a double thread the spirals of which alternate.

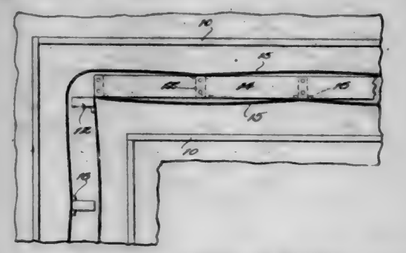
---

**1,565,070. GOLF CLUB.** EDWARD T. EDWARDS, Latrobe, Pa. Filed Mar. 6, 1924. Serial No. 697,290. 2 Claims. (Cl. 173—80.)

1. A golf club, embodying a shaft formed in sections of substantially equal length, united by a threaded connection formed of double thread the spirals of which alternate, said threads being interrupted longitudinally at intervals.

---

**1,565,071. FORM FOR CONCRETE CONSTRUCTION.** LEWIS LAVELL ELLIS, Sarasota, Fla. Filed June 16, 1925. Serial No. 37,544. 3 Claims. (Cl. 25—131.)



1. A form for concrete construction including spaced vertically disposed inner and outer walls, horizontally spaced vertically disposed standards arranged between the walls and plates engaging alternate standards upon opposite sides of the latter, the plates upon one side of the standards being spaced from the standards which are engaged by the opposite plates.

---

**1,565,072. TREATMENT OF ARGENTIFEROUS SULPHIDE ORES.** FRANK EDWARD ELMORE, Boxmoor, England, assignor to Niels C. Christensen, Salt Lake City, Utah. Filed Mar. 26, 1921. Serial No. 455,794. 9 Claims. (Cl. 75—18.)

1. A process of treating argentiferous lead-zinc sulphide ores which consists in first heating the ore admixed with sodium chloride in presence of air at a temperature exceeding about 400° C. but not high enough to cause volatilization of lead as halogen compound, the zinc sulphide remaining for the most part unattacked, then extracting the oxidized mixture with a strong solution of sodium chloride and finally extracting the silver from the argentiferous residue with solvent as herein defined.

---

**1,565,073. TREATMENT OF ARGENTIFEROUS SULPHIDE ORES.** FRANK E. ELMORE, Boxmoor, England, assignor to Niels C. Christensen, Salt Lake City, Utah. Filed June 9, 1922. Serial No. 567,203. 3 Claims. (Cl. 75—18.)

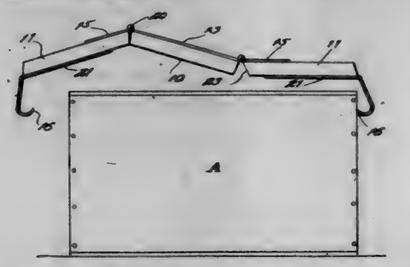
1. Process of treating argentiferous lead-zinc sulphide ores, consisting in heating the ore to about a dull red heat under such conditions that the zinc sulphide remains substantially undecomposed, then subjecting the ore which has been thus heated to the acid brine process, and then leaching the argentiferous zinc sulphide residue thus obtained by means of acid chloride brine solvents which extract the silver therefrom and leave the zinc sulphide substantially undissolved.

---

**1,565,074. BELT CLAMP.** THOMAS ERSKINE and ADOLPH C. ARNOT, Taft, Calif. Filed Aug. 24, 1925. Serial No. 51,890. 3 Claims. (Cl. 24—37.)

2. A belt-clamp comprising opposing grip-members adapted for frictional contact with the belt ends, said grip-members being outwardly flanged along one edge; a U-shaped sheath-member fitted over said grip-members, with the inner edges of its legs bearing on the outturned flanges of said grip members; and pressure studs carried by said sheath-member and bearing upon the grip-members to force the latter into frictional contact with its belt ends.

1,565,075. BOX LIFTER. HENRY FASSBENDER, Council, Idaho. Filed Mar. 16, 1925. Serial No. 15,991. 1 Claim. (Cl. 294—16.)



A lifter of the character described comprising a linking hinge having a straight bar and hinged portions connected to its respective ends, arms secured to the undersides of the straight bar and hinged portions respectively, said arms having their adjacent ends beveled, and hook arms secured to the undersides of the outer arms and terminating in offset inwardly and upwardly inclined sharpened hooks.

1,565,076. HANDLE-BAR-GRIP FASTENER. BISHOP E. FINK, Fort Myers, Fla. Filed Jan. 14, 1925. Serial No. 2,383. 3 Claims. (Cl. 208—126.)

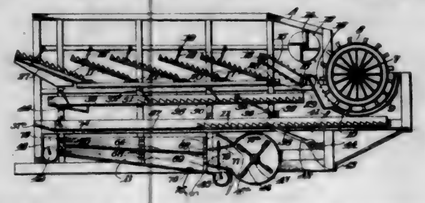
1. A fastening means for handle bar grips comprising a plug provided with a centrally disposed opening formed in one end thereof, an integrally formed sleeve and washer, and a screw passing through said sleeve and washer to be received in the opening of the plug for the purpose specified.

1,565,077. HOLDER FOR BAKED APPLES. MARY GILES FINN, Mount Vernon, N. Y. Filed Apr. 2, 1925. Serial No. 20,279. 1 Claim. (Cl. 53—6.)

A baking and serving holder for fruit, which comprises a shallow, dishlike receptacle having a substantially flat bottom and an integral stem extending upwardly therefrom near the center thereof, said bottom being constructed of comparatively thin material of uniform thickness throughout and being of approximately the same diameter as the fruit to be held thereon, said stem being constructed to extend through the core of the fruit and above the top thereof, and being provided at its top with an aperture whereby the receptacle can be lifted.

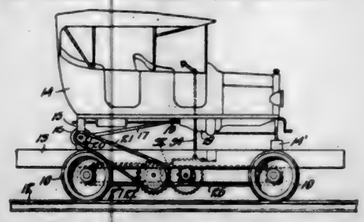
1,565,078. THRASHING MACHINE. JESSE L. FITZGERALD, Sr., Oberlin, Kans. Filed Mar. 20, 1922. Serial No. 545,147. 1 Claim. (Cl. 130—24.)

In a thrashing machine, a frame, a thrashing mechanism in said frame, means for moving straw rearwardly through the frame from said thrashing mechanism, an auxiliary grain pan disposed beneath the straw-moving means and having an imperforate forward portion provided with means for moving chaff rearwardly and a perforated screen forming rear portion, a main grain pan disposed beneath said auxiliary pan and extending forwardly beyond the forward end of the auxiliary pan to a point beneath said thrashing mechanism, said main pan having a perforated screen forming rear portion dis-



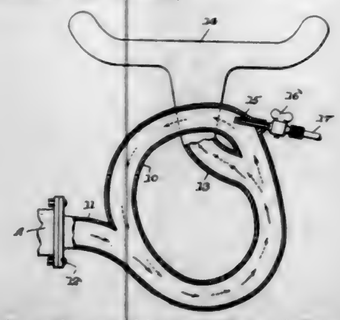
posed beneath the screen forming portion of the auxiliary pan and extending forwardly to a point intermediate the ends of the imperforate forward portion of the auxiliary pan and an imperforate forward portion provided with means for moving chaff rearwardly, and a shoe disposed beneath the main pan and including a screening medium disposed beneath the screen forming rear portion of the main pan.

1,565,079. RAILWAY VEHICLE. LEMUEL ROSCOE FOREMAN, Elizabeth City, N. C. Filed June 19, 1924. Serial No. 721,133. 5 Claims. (Cl. 105—101.)



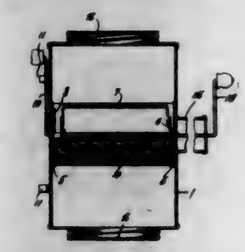
1. In a railway vehicle, an automobile body, a wheeled frame supporting the body, gearing connecting the engine to the frame including parallel driving and driven shafts, sprocket gearing connecting said shafts, intermeshing spur gears on said shafts, a clutch sleeve on the driving shaft engageable either with the sprocket gearing or with one of said spur gears, and a lever projecting through the floor of the automobile body for controlling the position of said clutch sleeve, substantially as set forth.

1,565,080. ENGINE MANIFOLD. JOHN LAVERNE FOUST, Baker, Mont. Filed June 9, 1924. Serial No. 718,930. 2 Claims. (Cl. 123—52.)



1. An engine manifold comprising a hollow ring-like body formed with an extension at one side constituting a mixture inlet, and an outlet pipe position leading from the inside wall of the ring-like body and constituting an outlet; and an auxiliary air inlet tube extending through the outer wall of the body and pointing in the direction of flow of mixture through the body.

1,565,081. SIFTER. STANLEY H. FRAZIER, Cainesville, Mo. Filed Feb. 4, 1924. Serial No. 690,648. 1 Claim. (Cl. 209—283.)

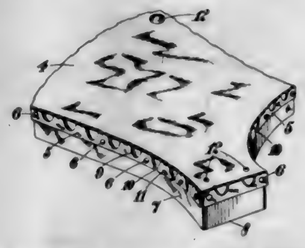


A sifter of the character described comprising a cylindrical shaped body, a shaft passing through the body, walls extending inwardly from the sides of the cylindrical shape body and meeting to form an apex at each side substantially in the plane of the shaft, a semi-circular screen having closures for its ends, one of said closures being journaled on the shaft, a handle passing through the wall of the body diametrically opposite the entrance of the shaft therein and connected with the other closure of the screen for reversal of the latter, means for holding the handle member in adjusted position and an agitating device fixed to the shaft and operatively associated with said screen.

1,565,082. PULL-CHAIN CANDELABRUM SOCKET. EDGAR H. FREEMAN, Trenton, N. J., assignor, by mesne assignments, to Circle F. Mfg. Co., Trenton, N. J., a Corporation of New Jersey. Filed Mar. 25, 1922. Serial No. 546,757. 8 Claims. (Cl. 173—354.)

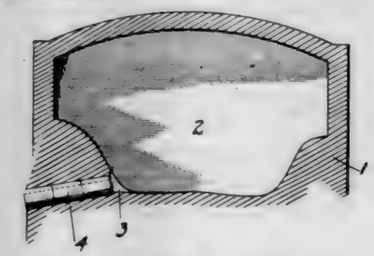
1. A candelabrum socket including a pair of insulation blocks, a bracket including two members slidable one upon the other adjustably connecting the blocks, a lamp socket carried by one of said blocks and a switch carried by the other.

1,565,083. CLICKING OR LIKE CUTTING-OUT KNIFE. HENRY HOWARD FREER, Leicester, England. Filed Jan. 6, 1925. Serial No. 847. 16 Claims. (Cl. 164—29.)



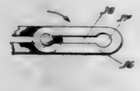
1. A cutting-out knife of the kind described comprising in combination a sheet-metal backing-plate having a rim constituted by a turned-down edge thereof, a cutting-strip and means securing said cutting strip to said rim.

1,565,084. ARTICLE FOR LINING TAP HOLES OF FURNACES. HENRY G. FRERICHS, Bartonville, Ill. Filed Oct. 16, 1924. Serial No. 744,083. 4 Claims. (Cl. 266—42.)



2. A monolithic magnesite tap-hole refractory for furnaces and of tubular cross-section.

1,565,085. HARNESS OR DROP-BOX CHAIN. FRANK L. FURGAL, Warren, Mass. Filed Feb. 9, 1925. Serial No. 7,733. 9 Claims. (Cl. 139—333.)

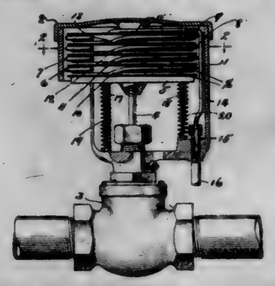


1. As an article of manufacture, a chain comprising pins, balls and spacers assembled together, each pin having a reduced neck near the end, and links for connecting said pin at the neck, each link having a longitudinal slot extending substantially throughout the length of the link and constituting its only means for receiving the pins and provided with an enlarged circular portion at one end of the slot of sufficient size to receive the largest diameter of the pin, said links being arranged along the chain with the enlarged portions of the slots located at the same end.

1,565,086. DIAPHRAGM. JAMES F. GALLAGHER, Brooklyn, N. Y. Filed May 18, 1923. Serial No. 639,761. 1 Claim. (Cl. 137—156.)

In combination, a housing, a cap therefor, a series of superimposed hollow diaphragm members therein, flexible tubes attached to the peripheries of said members and communicating with the interior thereof, a pressure

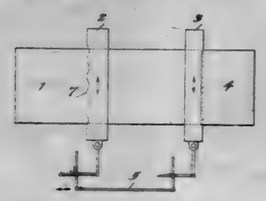
pipe communicating with one of said diaphragm members, whereby there is provided a plurality of diaphragm members connected in series to a pressure pipe, springs



attached to the periphery of the lower diaphragm member of the series for forcing the diaphragm structure toward said cap and lugs for spacing said diaphragm members.

---

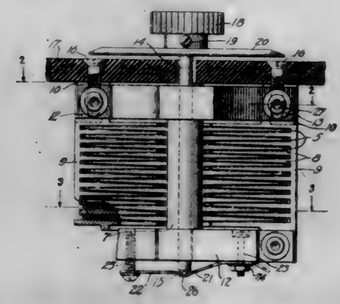
1,565,087. TRAVELING OR CHAIN GRATE STOKER. HUGO GALLE, deceased, late of Coesfeld, Germany, by Sophie Galle, executrix, Coesfeld, Germany. Filed July 10, 1925. Serial No. 42,842. 3 Claims. (Cl. 110—40.)



1. The combination with a traveling grate of a breaker bar arranged transversely of and in close proximity to the grate and formed and arranged to present a raking edge towards the advancing fuel, and means for reciprocating said breaker bar transversely of the grate.

---

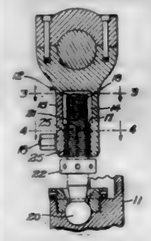
1,565,088. CONDENSER. JOHN O. GARGAN, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1922. Serial No. 589,735. 4 Claims. (Cl. 250—41.)



1. An air condenser comprising a fixed member including a plurality of parallel plates, supporting lugs and mounting studs cast integral, a movable member including a shaft portion and a plurality of parallel plates cast integral therewith, and a plurality of bridging members serving as bearings for said shaft portion and having perforations in the ends thereof adapted to cooperate with said studs whereby the bridging members may be rigidly secured to the fixed member.

---

1,565,089. RECIPROCATING MECHANISM. ERNEST GAUTHIER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 7, 1921. Serial No. 520,502. 6 Claims. (Cl. 74—48.)



1. In a punch press or similar operating mechanism, a pair of telescopic members forming the pitman of the mechanism, and a shearable element interposed between the adjacent surfaces of the telescopic members adapted to normally retain them against relative movement but shearable by excessive thrust to permit relative movement of the two members.

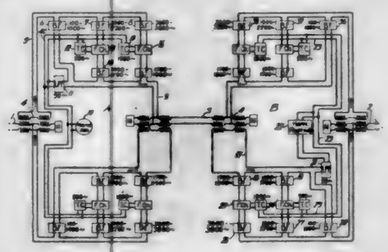
---

1,565,090. PROCESS FOR PRODUCING PULP. WILLIAM D. GREGOR, WESLEY M. OSBORNE, and ALEX J. KEMZURA, Newton Falls, N. Y. Filed July 14, 1924. Serial No. 725,983. 7 Claims. (Cl. 92—7.)

1. The process of digesting materials to form pulp which comprises the steps of partially filling the digester with cooking liquor, feeding the material into the partially filled digester an amount which will permit circulation of material in the liquor during the cooking, then filling in the remaining amount of cooking liquor to complete the charge.

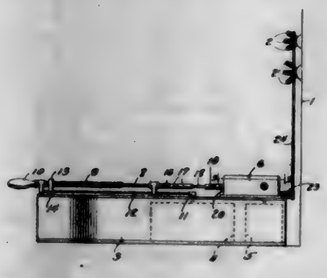
---

1,565,091. WAVE-TRANSMISSION SYSTEM. ELMER V. GRIGGS, White Plains, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 17, 1922, Serial No. 537,156. Renewed June 2, 1925. 8 Claims. (Cl. 178—44.)



7. A system for two-way transmission between distant points comprising means for transmitting base frequency energy therebetween, means for causing said base frequency energy at each of said points to reduce the effective frequencies of signal energy to be transmitted and to increase the effective frequencies of signal energy received by like amounts.

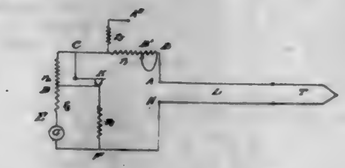
1,565,092. ATTACHMENT FOR OSCILLATION GENERATORS. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 28, 1921. Serial No. 479,798. 30 Claims. (Cl. 250—36.)



1. The combination with an oscillation generator including an electric discharge device and an oscillatory circuit of means for adjusting the constants of said circuit including a plurality of switches and controllers, and means to actuate said switches and controllers in a definite sequence.

---

1,565,093. METHOD OF AND APPARATUS FOR MAKING PYROMETRIC AND OTHER MEASUREMENTS. THOMAS RANDOLPH HARRISON and PAUL DARWIN FOOTE, Washington, D. C.; said Foote assignor to said Harrison. Filed Apr. 19, 1919. Serial No. 291,877. 20 Claims. (Cl. 175—183.)



13. An indicating circuit comprising a variable source of potential, indicating means calibrated to indicate variations of potential produced by said source for predetermined relations of resistance embodied in said circuit, and auxiliary circuit connections comprising a shunt around said indicating means which when manipulated cause said means to indicate substantial variations in the predetermined relations of the resistances of said first mentioned circuit.

---

1,565,094. PIPE BENDER. FRED HOTCHNER, San Francisco, Calif. Filed Mar. 8, 1922. Serial No. 541,934. 4 Claims. (Cl. 81—15.)

1. A pipe bender comprising a lever having a pipe embracing hook, a fulcrum on said lever, a second lever pivotally mounted on the first lever at the end distant from said pipe embracing hook, and means extending from the short arm of the second lever for engaging a pipe at a distance from said hook, whereby on the application of power to the second lever a pipe may be bent.

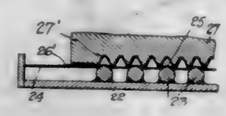
---

1,565,095. ANTISKID ATTACHMENT FOR VEHICLE WHEELS. JOHN JEUP, Snohomish, Wash. Filed Feb. 9, 1924. Serial No. 691,599. 2 Claims. (Cl. 152—2.)

1. The combination with a wheel of the class described, of a ring secured concentrically to the body of the wheel, a plurality of hooks fixed in one side of said ring with their hooked ends turned toward the center of the wheel, a plurality of hooks threaded into the ring from the other side with lock nuts thereon whereby they may be locked at different positions of adjustment and antiskid chains extended about the tread of the wheel with their end links secured to said hooks at opposite sides of the ring.

---

1,565,096. METHOD OF CONSTRUCTING RADIATORS FOR USE IN CONNECTION WITH INTERNAL-COMBUSTION MOTORS. HARVEY C. MUMMERT, Hollis, and WILLIAM WAIT, Jr., Garden City, N. Y., assignors, by mesne assignments, to Curtiss Aeroplane and Motor Company, Inc., Garden City, Long Island, N. Y., a Corporation of New York. Filed Oct. 26, 1922. Serial No. 597,072. 2 Claims. (Cl. 113—116.)



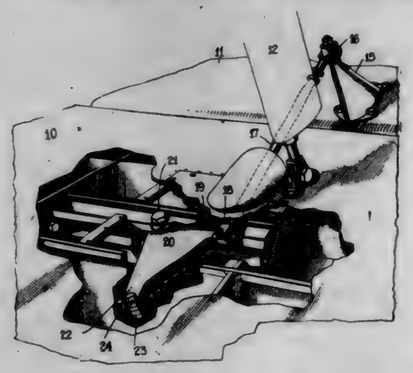
1. The method of constructing skin or surface type radiators for aeroplanes which consists in applying a coating of solder solution upon at least a portion of one surface of a metal plate, in laying upon the coated surface of said metal plate a second metal plate, one of said plates being corrugated to provide a plurality of laterally spaced lines of longitudinally continuous contact between said plates, said lines of contact being spaced according to the size of the mentioned corrugations, and in simultaneously heating and pressing together, along said lines of continuous contact, the mentioned plates, to effect, along said lines of contact, a series of longitudinally continuous laterally spaced solder joints between said plates, said plates, when thus joined together, defining a plurality of independently water tight and completely separated fluid passages or cells.

---

1,565,097. DIFFERENTIAL AILERON CONTROL. HARVEY C. MUMMERT, Hollis, N. Y., assignor to Curtiss Aeroplane and Motor Company, Inc., Garden City, N. Y., a Corporation of New York. Filed Feb. 29, 1924. Serial No. 695,963. 5 Claims. (Cl. 244—20.)

1. The combination with the supporting surface of an aeroplane, of control mechanism including a movable control surface and an element operable to move said control surface, and a connection between said control surface and said element having incorporated therein

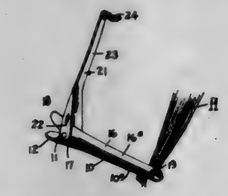
a bell crank, said bell crank being housed within said supporting surface and having its arms so related one to the other as to define an angle other than a right



angle whereby in the operation of said element a differential action in the movement of said control surface is provided.

---

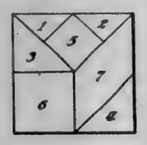
1,565,098. HAIR CURLER. DAISY D. NIELSEN, Los Angeles, Calif. Filed May 8, 1925. Serial No. 28,904. 1 Claim. (Cl. 132—41.)



A hair curling appliance comprising a cylindrical member, a channel shaped member, a clamping member having a lip formed on one end, a spring and a pin, said channel shaped member, cylindrical member and clamp being pivotally connected by said pin, said cylindrical member and channel shaped member being normally held together by the action of said spring and prevented from shifting laterally by the lip formed on the end of said clamping member engaging recesses formed in one end of said cylindrical and channel shaped members.

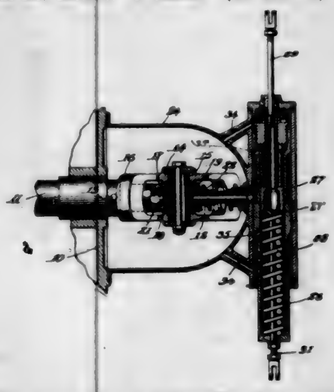
---

1,565,099. GEOMETRICAL PUZZLE. JOHN NIEBODKA, Chicago, Ill. Filed Mar. 11, 1925. Serial No. 14,713. 15 Claims. (Cl. 273—157.)



14. A seven figure puzzle comprising one smaller and one larger square and four triangles, the area of the smaller square being equal to the area of one pair of said triangles, and the area of the larger square being equal to the area of the other pair of said triangles, said polygons when placed together edgewise being adapted to form a plurality of geometrical figures.

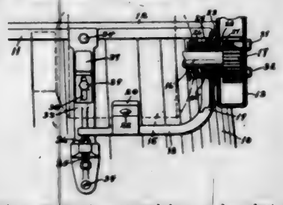
1,565,100. AUTOMATIC THROTTLE CONTROL. ARTHUR NUTT, Mineola, and ADOLPH MOSES, Hempstead, N. Y., assignors, by mesne assignments, to Curtiss Aeroplane and Motor Company, Inc., Garden City, N. Y., a Corporation of New York. Filed Jan. 10, 1921. Serial No. 436,291. 5 Claims. (Cl. 264—7.)



1. The combination, in a throttling device for internal combustion motors, of a throttle, a throttle control lever, a bodily movable mechanical connection between the throttle and throttle control lever including parts capable of relative movement, and means for temporarily so relating such parts as to render them incapable of relative movement without affecting in any way the bodily movement thereof.

---

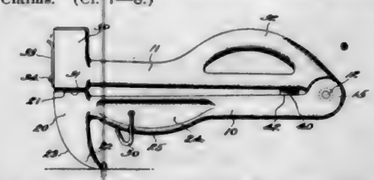
1,565,101. MOTOR SUPPORT FOR WASHING MACHINES. CARL A. OLSON, Clarinda, Iowa, assignor to Clarinda Manufacturing Company, Clarinda, Iowa, a Corporation of Iowa. Filed Oct. 15, 1923. Serial No. 668,694. 5 Claims. (Cl. 248—14.)



5. A motor support, comprising a bracket having an arm adapted to extend beneath a motor, a screw threaded in said arm and adapted for adjustment to engage said motor, and a wedge member adjustably mounted on a vertical arm of said bracket and adapted to engage a curved side of the motor.

---

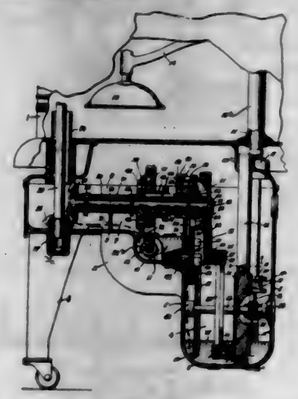
1,565,102. STAPLE PULLER. JOHN AARON PETERSON, Kane, Pa. Filed Apr. 14, 1925. Serial No. 23,077. 4 Claims. (Cl. 7—8.)



1. In a staple puller, substantially parallel members pivoted together at one end for swinging movement toward and from each other, one of said members formed at its free end with a staple engaging head, and the other of said members formed at its free end with a hammer head for striking said engaging head when the members are swung together, and locking mechanism for detachably securing said members in position swung together with said heads alined to form a hammer head, said members providing a handle therefor.

---

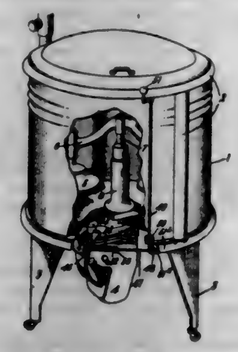
1,565,103. LUBRICATING SYSTEM FOR WASHING MACHINES. GEORGE E. RANDLES, Cleveland, Ohio, assignor to The Foote-Burt Company, a Corporation of Ohio. Filed May 27, 1924. Serial No. 716,252. 5 Claims. (Cl. 184—7.)



5. In a washing machine, a housing adapted to contain a supply of lubricant in its lower portion, a shaft journaled in the housing adjacent its upper end, said shaft having an axially-extending passage, operating mechanism in the housing, said mechanism including a gear wheel on said hollow shaft and a portion which dips into lubricant in the housing, a scraper member associated with said gear wheel at a level above that of the shaft to which said gear wheel is connected, means defining a passage for conveying lubricant from the scraper member to the passage in the shaft, and means providing conduits for conveying lubricant from the passage in the shaft to parts requiring lubrication.

---

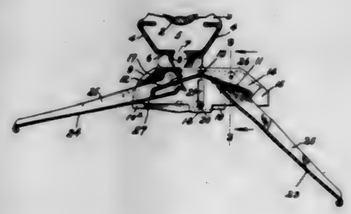
1,565,104. WASHING MACHINE. GEORGE E. RANDLES, Cleveland, Ohio, assignor to The Foote-Burt Company, a Corporation of Ohio. Filed May 27, 1924. Serial No. 716,254. 15 Claims. (Cl. 192—18.)



1. In a washing machine, the combination of a reciprocating washing device, a driving shaft, a clutch for connecting the shaft to and disconnecting it from said device, and operating means for the clutch, said operating means including a spring member through which the operating means moves the clutch.

---

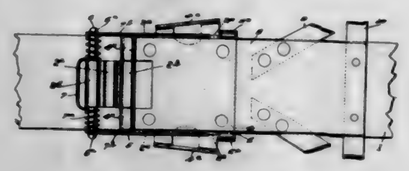
1,565,105. CLOTHES WRINGER. GEORGE E. RANDLES, Cleveland, Ohio, assignor to The Foote-Burt Company, a Corporation of Ohio. Filed Aug. 28, 1924. Serial No. 734,571. 8 Claims. (Cl. 68—32.)



1. In a reversible clothes wringer, an adjustable drain board comprising a member on each side of the wringer which at one time serves as a drain for water and at another time as a chute for the clothes, and means whereby when the drain board is adjusted the member which is to serve as a water drain is elevated and the member which is to serve as a clothes chute is lowered.

---

1,565,106. SKI BINDING. WILLIAM F. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Aug. 6, 1925. Serial No. 48,610. 7 Claims. (Cl. 208—184.)



1. In a ski binding, a base plate having a toe plate pivotally connected therewith, and means for locking said toe plate against any pivotal movement.

---

1,565,107. METHOD OF HYDRATING LIME. JOHN P. RICH, Swanton, Vt. Filed Dec. 29, 1924. Serial No. 758,772. 3 Claims. (Cl. 23—188.)

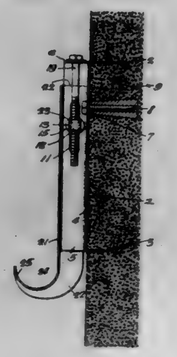
1. The method of hydrating lime which consists in adding to a charge of unground lime of known weight during agitation a calculated quantity of water to slake all the lime, continuing the agitation while admitting a jet of air to assist agitation and separate impurities, and withdrawing by suction the hydrated lime.

---

1,565,108. ADJUSTABLE WALL BRACKET. JAMES L. RILEY, Philadelphia, Pa. Filed Feb. 13, 1925. Serial No. 9,011. 3 Claims. (Cl. 248—17.)

2. A supporting bracket comprising a member of angular cross section having a rearward extension from one flange, said flange having a bolt hole, the other flange of said member having an inturned apertured ex-

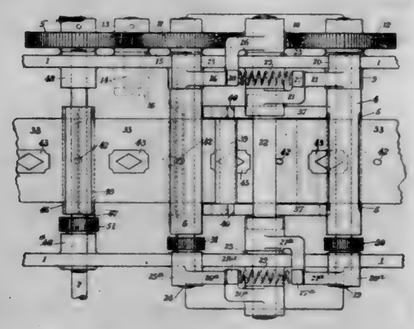
tension and a longitudinal slot, a bolt suspended in said inturned extension and having an associated threaded part projecting through the slot, and a second angle



member having in one flange an opening for reception of said threaded part which projects through said slot and an outwardly projecting load-carrying extension.

---

1,565,109. APPARATUS FOR FEEDING WEBS IN CORRECT REGISTER. WILLIAM ROSE, Gainsborough, England. Filed Mar. 1, 1923. Serial No. 622,232. 2 Claims. (Cl. 271—2.6.)

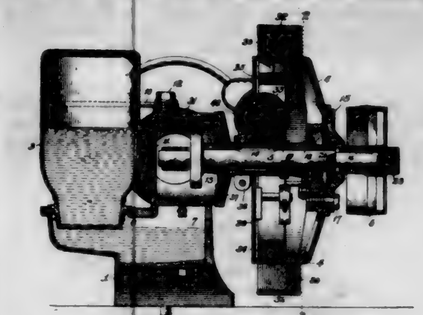


1. In apparatus for feeding webs in correct register, the combination of two pairs of rotatable rollers and a retarding device between said pairs of rollers, in which the retarding device consists of a plate secured to the frame-work and a brake-piece adapted to temporarily arrest the forward movement of the part of the web fed towards the said retarding device by the first pair of rollers by pressing slightly upon the web until it is drawn through the said retarding device, as hereinbefore explained.

---

1,565,110. INTERNAL-COMBUSTION ENGINE. HOWARD F. SNYDER, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a Corporation of Iowa. Filed Oct. 26, 1921. Serial No. 510,458. 7 Claims. (Cl. 308—106.)

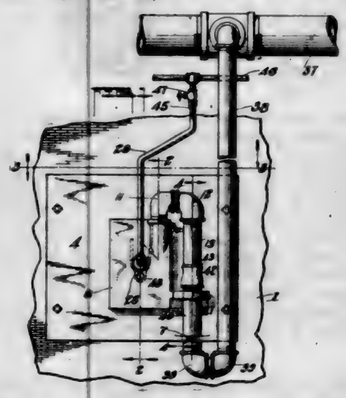
1. In a mechanism of the character disclosed, comprising a crank case, a cap plate therefor, a bearing integral with said cap plate, a shaft in said bearing and having an end thereof extending into the case, a cover plate secured to the other end of the shaft, a fan wheel secured to the cover plate, sealing means between the



fan wheel and the bearing, said cover plate enclosing the end of the bearing remote from the case for preventing leakage of lubricating fluid.

---

1,565,111. LIQUID-FUEL BURNER. JOHN SOMMER, Peoria, Ill. Filed July 22, 1922. Serial No. 576,816. 7 Claims. (Cl. 158—2.)



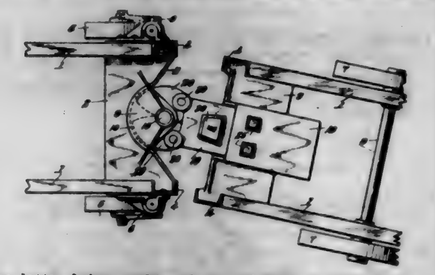
6. In an apparatus of the character described, in combination, with a furnace having a fuel inlet port a face plate attachable to the wall of the furnace and having an opening coinciding with the fuel inlet port, a door adapted to fit within the opening in the face plate and to cover the fuel inlet port, a burner nozzle on said door, a main conduit for air, pipe connections between said conduit and said door, means in said pipe connection for sustaining the weight of the door and providing a hinged connection between the door and said pipe connections, a feeder for liquid fuel, means connecting said feeder with the door for conducting the liquid fuel to the burner nozzle of the door, and a flexible connection in said last mentioned connection whereby the same may adapt itself to the swinging movement of the door.

---

1,565,112. AUTOMATIC COUPLER FOR INDUSTRIAL TRUCKS. WILLIAM H. SOMMER, Peoria, Ill. Filed Oct. 16, 1922. Serial No. 594,874. 7 Claims. (Cl. 280—33.15.)

1. An automatic coupler, including coacting coupling mechanisms, one of which comprises a housing and a vertically disposed rod secured therein; the other of which comprises a draw bar recessed at its opposite ends.

one recessed end having slots in its walls, a pair of spaced resilient means in the latter recessed end, fixed means extending through the slots of the draw bar in the space between said spaced resilient means and engageable only with one of the latter at a time for permitting limited longitudinal movement of the draw bar,



the latter being cushioned at each end of such limit of movement of said resilient means, a pair of coacting coupling members pivotally connected with said draw bar in the opposite and recessed end and adapted to have coupling connection with said rod, and removable means adapted to hold the coupling mechanism in coupling relation.

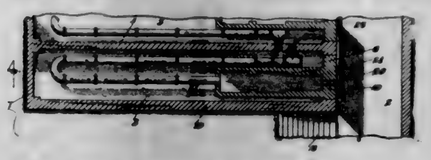
---

1,565,113. HOT TOP FOR INGOT MOLDS. WILLIAM H. SOMMER, Peoria, Ill. Filed Nov. 21, 1923. Serial No. 676,186. 8 Claims. (Cl. 22—147.)

1. A hot-top for ingot-molds, comprising a channeled body formed by inturned top and bottom flange, the flanges at the top end being of greater width than at the bottom end, and an insulating filling for said body with an opening therethru, in cross-section corresponding to the opening thru the top of said flanges and with the opening at the top of said mold.

---

1,565,114. BAKER. WILLIAM H. SOMMER, Peoria, Ill. Filed Nov. 21, 1923. Serial No. 676,188. 5 Claims. (Cl. 263—38.)



1. In a baker, a plurality of spaced walls defining tunnels, frame work in the tunnels dividing same into upper baking chambers and lower firing chambers, a combustion chamber in each firing chamber at one end thereof having its sides spaced from the adjacent sides of the firing chamber, exhaust stacks in certain of the walls, and metal conduits in the respective firing chambers connected at one end to an end of the combustion chamber and extending therefrom to adjacent the opposite ends of the tunnels and thence returning along the opposite side wall of the tunnel to adjacent the front of the combustion chamber and extending into the stack of said side wall, and means to support the conduits from the frame work.

---

1,565,115. SOLDER. JAMES BUCKNER SPEED, New York, and ARTHUR H. FALK, Brooklyn, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 11, 1924. Serial No. 685,666. 5 Claims. (Cl. 75—1.)

1. A solder consisting of substantially 11% silver and 86 to 89% tin.

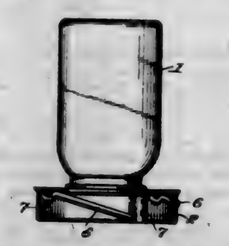
---

1,565,116. NECKTIE. HELEN SPENCER, London, England. Filed Feb. 24, 1925. Serial No. 11,346. 1 Claim. (Cl. 2—155.)

A scarf or necktie comprising two ends for tying, one of said ends having a tubular portion and being connected to the other by elastic material which when not in extended position is concealed within said tubular portion and which when in use occupies a position at the side of the collar, said other end of said scarf or necktie having a single hook adapted to engage any convenient part of the collar and to hold said other end against the tension of said elastic material during typing, whereby on release of said hook the knot automatically assumes its correct position in relation to the collar and is retained in said position.

---

1,565,117. FEEDER. EDWARD STABBERT, Tacoma, Wash. Filed Nov. 11, 1924. Serial No. 749,263. 2 Claims. (Cl. 119—53.)



1. An automatic feeder comprising a receptacle and a pan, means for holding the mouth of the receptacle at any desired distance from the bottom of the pan, such means consisting of a collar attached to the receptacle and means for adjustably connecting said collar with the pan, such means consisting of arms carried by the collar and engaging spiral grooves in the walls of the pan.

---

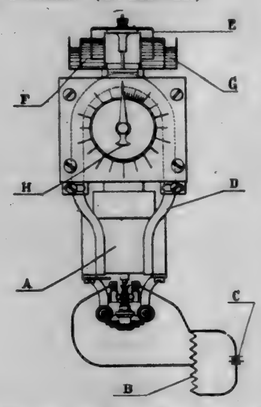
1,565,118. FOLDABLE BRACKET. JAMES C. STUGARD, Muncy, Pa. Filed Feb. 9, 1925. Serial No. 8,069. 2 Claims. (Cl. 248—20.)

1. A foldable bracket comprising an inner stationary member having an inner horizontal slot and an outer horizontal slot, the outer end of said outer slot having an inlet throat which opens through the upper edge of said member, an outer article-supporting member at the outer end of the inner member, said outer member having an

arm disposed at one side of said inner member a fastener passing through said arm and the inner slot of said inner member, and another fastener passing through the arm and the outer slot of said inner member, the first named fastener constituting a pivot for the outer member when the latter is shifted outwardly and swung to move the second named fastener through the throat of said outer slot, the lower side wall of said outer slot being provided at its inner end with an offset notch to normally receive and form a lock for second named fastener, whereby accidental outward sliding movement of said outer article supporting member is prevented.

---

1,565,119. VISCOSIMETER. PIERRE JOSEPH THOMAS, Montrouge, France, assignor to Compagnie pour la Fabrication des Compteurs et Materiel d'Usines à Gaz, Montrouge, France. Filed Feb. 13, 1924. Serial No. 692,573. 4 Claims. (Cl. 265—11.)



1. An apparatus for measuring the viscosity of a liquid comprising in combination a tank to contain the liquid to be tested, a bell depending into said tank and having its lower end adapted to be immersed in said liquid, a motor for rotating said bell at a speed governed by the degree of resistance offered by the fluid in said tank to the rotation of said bell, said bath being removably mounted on the frame of said motor and means for indicating the speed of rotation of said bell.

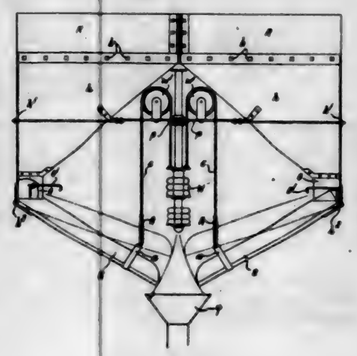
---

1,565,120. INCINERATOR. JAMES W. THOMPSON, White Plains, N. Y. Filed July 9, 1923. Serial No. 650,331. 2 Claims. (Cl. 110—18.)

1. A receptacle for burning refuse, comprising a tubular woven wire body, reinforcing hoops secured to the woven wire body intermediate of its ends and adjacent the upper and lower ends thereof, the lower ends of the wires of the tubular body below the hoop being interlocked to form a plurality of supports for the receptacle, woven wire secured to the hoop adjacent the lower end of the receptacle and forming a bottom for said receptacle, and a woven wire cover for the receptacle.

---

1,565,121. SILO OR BIN FOR THE STORAGE OF GRAIN OR THE LIKE. WILLIAM THOMPSON and WILLIAM REGINALD THOMPSON, Wexford, Ireland. Filed Nov. 26, 1924. Serial No. 752,490. 8 Claims. (Cl. 214—16.)



1. A hopper for use in a silo or bin for the storage of grain, said hopper divided by sloping side walls into a plurality of compartments, the side walls of adjacent compartments forming ridges and the ridges of all compartments being disposed about a common center, whereby the incoming grain is divided into a plurality of substantially uniform streams, each compartment formed with a discharge outlet in a region sufficiently remote from the ridges and the common center to prevent the formation of a vortex in the grain and spouts disposed beneath said outlets, said spouts hingedly connected with said hopper and directed towards one another so as to deliver beneath the common center.

---

1,565,122. AUTOMOBILE FINISH AND FINISHING PROCESS. WONG Y. TIME, Honolulu, Territory of Hawaii. Filed Dec. 5, 1924. Serial No. 754,184. 4 Claims. (Cl. 91—68.)

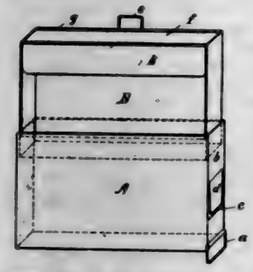
2. In a body finish of the class described, a body, a priming coat on the body consisting of red lead mixed with twenty five per cent of coach japan, and fifty per cent of raw linseed oil; a second coat consisting of white lead in oil mixed with seventy per cent of boiled linseed oil, and sand applied thereto; and a third coat consisting of white lead in oil mixed with fifty per cent of boiled linseed oil, fifty per cent of finishing varnish and sand applied thereto.

1,565,123. SELF-CLAMPING AND SELF-ADJUSTING WINDOW SHADE AND CURTAIN-ROD HOLDER. VICTOR E. TRAGER, New Orleans, La., assignor of one-fourth to Frank P. Huber, New Orleans, La. Filed Nov. 24, 1923. Serial No. 676,774. 1 Claim. (Cl. 156—23.)

A device of the character described, comprising a pair of plates, each having an inbent top and side edge meeting each other at adjacent ends to engage about the top and side edges of a window frame at its corner, angle brackets secured to said plate medially of the same, tubular telescopically engaged housings, fixed to the bracket, a coiled retractile spring passed thru the housings and having its ends looped thru the brackets, and extensible shade and curtain holding devices associated with the plate.

---

1,565,124. PROTECTING COVER FOR BANK NOTES, BONDS, AND THE LIKE. WILHELM VAGEDES, Munster, Germany. Filed Mar. 7, 1925. Serial No. 13,893. 1 Claim. (Cl. 129—43.)



Protecting cover for bank notes, bonds and other valuable papers, comprising in combination a protecting case open at one end, a box telescoped in said protecting case said box being open at one long side, a plate fixed on the inner surface of each end of said box at a short distance from this surface, a lid hingedly fixed to the free end of the bottom of said box, a flap at each end of said lid and designed to engage behind said plates, and a covering flap hingedly fixed on the free edge of said lid.

---

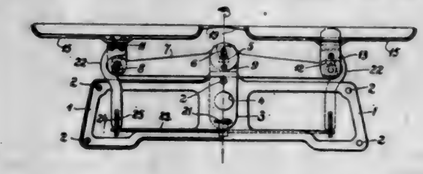
1,565,125. PROCESS OF PRODUCING A BINDING AND WATERPROOFING BITUMINOUS SOAP FOR BINDING AND WATERPROOFING PAVING AND BUILDING MATERIALS. LEONARD SCHADE VAN WESTRUM, New York, N. Y. Filed Jan. 19, 1925. Serial No. 3,494. 2 Claims. (Cl. 87—16.)

1. A process of producing a binding and water-proofing bituminous soap for binding and water-proofing paving and building materials, which consists in mixing, while hot, 30–50 parts by weight of asphaltum, 3–8 parts of resin, 3–8 parts of linseed oil and 5–50 parts of caustic soda lye until saponification is complete.

---

1,565,126. WEIGHING SCALE. RUDOLF VON FROMMER, Budapest, Hungary. Filed Feb. 28, 1925. Serial No. 12,390. 14 Claims. (Cl. 265—54.)

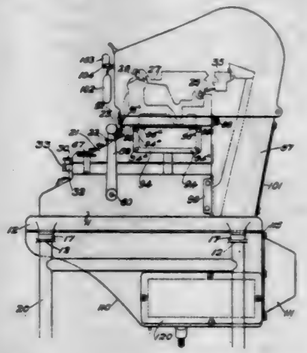
1. In a weighing-scale, the combination with pan holders, of two thrust rods directed downwardly from each of the pan holders respectively and forming the vertical members of a parallelogram, a scale-beam and a connecting rod arranged parallel to said scale beam, forming the horizontal member of said parallelogram, and a plurality of plates on each of said thrust rods having



their surfaces abutting and carrying edges on which the two ends of said connecting rods rest, thereby establishing connection between the said thrust rods and said connection rod.

---

1,565,127. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 5, 1921. Serial No. 513,003. 12 Claims. (Cl. 197—186.)



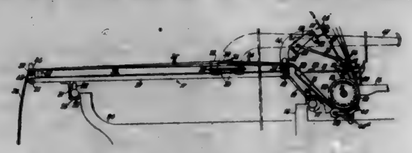
1. Sound-deadening means for a computing machine having a typewriter-portion provided with a keyboard, and having a framework formed with openings in its side and rear, a computer-portion on which the typewriter-portion rests, a base upon which a portion of said computer-portion is supported, and various computer operating mechanisms beneath said base and carried thereby and controlled by said keyboard, said sound-deadening means closing the open parts of the machine and comprising plates closing said side and rear openings in said typewriter frame, a hood enclosing said typewriter-portion at the top and rear but leaving the keyboard exposed, and an open-top casing enclosing said computer operating mechanisms and fitting against the lower side of said base to be closed thereby.

---

1,565,128. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 22, 1923. Serial No. 647,041. 18 Claims. (Cl. 197—126.)

1. In a typewriting machine, the combination of a platen mounted permanently in typing position, a platen-frame, releasable means for holding work-webs composed of a succession of forms and carbons interleaved therewith for line-space feed with said platen, a carrier for said carbons mounted for movement towards and from said platen, means for moving said carrier away from said platen with the composite web to clear the latter from said platen, and a gage at the delivery side

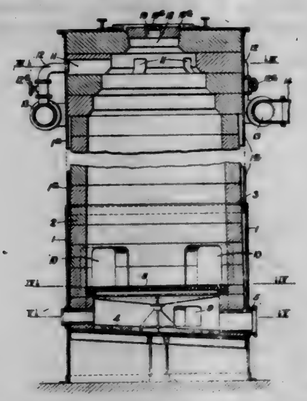
of said platen, movable from a position behind said work-webs, as they emerge from said platen, to a position in front of said platen, for gaging said work-



webs as they are drawn forwardly over said platen to effectuate a relative form-to-form shift between said work-webs and said carbons.

---

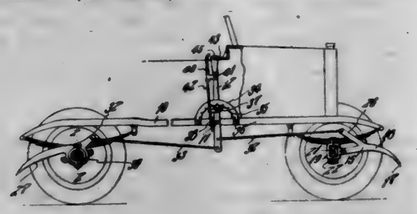
1,565,129. PROCESS OF FORMING ACTIVATED CARBON. GEORGE WIGHTMAN WALLACE, San Francisco, Calif. Filed May 15, 1925. Serial No. 30,506. 5 Claims. (Cl. 252—3.)



1. The process of preparing activated carbon which consists in subjecting carbonaceous materials in a closed chamber to downwardly traveling hot gases coming from a flame burning thereabove whereby a downwardly traveling zone of carbonization is produced, and cooling the carbonized material without access of air.

---

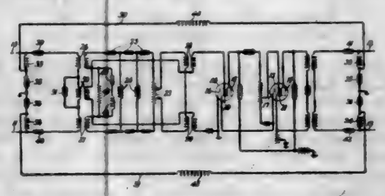
1,565,130. BRAKE. FRANK WATKINS, Huntington, Ind. Filed Feb. 28, 1925. Serial No. 12,367. 3 Claims. (Cl. 188—6.)



1. A brake mechanism for use upon automobiles comprising front and rear brakes respectively, the rear brake being pivotally secured upon the rear axle housing of the vehicle, a pair of clamping members arranged upon opposite sides of the rear brake and firmly engaging the rear axle housing thereof, extension members provided upon the inner end portions of the brakes, manually operated means pivotally secured to one of the side bars of the vehicle, and having pivoted connecting means to the lower end portion thereof and having their opposite ends correspondingly secured to the inner end portions of the brakes, manually operated spring retractile means arranged upon the manually operated braking means, an auxiliary locking means included upon the upper end portion of the manually operated means.

---

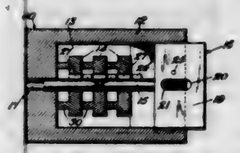
1,565,131. SIGNALING SYSTEM. RAY S. WILBUR, Lyndhurst, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 2, 1921. Serial No. 482,011. 8 Claims. (Cl. 179—4.)



1. In combination, a transmission line, an amplifying repeater, adjustable means between said line and said repeater for attenuating currents of a certain frequency range impressed on said repeater from said line, and a by-pass around said means for impressing other currents directly on said repeater without undergoing attenuation by said means.

---

1,565,132. KEYLESS LOCK. MEADE WILDRICK and ALEXANDER GILCHRIST HATCH, Honolulu, Territory of Hawaii, assignors to W-H Keyless Lock Company, Limited. Filed July 28, 1924. Serial No. 728,770. 2 Claims. (Cl. 70—53.)



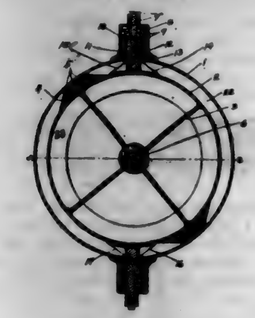
1. In a keyless lock, a casing provided with a recess and a longitudinal bore; a plurality of permutation discs in said recess, each having an integral annular flange, an axial bore and a keyway extending radially from said bore; the outer diameters of said flanges being less than that of said discs and the inner diameters thereof being greater than the diameter of said bore, said flanges serving to space said discs laterally and to form closed circular chambers between adjacent discs, the outer peripheries of said flanges being provided with circumferentially spaced notches; detent springs secured within said recess and engaging said notches to yieldingly maintain said discs in set positions; a bolt having a head and a shaft extending through the bores of said discs, slidably mounted in said casing bore; said shaft having projections adapted to enter said keyways and said circular chambers; and means for sliding said bolt.

---

1,565,133. ROTARY MOTOR. ARTHUR J. WILLIAMS, Nashville, Tenn., assignor of one-fourth to Cheever J. Cameron, one-fourth to William F. Glenn, jr., and one-fourth to Ivo B. Glenn, all of Nashville, Tenn. Filed Apr. 13, 1922. Serial No. 552,438. 2 Claims. (Cl. 121—77.)

1. In a rotary engine, the combination of a cylindrical stator having side plates, a cylindrical rotor journaled in the stator and having annular end flanges, pistons on the rotor to cooperate with the stator, sliding

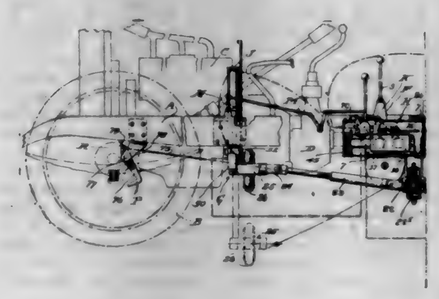
abutments on the stator to cooperate with the rotor, said flange and said end plates being provided with registering annular grooves, mating interfitting annular pack-



ing rings accommodated in said grooves, said rings being each substantially F-shaped in cross section, and springs confined between the rings pressing said rings apart.

---

1,565,134. SUPPLEMENTARY TRACTION DEVICE FOR MOTOR VEHICLES. VILLOR P. WILLIAMS and MIRIAM S. F. WILLIAMS, Baltimore, Md.; said Villor P. Williams assignor to said Miriam S. F. Williams. Filed Oct. 8, 1924. Serial No. 742,400. 11 Claims. (Cl. 180—1.)

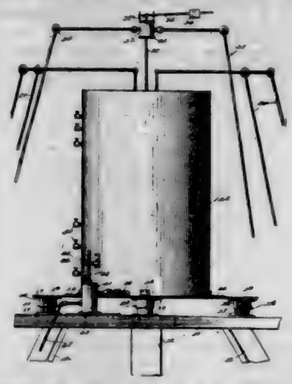


1. The combination with a prime mover and selective transmission means, of traction devices coupled with said transmission means for rotational movement, a closed system of fluid circulation including a pressure generating element coupled with said transmission means, means for controlling the generation of pressure in said system and means interposed in said system of fluid circulation and engaging said traction devices for moving the same in a vertical path upon increase or decrease of fluid pressure in the system.

---

1,565,135. OIL AND GAS SEPARATOR. CLARENCE J. WOLFE, Quay, Okla. Filed Dec. 17, 1924. Serial No. 756,494. 2 Claims. (Cl. 183—2.7.)

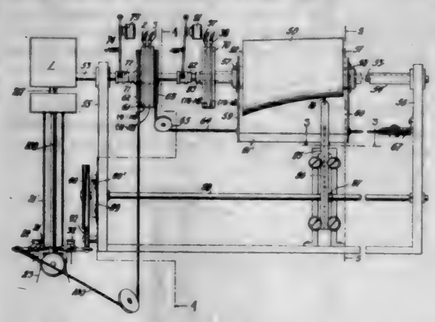
1. A separator for gas and oil comprising a tank, means for yieldably supporting the tank and comprising a stationary structure, cross bars connected to the tank, and yieldable supports between the cross bars and the stationary structure, said yieldable supports comprising telescoping cylinders and coil springs within the cylinders and engaging the stationary structure and the cross bars; flexible supply line conveying commingled gas and oil to the tank, a pressure controlled gas outlet leading from the upper part of the tank, an outlet for the oil leading from the lower part of the tank, a valve controlling said outlet, and motion transmission



means between the tank and the valve for opening the valve as the tank moves downwardly and closing the valve as the tank moves upwardly.

---

1,565,136. MEASURING AND RECORDING DEVICE. JAMES C. WRIGHT, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 2, 1923. Serial No. 672,321. 5 Claims. (Cl. 234—1.5.)



5. A device for recording the value of relative humidity; comprising a geometrical surface representing relative humidity as a function of two variables, said surface being mounted upon a member with respect to which it is movable relative to the coordinates of one of the variables, and said surface and the member being movable together relative to the coordinates of the other of said variables; means comprising an automatically and periodically balanced electrical bridge to measure one of the variables; means associated with said bridge to move said surface relative to said member; means comprising an automatically and periodically balanced electrical bridge to measure said second variable; means associated with said bridge to move said member; means for recording the value of relative humidity; and means cooperating with said surface to control said recording means.

---

1,565,137. COMBINATION TOOL. STEFAN ZAOKIPNY, Moose Jaw, Saskatchewan, Canada. Filed Mar. 13, 1924. Serial No. 698,896. 1 Claim. (Cl. 33—89.)

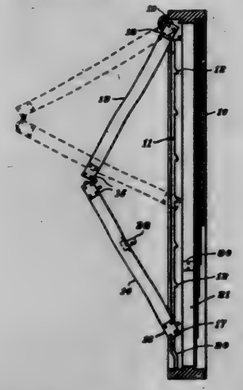
In a tool of the type described, a two-part body portion, a plurality of pins carried by one part of said body portion, a plurality of apertured resilient clips carried by the other part and receiving the pins in said apertures for connecting said parts, one of said parts having an

opening therein entering the same from the face engaging the second part, a spirit tube in said opening and held therein by the last mentioned second part, said spirit tube adapting said body portion to function as a plumb, and scaled means attached to said body portion for permitting the scribing of right angle lines with one line extending truly vertical and the other truly hori-

zontal, said scaled means including a section hinged longitudinally to one part of the body portion and having one transverse edge squared and the other transverse edge beveled at a 45° angle, a section hinged to the squared edge to unfold into a position in longitudinal alinement with the first section, and a section having a transverse edge beveled at a 45° angle hinged to the similar edge of the first section and adapted to unfold to a position at right angles to the first two mentioned sections.

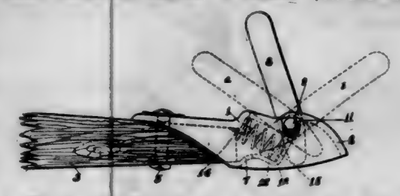
---

1,565,138. WINDOW CONSTRUCTION. PRICE ALDERFER, Souderton, and THOMAS F. CLEMENTS, Philadelphia, Pa. Filed Mar. 13, 1923. Serial No. 624,774. 1 Claim. (Cl. 20—42.)



In a window construction, the combination with a window frame formed with run-ways, plates at the top of said frame having slots communicating with the upper end of the run-ways, the slots in said plates curving outwardly away from the run-way and terminating at their upper end in a tapered shoulder, having an outwardly positioned depressed shoulder at their lower ends, hingedly connected sashes, and lugs on each of said sashes and movable in said run-ways, the lugs on the upper one of said sashes adapted to move in the slots in the plates and into the shoulder therein.

1,565,139. HAY-RETAINING DEVICE FOR HAY-STACKERS. ROBERT R. BOWERS, Branson, Colo., assignor to Dain Manufacturing Company of Iowa, Ottumwa, Iowa, a Corporation of Iowa. Filed Sept. 27, 1923. Serial No. 665,159. 6 Claims. (Cl. 214—144.)



1. The combination of a hay stacker tooth having a hollow point, a hay retaining finger pivotally supported thereon having a free rocking movement for a limited distance and adapted to yield rearwardly beyond said distance by pressure, and a spring operating to return said finger to its freely movable position when the pressure is relieved.

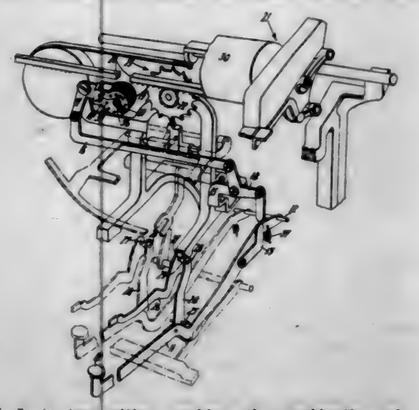
---

1,565,140. RAIL CLAMP FOR PLANERS AND THE LIKE. FORREST E. CARDULLO and HOWARD W. HUNT, Cincinnati, Ohio, assignors to The G. A. Gray Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 24, 1921. Serial No. 480,214. 15 Claims. (Cl. 90—87.)

1. A rail clamping device for machines of the character described, comprising a rail, a pair of supports therefor, a pair of clamps pivotally fastened to the said rail and having clamping surfaces adapted to engage the said supports, a rotary shaft extending longitudinally of the said rail, and means operable by rotation of the said shaft and adapted to actuate the said clamps, the said shaft being adapted to move longitudinally to permit equal clamping action of the two clamps.

---

1,565,141. TYPEWRITING MACHINE. CORNELIUS B. CORCORAN, deceased, late of New York, N. Y., by Michael J. Corcoran, administrator, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 4, 1924. Serial No. 690,418. 14 Claims. (Cl. 197—84.)



1. In a typewriting machine, the combination of a carriage, letter-feeding mechanism therefor, a type, an element for operating said type and controlling the

operation of said letter-feeding mechanism, and selective means for automatically securing a variable number of blank spaces upon the operation of said type, including means controlled by said operating element at the operation of said type, for releasing the carriage from the letter-feeding mechanism and jumping the carriage forwardly a predetermined uniform number of spaces from substantially any position of the carriage in its travel, said means including a part adjustable to determine the number of blank letter-spaces jumped by the carriage.

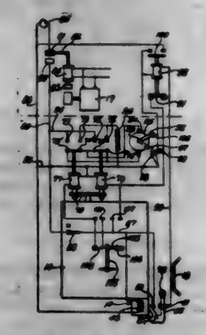
---

1,565,142. LIP-STICK HOLDER. CHARLES NEWTON CORYELL, Mamaroneck, N. Y. Filed Aug. 8, 1923. Serial No. 656,893. 2 Claims. (Cl. 206—56.)

1. In a holder of the character disclosed, concentrically disposed relatively rotatable tubular members, one having a longitudinal slot and the other a helical slot, an open-ended carrier guided in the inner tubular member and having a pin transverse of the carrier and extending beyond the side thereof at the bottom of the carrier providing a stop for an article in the carrier, said extended portion operating in the longitudinal and helical slots in the two members, the inner member being closed at one end by an operating head provided with a shoulder rotatably engaged by the adjoining end of the outer member, the opposite end of the inner member being open and having an outwardly turned flange rotatably engaging over the adjoining end of the outer slotted member, whereby said outer slotted member is rotatably confined between the shoulders provided by the head and out-turned flange at the opposite ends of the inner member, a casing fixedly engaged over the outer slotted member and a cover for the open end of the holder, said cover engaging over the end of the casing and said casing having an internal shoulder engaging over the out-turned flange on the end of the inner slotted tubular member.

---

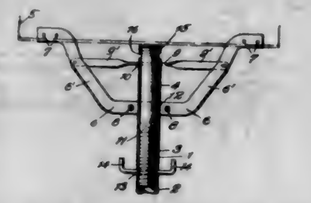
1,565,143. ELEVATOR-DOOR CONTROL. HAROLD J. FEAR, Montclair, N. J., assignor to Elevator Supplies Company, Inc., Hoboken, N. J., a Corporation of New Jersey. Filed Oct. 6, 1924. Serial No. 741,910. 22 Claims. (Cl. 187—52.)



9. In combination, a hatchway having floor landings, a car, a hoisting motor and means to cut out the same, gates at the landings and on the car, gate opening mechanism individual to each gate and means automatically actuated when the car nears a floor with the hoisting motor cut out to open the car gate and the landing gate at that floor only.

---

1,565,144. POST SUPPORT FOR RURAL-ROUTE MAIL BOXES. CHARLES S. HARRELL, Tower Hill, Ill. Filed June 1, 1925. Serial No. 34,045. 1 Claim. (Cl. 232—40.)



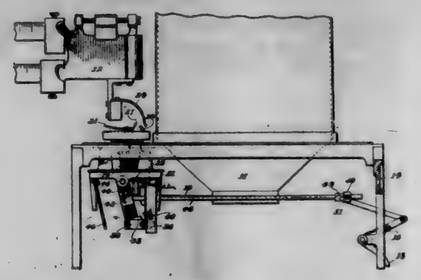
In a post support for rural route mail boxes, a post having an upper V-form seat and a reduced upper end above said seat, a sleeve revolubly and slidably mounted upon said reduced upper end and having a lower V-form extension engaging said seat, means carried by said sleeve for supporting a mail box comprising opposite strap irons having approximated lower ends having clamp bolt connections and upwardly extending arms bolted at their upper ends to said box, the said arms of each strap iron being divergent relative to each other and the arms of the opposite strap irons being also divergent relative to each other, each strap iron having a brace connecting the arms thereof and contacting centrally with said sleeve to prevent side sway of the said box, and a cap for said reduced upper end spaced from the upper end of said sleeve, the latter being vertically movable upon said reduced upper end to disengage said extension from said seat and revoluble to admit of reengagement of said extension and seat in a reversed position of said box.

---

1,565,145. RADIODOLL. BEULAH L. HENRY, New York, N. Y. Filed Feb. 12, 1925. Serial No. 8,768. 2 Claims. (Cl. 46—40.)

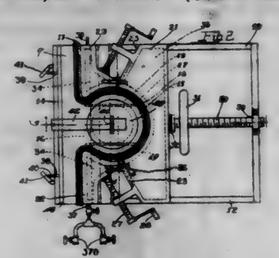
1. As a new article of manufacture, a hollow doll having a body and head portion, a radio cabinet disposed in the body portion with the panelboard thereof arranged flush with the rear surface of the doll, said surface having an opening therein to receive the panelboard, a loud speaker device located above the radio cabinet having the unit disposed within the head of the doll and the horn thereof extending downwardly and forwardly to the breast of the doll, said doll having an opening in the breast for the end of the horn, a supporting wall member mounted on top of the radio cabinet and acting as a support for the bell of the horn.

1,565,146. AUTOMATIC SCALE. CARL R. HERMAN, Crafton, Pa., assignor to James F. Cook, Crafton, Pa. Filed May 21, 1924. Serial No. 714,854. 2 Claims. (Cl. 249—63.)



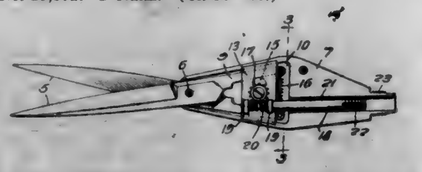
1. A cut-off for scales embodying a swaying beam, a sliding plate, a trigger positioned to hold the sliding plate in discharging position, a solenoid having a sliding core connected with the trigger, a source of electrical energy, a circuit including said source of energy and said solenoid, a switch introduced into said circuit and actuated by the sliding of the plate, and a second switch introduced into said circuit and actuated by the swaying of the beam.

1,565,147. CLOCK CABINET. WALTER J. HERSCHEDE and WALTER EBERHARDT, Cincinnati, Ohio, assignors to The Herschede Hall Clock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 23, 1923. Serial No. 658,867. 7 Claims. (Cl. 144—256.)



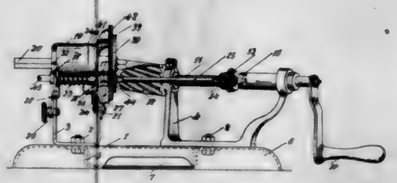
1. In a device of the class described, the combination of a fixed mold mounted on a base, a movable mold mounted for cooperative adjustment with the fixed mold, the fixed and movable molds having adjustable sections slidably mounted thereon, means carried by the base and movable mold for adjusting and clamping said movable mold and means carried by the movable mold for actuating the adjustable portions thereof.

1,565,148. POWER-OPERATED SCISSORS. WILLIAM L. HOFFMAN, Easton, Pa. Filed Apr. 1, 1925. Serial No. 19,872. 1 Claim. (Cl. 30—13.)



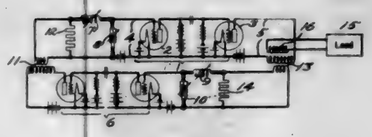
A motorized cutting implement comprising a two part casing externally shaped to fit within the closed hand, a partition seated in one part of such casing and held in position by the other part of the casing, pivotally connected blades mounted at one end of the casing and extending beyond the same as cutting portions and within the same below the partition as operating members, a rotating element supported in the partition and formed to actuate the operating members, and a shaft mounted in the upper portion of the casing and supported on the partition, said shaft operating said rotating element.

1,565,149. SHARPENER FOR PENCILS, CRAYONS, AND THE LIKE. CARL HOLENSTEIN, Oerlikon, Switzerland. Filed Dec. 8, 1923. Serial No. 679,421. 2 Claims. (Cl. 120—95.)



1. A sharpener for pencils, crayon pencils and the like comprising in combination a sharpening tool, a holder for the pencil mounted so that it is adapted to oscillate around an axis parallel to its central line, an abutment for said holder, means for pressing said holder against said abutment, clamping members movably mounted on said holder, a driving mechanism designed for rotating said holder, and means connecting said driving mechanism with said holder in such a manner that the clamping members are brought to the clamping position before the holder begins to rotate.

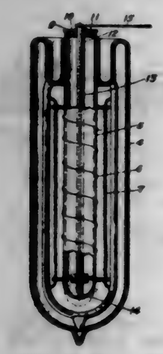
1,565,150. OSCILLATION GENERATOR. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 9, 1923. Serial No. 650,293. 8 Claims. (Cl. 250—36.)



1. The method of generating oscillations which comprises regeneratively amplifying oscillations and alternately selecting and amplifying a plurality of times the wave of generated frequency during each cycle of regeneration.

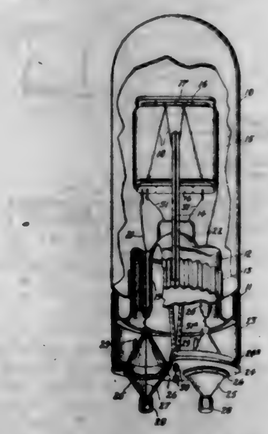
1,565,151. ELECTRIC DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1919. Serial No. 347,812. 34 Claims. (Cl. 250—27.)

1. In combination, a space current discharge device comprising an evacuated envelope containing a plurality of electrodes, said device being normally operative, and automatic means responsive to a condition of said device for rendering said device inoperative.



27. An electron discharge device comprising an envelope, cathode, anode and control electrodes therein and a contact operable in response to temperature changes in one of said electrodes.

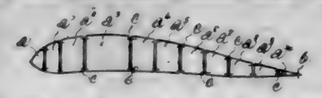
1,565,152. VACUUM INSULATOR AND ITS ASSEMBLY. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1920. Serial No. 426,454. 6 Claims. (Cl. 250—27.)



1. In an electric discharge device, a base, a unitary evacuated vessel of insulating material carried by said base, said vessel tapering conically toward the ends thereof, a leading-in wire of an electrode of the tube passing through said vessel, a cap mounted on one of said ends, and an electrical connection between said leading in wire and said cap.

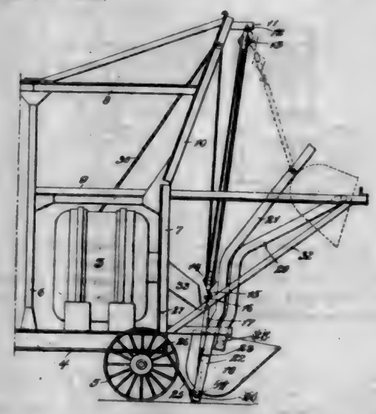
1,565,153. SUSTAINING AND STEERING SURFACE FOR AIRCRAFT. JEAN HUBERT, Paris, France. Filed July 10, 1922. Serial No. 573,994. 4 Claims. (Cl. 244—12.)

2. A sustaining or steering plane for aircraft comprising a plurality of elongated cells extending side-by-side in substantial parallelism, two opposite sides of the cells forming the surfaces of the plane and other opposite sides of the cells being in abutting relation with adjacent cells, and fastening devices located at points



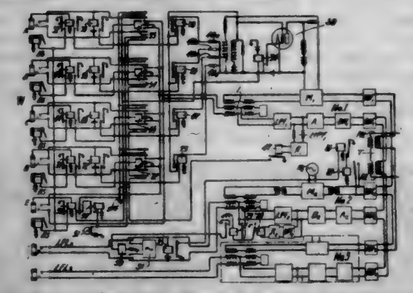
removed from the surfaces of the plane and extending in a direction transversely of the length of the cells to secure the latter together.

1,565,154. DISTRIBUTOR FOR CONCRETE MIXERS. CHRISTIAN J. HUG, Highland, Ill., assignor to The Hug Company, Highland, Ill., a Corporation of Illinois. Filed Nov. 22, 1923. Serial No. 676,433. 2 Claims. (Cl. 214—120.)



1. In a distributor for concrete mixers a bucket having a shaft secured to its bottom; guide-rollers mounted on the ends of said shaft; a channeled guide-member and a hinged lower extension thereof wherein said guide-rollers travel; other guide-rollers mounted on the sides of said bucket; a channeled guide-member arranged to receive said last-named guide-rollers; a bail affixed to said shaft and arranged to draw the bucket upwardly, its guide-rollers traveling in said guide-members, and tilting said bucket to discharge its contents.

1,565,155. CARRIER SIGNALING SYSTEM. JACOB S. JAMMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1923. Serial No. 663,745. 14 Claims. (Cl. 179—15.)

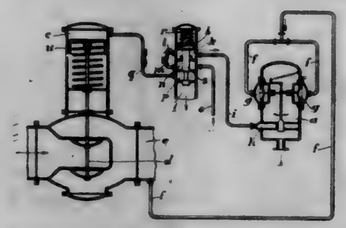


1. In a carrier wave signaling system, a carrier wave channel, stations in which said channel terminates, a modulator at one station, a detector at another station, a plurality of low-frequency terminal circuits adapted

to be operatively associated with said modulator, a corresponding plurality of low-frequency terminal circuits adapted to be operatively associated with said detector, and means controlled in response to the taking for use of one of the first-mentioned terminal circuits for operatively associating it with the modulator and for operatively associating one of the second-mentioned plurality of terminal circuits with the detector.

---

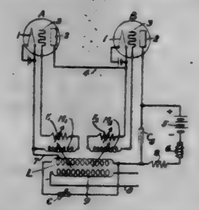
1,565,156. CONTROLLING DEVICE OPERATING BY THE AID OF A RELAY. CARL GUSTAF JANSON, Stockholm, and NILS PERSSON, Lidingon, Sweden, assignors to Aktiebolaget Vaporackumulator, Eriksbergsgatan, Stockholm, Sweden, a Corporation. Filed July 29, 1922. Serial No. 578,521. 35 Claims. (Cl. 137—139.)



18. A relay for control apparatus comprising a conduit carrying liquid under pressure, an aperture in the surface of said conduit, a throttling member normally spaced from said surface, means to slide said throttling member over said aperture.

---

1,565,157. CIRCUIT ARRANGEMENT FOR DISCHARGE DEVICES. JOHN B. JOHNSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 7, 1919. Serial No. 288,170. 22 Claims. (Cl. 250—36.)

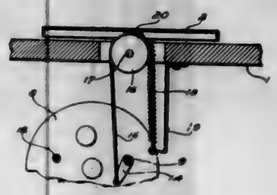


1. An oscillation generator comprising a source of space current, a plurality of electron discharge devices having a plate circuit, grid circuits and a frequency determining circuit included in said plate circuit, means for coupling said plate and grid circuits, said devices beng arranged in series with each other with respect to said source for converting the energy supplied by said source into oscillations.

---

1,565,158. PHONOGRAPH STARTING AND STOPPING DEVICE. LOUIS JURENKA, New York, N. Y. Filed May 21, 1925. Serial No. 31,962. 2 Claims. (Cl. 58—14.)

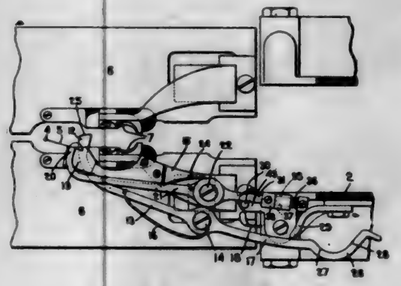
2. In an automatic starting device for talking machines, a brake shoe acting as a starting member, a spring for moving the brake shoe to start the turntable of the talking machine, a cord acting to normally prevent said spring from functioning, a pulley wheel coacting with the cord, brake shoe and wheel for normally holding the parts so that the brake shoe will engage the turntable of the talking machine and thereby prevent its rotation, an arm having one end connected with said cord, an alarm clock formed with alarm mechanism, said arm at one end being connected with said alarm mechanism



whereby the same is held in a given position so as to prevent the spring from functioning until the alarm mechanism is released whereupon said spring will move said cord and said shoe, the movement of the shoe being to a lower point on said wheel, said movement of said shoe releasing and starting said turntable.

---

1,565,159. THREAD-TRIMMING DEVICE FOR SEWING MACHINES. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Buttonhole Machine Company, Boston, Mass., a Corporation of Maine. Filed Feb. 26, 1921. Serial No. 447,988. 8 Claims. (Cl. 112—252.)

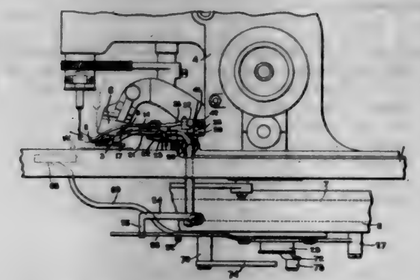


1. In a sewing machine constructed to sew a short seam and then come to rest, the combination with stitch-forming mechanism and work-holding means movable relatively to each other, said stitch-forming mechanism including a needle, of means operative at the end of each seam to grip the needle thread between the needle and the work, means to cut the thread between the gripper and the work, and means rendered operative by such relative movement to actuate first the thread gripping device at the end of each seam, then to actuate the cutter to cut the thread, and also to actuate the cutter a second time after the next succeeding seam has begun to be stitched.

---

1,565,160. THREAD-TRIMMING DEVICE FOR SEWING MACHINES. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed June 5, 1922. Serial No. 566,010. 14 Claims. (Cl. 112—252.)

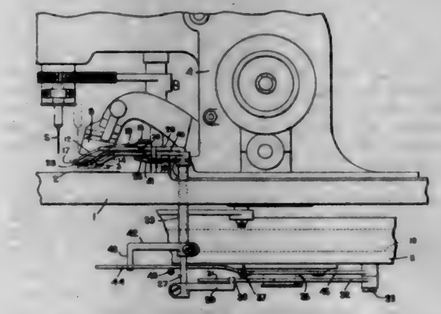
1. In a sewing machine, the combination with work-holding means and stitch-forming mechanism having a relative movement, of means operated by such relative movement to seise and hold the thread after the completion of the seam, and cam-operated means to cut the



thread between the thread-holding means and the work both at the end of the seam and at the beginning of the seam.

---

1,565,161. THREAD-TRIMMING DEVICE FOR SEWING MACHINES. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Original application filed June 5, 1922, Serial No. 566,010. Divided and this application filed Jan. 28, 1924. Serial No. 688,926. 4 Claims. (Cl. 112—252.)



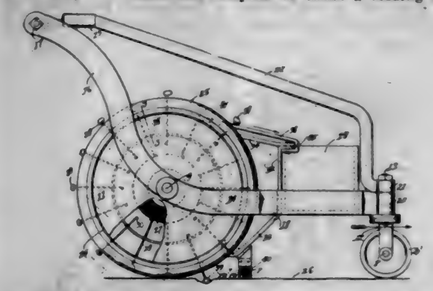
1. In a sewing machine, the combination with a bed plate, of work-holding means carried thereby, stitch-forming mechanism, a thread-holding device mounted on the work-holding means, a rock shaft extending vertically through the bed plate and journalled therein, said rock shaft having fast thereto one arm above the bed plate for actuating the thread-holding means and another arm below the bed plate, a cam-actuated lever to engage the second arm thereby to oscillate the rock shaft, and means to cut the thread.

---

1,565,162. PRUNE HARVESTER. FRANK W. KING, Kellogg, Calif., assignor of one-half to Heber L. Nay, Sebastapol, Calif. Filed Sept. 5, 1924. Serial No. 736,181. 1 Claim. (Cl. 56—328.)

In a device of the character described the combination with a receptacle holding frame including a front steering wheel and a pair of driving wheels, a drum positioned between and rotatable with said driving wheels, a plurality of prune picking elements slidably carried in said drum, co-operating means carried by said drum and frame for periodically releasing said elements for penetrating and retaining thereon the fruit deposited on the ground, said means including flexible bands in frictional

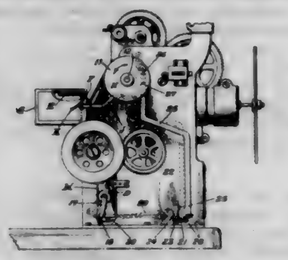
contact with the fruit picking elements and secured to the outer periphery of the drum, and release members carried by the frame and adapted to cause a folding of



the flexible bands, and conveying means carried by said frame whereby the pierced fruit is conveyed to the receptacle of the frame.

---

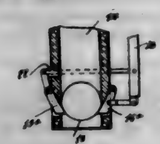
1,565,163. MOVING-PICTURE-PROJECTING MACHINE. LUKE KIRAL, Brooklyn, N. Y. Filed Nov. 3, 1924. Serial No. 747,624. 2 Claims. (Cl. 88—17.)



1. An attachment for moving picture projecting machines comprising a member adapted to be pivoted to the take-up sprocket shaft of the machine, a bell crank lever, a link connecting said member with said bell crank lever, a second link connected with said bell crank lever, and a pin and slot connection between said bell crank lever and the friction wheel of the machine, and spring means for holding said member under tension when said member is in co-acting engagement with a film strip.

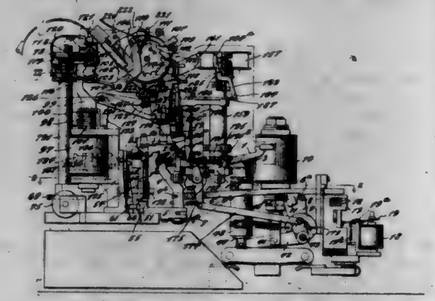
---

1,565,164. FARE REGISTER. WILLIAM C. KLEIN, Allentown, Pa. Filed Nov. 22, 1924. Serial No. 751,717. 1 Claim. (Cl. 194—6.)



A box having a coin chute, a vertically disposed armature adjacent said chute pivoted at one end, an electromagnet coacting with said armature, contacts extending into the passage way of the chute adapted to be bridged by a coin to energize the electro-magnet and thereby retract the armature, one of said contacts being carried by the armature and extending into the chute, a laterally extending arm on said armature having a detent for coin, said detent extending into the chute from the side thereof opposite to the last mentioned contact, and an operating member extending laterally from the armature.

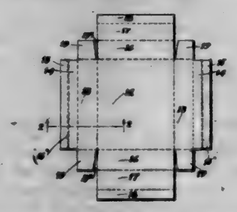
1,565,165. TELEGRAPH PRINTER. EDWARD E. KLEINSCHMIDT, Chicago, Ill., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 21, 1920, Serial No. 390,598. Renewed Oct. 26, 1925. 103 Claims. (Cl. 178—27.)



1. In a selecting mechanism; a plurality of selector magnets; a movable pawl carrier, a plurality of pawls mounted on said pawl carrier and controlled by said selector magnets; and a plurality of movable selector bars controlled by said pawls; said pawls being in spaced relation in the direction of movement of said selector bars, with respect to each other.

---

1,565,166. LEAKPROOF PAPER BOX AND METHOD OF MAKING THE SAME. ELIE W. LABOMBARDE, Nashua, N. H. Filed Apr. 10, 1922. Serial No. 551,030. 6 Claims. (Cl. 229—34.)

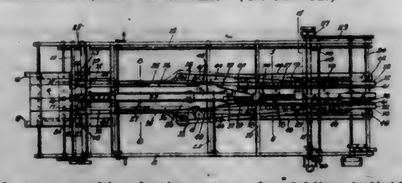


2. A box member blank creased to provide a plurality of lines for folding four marginal portions to form double-thick walls, two of said foldable marginal portions having tongue flaps extending from the ends of the inner sections, and the outer sections of said two foldable marginal portions having creases of greater depth than the other creases of the blank.

3. The method of making boxes for containing ice cream and the like, consisting in folding wall portions of the blanks, then waxing the blanks and finally converting the blanks to receptacle form.

---

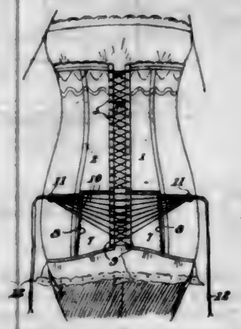
1,565,167. CARTON-MAKING MACHINE. HAROLD S. LABOMBARDE, Nashua, N. H. Filed Feb. 18, 1925. Serial No. 9,924. 31 Claims. (Cl. 93—41.)



1. In a machine having means for folding individual blanks to flat condition with adjacent edges, means for moistening areas of each blank near its edges, means for applying a strip of gummed tape to said areas, and means for causing the blanks to travel from the moistening means to the tape applying means in spaced and timed relationship to effect accurate location of the tape on the blanks.

---

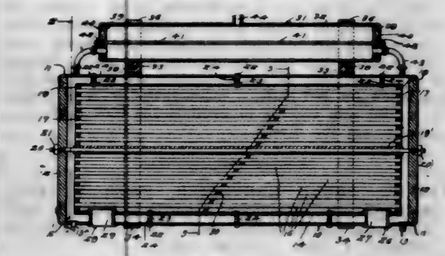
1,565,168. ATTACHMENT OR ADJUSTABLE BACK FOR CORSETS. KATE LOUISE LAMBERGER, New York, N. Y. Filed June 26, 1922. Serial No. 570,791. 1 Claim. (Cl. 2—29.)



In a corset of the type herein set forth, a body portion having its upper edge disposed adjacent to and upwardly of the waist line, the lower edge of the corset extending below the hip portions of the wearer throughout its circumference to present a long straight hip effect, the central portion of the lower end of the corset back being cut away with the side walls of the cutaway portion being disposed adjacent the sides of the hips of the wearer when in use, horizontally swinging closure flaps for the rear cutaway portion of the back overlying the buttocks with each closure flap having the outer vertical edge secured to the adjacent side wall of the cutaway portion to form a hinge connection therewith, each closure flap being substantially rectangular in plan view, the free adjacent vertical edges of the closure flaps being reinforced and parallel and having eyelets therein, lacing clusters associated with the eyelets and tying cords carried by the lacing clusters having their ends adapted to be secured together at the front side of the corset.

---

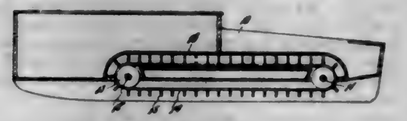
1,565,169. WATER-TUBE BOILER. MARTIN A. LAWSON, Middletown, Ohio. Filed Aug. 4, 1922. Serial No. 579,644. 1 Claim. (Cl. 132—140.)



A boiler having a water drum, end heads detachably secured to said water drum, a heater drum within said water drum, a tie rod carried by the heater drum and having its terminal extending through openings in said end heads, detachable fastenings on said terminals exteriorly of the drums and engaging said end heads to supplement the fastening of the end heads to the first drum, nipples connected to the drums and engaging opposite ends thereof to constitute inlet and exhaust openings respectively for the products of combustion, a live steam cylinder offset from the water drum, removable end heads for the live steam cylinder having threaded connection to the live steam cylinder, a tie rod extending longitudinally of the live steam cylinder and through its end head, fastenings on the terminals of the latter tie rod engaging the latter end heads, connections extending from the latter end heads to the water drum, blocks resting on the water drum inwardly of said connections, the live steam cylinder resting on said blocks, clamps surrounding the water drum, clamps surrounding the live steam cylinder, said clamps having their terminals in overlapping relation and disposed at the sides of the blocks, and fastenings passing through the terminals of the clamps and said block to secure the clamps and the blocks in place.

---

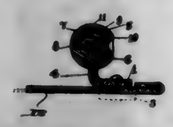
1,565,170. PROPELLING MEANS FOR BOATS. FRANK LE ROY, Aberdeen, Wash. Filed Jan. 28, 1925. Serial No. 5,345. 1 Claim. (Cl. 115—62.)



The combination with a boat having spaced longitudinal openings in the bottom thereof, an inverted channel member of U-shaped formation in cross section arranged within the boat and covering the adjacent opening, to prevent water from entering in the boat through said opening, the corresponding inner walls of the respective members reposing upon the adjacent edges of said opening, the corresponding outer walls of said members projecting through said opening, flanges projecting laterally from the last mentioned walls but reposing upon the sides of the boat to assist in holding said members in position, spaced parallel transverse shafts journalled on the walls of said channel members, spaced drums carried by said shafts and arranged in each channel member, an endless belt trained over each pair of drums, paddles carried by said belt and adapted to pass through the water with the lower rod run thereof, a crank portion formed on one of said shafts, and a reciprocating rod connected with said crank portion for rotating said shaft for the purpose specified.

---

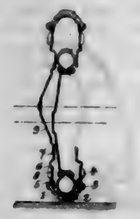
1,565,171. KNIFE HEAD FOR HARVESTERS. ROBERT C. LIVERAY, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 20, 1922. Serial No. 545,110. 6 Claims. (Cl. 56—303.)



6. A knife head formed of sheet metal and including a vertical web having a substantially hemispherical cup shaped projection on one side thereof with a central aperture, a member composed of two opposed substantially hemispherical parts, one of said parts having the same diameter as the inside of the cup and adapted to be positioned therein, the second part having the same diameter as the outside of the cup and co-operating with said cup to form a substantially spherical bearing, and a stud on the substantially hemispherical part in the cup extending into said aperture and expansible therein to hold said member and cup rigidly together.

---

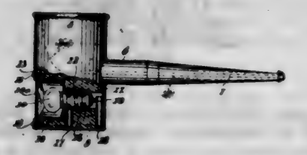
1,565,172. TIRE PROTECTOR. LUCIEN PAUL CÉLESTIN LOTTE, Paris, France. Filed May 20, 1924. Serial No. 714,714. 7 Claims. (Cl. 305—7.)



7. The combination with a wheel provided with a pneumatic tire, of a tire protector comprising two annular cheeks, an external roller path of flexible material and of U cross section, the outer edges of the said cheeks being secured to the edges of said roller path, and an internal roller path of metal disposed against the inner wall of the said roller path of flexible material, the edges of the said internal roller path being inwardly curved in such manner as to be separated from the inner wall of the roller path of flexible material, the inner diameter of said metal roller path being considerably larger than the outer diameter of the wheel including the pneumatic tire, and the said cheeks having a stepped transverse outline whereby the space between the cheeks in the part adjacent the periphery shall be considerably larger than the pneumatic tire of the wheels, and the said space in the portion adjacent the sides of the pneumatic tire at the upper part of the wheel shall be scarcely larger than the said tire.

---

1,565,173. ILLUMINATING MEANS FOR SMOKERS' APPLIANCES. GEORGE LYESO, Kingmont, W. Va., assignor of one-tenth to Mike Hrib, Rosemont, W. Va. Filed Feb. 5, 1925. Serial No. 7,036. 3 Claims. (Cl. 240—2.)



1. In a device of the type described, the combination with a smoker's appliance, of a bulb socket embedded in said appliance, an electric bulb mounted in said socket, a conductor tube embedded in the appliance and contacting with said socket, and a second conductor tube embedded in the appliance and contacting the inner end of the stem of the electric bulb.

---

1,565,174. REVOLVING-BRUSH CLEANER. JOSEPH A. MCANERNEY, New York, N. Y. Filed July 13, 1923. Serial No. 651,351. 1 Claim. (Cl. 15—48.)

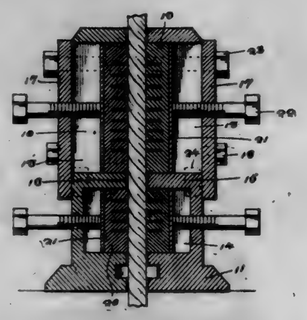
In a vacuum cleaner, a nozzle having an open mouth at its lower end and adapted to be connected at its upper end to a source of vacuum, a rotary shaft journaled in said nozzle, traction operated means by which the shaft is rotated in one or the other direction according to the direction of movement of the vacuum cleaner, bristles on the shaft, a pair of combs in the nozzle one at each side of said shaft and composed of rods mounted for free rocking movement and spaced teeth on the rods, said rods and teeth being placed at substantially the same elevation with the shaft, the teeth being curved inwardly and upwardly and having upwardly projecting inner free

points to engage the bristles and knife edges along the upper portions of the teeth to cut the material received from the bristles, and stops in the nozzle beneath the rods

and adapted to engage the teeth to hold the latter in an approximately horizontal position, the upwardly moving bristles at the other side of the shaft adapted to swing the companion teeth upwardly to clean the same.

---

1,565,175. PACKER. JOHN M. MCCAWLEY, Perry, Okla. Filed July 25, 1923. Serial No. 653,798. 1 Claim. (Cl. 286—16.)

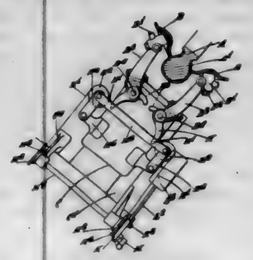


A casing head packer comprising a packing block formed of complemental sections, each of said sections including spaced side walls, a bottom wall, a top wall, a partition between the top and bottom walls and end walls connecting the bottom wall and partition, said top and bottom walls and said partition having substantially semi-circular recesses therein, means to secure the block sections together to provide a closed packing chamber and a second packing chamber having its opposite sides open, said semi-circular recesses providing axially alined openings at the top and bottom ends of said chambers for the passage of a string or cable, packing elements within each chamber to engage the string or cable, removable walls for the open sides of the second mentioned chamber and means to adjust the packing elements.

---

1,565,176. MACHINE FOR MAKING PNEUMATIC-TIRE COVERS OR CASINGS. COLIN MACBETH, Birmingham, England, assignor to The Dunlop Rubber Company, Limited, Regent's Park, County of London, England, a British Company. Filed Jan. 5, 1922. Serial No. 527,160. 9 Claims. (Cl. 154—10.)

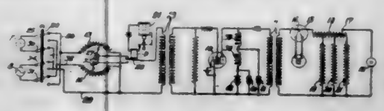
1. Spinning down mechanism for tire making machines comprising spinning down members, a reciprocatory carriage of which said members are mounted, means for causing the said members to bear against the casing plies on the core with the requisite pressure, and means automatically operated during the forward stroke of the said carriage whereby the pressure with which the members bear against the plies is increased when the said



members are required to pass over the portions of the ply or plies to be laid on the beads of the casing being built up.

---

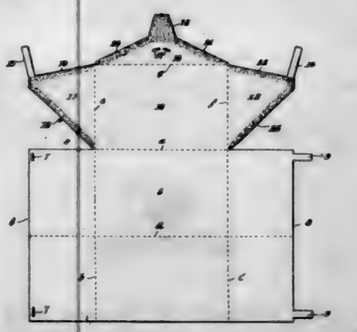
1,565,177. METHOD AND APPARATUS FOR COMPARING SOUNDS. DONALD MACKENZIE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 25, 1922. Serial No. 556,486. 6 Claims. (Cl. 179—175.)



1. The method of comparing electric waves of different characteristics which comprises alternately and in rapid succession in strictly uniform intervals translating said waves into sound waves, and adjusting the relative intensities of the electric waves until the sounds appear to be of equal intensity.

---

1,565,178. COMBINATION ENVELOPE AND LETTER SHEET. GEORGE MACKOVJAK, Johnstown, Pa. Filed Aug. 7, 1924. Serial No. 730,643. 1 Claim. (Cl. 229—92.7.)



In a combined letter sheet and envelope, a letter sheet blank of rectangular formation, foldable upon lines to provide a central portion and side extensions, one of the side extensions having a slot at the upper and lower ends thereof adjacent the outer edge, sealing tongues projecting outwardly of the edge of the other side extension and transversely alined with the slots to be received therein when the side extensions are folded inwardly to overlie the central portion, the envelope embodying a wall projecting upwardly from the letter sheet blank intermediate the side extensions and alined with the central portion, gummed triangular side flaps on the envelope wall, sealing tongues projecting outwardly from the upper edge of the side flaps, a gummed closure flap on the envelope wall and said closure flap having relatively angular slots each to receive a sealing tongue on the adjacent side flap.

---

1,565,179. GUM BOTTLE AND THE LIKE. HARRY VICTOR MAJOR, London, England, assignor to Samuel Jones and Company Limited, London, England. Filed Nov. 29, 1924. Serial No. 753,000. 2 Claims. (Cl. 91—67.5.)

2. A fluid reservoir closure including a cap having a flat wall and a curved wall, the curved wall being extended beyond the flat wall to form a lip, the free edge of the lip being serrated, the flat wall adjacent its juncture with the curved wall being reduced in thickness to form a recess, and formed in the base of such recess with a slot, whereby to reduce the pressure necessary on the lip to open the slot to a degree to prevent loss of function in the lip serration under such necessary pressure.

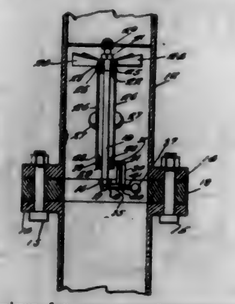
---

1,565,180. LACE-MACHINE CARRIAGE. GILES M. G. MAKIN, Pawtucket, R. I. Filed Jan. 29, 1925. Serial No. 5,485. 20 Claims. (Cl. 96—20.)

20. In a device of the type described, a carriage having a bobbin opening, a bobbin traveling in said opening, a pivoted member carried by the carriage for removably holding the bobbin in said opening and guiding it against lateral displacement in respect to the carriage, a spring for forcing the pivoted member toward the bobbin, a shoulder carried by the carriage, and a lateral projection carried by the pivoted member and bearing against the said shoulder for preventing the pivoted member from forcibly bearing against the bobbin.

---

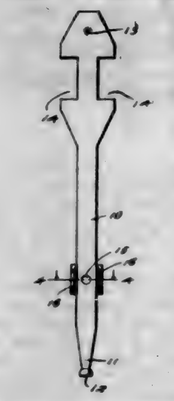
1,565,181. MIXER. SAM H. MANNING, Conroe, Tex. Filed Dec. 24, 1924. Serial No. 757,863. 3 Claims. (Cl. 48—180.)



1. A fuel mixer for use upon internal combustion engines, comprising a body member positioned between the intake manifold and carburetor therefor, a transversely extending bar provided in said body and having the lower end of a shaft secured thereto, a cross member secured to the upper end portion thereof, a pair of collar members arranged at spaced intervals on the upper portion of the shaft and adjacent the cross member, a rotatable hub member having a plurality of fan members extending from opposite sides thereof and arranged between the collar members, a pair of flexible members connected to the rotatable hub member and having the opposite end portions pivoted to a collar member mounted for rotation and reciprocation upon the shaft and means connected with said collar member for selectively opening and closing an air inlet port connected with the intake manifold of the engine.

---

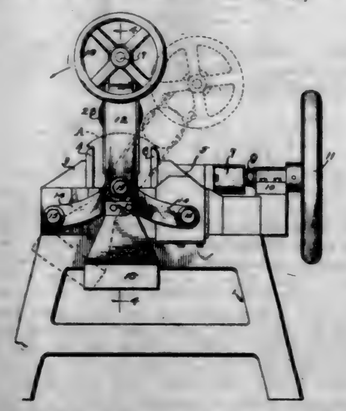
1,565,182. LUG AND HEEL-STRAP SUPPORT. HOMER MERONEY, Lancaster, S. C. Filed Jan. 8, 1925. Serial No. 1,222. 1 Claim. (Cl. 139—154.)



A lug and heel strap support comprising an elongated body, means at the lower end of said body for connection to a heel strap, said body having an opening adjacent said ends, guards integral with the body at opposite edges thereof in line with the opening, and said body adjacent its upper end having an opening and notches below said opening, said notches being in opposite edges of the body and adapted to receive a lug strap.

---

1,565,183. APPARATUS FOR BACKING BOOKS. LOUIS W. MEYERS, Chicago, Ill. Filed Sept. 19, 1924. Ser. No. 738,713. 4 Claims. (Cl. 11—5.)

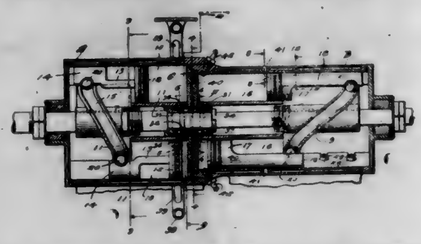


3. In a device of the character described, a vise, a frame pivotally mounted over said vise, a horizontally extending shaft carried by said frame, vertically extend-

ing shafts arranged at opposite sides of said frame and connected to said horizontally extending shaft to be rotated thereby, said shafts being provided with threaded portions, roller boxes mounted on the threaded portions of said shaft, and a roller arranged between said boxes and supported thereby to permit rotation.

---

**1,565,184. INTERNAL-COMBUSTION ENGINE.** LLOYD W. MILLER, Bessemer, Pa. Filed Nov 10, 1923. Serial No. 674,038. 7 Claims. (Cl. 123—66.)



7. An engine of the class described having walls therein providing compression chambers and firing chambers, said walls terminating short of the end walls of the engine, pistons movable in said chambers, spirally grooved members, a shaft carrying said members and journaled centrally with respect to said chambers, the pistons having means extending therefrom and engaged in the spiral grooves of said members, a partition between the compression chambers and firing chambers, said walls having ports on opposite sides of said partition, a valve carried by said shaft having passages therethrough whereby compressed fuel may pass through the same and said ports from the compression chambers to the firing chambers, the engine having exhaust passages leading from the firing chambers, and passages in said partition serving as auxiliary exhaust outlets.

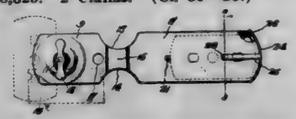
---

**1,565,185. LITHOPONE PRODUCT AND PROCESS OF MAKING THE SAME.** JOHN L. MITCHELL, New York, N. Y. Filed Oct. 6, 1922. Serial No. 592,869. 8 Claims. (Cl. 134—78.)

3. The process of manufacturing a lithopone product which includes quenching the lithopone in a solution of a soluble alkaline earth salt to form a coating and then changing this alkaline earth salt into an insoluble one.

---

**1,565,186. RAZOR-BLADE HOLDER.** DON PARDEE MOON, Kokomo, Ind. Filed Aug. 22, 1924. Serial No. 733,629. 2 Claims. (Cl. 30—25.)



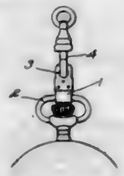
1. A razor blade holder comprising, a pair of plates spaced apart at one end to provide a handle and being bent toward each other intermediate their ends and reduced in width thereat to provide a finger hold and a pair of spring arms, the other ends of the plates being spaced apart a slight distance to provide jaws and being concave at their inner sides, and a clamping screw secured through the concave portions and arranged to bind against the outer convex sides of the jaws to draw the same toward each other, said jaws being adapted to receive a blade in edgewise relation therebetween, said spring arms and said concave portions of the jaws adapted to cause the gripping of the edge portions of the jaws upon said blade.

**1,565,187. TENSION DEVICE FOR SHUTTLES.** CHARLES FREDERICK MOORE, Norwich, Conn., assignor to The Schwarzenbach Huber Co., West Hoboken, N. J., a Corporation of New Jersey. Filed June 26, 1924. Serial No. 722,583. 1 Claim. (Cl. 139—215.)

A take-up and tension device for shuttles, comprising means for guiding the thread over a certain path as it is pulled so that it will automatically be fitted into the correct position, said means including a pair of overlapping members forming a passageway, said members at the point of overlapping being spaced apart sufficiently to permit the thread to pass therethrough, a plurality of spaced stationary arms having hooks arranged adjacent said thread guiding means, a plurality of fingers co-acting with said hooks, and resilient means for causing said fingers to press the thread so that it will frictionally engage said hooks.

---

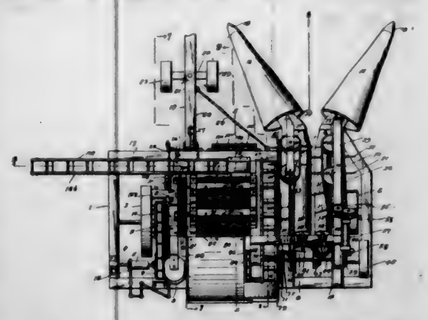
**1,565,188. ATTACHING DEVICE FOR WATCHES.** DAVID R. MORGAN, Farmville, N. C. Filed Sept. 16, 1922, Serial No. 588,678. Renewed Oct. 15, 1925. 1 Claim. (Cl. 63—21.)



A watch attaching device of the character described comprising a looped strap, reinforcing plates secured to the ends of the straps and provided with openings registering with like openings in the strap, tongues formed on the inner end of each reinforcing plate and bent against the strap in confronting relation, and said plates being indented into the strap for further retaining the tongues against relative movement.

---

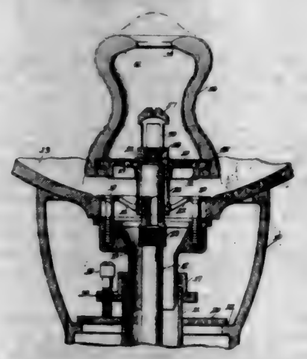
**1,565,189. CORN HARVESTER.** ROBERT L. MORGAN, Williamsville, Ill. Filed Jan. 5, 1922. Serial No. 527,137. 4 Claims. (Cl. 56—112.)



4. A harvester having spaced beams, said beams at their forward ends extending away from each other, gathering members of substantially conical form, said members being hollow, said beams extending into said members through the larger ends thereof, axle connections within said members and between said members and the forward ends of said beams, snapping rollers in the rear of said beams, and feed elements for the stalks associated with said snapping rollers, one of said elements terminating short of the rear end of the rollers to provide a lateral discharge passage over the last mentioned roller.

---

**1,565,190. BUBBLER HEAD.** PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Original application filed Nov. 12, 1919, Serial No. 337,494. Divided and this application filed Oct. 10, 1923. Serial No. 667,712. 4 Claims. (Cl. 299—12.)



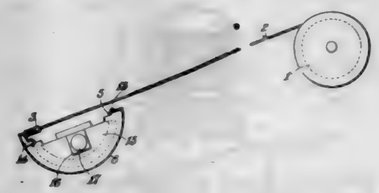
1. In combination, a bubbler head having an internal circumferential groove, an interrupted rib below said groove, a supply pipe extending through the lower end of said bubbler head, a plate having a drainage opening mounted on said pipe, and radially projecting lugs on said plate adapted to engage the groove in said bubbler head.

---

**1,565,191. CANOPY HOLDER.** VIRGINIA P. NELSON, New York, N. Y. Filed Mar. 13, 1925. Serial No. 15,417. 4 Claims. (Cl. 135—5.1.)

1. A device of the character described comprising a post adapted to be secured to a bed, an arm on the upper end of the post, a canopy holder removably connected to the arm and comprising a collapsible spider, couplings at the ends of the spider members, and flexible strips interposed between the couplings and at their ends engaging the couplings and forming a circular member.

**1,565,192. METHOD AND APPARATUS FOR APPLYING PRINTING SHEETS TO THEIR CYLINDERS.** MALCOLM OWEN, London, England. Filed Feb. 12, 1924. Serial No. 692,409. 7 Claims. (Cl. 153—40.)

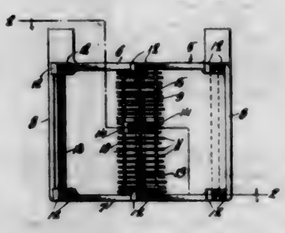


1. Method of preparing a printing sheet for immediate application to a printing cylinder having a gap consisting in forming the sheet of correct length, and stressing the sheet, and while the stress is maintained, bending the sheet over sharp edges spaced apart by a convex segmental surface of a length equal to the circumference of the printing cylinder less the width of the gap, whereby as a continuous operation first one end of the sheet is folded over, then the sheet bent, and finally the other end of the sheet folded over, the spacing and forming of the fold being such that it will coincide exactly with the longitudinal edges of the cylinder gap when a sheet has been applied to the cylinder.

2. A rotatable segmental former for preparing a printing sheet for immediate application to a printing cylinder having a gap, having a convex surface of a length equal to the circumference of the printing cylinder to which the sheet is to be applied, less the width of the gap, an edge at each end of the convex surface corresponding to the longitudinal edges of the cylinder gap, and means for varying the length of the said surface.

---

**1,565,193. STORAGE BATTERY.** RICHARD B. OWEN, Washington, D. C. Filed Dec. 22, 1919. Serial No. 346,556. 3 Claims. (Cl. 136—143.)



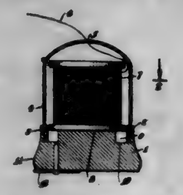
1. A storage battery electrode including a grid thickened at predetermined points and having each thickened point channeled through to the surface of the grid to provide parallel lugs, and insulation deposited between said lugs to engage the grid surface and projecting beyond the outer extremities of the lugs.

---

**1,565,194. DENTAL FLOSS CONTAINER.** ALLISON E. PALMER, Winsted, Conn., assignor to Belding Bros. & Co., New York, N. Y., a Corporation of New York. Filed Nov. 7, 1924. Serial No. 748,320. 3 Claims. (Cl. 242—138.)

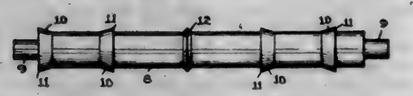
1. In a dental floss container, the combination of a base having an upstanding annular flange formed with an integral screw-thread, and a portion inside said flange

on which a spool of dental floss is adapted to be supported, and a glass dome having an opening therethrough for the passage of dental floss directly from the spool,



and having an external screw-thread about its lower edge portion, adapted to screw into said flange, to removably surround the spool.

1,565,195. COFFIN-RETAINING DEVICE FOR HEARSES. WILLIAM B. PASSELS, Pleasantville, N. J. Filed Apr. 1, 1924. Serial No. 703,471. 3 Claims. (Cl. 214—84.)

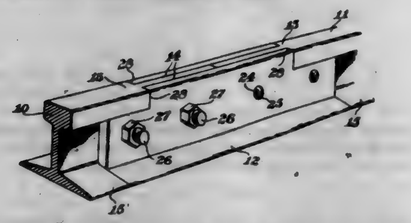


1. In a coffin retaining device, rollers adapted to support a coffin when in a hearse, each of the said rollers having circumferential shoulders integral therewith with relatively sharp edges, the said rollers having coffin supporting surfaces between the shoulders to limit the action of the edges of the shoulders on the bottom of the coffin, substantially as described.

1,565,196. TREATMENT OF SILK SHREDS. VITTORIO PIANA, Chiavazza, Italy, assignor to Cugnolio Piana and C., Chiavazza, Biella, Italy. Filed Mar. 21, 1923. Serial No. 626,705. 3 Claims. (Cl. 19—66.)

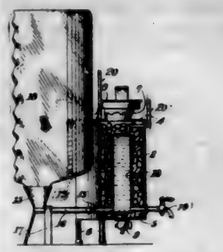
1. A method of recovering silk from silk crop waste, comprising, treating silk crop waste in a closed chamber heated from the outside to a temperature at which the vegetable matter usually mixed with silk crop waste is made dry and friable, and then subjecting the waste to a crushing operation and separating the silk from the pulverized vegetable matter.

1,565,197. RAIL JOINT. SAMUEL PORTE, Sydney, Nova Scotia, Canada. Filed Nov. 17, 1924. Serial No. 750,425. 4 Claims. (Cl. 238—177.)



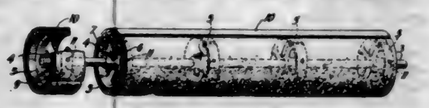
3. The combination with a pair of rails, having their ends partially cut away to leave the web and a portion of the tread, of a joining plate comprising a common base, a pair of spaced plates adapted to form webs and treads and having the ends partially recessed adjacent the top and means for rigidly securing the joining member and the rails together.

1,565,198. COOLER. ELI RASHETA, West Allis, Wis. Filed Feb. 10, 1923. Serial No. 618,293. 2 Claims. (Cl. 62—143.)



2. A cooler for the purpose described including a chamber having concentric arcuate walls whereby the chamber is adapted to fit around a water bottle or the like, a series of independent fluid receiving chambers held in the first chamber and spaced throughout therefrom, said chambers being likewise spaced from each other whereby each fluid receiving chamber may be entirely surrounded by ice, faucets each leading from a respective fluid receiving chamber and extending through the convex side of the first chamber, inlet pipes each extending through a remaining wall of the first chamber and communicating with a respective fluid chamber, and bottle neck receiving funnels connected to the inlet pipes.

1,565,199. ROLL FOR IRONING MACHINES. CHARLES E. REDDIG, Kew Garden, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 28, 1921. Serial No. 503,937. 3 Claims. (Cl. 68—9.)



1. A roll for ironing machines comprising a support having a recess therein, a sheet metal cylinder mounted thereon with the adjacent longitudinal edges of the cylinder separated to form a slot registering with said recess, and a fabric cover wound around said cylinder, one end of said fabric disposed within said slot and recess and held therein by the clamping action of the abutting ends of the cylinder.

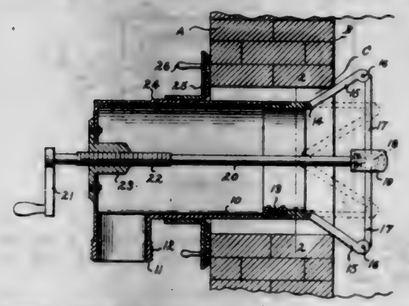
1,565,200. METHOD OF MAKING CORES FOR CATHODES OF VACUUM TUBES. HOWARD T. REEVE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 12, 1920. Serial No. 416,464. 2 Claims. (Cl. 250—27.)

1. The method of making a core for an electron-emitting cathode which comprises mixing metals, including platinum and nickel in powdered form, the proportion of platinum to nickel being that desired in the core, pressing the mixture into a coherent ingot, heating the ingot to a sintering temperature in the absence of oxidizing conditions, and cold working the ingot into filamentary form with annealing of the work at high temperature, at intervals, the early stages of the cooling being done in the absence of oxidizing conditions.

1,565,201. FLUE CLOSER. WILLIAM REICHERT, Shenandoah, Pa. Filed Mar. 29, 1923, Serial No. 628,587. Renewed May 4, 1925. 3 Claims. (Cl. 126—319.)

1. A device of the character described comprising an elongated cylindrical member disposed within a flue opening, a collar screwed onto said cylindrical member

and bearing against the outer surface of the wall at the flue opening, a ring secured within the inner end of said cylindrical member and carrying ears, arms pivotally connected with said ears, a nut member mounted in the outer end of the cylindrical member, a rod screwed

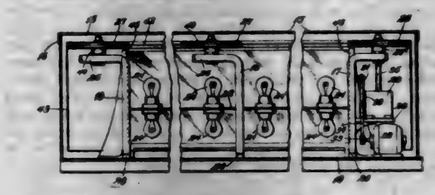


through said nut member and equipped with turning means, a yoke swiveled upon the inner end of the rod, and links pivotally connected with the free ends of said arms and pivotally connected with each other within the confines of said yoke.

1,565,202. ADJUSTABLE FASTENER DEVICE. HERMAN REITER, New York, N. Y. Filed Jan. 9, 1925. Serial No. 1,429. 1 Claim. (Cl. 24—206.)

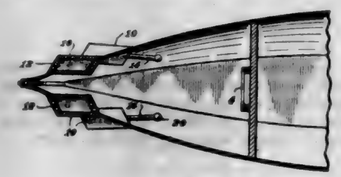
In combination, a layer of fabric, an apertured plate disposed against one side thereof, a second plate disposed against the other side thereof, the apertured plate having prongs adapted to be bent up at the ends thereof and project through the fabric, the second plate having notches in its ends adapted to receive the prongs, the ends of the prongs adapted to be bent back against the rear face of the second plate whereby the two plates are held together with the fabric therebetween, a U-shaped spring member disposed with its limbs lying along the edges of the apertures of the first plate and projecting slightly thereover, and a plurality of lips struck up from the metal of the first plate, said lips being curved over to embrace the spring member throughout its length to hold it in place.

1,565,203. CHANGEABLE EXHIBITOR. CHARLES ROEMER, Jamestown, N. Y., assignor to The Pandora Sign Corporation, Jamestown, N. Y., a Corporation of Delaware. Filed Oct. 11, 1924. Serial No. 743,074. 5 Claims. (Cl. 40—32.)



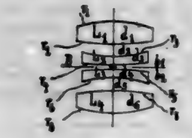
1. In a changeable exhibitor, a plurality of supports, a plurality of pulleys carried by the supports and arranged in a common plane and having their peripheries grooved, means for driving one of said pulleys, means for adjusting another of said pulleys toward and away from the first named pulley, an endless carrier belt having its inner face conforming in shaping to the grooves of the pulleys and fitting into the grooves of all of said pulleys, a perforated skirt secured to the outer face of said carrier belt and freely depending therefrom, said pulleys being of greater diameter than the width of any portions of said supports arranged between the opposed portions of the skirt whereby said skirt is free from engagement with said supports.

1,565,204. SHIP CONSTRUCTION. EMMA M. SNYDER ROWSON, Haddonfield, N. J. Filed Sept. 30, 1924. Serial No. 740,810. 3 Claims. (Cl. 114—66.)



3. In a ship construction, a water-tight observation compartment in the bow of the hull of a ship, upper and lower sets of observation housings carried by the bow of the hull of the ship and extending outwardly therefrom, the upper set of housings having both their inner and their outer ends transparent, levers swivelly carried by the lower sets of housings and illuminating means carried by said levers.

1,565,205. PHOTOGRAPHIC OBJECTIVE. PAUL RUDOLPH, Kleinbiesnitz, near Gorlitz, Germany. Filed Sept. 1, 1922. Serial No. 585,705. 1 Claim. (Cl. 88—57.)

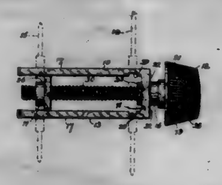


In an objective, with middle diaphragm, composed of four members separated from another by air the convex surfaces of the two convex-concave diverging members which form the inner constituents facing one another and the two collecting members which form the outer constituents having the stronger curvature turned to the outer side, the air distance between the two diverging members being smaller than the sum of the two distances between the diverging lenses and the collecting lenses, the arrangement that, as regards, radii, thicknesses and distances between the lenses the two halves of the objective are each proportional to the other and as regards glass materials the two halves of the objective are equal the one to the other.

1,565,206. RADIO COIL MOUNT. GEORGE F. RUZICKA, Bohemia, N. Y. Filed Jan. 14, 1925. Serial No. 2,339. 1 Claim. (Cl. 171—119.)

A mount comprising a support comprising parallel guides and a crosspiece between the guides at adjacent ends thereof; said crosspiece having a bearing boss; a bushing in said bearing boss, an element having a relatively long screw-threaded portion and a reduced plain portion and a screw-threaded extremity, the plain portion being disposed in said bushing for rotatably supporting said element, a nut connected to said screw-threaded extremity and serving with said crosspiece to hold said support fixed to a panel or the like, a manipulator knob attached to said nut, a carrier having holes

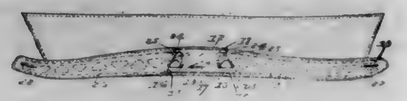
and a screw-threaded bore, the holes in said carrier respectively receiving said guides to prevent the carrier from turning the relatively long screw-threaded portion being extended in the screw-threaded bore in said carrier



so that upon the manipulator knob being turned the carrier will be slid along said guides, and a second carrier supported by said guides and held against movement thereon and with respect to which said first carrier is moved toward and away from the same.

---

1,565,207. STIFFENER FOR COLLARS. JOHN SAUL, Jersey City, N. J. Filed Sept. 27, 1922. Serial No. 590,926. 2 Claims. (Cl. 2—132.)



1. In a stiffener for collars, a member of relatively rigid but flexible material, ears formed on the upper edge of the member in spaced relation to each other, the said member having recesses between the ears and the edge of the member forming clearances, and a collar having a portion of the outer side of the neckband removed in that part of the collar adapted to fit at the back of the neck, the edges of the outer side of the neckband fitting between the ears and the edge of said member whereby the member is prevented from slipping with relation to the collar to which the member is applied.

---

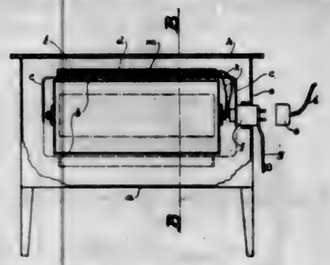
1,565,208. FINISHING WELT. ROBERT C. SCHEMMEL, Union City, Ind., assignor to The Backstay Machine & Leather Company, Union City, Ind., a Corporation of Indiana. Filed Feb. 2, 1925. Serial No. 6,363. 6 Claims. (Cl. 155—184.)

1. A finishing welt of the blind-nail type including in combination a tack-receiving base, and an independent tack-concealing welt body permanently secured to said base by fastening means passing through said body and spaced inwardly from th edge thereof, said fastening means connecting said welt-body to the base.

---

1,565,209. ELECTRIC TOY COOKING STOVE. WALDEMAR SCHWARZENHAUER, Eltersdorf, Germany. Filed Feb. 20, 1925. Serial No. 10,652. 3 Claims. (Cl. 219—35.)

1. An electric toy cooking stove with only one single heating element comprising in combination with a baking tube in the toy cooking stove having the usual top plate, a U-shaped member pivotally mounted on the side walls of said baking tube, a flat frame-shaped heating element on the top of said U-shaped member, and means for rotating said U-shaped member from the outer side of the



cooking stove to bring said heating element to any desired position with regard to the top plate and the baking tube.

---

1,565,210. PLIER WRENCH. HARVEY W. SEIBER, Dover, Ohio. Filed Sept. 3, 1924. Serial No. 735,645. 1 Claim. (Cl. 81—83.)

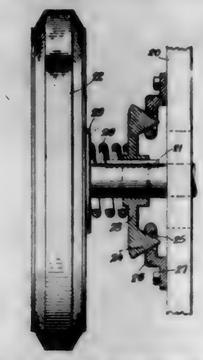
A wrench comprising first and second levers having cooperating jaws, the second lever having an elongated opening disposed intermediate the ends of the second lever, and having a rack located along one edge of the opening, the first lever having a circular aperture located intermediate the ends of the first lever, a pivot element connecting the levers and located in the opening of the second lever and in the aperture of the first lever, a dog disposed in the opening of the second lever and mounted to swing on the pivot element, spring means for maintaining the dog yieldably engaged with the rack, and means whereby the first lever will detach the dog from the rack when the levers are swung apart to a predetermined angle, the wrench being characterized by the fact that said means embodies an integral projection on the dog, disposed radially with respect to the pivot element, the first lever being supplied with an arcuate recess communicating with the aperture of the first lever and receiving the projection of the dog for limited movement, the levers being of single-layer form, and being superposed one on the other, the construction being such that the levers may be separated simply by removing the pivot element, and without loosening the projection or separating the projection from the dog.

---

1,565,211. SHAFT COUPLING AND RESILIENT SUSPENSION. BENJAMIN F. SEYMOUR, Washington, D. C. Filed Sept. 28, 1921. Serial No. 502,646. 6 Claims. (Cl. 267—9.)

1. In a device of the character described, the combination of a shaft having an element splined thereon

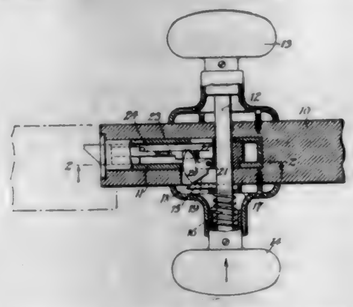
provided with a plurality of cone heads, a spring on the shaft normally holding said element under tension, a member having an element provided with a plurality of



recesses adapted to receive said cone heads, said element being non-revolubly mounted on said member and providing a resilient connection between said shaft and said member, substantially as set forth.

---

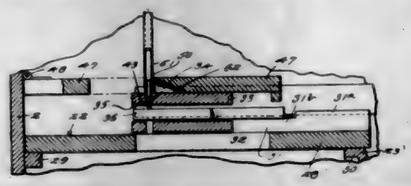
1,565,212. LATCH. JAMES SILLICK, New York, N. Y. Filed Feb. 11, 1925. Serial No. 8,471. 1 Claim. (Cl. 292—166.)



In combination, a slidable knob shaft, a latch casing, a slotted latch bolt therein, and a cam plate pivoted within the casing and projecting into said slot, the knob shaft also being slotted, said cam plate projecting into the slot in the knob shaft, the end of said slot adapted to engage the cam plate to move it to withdraw the latch bolt when the knob shaft is moved longitudinally.

---

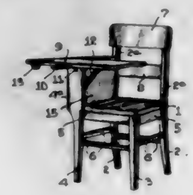
1,565,213. COIN-CONTROLLED VENDING MACHINE. GEORGE H. SIMPKINS, Louisville, Ky. Filed June 6, 1925. Serial No. 35,368. 5 Claims. (Cl. 194—58.)



4. A vending machine comprising an article carrier, a slidably mounted pusher provided with a coin receiving slot and a groove intersecting said slot, a stationary coin stop entering said groove and extending partly across said slot, and a detent cooperating with the pusher and provided with a cam surface, and means for moving the pusher in opposite directions.

---

1,565,214. CHAIR DESK. CHARLES L. SMITH and EDWARD E. RODERICK, Belfast, Me., assignors to Correct Posture Seating Company, Belfast, Me., a Corporation of Maine. Filed Oct. 31, 1924. Serial No. 746,990. 11 Claims. (Cl. 155—128.)



1. A chair having one front leg extended above the chair seat, and a compartment to the rear of said leg, the leg forming the front end of said compartment, and the chair seat forming the bottom of the compartment.

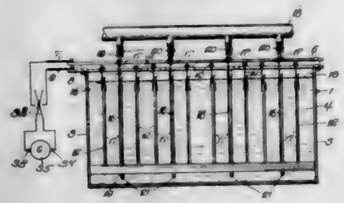
---

1,565,215. TREATMENT OF ORES OR RESIDUES CONTAINING ZINC. STANLEY COCHRAN SMITH, London, England. Filed May 14, 1924. Serial No. 713,310. 8 Claims. (Cl. 23—61.)

8. A process of treating liquors containing zinc ions, chlorine ions and sulphate-ions which comprises precipitating the sulphate ions by addition of barium chloride, then precipitating zinc carbonate by heating the liquor with barium carbonate to precipitate zinc carbonate and obtain a solution containing barium chloride and using this barium chloride for precipitating sulphate-ions in a succeeding treatment of another batch of liquor.

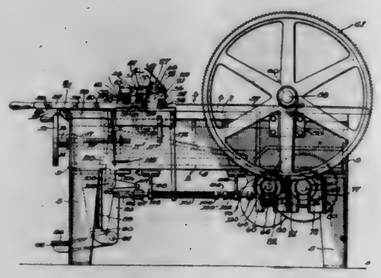
---

1,565,216. ELECTROPLATED STEREOTYPE PLATE OR NICKEL-PLATED PRINTING PLATE AND PROCESS OF MAKING THE SAME. CHRISTIAN N. SMITH, Elgin, Ill., assignor of one-half to William P. Topping, Elgin, Ill. Filed June 10, 1922. Serial No. 567,406. 12 Claims. (Cl. 204—6.)



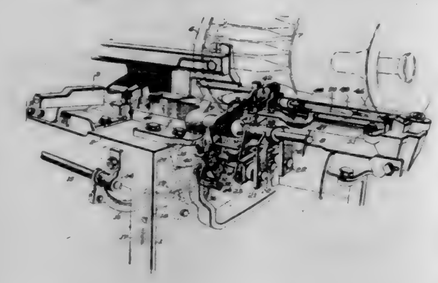
1. The process of making electroplated stereotype plates which comprises providing a moulded stereotype plate body to be plated, submitting the surface of the printing side of said stereotype plate body to the chemical action of a solution containing corrosive sublimate and water, thereby removing foreign substances from the surface of the plate body and producing a lusterless surface on the printing side of said plate body, and then electrolytically depositing a plating on said lusterless surface.

**1,565,217. MACHINE FOR SHAVING PRINTING PLATES.** CHRISTIAN N. SMITH, Elgin, Ill., assignor of one-half to William P. Topping, Elgin, Ill. Filed Sept. 20, 1923. Serial No. 663,845. 19 Claims. (Cl. 90—27.)



1. In a shaving machine of the class described, the combination of a bed adapted to support a metallic printing plate to be operated upon, a knife-supporting carriage mounted in movable relation to and adapted to travel over said bed, a knife mounted on and in movable relation to said carriage, plate-engaging roller mechanism on said carriage and adapted to engage a plate supported by said bed, supporting means adapted to adjustably support said bed in operative position, means for automatically raising and lowering the cutting edge of the knife with respect to the carriage and bed, and means for operating the carriage.

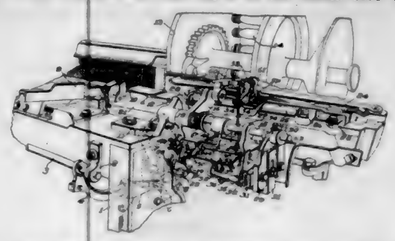
**1,565,218. FILLING-END CONTROLLER.** ALFRED E. STAFFORD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 14, 1925. Serial No. 30,241. 10 Claims. (Cl. 139—256.)



1. In a filling replenishing loom, the combination of the lay, a shuttle box at the filling replenishing end thereof, a shuttle having a filling feeler slot and means for engaging the spent filling between the ends of the bobbin opposite the filling feeler slot of the shuttle and withdrawing it over the top of the shuttle box.

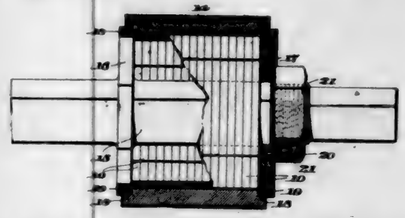
**1,565,219. FILLING-END CONTROLLER.** ALFRED E. STAFFORD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 20, 1925. Serial No. 31,697. 9 Claims. (Cl. 139—256.)

1. In a filling replenishing loom, the combination of the lay, a shuttle box at the replenishing end of the lay, means for parting the spent filling adjacent the shuttle eye, means for clamping the filling at a point remote from the shuttle eye and adjacent the feeler slot when



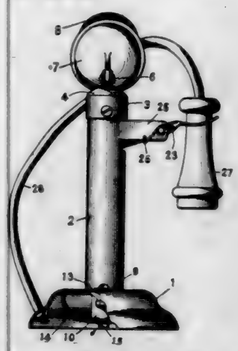
the shuttle is in replenishing position and removing the clamped portion of the filling over the top of the shuttle box.

**1,565,220. APPARATUS FOR MAKING PISTON RINGS.** EDWARD H. WEHLANN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 8, 1919. Serial No. 343,304. 4 Claims. (Cl. 29—89.)



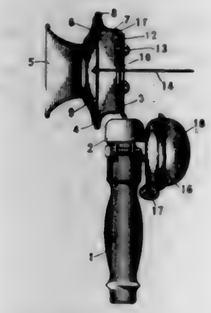
1. In an apparatus for producing piston rings, a sleeve for holding the rings preliminary to clamping, the inner contour of said sleeve corresponding in size and shape to the contracted ring, said sleeve having an annular recess at one end, and clamping means having a centering device cooperating with said recess.

**1,565,221. TOY TELEPHONE.** GEORGE A. WEST, East Hampton, Conn., assignor to Gong Bell Manufacturing Company, East Hampton, Conn., a Corporation of Connecticut. Filed June 9, 1922. Serial No. 567,077. 14 Claims. (Cl. 46—46.)



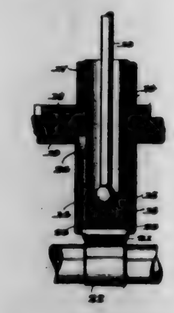
12. A toy telephone consisting of a base, a standard rising from the base, a receiver, a transmitter, a vibratable arm on which the receiver is supported, a sound-producing device concealed within the base, and connecting means between the vibratable arm and the sound-producing device, whereby the latter is responsive in its operations to the movements of the vibratable arm.

**1,565,222. TOY PHONE.** HAROLD D. ALLEN, East Hampton, Conn., assignor to The Gong Bell Manufacturing Company, East Hampton, Conn., a Corporation of Connecticut. Filed July 21, 1922. Serial No. 576,456. 2 Claims. (Cl. 181—29.)



1. A toy telephone, consisting of a hollow casing in which is supported a vibratory diaphragm, the casing wall on one side of the diaphragm being centrally perforated to permit the passage of a wire leading to the diaphragm, a support for the telephone instrument surrounding the opening through the casing wall, to which wall the suport is secured, and a supporting plate on the inside of the casing to which the said support for the telephone instrument is connected.

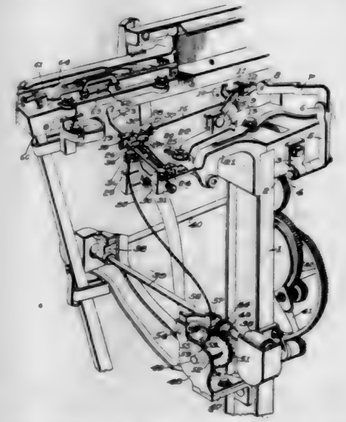
**1,565,223. HYDROCARBON MOTOR.** HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 10, 1919. Serial No. 275,973. 10 Claims. (Cl. 123—90.)



10. In valve operating mechanism, a reciprocatory valve operating roller holder, a hollow cylindrical guide in which such holder is movable and a roller mounted in the holder and having ends curved on the same radius as that of the guide wall and fitting against said wall.

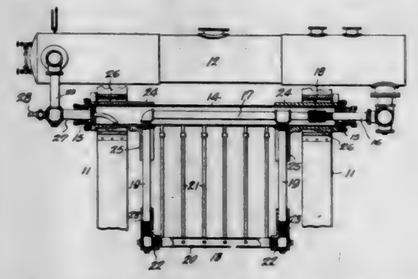
**1,565,224. FEELER MECHANISM FOR LOOMS.** HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 3, 1925. Serial No. 20,401. 8 Claims. (Cl. 139—270.)

1. In a loom, the combination of a feeler having periods of activity and inactivity with the same supply of filling in the shuttle, a device for holding the feeler during its periods of inactivity and a quick-acting trip for freeing the feeler at intervals, comprising a shaft, a worm operated by said shaft and having a quick-acting portion formed by imparting a steep pitch to a short portion of the worm thread, a worm wheel engaged by the worm,



a trip lug actuated by the worm wheel, and means between the trip lug and said holding device for effecting quick release of the feeler from said device.

**1,565,225. INCINERATOR CONSTRUCTION.** ALEXANDER S. DECARIE, Montreal, Quebec, Canada. Filed May 12, 1922. Serial No. 560,439. 4 Claims. (Cl. 122—2.)

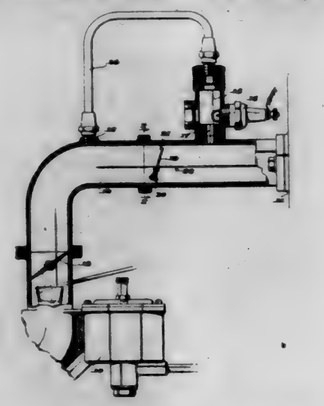


4. A device of the class described, comprising tubular supports, grate sections depending from said supports and positioned within a combustion chamber, said sections comprising straight end pipes, cross pipes connecting the free ends of said straight pipes and intermediate pipes attached to the tubular supports at their upper ends and to the cross pipes at their lower ends, said intermediate pipes being curved or bent at their lower ends, said tubular supports having internal construction which taken in conjunction with the grate sections presents a continuous passage for the circulation of a cooling agent from the tubular support, through the grate sections and back into the tubular support, means adapted to oscillate the grate about its suspension means, and means to transmit the power required to oscillate the grate sections.

**1,565,226. HYDROCARBON MOTOR.** HENRY P. DOOLITTLE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 20, 1920. Serial No. 382,778. 9 Claims. (Cl. 123—122.)

1. The combination with the hydrocarbon motor having an intake conduit, and a throttle valve in the intake

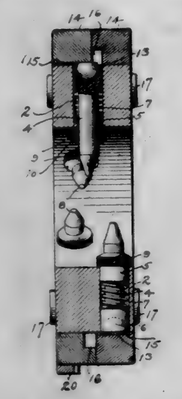
conduit, of a combustion heater having both its inlet and outlet connected to the conduit on one side of said



throttle, and an automatically variable restriction means in the conduit between said inlet and outlet.

---

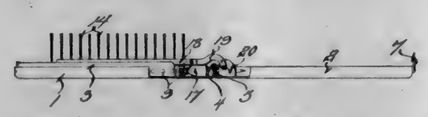
1,565,227. CHUCK. ORLANDO GARRISON, Dayton, Ohio. Filed Oct. 26, 1920. Serial No. 419,637. 23 Claims. (Cl. 279—71.)



1. In a chuck of the character described, an annular head, a plurality of radially disposed longitudinally movable plungers carried by said head, said plungers being offset in relation one with another in the axial direction of the annular head to form a helically arranged series, and means for simultaneously reciprocating the plungers.

---

1,565,228. FOLDABLE BRUSH. VICTOR A. JOHNSON, Hartland, Wis. Filed Mar. 16, 1925. Serial No. 15,897. 2 Claims. (Cl. 15—203.)

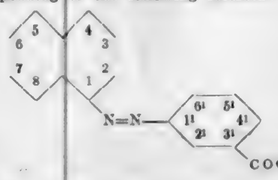


1. A foldable brush comprising a body portion, a plurality of rocker bars carried within said body portion, each of said rocker bars having depressions formed in one face thereof, bristles socketed within said depressions, a binding strip secured against said face and having inwardly projecting lips for clamping said bristles within said depressions, and mechanism connecting said rocker bars and said cover to cause simultaneous motion of said bars when said cover is opened and closed.

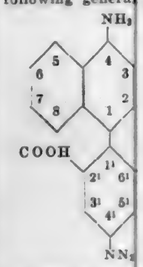
---

1,565,229. PROCESS FOR THE PRODUCTION OF BENZANTHRONE DERIVATIVES. GEORG KALISCHER, Mainkur, near Frankfort-on-the-Main, and RUDOLF MÜLLER and FRITZ FRISTER, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to Leopold Cassella & Co. Gesellschaft mit beschränkter Haftung, a Corporation of Germany. Filed Mar. 19, 1925. Serial No. 16,795. 4 Claims. (Cl. 260—61.)

1. Process for the production of benzanthrone derivatives which consists in treating α-naphthalene-azo-benzene-m-carboxylic acids (in which the C-atoms 4, 5 and 4¹ corresponding to the following formula:



are not substituted) with reducing agents in an acid solution, and condensing the diaminonaphthylphenyl-o-carboxylic acids thus obtained and represented by the following general formula:

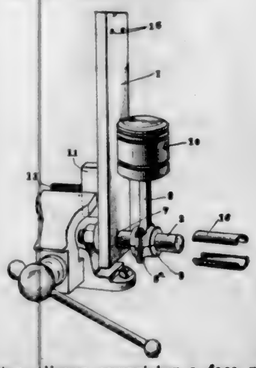


The C-atoms 2, 3, 5, 6, 7, 3¹, 5¹, 6¹ may be substituted by univalent groups (as $CH_3$, halogenes, O-Alkyl)

with acid condensing agents substantially as described.

---

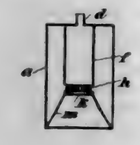
1,565,230. COMBINATION SURFACE PLATE AND PISTON ALIGNER. FRANK HOERNER, Los Angeles, Calif. Filed Nov. 30, 1923. Serial No. 677,921. 2 Claims. (Cl. 33—180.)



1. A piston aligner comprising a face plate which is greater in width than the piston to be aligned, there being an aperture formed centrally of the face plate adjacent one end thereof, an arbor having a reduced end extending through said aperture with the enlarged end projecting from the face of the face plate and providing a shoulder bearing against the faced surface of the face plate, and a nut threaded onto the reduced end of the arbor on the back side of the face plate for tightening the arbor to the face plate.

---

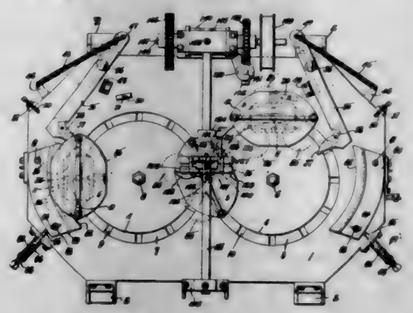
1,565,231. ABSORPTION REFRIGERATING MACHINE. EDMUND RUMPLER and HANS RICHTER, Berlin, Germany; said Richter assignor to said Rumpler. Filed July 10, 1924. Serial No. 725,293. 2 Claims. (Cl. 62—118.)



1. In an absorption refrigerator machine, a generator comprising a closed receptacle having a bottom rising toward the inside and defining a corresponding recess on the outside, a substantially vertically disposed tubular vessel within the receptacle extending upwardly centrally from the bottom of the receptacle and a fluid connection between the lower portion of the vessel and the receptacle including means for permitting gas to freely flow from the vessel into liquid in the receptacle only in small bubbles.

---

1,565,232. BRAIDING MACHINE. EARL F. BALDWIN, Gardner, Mass., assignor to American Fibre Corporation, Gardner, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1922. Serial No. 533,799. 7 Claims. (Cl. 96—8.)

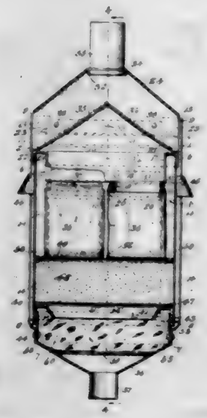


1. In a machine of the class described, a track arranged in a closed path, a shoe movable along said path, a spool holder pivoted to said shoe, means to lock said holder to said shoe to prevent relative pivotal movement thereof, means for rendering said locking means inoperative at certain positions of said shoe on said track, and means for turning said holder relative to said shoe while said locking means is inoperative.

---

1,565,233. WATER-FILTERING DEVICE. WILLIAM H. BRANTSEN, Augusta, Kans. Filed June 4, 1925. Serial No. 34,957. 8 Claims. (Cl. 210—89.)

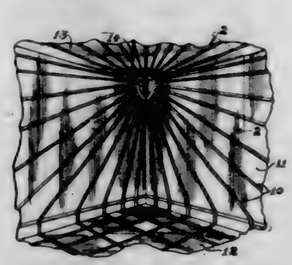
1. A filtering device comprising a support, a base element secured thereto and provided with water straining means and a discharge spout, a carrier detachably connected with said support, overlapping and opening into the base and provided with a pair of strainer elements having a filtering agent interposed therebetween, and a head detachably connected to said support, closing the top of said carrier and provided with an inlet,



a strainer element intermediate its ends and a plurality of strainer elements depending from its bottom and resting on one of the strainer elements within the carrier.

---

1,565,234. MEANS OF FIRE AND BURGLAR PROTECTION. JOSHUA CLARIDGE, Chicago, Ill., assignor to Pro-Tex Laboratories, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 19, 1923. Serial No. 619,792. 6 Claims. (Cl. 109—6.)



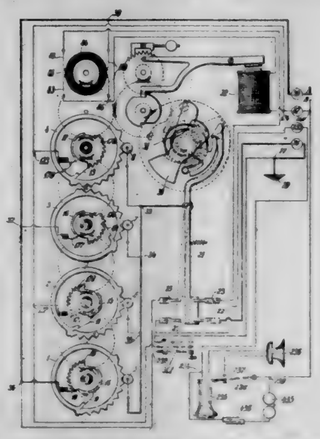
1. The combination with a bank vault of a container for protecting fluid, means for releasing such fluid operable by heat and a train of combustible material leading to such means, such material consisting principally of substances adapted to burn without substantial generation of gas.

---

1,565,235. SELF-ACTING TELEPHONE SYSTEM. ERNEST AUGUST FALLER, New York, N. Y., assignor, by mesne assignments, to The North Electric Manufacturing Company. Filed July 28, 1904. Serial No. 218,490. 185 Claims. (Cl. 179—18.)

1. A telephone exchange system comprising groups of subscribers' lines, a lesser group of primary link circuits for each of said groups, other link circuits each adapted for connection with primary link circuits in a plurality of groups, means for associating calling lines with the primary link circuits of their related groups, automatic

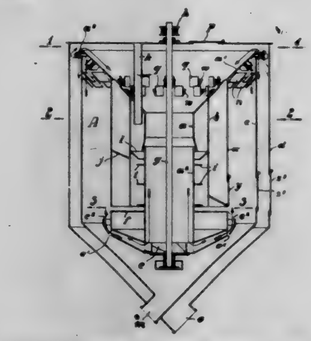
means for effecting simultaneously initiated selection of idle ones of said other link circuits, means for connecting the so-selected link circuits with primary link cir-



cuits in a plurality of groups, and means for extending the selected link circuits to connection with wanted lines.

---

1,565,236. APPARATUS FOR SIFTING FINE MATERIAL. GEORG ROTH, Darmstadt, Germany, assignor to Gustav Stöckle, Darmstadt, Germany. Filed Sept. 3, 1921. Serial No. 498,476. 3 Claims. (Cl. 209—148.)



1. An apparatus for separating fine material comprising in combination a cylindrical casing, a plurality of walls being arranged concentrically to said casing and suitably connected to each other, a suction pipe attached to a central driving axle and arranged in line with the shortened inner wall and having a disk shaped lower end, a centrifugal blower fixed to the lower end of the central axle near the lower opening of said suction pipe, a rotatable member mounted on the lower end of said suction pipe and so fitted with a horizontal surface that the material which is supplied to said member will be discharged centrifugally from said member when the same rotates, a conical plate connected to the bottom of said blower and being upwardly bent against said dish-shaped pipe so as to form a ring shaped outlet for the distributing air current being produced by said blower, and means for generating an auxiliary horizontal air current adapted to act upon the falling materials and to regain the finer particles from the coarse material falling to the outlet, and means for separating the fine particles from the air currents resucked by said blower, substantially as set forth.

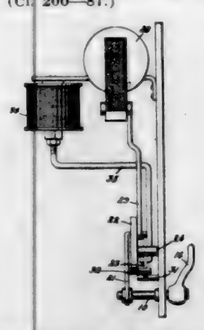
---

1,565,237. PROCESS FOR TREATING SEED GRAIN. ALBRECHT SCHMIDT, ADOLF STEINDORFF, and ALFRED FLUSS, Hochst-on-Main, and OTTO SCHAFFRATH, Leipzig, Germany, assignors to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-Main, Germany, a Corporation of Germany. Filed Apr. 7, 1923. Serial No. 630,592. 2 Claims. (Cl. 167—3.)

1. Equal parts of a 0.2% solution of the dihydrochloride of diaminodihydroxyarsenobenzene in water and a .2% aqueous solution of copper sulfate are mixed and this solution may be used directly for treating seeds, for instance by immersion, the duration of the treatment lasting for one hour.

---

1,565,238. STARTING DEVICE FOR ELECTRIC MOTORS. RUDOLPH F. E. WIEDEMANN, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 8, 1923. Serial No. 679,507. 6 Claims. (Cl. 200—87.)



1. A starting device for electric motors comprising a switch mechanism freely operable between a starting and an off position and normally operable from the starting through the off to a running position, a member mechanically connected to said switch mechanism to move synchronously therewith, and electrically controlled latching means cooperating with said member for stopping the said switch mechanism in the off position upon operation thereof from the starting position with the motor starting current above a predetermined value.

---

Patents Nos. 1,565,239 to 1,566,264.

# THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 341—No. 3. TUESDAY, DECEMBER 15, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Attorneys—Disbarment.

(ORDER No. 2,934.)

U. S. PATENT OFFICE, *Washington, Oct. 29, 1925.*

Acting under the provisions of section 487 of the Revised Statutes of the United States, as amended February 18, 1922, Norman T. Whitaker, of 1006 F Street NW., Washington, D. C., whose registration number is 3425, has this day been disbarred from practice before the United States Patent Office.

WM. A. KINNAN,
*Acting Commissioner.*

## Changes in Classification.

Order No. 2,937, November 27, 1925, directs the transfer of class 77, Boring and Drilling, from Division 29 to Division 13, effective December 1, 1925.

## Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Nov. 17, 1925.*

*American Beverage Co., Inc., its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of Artemas W. Deane, of 129 South Fremont Street, Los Angeles, Calif., to effect the cancellation of the trade-mark registration of American Beverage Co., Inc., Atlanta, Ga., No. 58,908, dated December 25, 1906, and the notice of such proceeding sent by registered mail to the said American Beverage Co., Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said American Beverage Co., Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

## Interference Notices.

U. S. PATENT OFFICE, *Washington, Dec. 4, 1925.*

*Charles C. Copeland & Co., its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Spartan Mills, Spartanburg, S. C., for registration of a trade-mark and trade-marks registered March 10, 1907, No. 61,438, and April 2, 1907, No. 61,700, to Charles C. Copeland & Co., 45 Worth Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Charles C. Copeland & Co. at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Charles C. Copeland & Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## U. S. Circuit Court of Appeals—Second Circuit.

E. FREDERICKS, INC., *v.* EUGENE, LIMITED (TWO CASES). SAME *v.* VICKERY.

*Decided November 10, 1924.*

[3 F. (2d) 543.]

1. ANTICIPATION—REMOTE ART—DEVICE NOT ADAPTED TO NEW USE WITHOUT CHANGE.

Where the only similar device in the prior art requires a change in order to adapt it to an entirely new use, anticipation of an invention which is adapted to the new use can not be predicated upon such prior device.

2. SAME—SAME—UNPATENTABLE TRANSFER TO NEW ART.

Where the patentee's device is a pad for use in the hair-waving art, made like a medicated plaster, with hair-treating material instead of medicament, and the prior hair-waving art discloses similar pads without the gauze layer of the plaster, rolled up and inserted in tubes, *Held* that no one or more of the features of the patentee's pad produces a new result in the process of permanent hair waving, and the transfer of the idea of leaving the pad flat, adding gauze and stitching from the art of medicated plasters to the art of permanent hair waving is not the conception of inventive thought.

3. SPECIFICATION—MEANING OF TERMS.

The specification of a patent must be followed as to what the terms of a patent are intended to mean.

4. EQUITY RULE 8—PERMITTING PLAINTIFF TO WITHDRAW SUIT WITHOUT PREJUDICE AFTER ISSUE JOINED HELD ERROR.

Under district court equity rule 8, authorizing the court after issue joined to refuse to permit plaintiff to discontinue if justice so requires, *Held* error to permit plaintiff to discontinue suits for patent infringement without prejudice, where such withdrawal was substantially prejudicial to defendant.

APPEAL from the District Court of the United States for the Southern District of New York.

Patent infringement suits by E. Fredericks, Inc., two against Eugene, Limited, and one against William H. Vickery. Decree for plaintiff (298 F. 633), and defendants appeal. Reversed, with directions to dismiss bill in each case.

Appeals from the United States District Court for the Southern District of New York. The first two suits involve two patents for permanent waving of human hair, to wit, No. 1,313,232 and No. 1,206,917. The third suit is for infringement of Patent No. 1,425,956 for hair-waving means. A decree was entered permitting the withdrawal of the first and the second suits involving the Patent No. 1,206,917 and in favor of the plaintiff on the others. Defendants appeal. Reversed.

*Messrs. Sheffield & Betts* (*Mr. Drury W. Cooper* and *Mr. Edward W. Vaill* of counsel) for the appellants.

*Mr. Charles H. Wilson* (*Mr. William L. Morris* of counsel) for the appellee.

Before ROGERS and MANTON, Circuit Judges, and LEARNED HAND, District Judge.

MANTON, *Cir. J.* (after stating the facts as above):

These actions were tried together, and will be considered in one opinion.

The first patent, No. 1,313,232, was issued to Speckerman on August 12, 1919, on an application filed June 30, 1917, and relates to a flat double package made of paper and cloth containing powdered borax; the container is stitched longitudinally to hold the powdered borax in position within the coverings or envelopes. As thus made, the pad is used in permanent hair waving. The hair is first wrapped or twisted around a metal curler or rod, the package is wet or moistened, and then wrapped around the hair on the curler, and a pasteboard tube is then slid over the curler and moistened package, and then the cylindrical electric heater is placed over the parts thus arranged. Thereafter the electric current is allowed to pass through the heater until steam and borax vapor are produced by the heat generated, which, upon entering the hair wound on the metal curler, causes the same to produce the so-called permanent wave or curl. The heater and pasteboard tube are removed, the hair remains in a more or less curly condition, depending, of course, upon the skill of the operator and the appliance used. In thus applying the curlers and heaters to the human head the scalp is divided into a number of sections from which the hair is applied to separate curlers and treated with separate heaters so that in the course of this operation there are some 40 or 50 curlers and heaters in use at one time.

The claims in suit are:

5. A device of the class described, comprising an envelop formed of textile material having located therein a hair treating substance in powdered form, said envelop being adapted to be shipped in flat form, and when moistened being adapted to be wrapped about a tress of hair so as to closely embrace the same. * * *

7. A device of the class described comprising a flat envelop formed of absorbent material having located therein a hair treating substance in powdered form, and said first named envelop being inclosed within an envelop of flexible material.

Patent No. 1,425,956, the basis of the third suit, is designed to treat only the hair newly grown after previous treatment by the pad of the first patent. The need therefore is found in the fact that human hair grows half an inch per month after the permanent wave treatment, and it is intended by the use of this patent to accomplish the result of securing a permanent wave for the newly-grown hair. This patent provides a small pad of borax, the rest of the package being felt or the like. There are slight variations in the matter of placing the borax within the envelop and a block of flexible porous material, such as blotting paper or felt is added. The envelop or pad is used in the same manner as in the first patent, the purpose of the blotting paper or felt being to protect the portions of the hair which have been previously waved against both the steam and heat. The claims involved in this patent are:

9. A device of the class described, comprising a casing, one portion of said casing having a hair treating substance therein and being penetrable by steam and another portion of casing being formed of material relatively impenetrable by steam.

10. A device of the class described comprising a casing, one portion of said casing containing a hair treating substance and being so formed as to permit steam to pass therethrough, and another portion of said casing being relatively impervious to the passage of steam and being also non-heat-conducting.

The court below found both these patents valid and infringed, although the defense of anticipation by prior patents and uses, lack of invention, and noninfringement were interposed.

We will consider Patent No. 1,313,232 first. There is an admission that it has been the practice to wind a lock of hair upon the curler and then wind about the curled hair a strip of absorbent material which has been impregnated with a fluid commonly used in the art of hair curling, whereupon the curled hair and absorbent material are subjected to the action of heat. Also the tubes made of pasteboard or other materials have been used for locating therein hair-treating substances. But the contention of the appellee is that it has an improved pad which is more convenient to handle and more readily salable. The process is substantially the same as that used in the tube of the Aldworth patent, No. 1,186,533, or in the Nestle tube patent, No. 1,052,166, both of which were heretofore judicially considered. *Nestle Patent Holding Co.* v. *E. Fredericks, Inc.* (D. C.) 258 F. 627; affd. (C. C. A.) 261 F. 780. The patent in suit states that the method of winding a strip of absorbent material about the hair is objectionable for several reasons, among them, the length of time required to wind the absorbent material on the curled hair; the fact that the absorbent material will not take up a sufficient quantity of hair-treating fluid to make its action effective; the fact that handling the wet strips of material makes the process distasteful to the subject, as well as inconvenient for the operator. It says of the tubes of the Aldworth patent, which have hair treating substances located therein, that they are objectionable, in that during transportation the hair-treating substance is apt to be dislodged from the interior of the tube, and that, owing to the variations in the size of the carriers of hair-treating substance within the tube, it is sometimes difficult to position these tubes about the curled hair.

The patentee says that the objects of his invention are: (*a*) shortening the length of time required to wind absorbent material on the curled hair; (*b*) increased quantity of hair-treating fluid contained in the pad; (*c*) convenience in handling; (*d*) convenience in transportation; (*e*) even distribution of the hair-treating material. It was decided by the district court, and affirmed by this court in the case referred to, that the Aldworth patent was valid and infringed. Thereupon the appellee, who was the defendant in that litigation, experimented, resulting in his securing the patent in suit. It is apparent that what he accomplishes in his new construction is a separation of the pad of the Aldworth or Nestle tube from the rolled paper cover, and he placed cotton gauze around it to prevent the pad from tearing when handled or sold as a flat separate package. It is intended that when used it is to be combined with a pasteboard tube, giving the advantage of what Aldworth accomplished by the borax package being contained within the tube in cylindrical shape when sold and used. In other words, the patentee provides for the rolling and insertion of the pad into the tube at the time of use instead of before marketing. Thus the patentee kept his package separate from the tube and covered it with a gauze to make a more durable or a thicker package. In order to hold the borax powder more firmly in position, he stitched the pad on a sewing machine as he illustrates, but this is not claimed in the claims in suit. The pasteboard tubes have to be used with a pad in any event, and also have to be shipped to the customer. What has been accomplished in making this flat package is pointed out in the prior art in so far as inclosing and shipping various kinds of powder and materials are concerned, even including borax Patent No. 56,353, dated July 17, 1866, to Bogia and Taylor. Although this was not of the same art as hair curling, this patent shows the method of forming a pad which is now introduced into the hair-waving art. All the substantial features involved in the use of a paper pad containing borax powder for the purpose of hair curling were old. In the patent to Cooper, No. 144,315, there was shown a pad stitched as were the Bogia and Taylor pads, and this contained a mixture of alum and borax. That patent discloses the method of making pads which has been adapted as an expedient by the patentee. Borax packages were applicable when wet for curling hair, and this knowledge was old.

[1, 2] The court below decided that anticipation could hardly be predicated upon a structure which required modification in order to adapt it to a use for which it was never intended. As an abstract rule that is true, as where the only existence of similar devices in the prior art was some device which required a change to adapt it to an entirely new use and there was no other device previously used to serve the same purpose. But the record shows a flat envelop or pad of paper had been used in this prior art, as illustrated by the Aldworth tube. The idea of invention is clearly old and acknowledged by use in the prior art, and all the patentee did was to leave this pad in its flat condition, add gauze to it, and stitch it. This idea is illustrated in patents of the prior art referred to. The patentee here could not use paper covering alone, because it would tear when wet, and he put cloth around it for the same purpose that cloth is put around plasters and poultices. We think an ordinary person, skilled in the art, could make this slight change in the Aldworth patent. Where a change is readily made in any composite instrumentality, the change is not the prompting or product of invention. It is the common experience in patent cases that mere mechanical facility can alter or change the form in which originality and merit express themselves and assert for it a claim of invention. Such pretention is not invention. *N. Y. Scaffolding Co.* v. *Chain Belt Co.*, 280 O. G. 1009; 1920 C. D. 492; 254 U. S. 32; 41 S. Ct. 21; 65 L. Ed. 116. No one or more of the features of the patentee's pad produced a new result in the process of permanent hair waving, and the transfer of the idea from the art of medicated plasters to the art of permanent hair waving is not the conception of inventive thought. It is a matter of commercializing a device, to wit, a pad. A patent for the application of a freezing mixture for the preservation of fish or the like in a closed chamber wherein congealing medium has no direct contact with the atmosphere of the preserving chamber was held invalid, in view of prior use of like instrumentalities for the prevention of decay of corpses. *Brown* v. *Piper*, 91 U. S. 37; 23 L. Ed. 200.

In *Jay* v. *Weinberg* (C. C. A.) 278 O. G. 712; 1920 C. D. 402; 262 F. 973, a suit on a patent in the art of water elevating, the principle of operation whereby a fluid is lifted by vacuum suction and discharged by gravity was held to be identical with an alleged patent for gravity-fed carburation where the feed tank was filled by elevating gasoline from a lower to a higher reservoir. Claims of the character of those in suit can not have limitations read into them for the purpose of avoiding anticipation in the prior art. The patentee is bound by his claims as he makes them. He can not go beyond the claims and contend that, because the prior art does not show a pad adapted for used in hair dressing or permanent hair waving, identical with appellee's pad, that the claims are therefore valid. The prior art shows, as illustrated by the Aldworth patent, paper borax pads; also poultices and plasters and flat strips of fabric having borax between the folds. We think the claims of the patents in suit are anticipated by these devices, and that the slight modifications in the appellee's device as now used in this permanent hair-waving art, created no advance and demonstrated no inventive thought as it produced no improvement in the curled or waved hair result. It was error below to hold this patent valid.

[3] As to the second patent in suit: The borax pad described is similar to that of the patent we have just considered. The patentee here made the borax portion of the pad smaller, and to fill the space occupied in the first patent by borax he does it with a block of flexible porous material such as blotting paper or felt. Asbestos is also mentioned as a substitute. The object of a smaller area of borax is to confine the curling to the newly grown hair and not affect that still waved by the previous treatment. The casing is a strip of flexible woven material such as gauze fabric or cheesecloth. The purpose of the flexible porous material is said in the specifications to be for wrapping around that part of the hair which has already been waved or which is not intended to be waved, so as to act as a protecting medium whereby that portion of the hair will not be affected by the process. It is understood that this block of material will not be immersed in water, but will be left in a dry condition so that no steam will be produced during the waving operation. The claims do not describe the materials of the appellee's pad as are set forth in the specifications. The casing of the patent in which the porous material or asbestos is included is made entirely of paper and cloth. Paper and cloth are penetrable by steam, and claim 9 states,

another portion of casing being formed of material relatively impenetrable by steam.

The appellee's pad as described in the patent and offered in evidence has no portion of the casing made of material impenetrable by steam. Flexible porous material, such as blotting paper and felt, is not impenetrable by steam, nor is asbestos. But claim 10 states,

another portion of said casing being relatively impervious to the passage of steam and being also non-heat-conducting.

But it is not impervious to steam, and there is no portion of the casing of the appellee's pad that has these qualities and apparently refers only to a block of the porous material or asbestos. The specifications must be followed as to what the terms are intended to mean. The paper and cloth admittedly must allow the passage of steam, and the only other remaining element, except the borax, is the porous asbestos pad.

We regard the claims here involved as nothing more than the shortening of the borax portion and the substitution in place of the part previously occupied by the borax of a felt or asbestos block. It involved nothing more than mechanical skill to apply the borax to a portion of the hair desired to be waved and at the same time protect the hair not desired to be waved by the material that will reduce the heating effect of the electric heater. *Thomas Lasting Wave Co., Inc.*, v. *E. Fredericks, Inc.* (C. C. A.) 277 F. 186. It was not invention to make a shorter borax pad to curl one or two inches near the scalp and protect the rest of the hair. Since this was the only problem involved in the thought of this invention, we must hold that inventive thought was not displayed and that the patent in suit is invalid.

[4] The bill of complaint on the Roos patent, No. 1,206,917 which was involved in the first two suits, was withdrawn upon application of the appellee and over the protest of the appellant. Equity rule No. 8 of the district court provides:

Voluntary Discontinuances. If justice requires, the court, after issue joined, may refuse to permit the plaintiff to discontinue, even though the defendant cannot have affirmative relief under the pleadings, and though his only prejudice is the vexation and expense of a possible second suit upon the same cause of action.

This rule was effective when this cause was tried. We think it was error to permit the withdrawal of this suit without prejudice. It did prejudice the defendant, and was contrary to the rule of the court. It was the kind of abuse of practice which led to the promulgation of equity rule No. 8. The withdrawal without prejudice was improvidently granted, and that part of the decree should be reversed with directions to dismiss.

The decree is reversed, with directions to the district court to dismiss the bill in each case.

## U. S. Circuit Court of Appeals—Second Circuit.

HAMMER *v.* ROBERTSON, COMMISSIONER OF PATENTS.

IN RE HAMMER.

*Decided February 20, 1925.*

1. BILL IN EQUITY—SECTION 4915, REVISED STATUTES—COURT CAN NOT RENDER ADVISORY OPINION WHETHER THERE IS ANY REMEDY UNDER STATUTE. The Circuit Court of Appeals, to which appeal has been taken from dismissal, for want of jurisdiction, of suit under Revised Statutes, section 4915 (Comp. St., sec. 9460), by unsuccessful applicant for patent against the Commissioner, can not render an advisory opinion as to whether there is any remedy under such statute for such an applicant with no opponent but the Commissioner.

2. SAME—SAME—PETITION TO COURT FOR ISSUANCE OF PATENT, NAMING NO DEFENDANT, HELD NOT A SUFFICIENT BILL IN EQUITY. Any proceeding under Revised Statutes, section 4915 (Comp. St., sec. 9460), to obtain issuance of patent must be by plenary suit in equity, and a petition to court, naming no defendant, is not a sufficient bill in equity.

3. SAME—SAME—SERVICE IN WASHINGTON ON COMMISSIONER OF PATENTS HELD NOT TO GIVE JURISDICTION IN SUIT IN NEW YORK TO OBTAIN ISSUANCE OF PATENT. Defendant Commissioner of Patents, not being a citizen or resident of New York, where suit, under Revised Statutes, section 4915 (Comp. St., sec. 9460), was brought to obtain issuance of patent, service of original process on him in Washington, D. C., gave no jurisdiction.

4. SAME—SAME—APPEAL AD MISERICORDIAM, BECAUSE OF EFFECT OF STATUTE, TO BE MADE TO CONGRESS. Appeal ad misericordiam, because of effect of statute, must be made to Congress, which makes statutory law; the court merely applying it.

APPEAL from the District Court of the United States for the Eastern District of New York.

Suit by Peter Hammer against Thomas E. Robertson, Commissioner of Patents, with petition in equity by Peter Hammer, to procure issuance of a patent under Revised Statutes, section 4915 (Comp. St., sec. 9460). Motions to dismiss were granted (325 O. G. 3; 1924 C. D. 184; 291 F. 656; 325 O. G. 4; 1924 C. D. 187; 300 F. 246), and defendant appeals. Affirmed.

STATEMENT OF THE CASE.

Hammer, a resident of the district above named, first brought suit against the Commissioner of Patents, alleging that he had applied for a patent in the usual way and been refused by the Office, whose decision had been affirmed by the Court of Appeals for the District of Columbia on June 2, 1923. Wherefore he prayed that the court below would decree that said patent be issued by the defendant Commissioner, pursuant to Revised Statutes, section 4915 (Comp. St., sec. 9460). On this bill process issued and was served on the Commissioner in the District of Columbia. Defendant appeared specially and moved to dismiss for lack of jurisdiction. Motion was granted, and from decree accordingly Hammer appealed.

He then filed what he called a "bill of complaint" in the court below, *naming no defendant and praying no process*, but setting up the same facts and praying the same relief. Of this document he sent a copy by mail to the Commissioner in Washington, D. C., who thereupon again appeared specially and moved to dismiss as before. This motion was also granted, and Hammer again appealed. It is admitted that the Commissioner is not a citizen or resident of New York, or any district thereof, but is a citizen and resident of Maryland, whose official residence is in Washington, D. C.

*Mr. Wm. E. Warland* for the appellant.

*Mr. Ralph C. Green* (*Mr. Wm. A. De Groot* of counsel) for the appellee.

Before ROGERS, HOUGH, and MANTON, Circuit Judges.

PER CURIAM:

Hammer, in prosecuting his application for a patent, encountered no opposition from other parties claiming the same asserted invention. There was no interference. His only opposition (so to speak) was from the Examiners; i. e., the Office. His was, in common parlance, an ex parte, not an inter partes, proceeding.

[1] By this appeal he seeks to present a question not without interest, viz: Is there *any* remedy under Revised Statutes, section 4915 (Comp. St., sec. 9460), for an applicant such as he, who has no successful patentee to sue, and no opponent but the Commissioner himself? On this question we can not render an advisory opinion, for no such function is granted us. We can only decide whether such a disappointed patentee applicant can bring a *suit* under the statute in his home district, and either compel an official whose private and official residences are elsewhere there to appear, or obtain relief without either service or appearance.

[2] As for the second effort (In re Hammer) it is a sufficient, though summary, holding to point out that the statute (R. S., sec. 4915) provides only for a "remedy by bill in equity," and this petition to the court is not and can never be such a bill. That any proceeding under this statute is by plenary suit in equity is settled. *Dover* v. *Greenwood* (C. C. A.) 177 F. 946. And there is nothing to the contrary of this holding in *Re Greeley*, 6 Fisher, 575.

[3] As to the first attempt, that is in form a plenary suit, not unlike *Barrett* v. *Ewing*, 243 O. G. 1065; 1917 C. D. 353; 242 F. 506; 155 C. C. A. 282, and several others, and the only question is whether the service of process confers jurisdiction; a point on which *Butterworth* v. *Hill*, 31 O. G. 1043; 1885 C. D. 292; 114 U. S. 128; 5 S. Ct. 796, 29 L. Ed. 119, has never been overruled and is binding on us. Therefore we hold that service on the defendant in Washington, D. C., was unavailing, and the decision below was right.

[4] Appellant urges that this renders Revised Statutes, section 4915, a farce, because it throws him back into the courts of the District of Columbia, which have already decided against him, unless Mr. Robertson consents to be served in the district of his home, and he wants *rights*, not favors. Even recourse to the Supreme Court of the United States is by recent legislation denied. *Chott* v. *Ewing*, 215 O. G. 1264; 1915 C. D. 327; 237 U. S. 197; 35 S. Ct. 571; 59 L. Ed. 913; *Baldwin* v. *Howard*, 286 O. G. 865; 1921 C. D. 359; 256 U. S. 35; 41 S. Ct. 405; 65 L. Ed. 816. This is the appeal ad misericordiam, and must be addressed to Congress, which makes statute law, not to us who apply it.

Decree affirmed.

## PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

952,645, H. L. Smith, Reenforced-concrete sectional sea wall, suit filed Oct. 10, 1925, D. C., N. D. Calif., Doc. E 1577, *H. L. Smith* v. *Alaska Packers Assn. et al.*

958,478, W. E. Davey, Process of reenforcing trees, suit filed Sept. 23, 1925, D. C. Conn., Doc. E 1818, *The Davey Tree Expert Co.* v. *E. Maynard.* Same, consent decree for perpetual injunction Oct. 20, 1925, D. C. Minn., (4th Div.), Doc. E 480, *The Davey Tree Expert Co.* v. *E. G. Perl.*

1,169,380, L. Cohen, Self-adjusting hat conformer and retainer, 1,209,121, same, Combined hat lining and bandeau, final consent decree sustaining patent and granting injunction Oct. 14, 1925, D. C., S. D. N. Y., Doc. E 30/211, *L. Cohen et al.* v. *R. Martean* (*The E. Z. Band-O Co.*)

1,181,370, A. C. Brown, Adjustable faucet attachment, suit filed Oct. 13, 1924, D. C., N. D. Ohio (E. Div.), Doc. 1365, *A. C. Brown* v. *The Sterling Brass Co.* Final decree Oct. 13, 1925, patent held valid and infringed, injunction granted.

1,197,224, W. E. Moore, Clip for fountain pen (and 1,548,548 C. H. Patten, Writing instrument, included by answer Oct. 2, 1925), suit filed Sept. 11, 1925, D. C. R. I., Doc. 226, *Parker Pen Co.* v. *Rex Mfg. Co.*

1,209,121. (See 1,169,380.)

1,237,015, W. C. Brinton, jr., Electrical condenser and process of making same, suit filed Oct. 7, 1925, D. C., S. D. N. Y., Doc. E 34/44, *Dubilier Condenser & Radio Corp.* v. *Rance Corp.* Same, suit filed Oct. 8, 1925, D. C., S. D. N. Y., Doc. E. 34/71, *Dubilier Condenser & Radio Corp.* v. *Walthal Electric Co., Inc.*

1,346,926, C. Weitz, Stylographic fountain pen, suit filed Oct. 17, 1925, D. C., S. D. N. Y., Doc. E 34/106, *C. Weitz* v. *S. Lisk et al.* (*S. Lisk & Bros.*).

1,385,807, R. E. Wetter, Traffic-signal system, suit filed in D. C., N. D. Tex. (Dallas), Doc. E 3048/306. *Universal Traffic Control Co. et al.* v. *City of Dallas.* Patent held not infringed. (See 6 F. R. (2d) 282.)

1,399,118, 1,469,272, W. H. Hermann, Tire-building machine, suit filed Oct. 16, 1925, D. C., N. D. Ohio (E. Div.), Doc. 1641, *The Hermann Tire Building Machine Co.* v. *The Mason Tire & Rubber Co.*

1,444,740, G. H. Gerwerdts, Mold, appeal filed Oct. 13, 1925, C. C. A. (2d Cir.), Doc. 8921, *A. G. Miller* v. *Feraca Stone Works, Inc., et al.*

1,457,625, A. Freydberg, Fabric binding strip, Filed consent and order of discontinuance, Oct. 22, 1925, D. C., S. D. N. Y., Doc. E 32/286, *Freydberg Bros., Inc.*, v. *M. Freedman.*

1,469,272. (See 1,399,118.)

1,521,259, F. Stolzenberg, Imitation fur and method of producing same, suit filed Sept. 3, 1925, D. C. Conn., Doc. E 1817, *S. Blumenthal & Co., Inc.*, v. *Salt's Textile Mfg. Co.*

1,526,982, W. E. Hill, Stencil sheet, suit filed Oct. 9, 1925, D. C., N. D. Calif., Doc. E 1576, *A. B. Dick Co.* v. *The Styx Co.*

1,533,669, H. Solomon, Machine for applying backs to mirrors, suit filed Oct. 16, 1925, D. C., S. D. N. Y., Doc. E 34/97, *H. Soloman* v. *M. Lubliner, et al.* (*Modern Mirror Novelty Co.*).

1,548,496, Weeks & Bloch, Pencil-printing machine, suit filed Oct. 9, 1925, D. C., S. D. N. Y., Doc. E 34/73, *C. M. Weeks Co., Inc.*, v. *C. M. Weeks.*

1 548,548. (See 1,197,224.)

Des. 62,482, H. Frischer, Plaited fabric, final consent decrees sustaining patent and granting injunction (notice dated Oct. 7, 1925), D. C., S. D. N. Y., Doc. E 28/248, *H. Frischer* v. *Eckstein & Landan* (*I. D. Mfg. Co.*); and Doc. E 28/249, *H. Frischer* v. *L. Landan et al.* (*Landan Bros.*).

Re. 15,749, J. C. Coulombe, Fuel-feeding device, suit filed July 16, 1925, D. C. Conn., Doc. E 1811, *J. C. Coulombe* v. *G. G. Vacuum Tank Corp. et al.*

T. M. 22,406, T. M. 47,189, The Coca-Cola Co., Nutrient or tonic beverage, suit filed Oct. 16, 1925, D. C., N. D. Ohio (E Div.), Doc. E. 590, *The Coca-Cola Co.* v. *C. J. Higgins.*

T. M. 47,189. (See T. M. 22,406.)

T. M. 74,530, Ford Motor Co., Motor vehicles and their parts: T. M. 172,198, T. L. Finney, Nonalcoholic maltless beverage and sirup and extracts for the manufacture of same, suit filed Oct. 13, 1925, D. C., N. D. Ala., Doc. 541, *Ford Motor Co.* v. *Ford Cola Syrup Co.*

T. M. 172,198. (See T. M. 74,530.)

## ADJUDICATED PATENTS.

(D. C. Del.) The Backeland patents, Nos. 942,690 and 942,809, for "bakelite," *Held* not infringed. *Bakelite Corporation* v. *Brunswick-Balke-Collender Co.*, 7 F. (2d) 697.

(D. C. Mich.) The Ledwinka patent, No. 1,143,635, for automobile body, claims 3, 9, 10, 14, 19, 22, 28–31, inclusive, 38, and 39 *Held* invalid. *Edward G. Budd Mfg. Co.* v. *C. R. Wilson Body Co.* 7 F. (2d) 746.

(C. C. A. Calif.) The Roberti patent, No. 1,180,432, for nonstretching ventilated mattress, claims 2 and 3 *Held* valid and infringed. *Jonas* v. *Roberti*, 7 F. (2d) 563.

(D. C. Mich.) The Ledwinka patent, No. 1,214,932, for support for a vehicle-top iron, *Held* invalid. *Edward G. Budd Mfg. Co.* v. *C. R. Wilson Body Co.*, 7 F. (2d) 746.

(D. C. Mich.) The Ledwinka patent, No. 1,255,323, for removable upholstery for vehicles, *Held* not infringed. *Edward G. Budd Mfg. Co.* v. *C. R. Wilson Body Co.*, 7 F. (2d) 746.

(D. C. Mich.) The Ledwinka patent, No. 1,275,274, for automobile body, claims 1 and 2 *Held*

not infringed and claims 11 and 12 *Held* invalid. *Edward G. Budd Mfg. Co.* v. *C. R. Wilson Co.*, 7 F. (2d) 746.

(D. C. Iowa) The Smalley patent, No. 1,504,154 for automobile supports, *Held* valid and infringed *Smalley* v. *Auto Specialists, Inc., of Sioux City, Iowa*, 7 F. (2d) 710.

## ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,520,122, F. C. Gephart and R. H. Harries, Process for making solid, water-soluble tea products, decided November 5, 1925, claims 8, 9, 10, and 14.

Pat. 1,512,566, O. M. Tucker and W. A. Reeves. Method and apparatus for delivering viscous glass, decided November 6, 1925, claims 1, 3, and 12.

Pat. 1,504,295, S. B. Williams, jr., Telephone-exchange system, decided November 5, 1925, claim 22.

Final decisions in interferences have been rendered against the following registered trade-marks:

T. M. 52,684, Canned fruits, vegetables, and oysters, Platt and Company, Baltimore, Md. Registered May 15, 1906. Decided November 4, 1925.

T. M. 38,111, Groceries, G. K. McGaw and Co., Baltimore, Md. Registered April 15, 1902. Decided November 4, 1925.

T. M. 128,705, Condensed milk, Galeton Dairy Products Co., Galeton, Pa. Registered January 13, 1920. Decided November 4, 1925.

## Disclaimers.

1,532,711.—*Donald McGregor Newton*, Montclair, N. J. METHOD AND APPARATUS FOR THE FORMATION OF PILING. Patent dated April 7, 1925. Disclaimer filed November 23, 1925, by the patentee, and assignee, *MacArthur Concrete Pile & Foundation Co., Inc.*

Hereby enters this disclaimer of that part of said Letters Patent which is in the following words, to wit:

*"What is claimed is:—*

*"1. The herein described method of forming footings in sand or soft soils, consisting in sinking a capped casing into the ground to the full depth at which the footing is to be formed, partially filling said casing with a foundation material, forcibly ramming said material and simultaneously partially withdrawing said casing, removing the cap by the withdrawal of the casing and the pressure of the ram and ramming the foundation material to compress the surrounding soil and form an enlarged footing.*

*"2. The herein described method of forming footed concrete piles in sand or soft earth, consisting in driving a casing having a removable driving cap, into the ground to the full depth to which the pile is to extend, partially filling the casing with foundation material, ramming said foundation material and simultaneously partially withdrawing the casing to remove the cap and to provide an unlined cavity beneath the lower end of the casing, continuing the ramming of the foundation material to force the same outwardly and beyond the walls of the cavity, thereby compressing the surrounding soil so that an enlarged footing is formed, subsequently filling the casing, and ramming the material and finally withdrawing the casing while retaining the material under pressure to cause the material to contact with the walls of the cavity formed by the casing and form a complete column.*

*"3. The method of forming piles which comprises introducing into a casing a ram adapted to fit snugly within the interior of the casing and having means to limit downward movement thereof in the casing when said head reaches the lower end of the casing, moving the ram downwardly in the casing until said means becomes operative, sinking the ram and the casing into the earth, withdrawing the ram, introducing a plastic foundation material into the casing, again inserting the ram into the casing and moving it downwardly therein until said head rests upon the upper surface of said material, and withdrawing the casing from about said material while applying said ram to move downwardly in the casing so as to continuously act to press material into the cavity formed by the withdrawal of the casing.*

*"4. The method of forming piles which comprises inserting into a casing a ram normally movable with respect to the casing but having thereon means to limit the movement thereof when its end is adjacent the casing end, moving the ram into said casing until said means becomes operative, applying force to the ram to sink the ram and the casing into the earth to the full depth of the pile to be formed, withdrawing the ram, introducing a plastic foundation material into the casing, again inserting the ram and thereafter employing the ram to compact and to move said material, upon the withdrawal of the casing, into the cavity presented by such withdrawal.*

*"5. The method of forming piles which comprises sinking a casing into the earth, filling the casing throughout substantially its entire length with a charge of plastic foundation material, inserting into the casing a heavy rod adapted to rest against the upper surface of said material, and withdrawing the casing from about said material while allowing the rod of its own weight to slide downwardly in the casing so as to act against said surface to automatically press the material into the cavity formed by the withdrawal of the casing.*

*"6. The method of forming piles which comprises sinking a capped casing into the ground, partially filling the casing with a foundation material, inserting a ram into the casing, partially withdrawing the casing and moving the ram downwardly to remove the cap from the casing and to force the foundation material against and into the surrounding soil, withdrawing the ram from the casing, again filling the casing with a foundation material, again inserting the ram in the casing, and completely withdrawing the casing from about said material while allowing the ram to move downwardly in the casing so as to bear continuously against the upper surface of said material to press the material into the cavity formed by the withdrawal of the casing."*

1,410,797.—*Edgar M. Clark*, New York, N. Y. ART OF PRESSURE DISTILLATION. Patent dated March 28, 1922. Disclaimer filed November 19, 1925, by the assignee by mesne assignments, *Standard Development Company*.

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit:

*"1. The improvement in the art of pressure distillation of petroleum oils for the purpose of producing lighter products by pyrogenesis, which consists in maintaining a considerable body of said oil under cracking conditions of temperature and pressure, continuously withdrawing oil from the said body, releasing the pressure from the withdrawn oil while the latter is in a heated condition, whereby its lighter fractions will distill off, collecting such lighter fractions and returning them to the oil body for further cracking therein."*

# TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 15, 1925.

[VOL. 341. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 152,386. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SCHUTTE & KOERTING COMPANY, Philadelphia, Pa. Filed Aug. 30, 1921.

*Particular description of goods.*—Engineering Appliances Consisting of Injectors, Condensers, Chemical Equipment, Evaporators, Distillers, Oil Coolers, Feed-Water Heaters, Acid Pumps, Air-Jet Lifts, Vertical or Horizontal Lead Pumps, Automatic Blow Cases.

*Claims use* since May 1, 1921.

Ser. No. 184,369. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MILTON C. TRICHEL, doing business as Sun-Flower Pharmacal Co., Shreveport, La. Filed Aug. 11, 1923.

*Particular description of goods.*—Hair Pomade.

*Claims use* since December, 1921.

Ser. No. 185,242. (CLASS 24. LAUNDRY APPLIANCES AND MACHINES.) CHIEF MANUFACTURING COMPANY, Indianapolis, Ind. Filed Sept. 1, 1923.

*Particular description of goods.*—Machines for Scrubbing Carpets With Water or Other Suitable Cleansing Agents, Washing Machines, and Curtain, Dolly, and Blanket Drying Machines.

*Claims use* since on or about July 27, 1920.

Ser. No. 185,294. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) B. A. GRIFFIN & Co., Milwaukee, Wis. Filed Sept. 4, 1923.

The words "Extra Fancy Quality Herring," "Brand," and "A1" are disclaimed apart from the mark shown.

*Particular description of goods.*—Salted and Spiced Fish Products.

*Claims use* since September, 1922.

Ser. No. 186,646. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) VESS JONES, New York, N. Y. Filed Oct. 6, 1923.

WHISTLE

*Particular description of goods.*—Automobiles or Taxicabs.
*Claims use* since Sept. 1, 1923.

---

Ser. No. 188,332. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE STEAMETER CO., Chicago, Ill. Filed Nov. 14, 1923.

STEAMETER

*Particular description of goods.*—High-Tempered Alarm for Internal-Combustion Engines Attachable Directly Thereto or to the Cooling Radiator Thereof.
*Claims use* since May 2, 1923.

---

Ser. No. 189,166. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) R. C. MOORE, Hollywood, Calif. Filed Dec. 8, 1923.

CHEMICURE
the Chemical Cure
PATCH

No claim is made to the words "The Chemical Cure Patch" or to the representation of a tire and tire patch apart from the mark shown in the drawing.
*Particular description of goods.*—Tire Patches.
*Claims use* since July 1, 1923.

---

Ser. No. 189,937. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HOUSEHOLD NECESSITY COMPANY, San Francisco, Calif. Filed Dec. 20, 1923.

The World's Greatest Cleaner
Wash-White
The Only Harmless Bleach

No claim is made to the words "The Worlds Greatest Cleanser" and "The Only Harmless Bleach."
*Particular description of goods.*—Washing Compound.
*Claims use* since early part of 1915.

Ser. No. 190,535. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANK J. CONJURSKE, doing business as Nulife Company, Sturgeon Bay, Wis. Filed Jan. 8, 1924.

Nulife

*Particular description of goods.*—Hair Tonic.
*Claims use* since Sept. 15, 1921.

---

Ser. No. 190,625. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) E. C. ATKINS & COMPANY, Indianapolis, Ind. Filed Jan. 10, 1924.

JUNIOR MECHANIC

The lining on the drawing is shading and does not indicate color.
*Particular description of goods.*—Handsaws.
*Claims use* since Jan. 11, 1923.

---

Ser. No. 191,349. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SCHUTTER-JOHNSON CANDY CO., Chicago, Ill. Filed Jan. 26, 1924.

FRENCH PASTRY

*Particular description of goods.*—Candy.
*Claims use* since Nov. 30, 1923.

---

Ser. No. 191,818. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DURAND-MCNEIL-HORNER CO., Chicago, Ill. Filed Feb. 5, 1924.

"CLOVERHILL"

*Particular description of goods.*—Canned Fruits, Canned Vegetables, Canned Fish, Canned Hawaiian Pineapple, Fruit Preserves, Peanut Butter, Fruit Jelly, Tea, Coffee, Dried Codfish, Olives, Honey, Table Sirup, Flavoring Extracts for Food Purposes, Cocoa, Tomato Catchup, Pickles, Olive Oil, Evaporated Milk, Salad Dressing, Dried Fruits, Pepper, Candy, Salted Peanuts, Spaghetti, Self-Rising Pancake Flour, Toasted Corn Flakes, Horse-Radish, Malt Extract for Food Purposes, and Thyme.
*Claims use* since 1911.

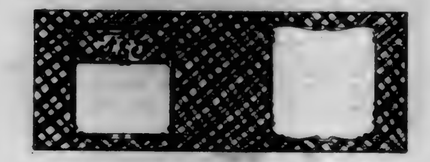
Ser. No. 193,186. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) KLEAN-RITE AUTO LAUNDRY COMPANY, Chicago, Ill. Filed Mar. 3, 1924.

KLEAN-RITE

*Particular description of goods.*—Automobile Washing Apparatus.
*Claims use* since about Jan. 23, 1924.

---

Ser. No. 194,698. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FAXON & GALLAGHER DRUG CO., Kansas City, Mo. Filed Mar. 31, 1924.



The trade-mark is lined to indicate the color blue.
*Particular description of goods.*—Rock Candy, Pure Olive Oil, Cloves, Caraway Seed, Mace, Allspice, Black Mustard, Yellow Mustard, Cinnamon, White Pepper, Black Pepper, and Garden Sage.
*Claims use* since July 1, 1921.

---

Ser. No. 198,030. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) GEORGE RUSSELL REED COMPANY, San Francisco, Calif. Filed June 3, 1924.

RISILIO

*Particular description of goods.*—Roller Composition for Printing Press.

11. A suction cleaner casing, in combination with a fan and motor, their common axes downwardly and rearwardly inclined.

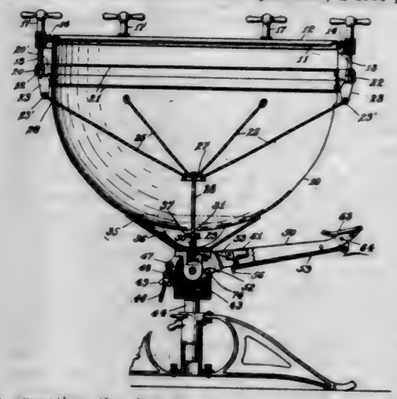
16,225. PROCESS OF MAKING MATERIAL FOR FILTERING AND DECOLORIZING. PHILIP L. WOOSTER, deceased, late of Manhasset, N. Y., by Lillian D. Wooster, administratrix, Manhasset, N. Y. Filed Aug. 5, 1925. Serial No. 48,431. Original No. 1,518,289, dated Dec. 9, 1924, Serial No. 337,854, filed Nov. 13, 1919. 18 Claims. (Cl. 252—2.)

1. The process of making a filtering and decolorizing agent which consists of boiling green bone, heating it to redness, allowing it to cool in a closed receptacle in such proximity to a hydrocarbon as to effect the deposition of carbon particles in the pores of the bone, subjecting the resulting product to the action of a re-agent that will reduce a substantial part of the inorganic constituents to a condition whereby they may be dissolved or washed free from the structure, washing the residue from the structure, grinding it and subjecting it to vapor arising from the incomplete combustion of a hydrocarbon.

16,226. TYMPANO. CECIL H. STRUPE, Indianapolis, Ind., assignor to Leedy Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 27, 1924. Serial No. 722,875. Original No. 1,469,197, dated Sept. 25, 1923, Serial No. 544,169, filed Mar. 6, 1922. 30 Claims. (Cl. 84—419.)

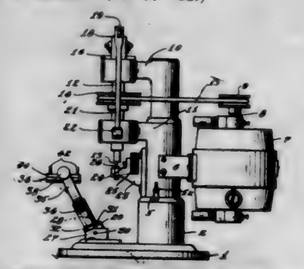
27. In a tympano, the combination of the kettle provided with a vibratile head, a plurality of circumferentially-spaced tuning pins associated with said head by a laterally flexible connection, a plurality of circumferentially-spaced levers fulcrumed upon the kettle and each operatively connected to a tuning pin, a plurality of actuators connected one to each lever, and projected into the interior of the kettle, and a primary actuator connected to all of said actuators within the kettle.

30. In a tympano, the combination of a kettle with its vibratile head, and tuning means by which the pitch of said head may be varied, said tuning means comprising a foot lever, retaining means for retaining said lever in any desired position of adjustment, a foot piece



for operating the foot lever, connections between the foot piece and retaining means, and a movable mounting for the foot piece on the foot lever which permits the operation of said connections to project and retract the retaining means independently of the force applied to said foot piece in manipulating the foot lever.

16,227. LENS-DRILLING MACHINE. EDWARD W. CLARKE, Silver Creek, N. Y., assignor to American Optical Company, Southbridge, Mass. Filed July 9, 1923. Serial No. 650,477. Original No. 1,447,761, dated Mar. 6, 1923, Serial No. 393,518, filed July 2, 1920. 6 Claims. (Cl. 77—63.)

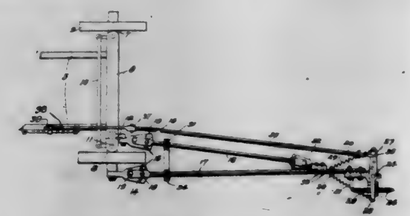


1. In combination with the base, frame, and rotatable spindle of a lens drilling machine, a lens holder pivoted to the base and adapted to present one surface of the lens to the drill, and means for subsequently turning the lens holder to present the opposite surface of the lens to the drill.

16,228. STEERING DEVICE. ADOLPH A. RIETZKE, Valley Park, Mo., assignor of one-half to Henry Cornelsen, Texhoma, Okla. Filed June 16, 1922. Serial No. 568,880. Original No. 1,403,708, dated Jan. 17, 1922, Serial No. 497,593, filed Sept. 1, 1921. 8 Claims. (Cl. 97—49.)

1. In combination with one of the stub axles and steering wheels of a tractor, a guide wheel in advance of the

steering wheels, spaced adjusting blocks in cooperative relation with said stub axle and rods connecting the guide wheel with said adjusting blocks, said rods capable of being adjusted to different positions with relation to each other.

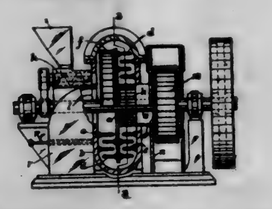


3. In a steering gear for tractors, an axle, steering wheels, stub axles for the steering wheels pivotally connected to said axle, adjusting blocks secured to one of said stub axles in spaced relation to each other, a guide wheel in advance of the steering wheels, a rod connecting said guide wheel with one of the adjusting blocks and a second rod connected to each first mentioned rod and to the other of said adjusting blocks, said rods capable of being adjusted to different angles with relation to each other.

5. In a steering device for tractors, in combination with the steering wheels and their stub axles, adjusting blocks carried by the outer and inner ends of one of the stub axles, a guide wheel in advance of the steering wheels, rods connecting said guide wheel with one of the steering wheel stub axles through the medium of the adjusting blocks and means to permit lateral adjustment of the rods with relation to each other.

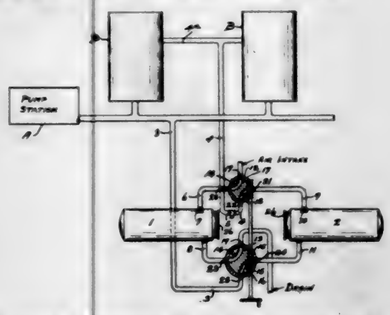
8. In combination with the stub axles and steering wheels of a tractor, an automatic steering device including adjusting blocks provided with curved slots carried by the outer and inner ends of one of the stub axles, a rod having one end thereof pivotally connected to one of the blocks, and having a bolt extending through the slot thereof to permit of the rod being set at different adjusted positions with respect thereto, an angularly disposed rod having connection with the other block and having a bolt extending through the slot thereof to permit of the rod being set at different adjusted positions with respect thereto, means for adjustably connecting the angularly disposed rod to the first mentioned rod, a steering wheel pivotally supported at the outer end of the first mentioned rod, and means for adjusting the steering wheel to various angles.

16,229. MACHINE FOR THE PRODUCTION OF POWDERED FUEL. CHARLES EDWARD BLYTH, Dunchurch, near Rugby, England. Filed Dec. 9, 1924. Serial No. 754,864. Original No. 1,446,151, dated Feb. 20, 1923. Serial No. 462,270, filed Apr. 18, 1921. 15 Claims. (Cl. 83—11.)



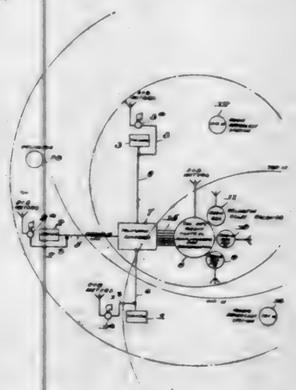
1. A pulverizing device comprising a stationary casing having a feeding and discharge opening on opposite sides, a disk rotatably mounted in said casing between said openings and having impellers on its opposite sides, beaters secured on the side walls of said casing intermeshing with said disk impellers, fan blades secured to the inlet side of said disk adjacent its rim, and blades secured to said disk on the opposite side thereof from said fan blades forming a conduit for the fines.

16,230. COMPRESSOR. ADOLF ROSZKOWSKI, New York, N. Y., assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed June 27, 1923. Serial No. 648,115. Original No. 1,383,860, dated July 5, 1921, Serial No. 357,485, filed Feb. 9, 1920. 14 Claims. (Cl. 137—79.)



3. An air compressor for a water system using compressed air as a motive power, comprising two tanks, arranged to have a water head from the system, a valve for connecting each tank either with the water head from the system and the compressed air service, or with the atmosphere at will.

16,231. RADIOPHONE SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed July 7, 1925. Serial No. 42,100. Original application filed Aug. 14, 1922, Serial No. 581,829. Renewed July 22, 1924. Original No. 1,522,357, dated Jan. 6, 1925. 58 Claims. (Cl. 250—6.)



53. The method of regional broadcast distribution which consists in transmitting waves in common to a plurality of subscribers in a given area and returning coordinated waves derived from said transmitted waves individually from receiving points to the transmitting point.

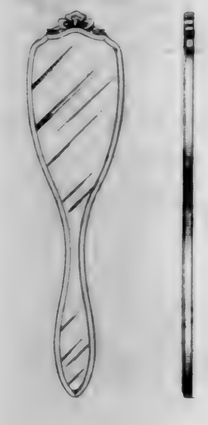
# DESIGNS

## DECEMBER 15, 1925.

69,005. MIRROR OR SIMILAR TOILET ARTICLE. WILLIAM S. BECHTOLD, Newark, N. J. Filed June 2, 1925. Serial No. 13,634. Term of patent 7 years.

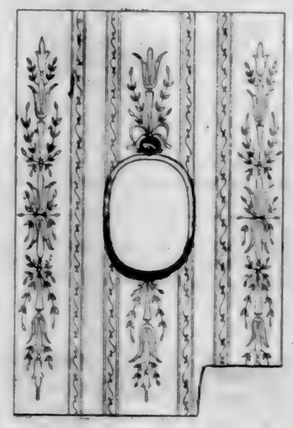
The ornamental design for a mirror or similar toilet article, as shown.

69,006. MIRROR OR SIMILAR TOILET ARTICLE. WILLIAM S. BECHTOLD, Newark, N. J. Filed June 2, 1925. Serial No. 13,636. Term of patent 7 years.



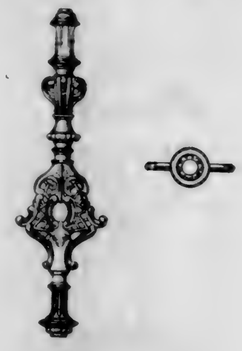
The ornamental design for a mirror or similar toilet article, as shown.

69,007. PHOTOGRAPH MOUNTING. JOHN ANTHONY BILL, Cincinnati, and CHARLES L. LEWIS, Toledo, Ohio. Filed July 27, 1925. Serial No. 14,230. Term of patent 3½ years.



The ornamental design for a photograph mounting as shown.

69,008. SPINDLE FOR LIGHTING FIXTURES. WILLIAM BLOCK, Chicago, Ill. Filed Oct. 15, 1925. Serial No. 15,130. Term of patent 3½ years.

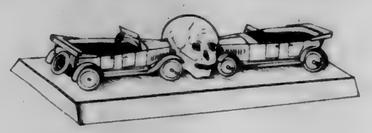


The ornamental design for a spindle for lighting fixtures substantially as shown.

69,009. LAMP BASE. WILLIAM BLOCK, Chicago, Ill. Filed Oct. 15, 1925. Serial No. 15,135. Term of patent 3½ years.

The ornamental design for a lamp base as shown.

69,010. COMBINED PAPER WEIGHT AND INKWELL. FRANK T. CORTESE, Brooklyn, N. Y. Filed Aug. 31, 1925. Serial No. 14,666. Term of patent 7 years.



The ornamental design for a combined paper weight and ink well, as shown.

69,011. GOBLET. LOUIS CRUVEILHER, New York, N. Y., assignor to Societe Anonyme des Cristalleries du Val St. Lambert, Val St. Lambert, Belgium. Filed Aug. 26, 1925. Serial No. 14,603. Term of patent 14 years.

The ornamental design for a goblet as shown.

69,012. FINGER RING. SAMUEL DALIN, West Allis, Wis. Filed Aug. 9, 1923. Serial No. 6,988. Term of patent 7 years.

The ornamental design for a finger ring, substantially as shown.

69,013. FOB OR SIMILAR ARTICLE. LYMAN KENT DAVIS, Springfield, Ill. Filed May 4, 1925. Serial No. 13,310. Term of patent 14 years.

The ornamental design for a fob or similar article, as shown.

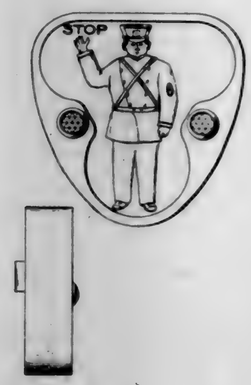
69,014. ELECTRICAL BRACKET FIXTURE. VICTOR R. DESPARD, Valparaiso, Ind. Filed Oct. 16, 1925. Serial No. 15,153. Term of patent 14 years.

The ornamental design for an electrical bracket fixture, as shown.

69,015. LIGHTING FIXTURE. EUGEN JULIUS DIETZMANN, Los Angeles, Calif. Filed Jan. 12, 1925. Serial No. 12,021. Term of patent 14 years.

The ornamental design for a lighting fixture as shown.

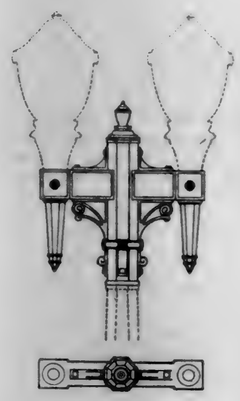
69,016. STOPLIGHT. ALBERT E. DONLEY, Providence, R. I. Filed July 15, 1925. Serial No. 14,109. Term of patent 7 years.



The ornamental design for a stoplight as shown.

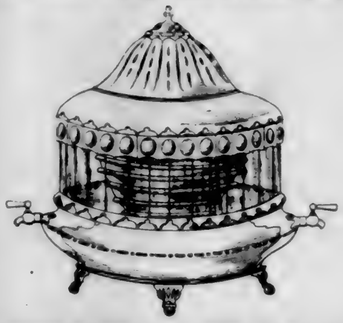
69,017. [WITHDRAWN.]

69,018. HEAD FOR STREET-LAMP STANDARDS. CHARLES HANSEN, Davenport, Iowa, assignor to Davenport Machine and Foundry Company, Davenport, Iowa, a Corporation of Iowa. Filed Aug. 24, 1925. Serial No. 14,569. Term of patent 14 years.



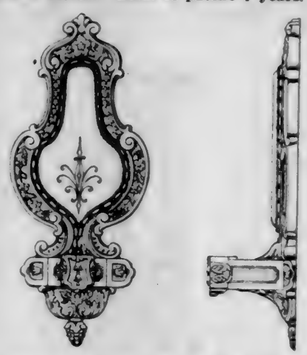
The ornamental design for a head for street lamp standards as shown.

69,019. CHILLING BOWL. HARRY W. HIBBARD, Cleveland, Ohio, assignor to The Frost Chill Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 14, 1924. Serial No. 9,276. Term of patent 14 years.



The ornamental design for a chilling bowl as shown.

69,020. BRACKET FOR LIGHTING FIXTURES. WILLIAM JAEGER, Philadelphia, Pa. Filed Sept. 10, 1924. Serial No. 10,731. Term of patent 7 years.

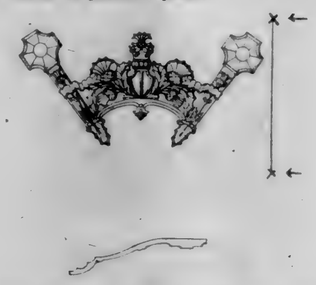


The ornamental design for a bracket for lighting fixtures substantially as shown.

69,021. LIGHTING FIXTURE. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,858. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

69,022. SEGMENTAL PORTION FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,859. Term of patent 7 years.



The ornamental design for a segmental portion for lighting fixtures as shown.

---

69,023. LIGHTING FIXTURE. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,860. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

---

69,024. BOBECHE FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,861. Term of patent 7 years.

The ornamental design for a bobeche for lighting fixtures, as shown.

69,025. LIGHTING-FIXTURE BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,862. Term of patent 7 years.

The ornamental design for a lighting fixture bracket, as shown.

---

69,026. BACKPLATE FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,863. Term of patent 7 years.

The ornamental design for a backplate for lighting fixtures, as shown.

---

69,027. LIGHTING-FIXTURE BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,864. Term of patent 7 years.

The ornamental design for a lighting fixture bracket as shown.

69,028. BACKPLATE FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,865. Term of patent 7 years.

The ornamental design for a backplate for lighting fixtures as shown.

---

69,029. LIGHTING-FIXTURE BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,866. Term of patent 7 years.

The ornamental design for a lighting fixture bracket as shown.

---

69,030. BACKPLATE FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,867. Term of patent 7 years.

The ornamental design for a backplate for lighting fixtures, as shown.

69,031. LIGHTING-FIXTURE BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,868. Term of patent 7 years.

The ornamental design for a lighting fixture bracket, as shown.

---

69,032. BACKPLATE FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,869. Term of patent 7 years.

The ornamental design for a backplate for lighting fixtures, as shown.

---

69,033. LIGHTING-FIXTURE BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,870. Term of patent 7 years.

The ornamental design for a lighting fixture bracket, as shown.

69,034. LIGHTING FIXTURE. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,871. Term of patent 7 years.

The ornamental design for lighting fixture, as shown.

---

69,035. CEILING LIGHT. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,872. Term of patent 7 years.

The ornamental design for a ceiling light, as shown.

---

69,036. LIGHTING FIXTURE. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,873. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

69,037. CEILING LIGHT. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,874. Term of patent 7 years.

The ornamental design for a ceiling light, as shown

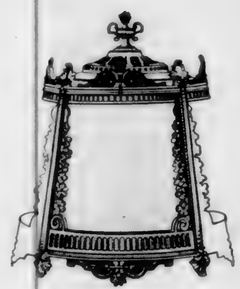
---

69,038. TABLE LAMP. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,875. Term of patent 7 years.

The ornamental design for a table lamp, as shown.

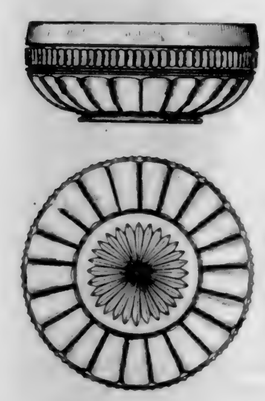
---

69,039. FRAME FOR LAMP SHADES OR SIMILAR ARTICLES. NORMAN LIPSKY, New York, N. Y., assignor to Sun Rise Lamp Mfg. Co. Inc., a Corporation of New York. Filed Aug. 19, 1925. Serial No. 14,513 Term of patent 3½ years.



The ornamental design for a frame for lamp shades, or similar articles substantially as shown and described.

69,040. DISH OR SIMILAR ARTICLE. VIRGIL LOOMIS, Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 1, 1924. Serial No. 11,265. Term of patent 7 years.



The ornamental design for a dish or similar article, substantially as shown.

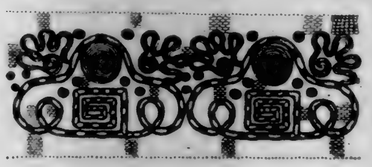
---

69,041. EMBROIDERED LACE. ENEE MEDA, New York, N. Y., assignor to Blanck & Co., Inc., New York, N. Y. Filed June 12, 1925. Serial No. 13,750. Term of patent 3½ years.

The ornamental design for embroidered lace, as shown.

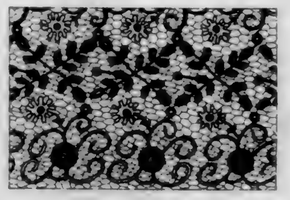
---

69,042. EMBROIDERED LACE. ENEE MEDA, New York, N. Y., assignor to Blanck & Co., Inc., New York, N. Y. Filed June 18, 1925. Serial No. 13,815. Term of patent 3½ years.



The ornamental design for embroidered lace, as shown.

69,043. LACE. ENEE MEDA, New York, N. Y. Filed Oct. 10, 1925. Serial No. 15,089. Term of patent 3½ years.



The ornamental design for lace, substantially as shown.

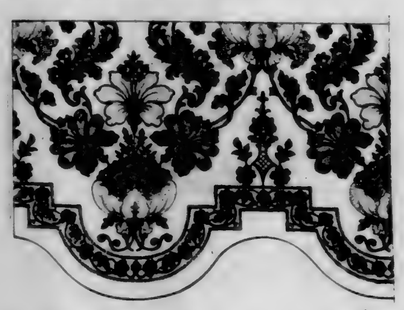
---

69,044. ELECTRIC LAMP. CHARLES F. MULVIHILL, New York, N. Y. Filed Mar. 10, 1925. Serial No. 12,673. Term of patent 14 years.

The ornamental design for an electric lamp, substantially as shown.

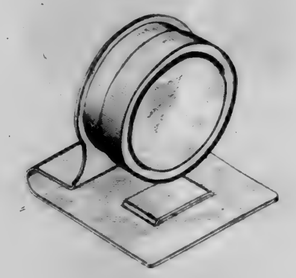
---

69,045. VALANCE FOR WINDOW DRAPERIES. ROBERT J. MURRAY, Philadelpia, Pa., assignor to Francis A. Bruner, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed Oct. 2, 1925. Serial No. 14,996. Term of patent 7 years.



The ornamental design for a valance for window draperies, substantially as shown and described.

69,046. THERMOMETER STAND. HARRY Y. NORWOOD, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Mar. 20, 1922. Serial No. 1,263. Term of patent 14 years.

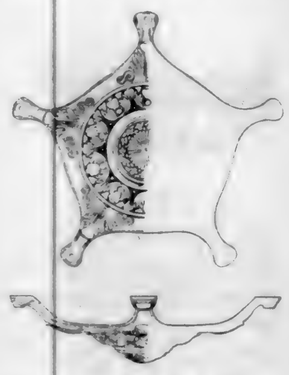


The ornamental design for a thermometer stand, as shown.

69,047. CHANDELIER. MIROSLAV PILNY, Astoria, N. Y., assignor to Metropolitan-Columbia Mfg. Co. Inc., a Corporation of New York. Filed July 30, 1925. Serial No. 14,275. Term of patent 3½ years.

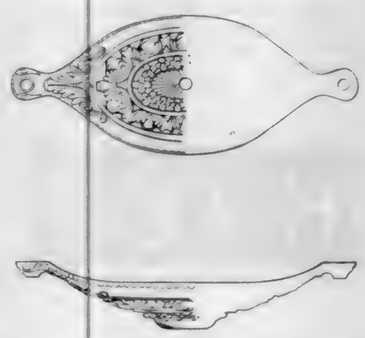
The ornamental design for a chandelier, substantially as shown.

69,048. LIGHTING-FIXTURE PART. MIROSLAV PILNY, Astoria, N. Y., assignor to Metropolitan-Columbia Mfg. Co. Inc., a Corporation of New York. Filed July 30, 1925. Serial No. 14,276. Term of patent 3½ years.



The ornamental design for a lighting fixture part, substantially as shown and described.

69,049. LIGHTING-FIXTURE PART. MIROSLAV PILNY, Astoria, N. Y., assignor to Metropolitan-Columbia Mfg. Co. Inc., a Corporation of New York. Filed July 30, 1925. Serial No. 14,277. Term of patent 3½ years.



The ornamental design for a lighting fixture part, substantially as shown and described.

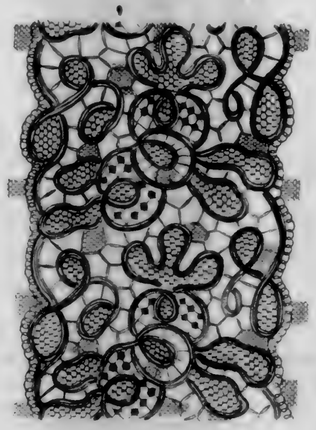
69,050. CANOPY FOR LIGHTING FIXTURES. MIROSLAV PILNY, Astoria, N. Y., assignor to Metropolitan-Columbia Mfg. Co. Inc., a Corporation of New York. Filed July 30, 1925. Serial No. 14,278. Term of patent 3½ years.

The ornamental design for a canopy for lighting fixtures, substantially as shown and described.

69,051. ARM FOR LIGHTING FIXTURES. MIROSLAV PILNY, Astoria, N. Y., assignor to Metropolitan-Columbia Mfg. Co. Inc., a Corporation of New York. Filed July 30, 1925. Serial No. 14,279. Term of patent 3½ years.

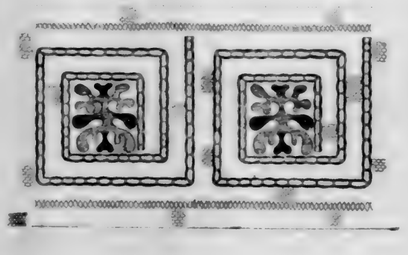
The ornamental design for an arm for lighting fixtures, substantially as shown.

69,052. EMBROIDERED LACE. ELIZABETH A. DAVIS PRESS, White Plains, N. Y., assignor to Blanck & Co., Inc., New York, N. Y. Filed June 12, 1925. Serial No. 13,753. Term of patent 3½ years.



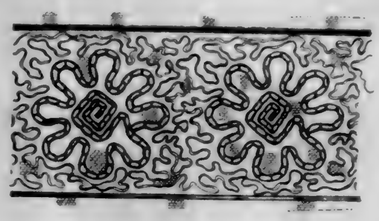
The ornamental design for embroidered lace, as shown.

69,053. EMBROIDERED LACE. ELIZABETH A. DAVIS PRESS, White Plains, N. Y., assignor to Blanck & Co., Inc., New York, N. Y. Filed June 12, 1925. Serial No. 13,754. Term of patent 3½ years.



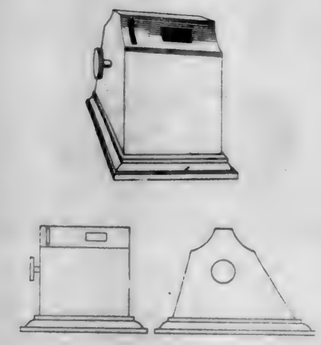
The ornamental design for embroidered lace, as shown.

69,054. EMBROIDERED LACE. ELIZABETH A. DAVIS PRESS, White Plains, N. Y., assignor to Blanck & Co., Inc., New York, N. Y. Filed June 12, 1925. Serial No. 13,755. Term of patent 3½ years.



The ornamental design for embroidered lace, as shown.

69,055. CASING FOR A CALCULATING MACHINE. CLAY W. PREWETT, Los Angeles, Calif., assignor to Prewett Addograf and System Company, Los Angeles, Calif. Filed July 23, 1923. Serial No. 6,830. Term of patent 3½ years.

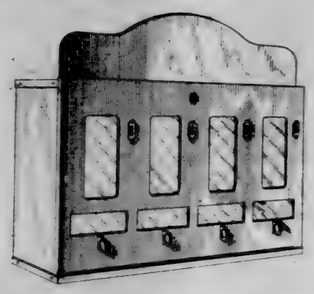


The ornamental design for a casing for a calculating machine as shown.

69,056. DOLL. BLANCHE SCHELL, Brooklyn, N. Y. Filed July 22, 1925. Serial No. 14,178. Term of patent 7 years.

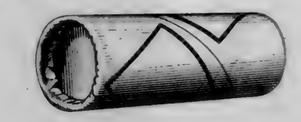
The ornamental design for a doll as shown.

69,057. VENDING-MACHINE CASING. EDWARD SCHULTZ, Chicago, Ill., assignor to William H. Jenkins, Chicago, Ill. Filed Oct. 29, 1925. Serial No. 15,286. Term of patent 3½ years.



The ornamental design for a vending machine casing, as shown.

69,058. CARTON OR SIMILAR ARTICLE. OLOF N. TØVANDER, Chicago, Ill., assignor to Standard Cap & Seal Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 23, 1922. Serial No. 4,068. Term of patent 7 years.

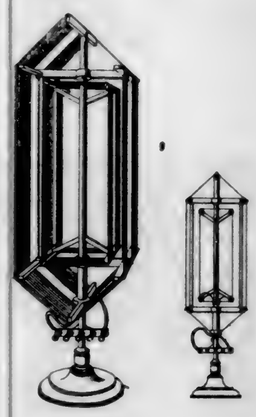


The ornamental design for a carton or similar article, as shown.

69,059. BOOK END OR SIMILAR ARTICLE. ELIZABETH F. WASHBURN, Ware, Mass. Filed Oct. 14, 1925. Serial No. 15,119. Term of patent 3½ years.

The ornamental design for a book end or similar article, as shown.

69,060. ANTENNA LOOP OR SIMILAR ARTICLE. GEORGE WILLIAMS, Santa Ana, Calif., assignor of one-half to James B. Utt, Tustin, Calif. Filed July 6, 1925. Serial No. 13,998. Term of patent 14 years.



The ornamental design for an antenna loop or similar article, as shown.

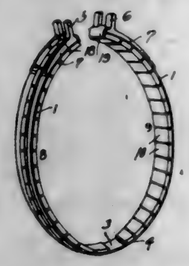
# PATENTS

## GRANTED DECEMBER 15, 1925.

1,565,239. AIRSHIP-STEERING MECHANISM. MARION W. ADKINS, Kansas City, Mo. Filed Mar. 13, 1923. Serial No. 624,709. 2 Claims. (Cl. 244—29.)

1. In a steering mechanism of the kind described, a rock shaft having two oppositely extending cranks, two cables respectively attached to said cranks, a rudder rigidly attached to said rock shaft, a second rudder at right angles to the first rudder, a bolt carried by said rock shaft and extending at right angles thereto on which the second rudder is pivoted, two members carried at opposite sides of said second rudder by said rock shaft, and a cable having a running connection with said members and attached to said second rudder at one side of the pivotal axis thereof.

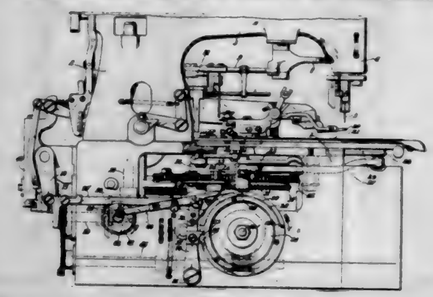
1,565,240. SECTIONAL BRAKE LINING. CARL ANDERSON, Roza, Wash., assignor of one-half to Thomas C. Doolittle, Roza, Wash. Filed Dec. 12, 1924. Serial No. 755,439. 4 Claims. (Cl. 188—259.)



3. The combination with a slotted brake band, a flexible liner strip comprising a series of perforated friction blocks, a single flexible strand passing successively through said blocks, a retaining head at one end of said strand for engagement with a block, a retaining hook at the other end of the strand for engagement with a block, and retaining tongues on said blocks having undercut guide grooves for co-action with said slotted brake band.

1,565,241. BUTTONHOLE-SEWING MACHINE. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 9, 1924. Serial No. 742,507. 6 Claims. (Cl. 112—71.)

1. A buttonhole sewing machine having in combination, stitch-forming mechanism, a work-holder, stitch-positioning cams making one complete rotation per buttonhole producing cycle and connections for relatively rotating and feeding the stitch-forming mechanism and work-holder to sew around a buttonhole, means connected to the sewing shaft for driving said stitch-positioning cams at a normal speed during a portion of the period of action of the stitch-forming mechanism, and means for more rapidly driving said cams during another portion of the period of action of the stitch-forming mechanism while the latter continues its sewing action, said last-named means including an accessibly located controlling wheel and means for driving said cams through said wheel.



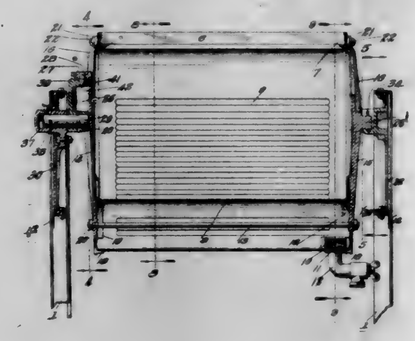
1,565,242. METHOD OF DECORATING ART NOVELTIES. MABEL F. ALKIRE, Dallas, Tex. Filed Oct. 1, 1925. Serial No. 59,898. 3 Claims. (Cl. 41—34.)

1. The hereindescribed method of decorating plastic articles which consists initially in adhering tufts of natural grass to the said article by heating a quantity of paraffine to a liquid consistency and dripping the same at spaced intervals on said grass, then in affixing a number of cloth flowers at desired positions on said grass to indicate natural placement thereof, and finally in varnishing said grass to produce a natural effect.

1,565,243. WASHING MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Apr. 23, 1923. Serial No. 633,877. 8 Claims. (Cl. 68—21.)

1. A metallic tub, including vertical side walls and a curved rubbing wall having an opening in its top and formed diametrically opposite thereto with an inturned

substantially inverted V-shaped transversely disposed bridge-wall, brace frames for each side wall, said frames having upper diverging arms and lower diverging shoes having inturned flanges to engage the curved wall at the juncture of the bridge-wall therewith and also provided



with inturned inverted V-shaped flanges to receive and brace the bridge-wall at opposite ends, bolts securing the arms to the side walls above the water line, and a bolt connecting the opposite frames near their lower ends and disposed outside the tub and between the walls forming the bridge-wall.

---

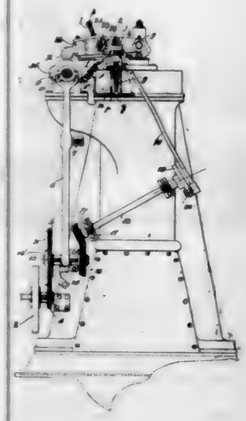
1,565,244. TOOTH-MOUNTING-CARD HOLDER. ROBERT C. ANGELL, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1922. Serial No. 551,929. 6 Claims. (Cl. 211—14.)

1. A holder of the class described, comprising a rack having side walls provided with opposed recessed pockets merging into obliquely inclined slots affording guides arranged to receive and hold tooth mounting-cards in relatively parallel planes, the recessed walls of said pockets being extended to form yielding guards arranged to frictionally engage the opposite ends of said tooth mounting-cards.

---

1,565,245. REVERSING MECHANISM FOR OIL-BURNING ENGINES. AXEL AUGUST ASPLUND, Auburn, N. Y., assignor to Edward T. Fenwick, Falls Church, Va. Filed Feb. 17, 1920. Serial No. 359,415. 13 Claims. (Cl. 123—41.)

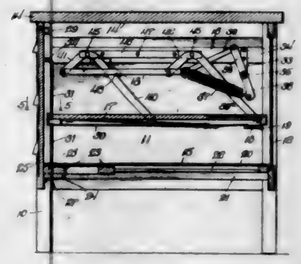
1. In an internal combustion engine having a plurality of cam operated valves each having a cam lever, and a cam shaft carrying a plurality of cams in duplicate for operating said valve levers and valves, one set for operating the engine ahead and one set for operating the engine astern, a reversing mechanism comprising in combination a cam shaft shifting mechanism, a valve



lever lifting mechanism, a valve opening mechanism and means for operating said cam shaft shifting mechanism, valve lever lifting mechanism and valve opening mechanism in a predetermined order.

---

1,565,246. OFFICE DESK. JOHN L. AXEN, Cicero, Ill. Filed Aug. 17, 1923. Serial No. 657,901. 3 Claims. (Cl. 45—52.)



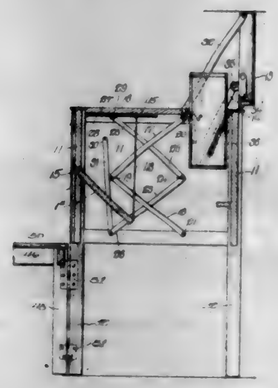
1. A cabinet having an open front with posts on opposite sides thereof; a floating shelf occupying a relatively low position when in the cabinet and a relatively high position when out of the cabinet, in combination with wearing strips secured to the posts and projecting slightly beyond the parallel edge of the post and toward the shelf and similar wearing strips secured to proximate longitudinal edges of the shelf and projecting slightly therebeyond toward said posts, for contact with the wearing strips on the posts during the entire movement of the shelf.

---

1,565,247. CABINET DESK. JOHN L. AXEN, Chicago, Ill. Filed Sept. 13, 1923. Serial No. 662,872. 1 Claim. (Cl. 45—52.)

A desk comprising a cabinet, having a hinged cover, a hinged two-piece front wall to said cabinet, means

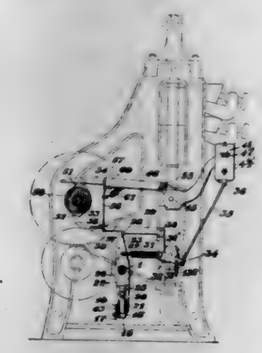
connecting said shelf to said cover for operation of said shelf by said cover, and means connecting the lower por-



tion of said front wall to said shelf for inward swinging movement thereby.

---

1,565,248. CONTROLLING DEVICE FOR POWER-OPERATING MECHANISM. ARTHUR BATES, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,248. 16 Claims. (Cl. 192—131.)

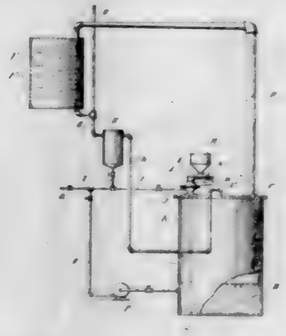


6. A device of the class described for controlling the operation of a machine having, in combination, mechanism controllable to throw the machine into and out of operation, two members operable by the respective hands of the operator, means dependent upon the operation of both of said members for controlling said mechanism to throw the machine into operation, and means acting independently of said members for controlling said mechanism to throw the machine out of operation.

---

1,565,249. MEANS FOR FEEDING SOLIDS AND SEMISOLIDS TO CHEMICAL APPARATUS. GEORGE A. BERRY, Somerville, N. J. Filed Mar. 17, 1920. Serial No. 366,622. 11 Claims. (Cl. 23—252.)

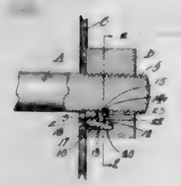
2. In an apparatus for feeding solids or semisolids into a closed receptacle, the combination of a substantially closed receptacle, a condenser exteriorly of the receptacle, means for leading vapors generated within the receptacle out of the receptacle and to the condenser, wherein they are condensed, means for leading the con-



densate back to the receptacle, and means for introducing foreign matter into the condensate during its passage from the condenser to the receptacle.

---

1,565,250. NUT LOCK. PAUL I. BIBLE, Hollis, Okla. Filed Aug. 22, 1925. Serial No. 51,770. 3 Claims. (Cl. 157—24.)



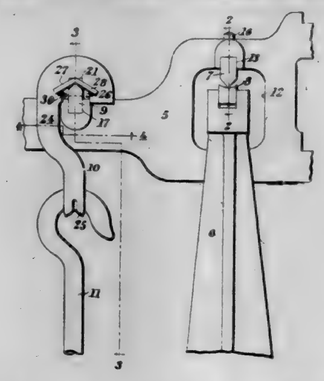
1. The combination with a bolt having a threaded shank of a nut threaded upon the shank adapted to engage the work through which the bolt is inserted, the nut having a radially extending passageway formed therein opening out into the bore of the nut, and a second passageway arranged parallel with the bore of the nut communicating with the inner end of the radially extending passageway and opening out through the inner face of the nut, an operating lug slidably mounted within the second mentioned passageway having a reduced tongue and a reduced extension normally extending beyond the inner face of the nut, a locking lug slidably mounted within the radially extending bore having a beveled inner end normally resting upon the tongue and biting teeth on its outer end for engaging the threads of the bolt, a holding pin extending into the nut for engaging the locking lug for holding the same against displacement, and an inclined face leading from said tongue to the body portion of the operating lug for engaging the beveled face of the locking lug for normally urging the same outwardly into locking contact with the bolt, when the operating lug is forced inwardly by the engagement thereof with the work.

---

1,565,251. SCALE LOOP. ALFRED BOUSFIELD, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Feb. 14, 1925. Serial No. 9,115. 2 Claims. (Cl. 265—49.)

1. In a scale, the combination with a weight-beam having a pivot, of a loop suspended from said pivot,

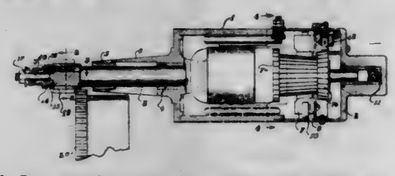
said loop having spaced arms, the extremities of which are of inverted U-form for engaging the said pivot,



and means carried by the pivot for limiting the lateral movement of the said loop.

---

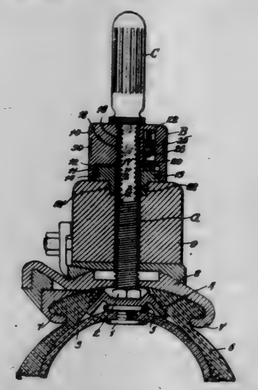
1,565,252. STARTING MOTOR FOR AUTOMOBILES. ODILON BRISBOIS, Chicago, Ill. Filed Dec. 11, 1922. Serial No. 606,343. 7 Claims. (Cl. 290—38.)



1. In a starting motor, a longitudinally shiftable armature, a tapered commutator having a rear beveled ridge, an auxiliary brush normally connecting with said ridge and so connected in circuit with the motor as to cut out a number of armature coils, said commutator riding from under said brush during its longitudinal travel.

---

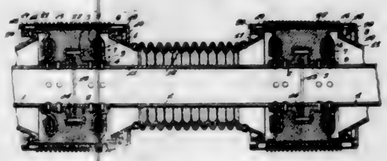
1,565,253. TIRE LOCK. ROBERT H. BUTTERS and RICHARD W. STARKE, Atlanta, Ga. Filed Sept. 21, 1923. Serial No. 663,936. 3 Claims. (Cl. 70—122.)



1. In a lock, in combination, a stem and a locking block, the stem having threads and flat faces interrupting the threads, the block comprising two co-axial co-operating parts relatively rotatable and having central openings through which the stem may project, one of the parts engaging the flat faces of the stem against rotation, the other engaging the threads against endwise displacement, a bolt carried by one part, the other part having ratchet shoulders for engagement by said bolt, and lock mechanism carried by one part and operative to retract the bolt.

---

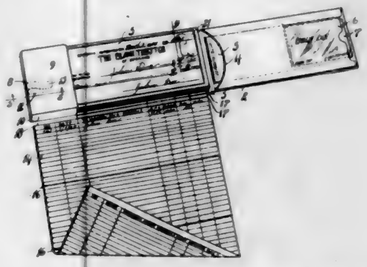
1,565,254. PIPE COVERING. ALBERT LEONARD BYSTROM, Tower, Minn. Filed Apr. 1, 1924. Serial No. 703,479. 1 Claim. (Cl. 137—75.)



A pipe covering including similar units each comprising an inner tubular pipe receiving member, annular outstanding portions at the ends of the member, an outer tubular member provided with annular corrugations, there being a partial vacuum between said members, and means at the ends of the outer tubular member interlocking with the annular outstanding portions to seal the space between the members, and means for sealing the connection between the units, said last mentioned means including connected inner and outer sleeves fitted upon said ends and having a partial vacuum between them, and an insulating packing surrounded by the inner sleeve.

---

1,565,255. CHECK BOOK. AXEL RICHARD BYQUIST, Spokane, Wash. Filed Apr. 8, 1924. Serial No. 705,024. 4 Claims. (Cl. 283—66.)



4. The combination with an end opening book having an inwardly opening pocket on its back, of a pad having one of its ends located in said pocket, a foldable account sheet having a tab located between the pad and back, and means within the pocket for retaining the pad and tab.

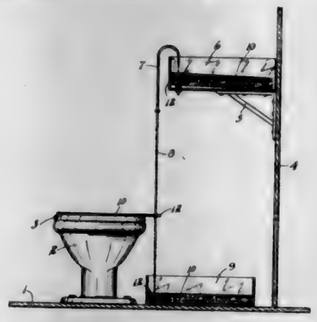
---

1,565,256. METHOD OF PRODUCING PHOTOGRAPHIC COPIES BY MEANS OF PHOSPHORESCENT SUBSTANCES. JENS HERMAN CHRISTENSEN, Holte, Denmark. Filed July 30, 1920. Serial No. 400,232. 4 Claims. (Cl. 95—5.)

1. The method of copying by means of a phosphorescent screen, which comprises illuminating a phosphorescent film, placing the said screen in contact with a picture to be copied, illuminating the picture through the screen with a colored light which will diminish the phosphorescence, then placing together the phosphorescent screen and a light sensitive film to produce on the latter a latent picture corresponding to said picture, and then developing the light sensitive film.

---

1,565,257. SANITARY TOILET-SEAT COVER. ETHEL F. CLARK, Shooks, Minn. Filed Mar. 31, 1923. Serial No. 628,954. 3 Claims. (Cl. 4—244.)



1. The combination with a toilet seat, of a container disposed above said seat, a second container disposed below said seat substantially alined with said first mentioned container, a relatively thin member disposed between said containers, a plurality of seat covers each having an eyelet secured in one side thereof threaded on said member so that the same can be stored in the upper container and moved to a position on said seat and then disposed in said lower container.

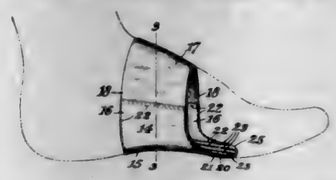
---

1,565,258. BITUMINOUS COMPOSITION FOR PAVING. GEORGE COBB, Baltimore, Md., assignor of one-third to Bernard L. Crosier and one-third to Frank K. Duncan, both of Baltimore, Md. Filed Oct. 7, 1924. Serial No. 742,231. 2 Claims. (Cl. 106—31.)

1. In a pavement, a mixture consisting of 3½% to 5% of bitumen, and a crushed rock mineral aggregate passing a #200 mesh sieve not over 5%, passing a #10 sieve 5% to 15%, passing a ¼ inch screen 15% to 25%, passing a ½ inch screen 20% to 35%, and passing a ¾ inch screen 20% to 40%.

---

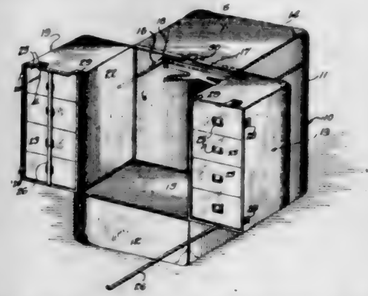
1,565,259. COMBINED INSTEP AND ARCH SUPPORT. HENRY JAMES COLLIS, Taunton, Mass. Filed Sept. 29, 1923. Serial No. 665,602. 2 Claims. (Cl. 36—71.)



1. A combined instep and arch support, comprising a bottom arch-support member consisting of a pliable body of leather or flexible material having a main bottom portion to extend under the sole of the foot and upwardly-extending opposite side portions to extend at at opposite sides of the foot above the sole, said pliable main bottom portion being extended in front of said upwardly-extending opposite side portions to project under the metatarsal part of the foot, reinforcing media carried by the bottom portion of said pliable body of the arch-support member and extending in said metatarsal front part thereof, and a top instep-support member constituted by a cross-strip or body band to extend across the instep and having its opposite ends attached to the top edges of said upwardly-extending side portions of the pliable body of the bottom arch-support member.

---

1,565,260. TRUNK. ROBERT MARTIN COOPER, Petersburg, Va. Filed Jan. 30, 1924. Serial No. 689,492. 4 Claims. (Cl. 190—13.)



1. A trunk comprising a substantially L-shaped relatively stationary body portion having a horizontal base section with an open top and a vertical section with an open inner face, a pair of movable sections hinged to the forward outer edges of said vertical section supported by said base section, and means for limiting the outward turning movement of said movable sections whereby their inner lower edges are supported by the upper side edges of said base section.

---

1,565,261. WAXING AND POLISHING MACHINE. NELSON B. CUTLER, Milwaukee, Wis., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 3, 1922. Serial No. 549,034. 3 Claims. (Cl. 15—179.)

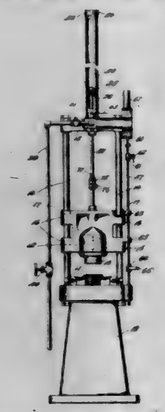
3. In a rotary padding brush for waxing and polishing machines, a rotary hub, bristles projecting from the hub and constructed and arranged to form recesses spaced about the periphery of the brush, and resilient supports for the bristles extending from the hub and supporting said bristles near the ends thereof.

---

1,565,262. DROP HAMMER. ARTHUR V. DA COSTA, Providence, R. I., assignor to Edgar Ward, Newton, Mass. Filed Nov. 25, 1921. Serial No. 517,752. 3 Claims. (Cl. 121—30.)

1. A pneumatic drop hammer comprising a hammer-head, a cylinder, a single-acting piston in said cylinder having a piston rod connected to said hammer-head, an inlet for supplying air under pressure to said cylinder to lift the piston and hammer, an exhaust valve, means for actuating the exhaust valve to permit the hammer-head to drop to the full end of its stroke, an inlet valve operable to admit said air under pressure to lift the piston when the hammer-head has made its full stroke

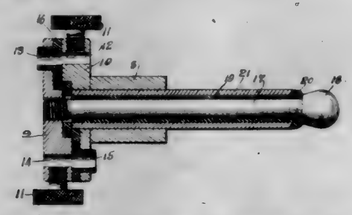
and means for admitting air into said cylinder during the rebounding movement of the hammer at a lower pressure than that required to lift the hammer-head, where-



by the partial vacuum produced by the rebounding of the hammer will be broken and an air cushion provided in said cylinder which will prevent a secondary blow.

---

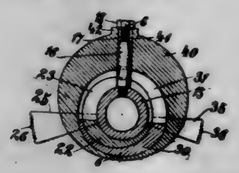
1,565,263. RADIO PHONE PLUG. CHARLES W. DENNY and WILLIAM E. MCLAUGHLIN, Middletown, Ohio, assignors to the Barkelew Electric Manufacturing Company, Middletown, Ohio, a Corporation of Ohio. Filed Aug. 4, 1922. Serial No. 579,594. 2 Claims. (Cl. 173—334.)



1. In a radio phone plug, a front plate having apertures, a rear plate having apertures adapted to register with the apertures in the front plate, insulating means between said plates adapted to project through a part of the apertures in either plate, whereby when the plates are adjusted an insulated aperture in one plate will always be in register with a non-insulated aperture in the other plate.

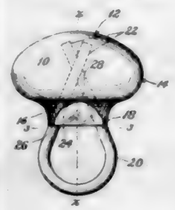
---

1,565,264. ADJUSTABLE ECCENTRIC. BORIS DUBL, Brooklyn, N. Y. Filed Mar. 22, 1924. Serial No. 701,099. 4 Claims. (Cl. 74—1.)



1. In an adjustable eccentric the combination of an outer eccentric, a pair of supplemental adjustable eccentrics rotatably coacting with the outer eccentric and means to locate the supplemental adjustable eccentrics in different positions.

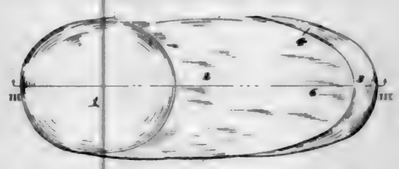
1,565,265. BUTTON. WILLIAM E. ELLIOTT, Lynn, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed May 12, 1920. Serial No. 380,838. 7 Claims. (Cl. 24—90.)



6. A button comprising a head, a neck and an eye entering opposite sides of the neck, there being depressions in the neck terminating near the entering points of the eye.

---

1,565,266. ARCH-CORRECTIVE DEVICE. JOSEPH C. FLANAGAN, Pittsburgh, Pa. Filed Dec. 27, 1923. Serial No. 682,963. 1 Claim. (Cl. 36—71.)



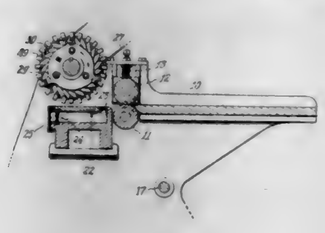
A removable arch-corrective device for foot wear formed of readily yieldable and resilient material and composed of a concaved heel seat, in front of said heel seat an elevated portion to be positioned under the longitudinal arch of the foot and of substantially uniform thickness for its full width and length, and in front of said elevated portion a forwardly and laterally inclined portion arranged to be positioned just in the rear of the metatarsal joints of the foot, while said joints rest on the floor of the shoe.

---

1,565,267. UPHOLSTERY PAD. DEL ROY F. FOWLER, Melrose Park, Pa. Filed May 12, 1924. Serial No. 712,615. 1 Claim. (Cl. 154—54.)

A pad for upholstery made up of a fabric backing overlaid by a multiplicity of thin veils of dry carded, long and wavy sisal fibre, said veils being successively superposed upon each other with the fibres of successive layers crossing each other at an angle so as to form a springy unfelted pad and said pad being stitched to the backing.

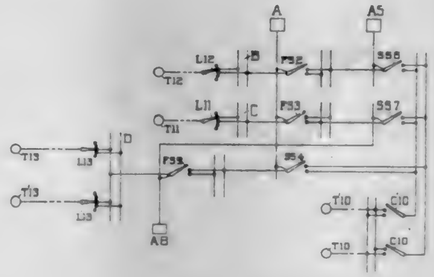
1,565,268. MACHINE FOR REMOVING BURS AND OTHER ENTANGLED SUBSTANCES FROM SKINS AND PELTS. JAMES FRAME, Kogarah, near Sydney, New South Wales, Australia. Filed Apr. 30, 1923. Serial No. 635,438. 2 Claims. (Cl. 149—24.)



2. Apparatus according to claim 1 wherein the drum is constructed of an assembly of discs each of which carries a plurality of peripheral lugs tapered towards their leading edges to form divider blades, and rearward and above each said lug a hollow faced beater, said blades and beaters on each such disc being respectively set out of alignment with each other and the complete assembly arranged in helical order on the drum periphery.

---

1,565,269. TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Portland, Oreg. Filed Mar. 30, 1922. Serial No. 548,165. 53 Claims. (Cl. 179—18.)



1. In a telephone system, a group of selective switches, a driving magnet specific to each switch, a driving control relay set for said switches common thereto and in permanent multiple relation therewith, and means automatically self initiated forthwith following the completion of the operation of a said selective switch to disconnect the said driving control relay set from operative control thereof and to thereupon render the driving control relay set in control of any one of the switches of the group irrespective of whether or not there is another call to the last said switches.

---

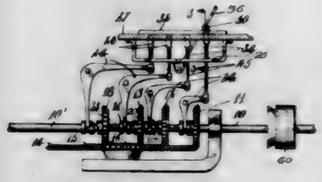
1,565,270. CORSET AND SIMILAR GARMENT FOR LADIES' WEAR. JOHN WILLIAM GORDON, Brislington, England, assignor to Chappell Allen & Company, Limited, Redfield, Bristol, England. Filed Mar. 26, 1925. Serial No. 18,379. 5 Claims. (Cl. 2—38.)

1. In a garment for ladies' wear having overlapping edges to be detachably connected, hooks and eyes carried by said edges, projecting from abutting faces of the edges within the overlapping zone, and interengageable by pairs to prevent separation of said edges, the edge carrying the eyes having, between the row of eyes and the margin, a pocket extending along the edge and opening toward the eyes, said pocket being divided into sub-

pockets into which the hooks move in entering the eyes, by stitching between eyes to prevent opening of the long pocket, whereby the hooks will be protected and shielded while interengaged with the eyes.

---

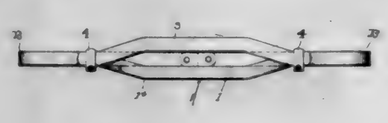
1,565,271. TRANSMISSION MECHANISM FOR VEHICLES. LYMAN B. GOUD, Brooklyn, N. Y. Filed Oct. 29, 1924. Serial No. 746,494. 4 Claims. (Cl. 74—59.)



1. A transmission mechanism comprising a drive shaft, a driven shaft alined with said drive shaft, a bevel pinion fixed on said drive shaft, a series of bevel pinions loose on said driven shaft and formed with one-way clutch faces, a series of co-axially fixed bevel gears of different diameters engaged by the respective bevel pinions, a series of clutch collars feathered on said driven shaft to engage the respective clutch faces, levers operatively engaged with said collars, plunger rods connected to said levers, and a slidable plate for selectively moving said plunger rods.

---

1,565,272. AUTOMOBILE BUMPER. WILLIAM J. GNOTENHUIS, Chicago, Ill., assignor to Bilex Products Company, Waukegan, Ill., a Corporation of Delaware. Filed Aug. 14, 1924. Serial No. 731,935. 6 Claims. (Cl. 293—55.)

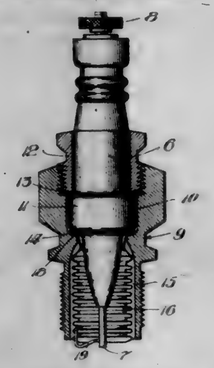


1. An automobile bumper comprising a continuous bar initially shaped to form a straight portion, looped portions at the ends of said straight portion, and rearwardly disposed end portions beyond said looped portions extending at a predetermined angle of divergence from said straight portion, said bar being adapted to be distorted by bringing the ends of said bar into fixed connection with each other to form a flattened loop, having all parts thereof under tension.

1,565,273. AUTOMOBILE BUMPER. WILLIAM J. GROTENHUIS, Chicago, Ill., assignor to Bifex Products Company, Waukegan, Ill., a Corporation of Delaware. Filed June 11, 1925. Serial No. 36,326. 9 Claims. (Cl. 293—55.)

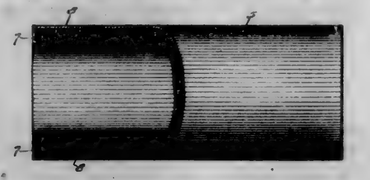
1. An automobile bumper comprising a resilient bar bent to form front and rear sections and intermediate looped ends, the central portions of said front and rear sections being curved outwardly with respect to the end portions thereof.

1,565,274. SPARK PLUG AND THE LIKE. JOHN B. HAWLEY, Jr., Colorado Springs, Colo. Filed Feb. 12, 1923. Serial No. 618,446. 8 Claims. (Cl. 123—169.)



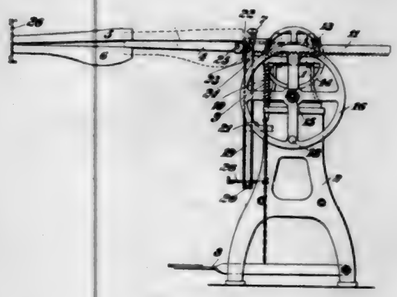
1. In a spark plug, the combination of a base member having in its lower portion a downwardly facing chamber, a porcelain seated within said chamber and against the upper end thereof, a central electrode extending downwardly through said porcelain and having its lower end exposed below the porcelain, said porcelain being of smaller size than the chamber to leave an annular opening between the porcelain and the wall of the chamber, a cylindrical insert located within said annular opening, said insert comprising a relatively thin sheet of brass annularly corrugated and silver plated, an electrode point carried by the lower end of said insert and in close proximity to the exposed lower end of the first mentioned electrode, said point comprising a length of copper coated steel wire, substantially as described.

1,565,275. COUPLING HOSE. PAUL H. HENKEL, Erie, Pa., assignor to Continental Rubber Works, Erie, Pa., a Corporation of Pennsylvania. Filed Dec. 13, 1923. Serial No. 680,330. 2 Claims. (Cl. 137—90.)



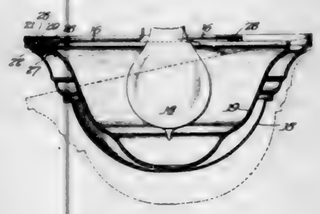
1. A radiator coupling comprising an inner wall of mixed rubber and unwoven fibre, the elements of the fibre extending in miscellaneous directions in the wall, and an outer wall of rubber united by vulcanization with the inner wall.

1,565,276. MACHINE FOR SHAPING LEATHER LEGGINGS. GEORG HÖPPNER, Neukolln, Germany. Filed Sept. 12, 1923. Serial No. 662,201. 9 Claims. (Cl. 69—8.)



1. A machine for shaping leather leggings comprising a frame, a spindle mounted therein, a holder on said spindle, a wedge held by said holder, a two-part shaper adapted to be carried by said wedge, and an abutment member carried by said frame for forcibly moving the shaper, enclosed by the legging, over the wedge.

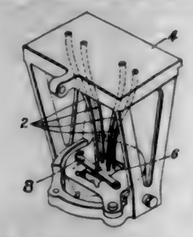
1,565,277. LIGHTING FIXTURE. PAUL M. HOTCHKIN, Chicago, Ill. Filed Aug. 29, 1921. Serial No. 496,212. 10 Claims. (Cl. 240—78.)



1. In a lighting fixture of the class described, the combination with a suspensory device, a bowl, and a reflector within the bowl, of a plurality of inwardly directed holders associated with said bowl and provided with depending engaging lips against which said reflector is adapted to seat for supporting the reflector within the bowl, and a plurality of supporting arms associated with said suspensory device and having detachable engagement with said holders, said supporting arms being formed of resilient material, the inherent resilience of which tends to spring the arms toward the center of the fixture to preserve engagement of the arms with the holders and likewise maintain contact of the engaging lips and the holders with said reflector.

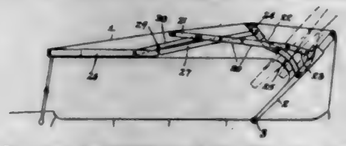
1,565,278. FASTENER-FEEDING DEVICE. JOHN C. JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 19, 1923. Serial No. 626,114. 4 Claims. (Cl. 1—39.)

1. In a fastener feeding mechanism, a flexible conductor for fasteners having a diameter that will prevent fasteners from turning over therein, said conductor comprising a ribbon or strip of resilient material wound in a helical coil, each convolution of which includes a portion which is offset toward the center of the conductor and projects within the convolution next adja-



cent to it in the direction of the delivery end of the conductor in substantially parallel relation, longitudinally of the conductor, to that portion within which it projects.

1,565,279. TOP FOR VEHICLES AND THE LIKE. FRED K. LEWIS, Ashtabula, Ohio. Filed Nov. 17, 1920. Serial No. 424,745. 6 Claims. (Cl. 296—116.)

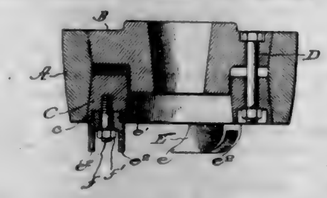


1. In a top for vehicles and the like, the combination of a support pivotally attached to the body of the vehicle and adapted to incline rearwardly in the open position of the top, a rigid forwardly inclining supplemental bow pivotally attached to said support so as to lie with its upper end substantially directly over the point of attachment of said support to the vehicle body when the top is thus open, a forwardly extending articulated auxiliary bow attached to said supplemental bow about a fixed pivotal axis, and link and lever means connecting said auxiliary bow with said support at a fixed point thereon and independently of any other part.

1,565,280. PROCESS OF PRODUCING FERROZIRCONIUM. RALPH H. MCKEE, New York, N. Y., assignor to Joseph G. Donaldson, Hamilton, Ohio. Filed July 28, 1921. Serial No. 488,227. 4 Claims. (Cl. 75—1.)

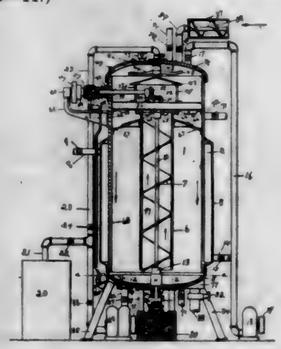
1. The process of producing zirconium alloy which consists in fusing an oxygen compound of zirconium with a metallic sulphide.

1,565,281. AGITATOR FOR GYRATORY MILLS. WILLIAM THOMAS MCNINCH, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Dec. 1, 1924. Serial No. 753,018. 5 Claims. (Cl. 83—45.)



1. In a mill having a roll, agitators mounted upon the roll in position to encounter material to be ground; said agitators being constructed with a substantially solid forward portion and with a protecting recess in rear of said forward portion, and having means securing them to the roll, located in said recess.

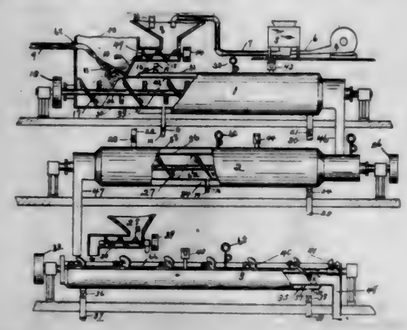
1,565,282. PROCESS AND APPARATUS FOR TREATING VEGETABLE SUBSTANCES. CHARLES R. MABEE, Buffalo, N. Y., assignor to Mabee Patents Corporation. Filed Aug. 16, 1920. Serial No. 403,861. 8 Claims. (Cl. 99—11.)



1. An apparatus for treating vegetable materials, comprising a closed cylindrical container, a spiral conveyor supported centrally therein, positive feeding means for introducing said vegetable materials in said container, and means for spraying liquid materials into the container and upon the vegetable materials.

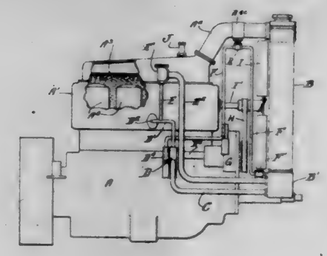
6. A method for the treatment of vegetable materials, which comprises subjecting said materials in a moistened condition to an alternate compression and expansion at an elevated temperature and at a pressure above atmospheric, whereby the starch granules and fiber structures are broken down, rendered more thoroughly assimilable, and a portion thereof converted into sugars.

1,565,283. PROCESS FOR THE CONTINUOUS STEAM MILLING OF VEGETABLE SUBSTANCES. CHARLES R. MABEE, Buffalo, N. Y., assignor to Mabee Patents Corporation. Filed Aug. 16, 1920. Serial No. 403,863. 7 Claims. (Cl. 99—11.)



7. A method for the treatment of vegetable materials, which comprises admixing said materials with liquid materials at a temperature of about 200° F. and then subjecting the same to alternate compression and expansion, first at a temperature of about 200 F. and then at a temperature of about 212° F., admixing other vegetable substances therewith and finally drying, all in a continuous manner.

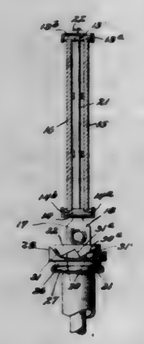
**1,565,284. COOLING SYSTEM.** HARRY C. MALLORY, New York, N. Y.; Sue R. Mallory administratrix of said Harry C. Mallory, deceased. Filed May 28, 1921, Serial No. 473,439. Renewed Apr. 17, 1925. 5 Claims. (Cl. 123—178.)



1. In an engine cooling system comprising an engine cooling space and a condenser connected to said space, and adapted to condense vapors formed by the absorption of heat by a cooling liquid contained in said space, the improvement which consists in means for adjusting the capacity of said condenser as required to maintain said liquid at an approximately constant temperature, comprising a thermostatic device responsive to the cooling liquid temperature.

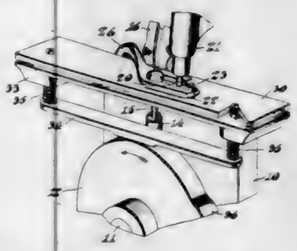
---

**1,565,285. MOVABLE SIGNBOARD.** MONTE C. MERKER, Reading, Pa., assignor to Merker, Ellis, Kramer Company, Reading, Pa., a Copartnership composed of Monte C. Merker, Harry G. Ellis, and Paul A. Kramer. Filed Mar. 20, 1923. Serial No. 626,363. 9 Claims. (Cl. 40—138.)



1. A movable sign board comprising a frame mounted to move about a vertical axis intermediate its ends, said axis being located nearer to one end than the other of said frame, whereby rotation of the frame by the wind is prevented, means for yieldingly holding said frame in an original position, means tending to cause said frame to return to its original position after it is displaced therefrom, and means for yieldingly holding said frame in a new position at an angle to its original position after the same has been displaced a predetermined degree from its original position.

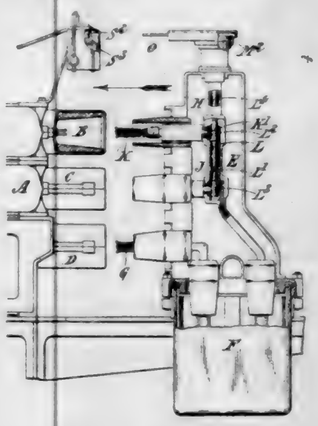
**1,565,286. METHOD OF SETTING BLIND AND INVISBILE EYELETS.** HOMER B. MILLER, Gardiner, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Aug. 26, 1918, Serial No. 251,456. Renewed Mar. 31, 1921, Serial No. 457,424. Divided and this application filed Feb. 17, 1922. Serial No. 537,237. 7 Claims. (Cl. 218—29.)



1. That method of setting blind or invisible eyelets, which consists in forcing a punch through all the layers of an article of work, thereafter, but while the punch remains in said article, relatively moving the said article and an annular clenching element so as to pass the latter through one of the layers of said article, and thereafter inserting an eyelet into the article so as to clench it against said shoulder.

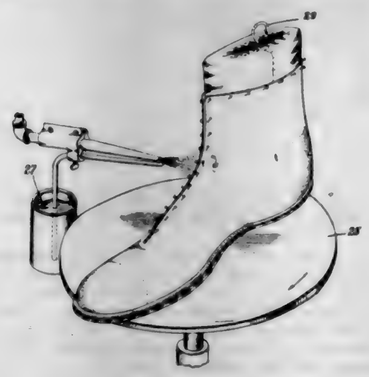
---

**1,565,287. ELECTRIC SWITCH GEAR.** JAMES MIRREY, East Boldon, England, assignor to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a British Company. Filed Dec. 1, 1924. Serial No. 753,375. 6 Claims. (Cl. 200—51.)



1. In electric switchgear of the drawout type, the combination of a plurality of busbar sockets, a main switch, sockets connected to said main switch, a movable member having holes or slots at levels corresponding to the centre line of the sockets, a removable plug serving when inserted in one of the main switch sockets to connect it with one of the busbar sockets, a pin or projection on said removable plug adapted to enter the corresponding hole in said movable member and means for moving said member to allow the entrance of said pin or projection into the hole and for indicating the selected position of the plug.

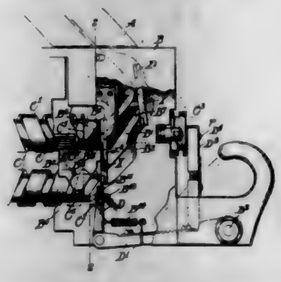
**1,565,288. ART OF MANUFACTURING BOOTS AND SHOES.** GEORGE E. MOLYNEUX, Bayonne, N. J., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 18, 1922. Serial No. 588,860. 10 Claims. (Cl. 12—142.)



1. The method of manufacturing a shoe which comprises assembling a lining and a bottom member upon a last, drawing the lining tightly about the last and spraying upon the lining a coating substance to form the upper.

---

**1,565,289. TYPOGRAPHICAL DISTRIBUTING MACHINE.** LUTHER E. MORRISON, New York, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Feb. 11, 1925. Serial No. 8,363. 11 Claims. (Cl. 199—42.)

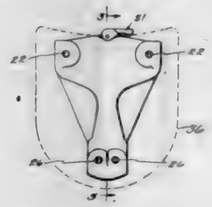


1. In a typographical distributing mechanism comprising a distributor bar and set of matrix conveying screws, the combination of guide means along which the matrices pass by gravity, means for arresting the gravitating matrices at a point in advance of the conveying screws, means for releasing the arrested matrices, one at a time, to permit their escape into position to be picked up by the screws, and inclined surfaces movable into engaging relation to the release matrices for directing them to the pick-up position.

---

**1,565,290. HEEL ATTACHMENT.** BARNEY NOEL, Windsor, Ontario, Canada. Filed Jan. 24, 1924. Serial No. 688,204. 3 Claims. (Cl. 36—61.)

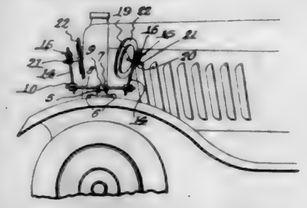
1. An attachment for heels, comprising a casing adapted for embedding in a heel having a longitudinally extending channel formed therein and communicating adjacent one end with a transversely extending passage at opposite sides to form a cross-shaped recess; movable calks mounted in said casing and adapted for projecting therefrom; a cross-shaped actuating member, slidably positioned in said channels having a cross-head at one end of its trunk, the arms and the cross-head of said



cross-shaped member being adapted for engaging said calks for projecting their ends out of said casing into operative position, said cross-shaped member being slidably movable into operative or inoperative position.

---

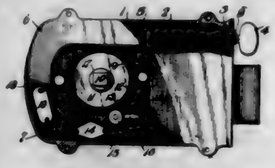
**1,565,291. MIRROR.** LOVELL E. PEARCH, South Bend, Ind. Filed Jan. 13, 1925. Serial No. 2,109. 1 Claim. (Cl. 45—97.)



In a device of the character described, a support, a horizontally disposed rod mounted on the support, supporting blocks adjustably mounted on the rod, vertical rods extending through the supporting blocks, and mounted for vertical adjustment therethrough, adjustable clamping members on the vertical rods, mirrors having supporting rods, said supporting rods adapted to extend through the adjustable clamping members, to adjustably support the mirrors, and said mirrors being mounted so that one mirror will reflect into the adjacent mirror.

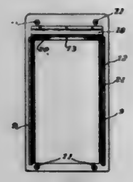
---

**1,565,292. DOOR-FASTENER ATTACHMENT FOR LOCKS.** ADOLPH POSTAL, Cook County, Ill. Filed June 19, 1924. Serial No. 721,116. 6 Claims. (Cl. 292—264.)



1. A device of the class described comprising in combination a lock, a safety chain movable within a groove, said groove being formed around the latching mechanism of the lock, and being covered by the bottom casing, means for urging the safety chain into the interior of said groove, a socket is provided at the opening of the groove, thereby preventing the withdrawal of the all safety chain, said safety chain being provided with a flat link which works in conjunction with a slotted socket mounted on the lock-catch.

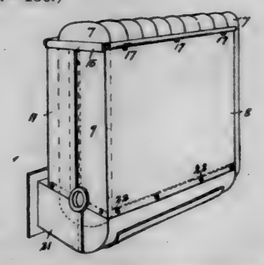
**1,565,293. CAR-VESTIBULE DIAPHRAGM.** HARRY H. SCHROYER, Chicago, Ill., assignor to Morton Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 19, 1924. Serial No. 738,580. 4 Claims. (Cl. 105—17.)



3. A car vestibule diaphragm comprising two legs, a horizontal metal top with obliquely cut sides to allow angular movement between the two cars, laterally open pockets in said top slidably to receive the upper ends of said legs and thereby allow relative angular movement between the legs and top.

---

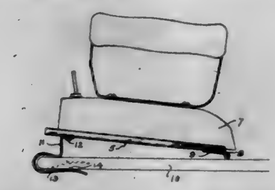
**1,565,294. HOUSING CONSTRUCTION FOR STEAM RADIATORS.** CLARENCE C. SHIPP, Indianapolis, Ind. Filed Sept. 15, 1924. Serial No. 737,728. 2 Claims. (Cl. 267—136.)



1. A radiator housing of sheet metal in a plurality of separable parts joined together at the ends of the housing by a slip-joint one side of which is channeled, channeled clamp-bars on each of said jointed ends having the housing ends inserted in the channels, and tie-rods holding the housing front and back against the ends of the clamp-bars and stiffening rolls on the edges of the housing, front and back, enveloping the tie-rod terminals.

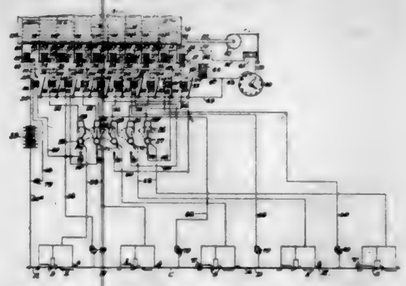
---

**1,565,295. IRON STAND.** CLARENCE C. SHIPP, Indianapolis, Ind. Filed Jan. 23, 1925. Serial No. 4,162. 3 Claims. (Cl. 68—27.)



2. An iron stand having a base substantially the shape of a sad iron, an upturned flange along one side of the base, an upturned flange along the opposite side of the base, said flanges having an opening therebetween at the forward apex of the base to permit the nose of an iron to project therethrough, a rear supporting leg, and a front supporting leg, said front leg being appreciably shorter than the rear leg, and an extension leg pivotally secured to said front leg.

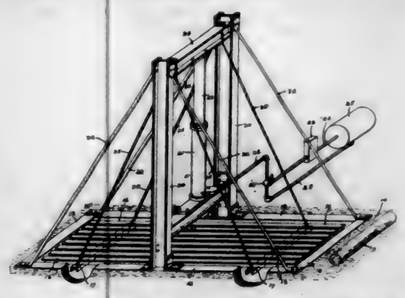
**1,565,296. TRAIN-CONTROL SYSTEM.** PAUL J. SIMMEN, Eden, N. Y. Filed Apr. 15, 1922. Serial No. 553,204. 22 Claims. (Cl. 246—4.)



2. In a system of train control, the combination with a vehicle and a line of track, of an element associated with the track and upon which electric current may be impressed, central office means for energizing or de-energizing said element, electrical receiving devices in the vehicle, means for severally conditioning said devices in accordance with the condition of said element as affected by said first named means, means involving the co-operation of said vehicle and said element as initially de-energized by said first named means for automatically establishing an electric circuit between said vehicle and the central office and an electrical receiving device in said circuit.

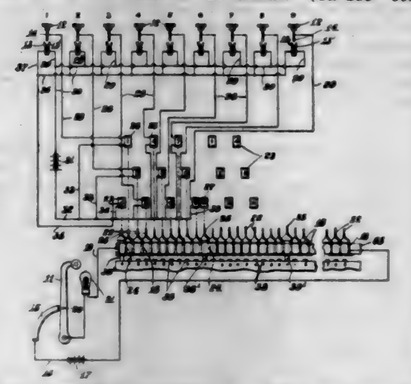
---

**1,565,297. VENEER VAT.** EDWARD B. VARNEY, Fall River, Mass. Filed July 29, 1925. Serial No. 46,927. 2 Claims. (Cl. 187—1.)



2. In combination, a sunken veneer vat having its mouth substantially flush with a log-supporting surface; and an auxiliary structure adapted to support a charge of logs in the vat in position for boiling, and to close the mouth of the vat, said structure comprising a platform constituting a false bottom movable vertically in the vat and formed to prevent entrance to the vat when raised, a supporting frame located above the vat, a hydraulic hoist including a vertical cylinder fixed to the frame, a ram movable vertically therein by hydraulic pressure, and a manually operable valve controlling the passage of hydraulic pressure to and from the cylinder, suspending connections between the ram and the platform including a cross head fixed to the ram and suspension members connecting the cross head with the platform, the hoist being operable to raise and lower the platform and hold it in any position to which it is movable, the frame, the hoist, and the connections between the hoist and the platform being arranged to permit movement of logs to and from the platform, the arrangement being such that the platform may be held in position to prevent entrance to the vat before a charge is inserted and after the charge is removed.

**1,565,298. STOP-CHECK-ANNOUNCING DEVICE FOR ADDING MACHINES.** MORTON WADDELL, New York, and MORRIS KATCHER, Brooklyn, N. Y. Filed Apr. 10, 1925. Serial No. 22,065. 17 Claims. (Cl. 235—60.)



7. In a stop-check announcer for adding machines, the combination of an electric signalling circuit, comprising spaced contact members corresponding to the keys of the adding machine, said members being connected in groups of ten for each nine keys of the adding machine, the extra member being the zero member while the other nine are the digit members, a circuit closer disposed in said signalling circuit and operatively connected with the handle of the adding machine, electrical circuit closing members arranged to normally close the gap between said digit members and other closing members to normally open the circuit at the zero members, electric means affected by operation of the keys of said adding machine to operate the closer digit members and the closer zero members of the same group to make and break the circuit between the corresponding contact members, and a rotating member having series of digit and zero contact members in operative relation to said spaced contact members, whereby gaps in the signalling circuit caused by the closing members may be closed by the corresponding selector members to effect a signal.

---

**1,565,299. METHOD OF MAKING PISTON RINGS.** JACOB B. WENZEL, Bloom, Colo. Filed Oct. 23, 1924. Serial No. 745,535. 2 Claims. (Cl. 29—156.6.)

1. The method of making piston rings comprising the indenting of the ring on a flat face thereof, the indenting being done to a greater extent at the split portion and the point opposite thereto and gradually to a less extent toward the sides of the ring, that is, the points equidistant between the split portion and the point opposite thereto, and then grinding the flat faces so as to move the material to the lowest point of the indentations.

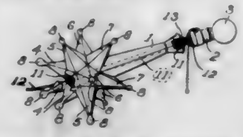
---

**1,565,300. PROCESS FOR REDUCING SULPHATES AND THE LIKE.** ALFRED H. WHITE, Ann Arbor, Mich., assignor to John E. Alexander, Port Edwards, Wis., and E. G. Goodell, trustees, Stevens Point, Wis. Filed Oct. 18, 1924. Serial No. 744,410. 8 Claims. (Cl. 23—137.)

1. The process of forming metallic sulphide from a metallic salt of an oxygen acid of sulphur reducible to sulphide by heated carbonaceous material which includes heating said salt in the presence of carbonaceous material and an oxide of a metal, capable of reacting with carbon dioxide to form a carbonate with evolution of heat at the temperature at which such reduction is carried out, and sufficient in amount to form a carbonate with the principal part of the carbon dioxide evolved in the reduction, to a temperature above 300° C. and below the temperature at which the carbonate of the metal whose oxide was added, dissociates completely.

---

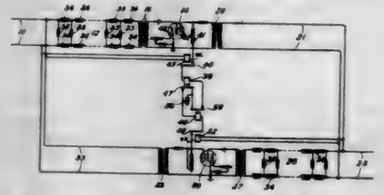
**1,565,301. INCLINABLE STAND.** CHARLES J. ANDRAE, St. Louis, Mo. Filed May 1, 1924. Serial No. 710,264. 2 Claims. (Cl. 240—53.)



1. An inclinable lamp holder comprising a hollow arm provided at one end with lamp-attaching means, and at the other end with an enlarged base, a plurality of legs tending radially of the base and having rounded tips, certain of the legs supporting the holder vertically and other legs supporting the holder at an incline, the rounded tips of the legs supporting the holder vertically being enlarged and constituting weights.

---

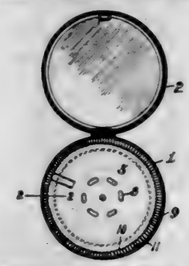
**1,565,302. TWO-WAY REPEATER CIRCUITS.** HAROLD D. ARNOLD, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1919. Serial No. 338,759. 31 Claims. (Cl. 179—170.)



1. The method of operating a repeater, which comprises putting said repeater in condition for repeating in response to signal currents to be repeated, delaying the flow of said signal currents to said repeater until said repeater is in condition for repeating, and then supplying said delayed currents to said repeater.

---

**1,565,303. VANITY CASE.** EDWARD W. BASSETT, Toledo, Ohio, assignor to The Celma Company, Toledo, Ohio, a Corporation of Ohio. Filed July 1, 1925. Serial No. 40,896. 5 Claims. (Cl. 132—83.)

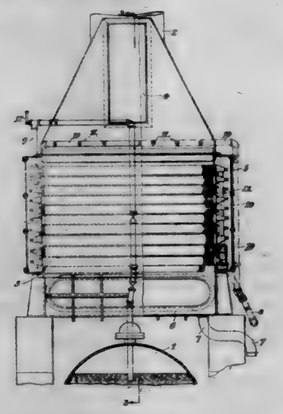


1. In a vanity case, a flexible diaphragm removably mounted therein and cooperating with the case bottom to form a powder-receiving chamber, the diaphragm hav-

ing a binding around its marginal portion and embracing its edge to form a packing for engagement with the side wall of the case to provide a close joint therebetween.

---

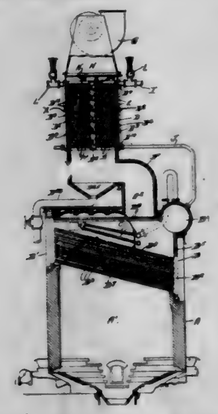
1,565,304. ECONOMIZER FOR STEAM BOILERS. JOHN E. BELL, Brooklyn, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Nov. 7, 1919. Serial No. 336,284. 7 Claims. (Cl. 122—421.)



1. An economizer for steam boilers comprising in combination a bank of horizontally disposed tubular elements each having external circumferentially extending ribs and valved water supply means for discharging water downward onto the top of said bank of tubes to wash off the external tube surfaces.

---

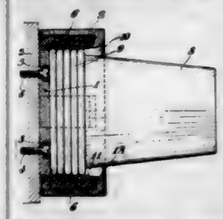
1,565,305. STEAM-GENERATING PLANT. JOHN E. BELL, Brooklyn, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed July 1, 1922. Serial No. 572,166. 8 Claims. (Cl. 122—421.)



1. In a steam generating plant comprising a boiler furnace and a boiler section having storage capacity for a variable amount of water, and having a steam and water space, the improvement which consists in an economizer section traversed by the boiler furnace heating gases after the latter have left the boiler section and through which water is passed into the boiler section, and formed of staggered rows of steel tubes encased in externally corrugated tubular cast iron sections, said tubes being so proportioned as to provide an aggregate economizer heating surface approximately as great as the aggregate boiler heating surface, and so spaced as to require a draft suction at normal load to move the heating gases through the economizer section at least as great as the draft suction required to move the heating gases through the boiler section.

---

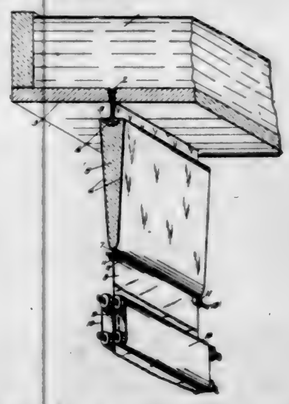
1,565,306. HOLDER FOR INDIVIDUAL DRINKING CUPS. SIMON BERGMAN, New York, N. Y., and JAMES D. REIFSNYDER, Weehawken, N. J., assignors, by mesne assignments, to Tulip Cup Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 18, 1921. Serial No. 438,104. 7 Claims. (Cl. 211—8.)



1. In a holder for drinking cups, the combination of a base member adapted to be secured to a vertical surface, and fixedly secured retaining means projecting out therefrom and having a delivery opening facing out therefrom, said means comprising resilient rubber and being adapted and constructed to permit the insertion through said opening of the open ends of a plurality of nested cups and the withdrawal of the cups from said opening one at a time, and to frictionally support and retain the nested cups substantially fixedly in horizontal position at all times as they project out from the vertical surface, said retaining means being comparatively short, so that the greater portion of the length of the nested cups extends unsupported.

---

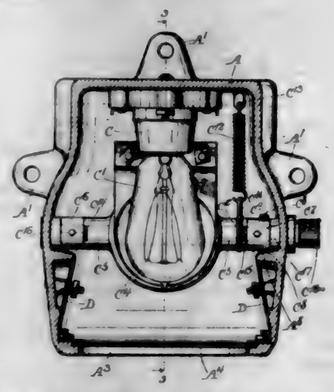
1,565,307. DRAWING SHEET GLASS. JAMES C. BLAIR, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 26, 1923. Serial No. 682,612. Renewed Feb. 19, 1925. 15 Claims. (Cl. 49—17.)



3. In apparatus for producing sheet glass, a source of molten glass, a slab or forming member down which glass flows from the source, means for drawing this glass from the slab in sheet form, and auxiliary drawing means acting only on the edge portions of the sheet adjacent the line of departure of the glass from the slab.

---

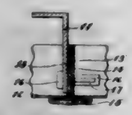
1,565,308. LOCOMOTIVE LIGHT. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 29, 1921. Serial No. 525,721. 1 Claim. (Cl. 240—23.)



In a light, a casing, and a single light source therein, said casing having an open bottom and an open front, the light from said light source adapted to shine through said open front, the light being adapted to shine directly through the open bottom of the casing, in combination with a pair of reflectors mounted within said casing, each adapted to reflect a beam of light laterally and downwardly through the open bottom of said casing, in combination with a movable shutter having transparent colored glass therein and adapted to be moved into the forward path of said light and adjustably to be moved behind said first mentioned reflector out of the path of said light.

---

1,565,309. VERTICAL JOINT FOR WALL SHEETS. SPENSLEY S. DAYKIN and HARRY O. DAVIDSON, Cleveland, Ohio, assignors to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 27, 1920. Serial No. 361,885. 3 Claims. (Cl. 189—36.)

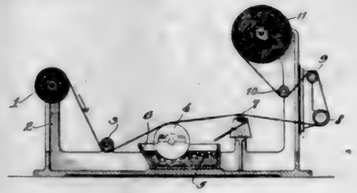


1. The combination with a column comprising a pair of flanged uprights, of flanged wall plates having their contiguous flanges arranged between the flanged uprights, a sealing strip interposed between said flanges, a slotted bolt passing through said flanges and strip and a wedge member passing through said bolt and bearing against one of said members to hold all of them firmly together.

---

1,565,310. MARKING OR BRANDING OF CARBON PAPER. HAROLD W. A. DIXON, Hollis, N. Y., assignor to Columbia Ribbon & Carbon Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 5, 1924. Serial No. 730,807. 7 Claims. (Cl. 91—67.9.)

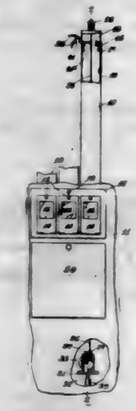
2. The process which consists in applying the transfer material to a backing sheet, heating different parts of the backing to different temperatures to cause the amount of transfer material absorbed by different parts of the backing sheet to be varied and then chilling or coating the transfer material to produce a defined marking on the backing.



6. A transfer sheet selected portions of which contain less absorbed transfer material than other portions to provide a design on the sheet contrasting in color with the remainder of the sheet.

---

1,565,311. MAIL ELEVATOR. DANIEL A. DORAN, Yonkers, N. Y. Filed Dec. 9, 1922. Serial No. 605,788. 11 Claims. (Cl. 187—4.)



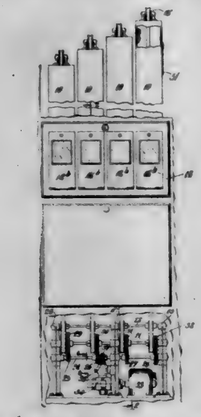
5. In an apparatus of the class described, a shaft, a member mounted in and movable through said shaft from one end thereof to the other, an endless cable to which said member is secured and by means of which the same is operated, said cable passing over a pulley at the upper end of the shaft, means involving an electric motor at the lower end of the shaft for operating said cable and said member to positively drive said member upwardly and downwardly through the shaft, said last named means being mounted on a movable support, whereby the weight thereof will take up the slack in said cable, tensional means for partially supporting said movable support, said member being provided with resilient guide members to permit of its free passage through said shaft, the body portion of said member being arc-shaped in form, tensional means for securely holding mail in connection therewith, said motor being in an electric circuit, means automatically actuated by said member for controlling the circuit to said motor, other means for controlling the circuit to said motor, and means independent of said last named means for opening and closing the motor circuit.

---

1,565,312. MAIL ELEVATOR. DANIEL A. DORAN, Yonkers, N. Y. Filed Oct. 2, 1923. Serial No. 668,077. 18 Claims. (Cl. 187—4.)

1. An apparatus of the class described comprising an endless conveyor, a carrier mounted in connection with

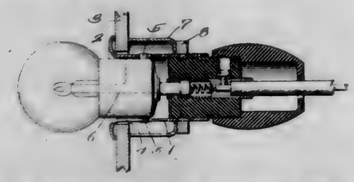
said conveyor, means involving a power unit and transmission for actuating said conveyor to move said carrier from one point to another, said last named means being



automatically controlled, and means involving said first named means for reversing the direction of travel of said carrier.

---

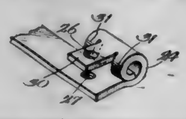
1,565,313. CIRCUIT CONNECTER. HARRY A. DOUGLAS, Bronson, Mich. Filed Oct. 6, 1921. Serial No. 505,728. 3 Claims. (Cl. 173—339.)



1. The combination with a cylindrical shell having a flange at one end and formed with a bayonet channel adjacent said flange; of a mounting through which said shell is extended and having one side engaged by said flange; a washer surrounding the shell and bodily movable along the same, said washer having a cylindrical skirt portion that surrounds said bayonet channel and whose internal diameter is larger than the external diameter of said shell and whose inner end is in engagement with the other side of said mounting, the other end of said washer being formed with an end wall having a circular opening therein whose diameter is less than the inner diameter of the cylindrical portion of the washer; and a nut in threaded engagement with said shell and bearing against said end wall of the washer to clamp the mounting between the washer and the flange upon the shell.

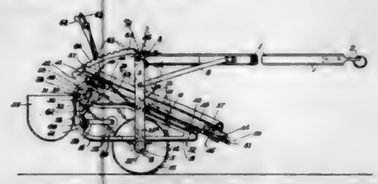
---

1,565,314. ELECTRICAL CONNECTER. HARRY A. DOUGLAS, Bronson, Mich. Filed Oct. 20, 1923. Serial No. 669,789. 1 Claim. (Cl. 173—259.)



A wire receiving clip comprising a U shaped piece of sheet metal apertured in its ends to receive a bolt and having one side inclusive of an intermediate portion, which is the apertured part of this clip side, and two outer lateral portions which are curled against the opposite side of the clip base.

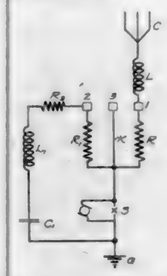
1,565,315. IMPLEMENT OR MACHINE FOR HARVESTING MAIZE. DANIEL JACOBUS DU PLESSIS, Koster, Transvaal, South Africa, assignor of one-third to Joseph Dearlove Hardy Verster, Koster, Transvaal, South Africa. Filed June 9, 1920. Serial No. 387,736. 5 Claims. (Cl. 56—118.)



1. An implement for harvesting maize, including a pair of co-operating chains, the links of which are provided with fingers which operate to detach the ears from the stalks of the plants, and a road wheel which serves as a roller for holding the stalks of the plants and drawing them down through the fingers of the co-operating chains.

---

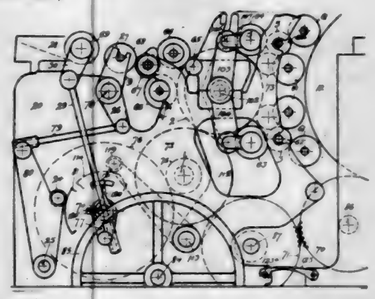
1,565,316. METHOD OF AND APPARATUS FOR CONTROLLING ALTERNATING CURRENTS. WILLIAM A. EATON, Arlington, Va., assignor to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Mar. 25, 1920. Serial No. 368,661. 15 Claims. (Cl. 250—19.)



14. The method of transferring the energy of an arc-type oscillation generator from a main work circuit to an auxiliary circuit, which consists in momentarily connecting the previously de-energized circuit in shunt to the previously energized circuit, and then rendering said previously energized circuit substantially non-oscillatory.

---

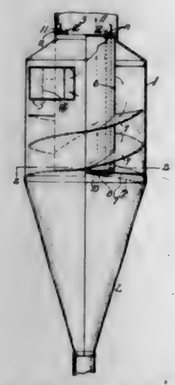
1,565,317. INKING MECHANISM FOR PRESSES. FRED S. ENGLISH, New London, Conn. Filed June 30, 1923. Serial No. 648,844. 6 Claims. (Cl. 101—351.)



1. In a press the combination of a press having a plate or form cylinder and a gear, a carriage movable toward and from said cylinder and having inking mechanism carried thereon, including a gear adapted to mesh with said first gear, indicating means associated with the inking mechanism on said carriage and indicating means associated with said press, whereby when said carriage is moved toward said cylinder said gears may be caused to mesh in predetermined relation.

---

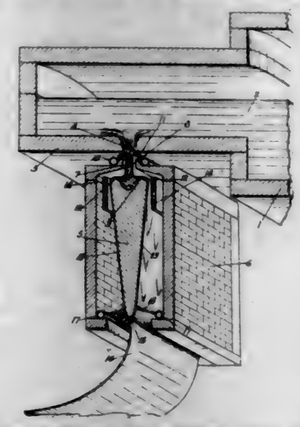
1,565,318. SEPARATOR. ERNEST F. FISHER, St. Louis, Mo. Filed Apr. 6, 1925. Serial No. 21,052. 4 Claims. (Cl. 183—86.)



1. A separator of the character described comprising a cylindrical casing having a tangentially disposed inlet for dust laden air, an air outlet at the top thereof, and a conical hopper at the bottom thereof, an air receiving cylinder communicating with said outlet and disposed within the casing, said cylinder having its axis coincident with that of the casing, a plurality of helical vanes between the casing and cylinder, the lower ends of said vanes being movable and being provided with suitable extensions contiguous to the lower end of the aforesaid cylinder, and means for adjusting the plane of inclination of the vane terminals and the extensions to and from the cylinder.

---

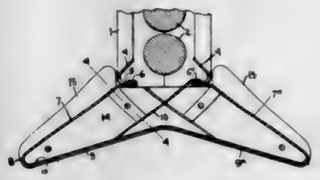
1,565,319. FORMING SHEET GLASS. ARTHUR E. FOWLE, Toledo, Ohio, assignor to the Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 11, 1924, Serial No. 691,941. Renewed Feb. 26, 1925. 10 Claims. (Cl. 49—17.)



5. In an apparatus for producing sheet glass, a receptacle for molten glass having a slot or orifice in the bottom thereof through which a stream of molten glass may flow, means for directly applying heat to the surfaces of this stream as it leaves the slot, a slab positioned below the slot having a longitudinal recess in its upper end for receiving the fluid glass which flows therefrom in thin film form down the converging outer sides of the slab, means for cooling the fluid glass as it overflows the upper edges of the slab, the downwardly flowing glass films uniting at the lower edge of the slab to form a single sheet of glass, and means for reheating the films adjacent the lower edge of the slab.

---

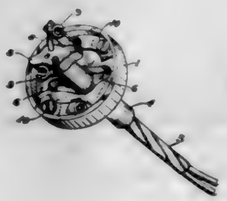
1,565,320. WRINGER. WALTER A. FRANTZ, Cleveland, Ohio. Filed Mar. 20, 1922. Serial No. 545,146. 5 Claims. (Cl. 68—32.)



1. As an article of manufacture, a member adapted to be attached outside the bottom of a wringer frame and to project laterally of said frame at both sides, the projecting portions being sloped downwardly from the wringer rolls so as to form chutes, and a shelf portion beneath one of said chutes adapted to return water from the rolls to a tub independently of the chute.

---

1,565,321. ELECTRIC CONNECTION. WALTER A. FRANTZ, Cleveland, Ohio. Filed Feb. 16, 1923. Serial No. 619,427. 10 Claims. (Cl. 173—328.)



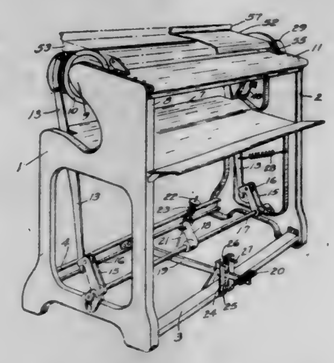
1. An electric cord having a fabric sheath and a flexible soft rubber protecting sleeve molded upon and adhesively attached to said sheath adjacent to its end, the remainder of said sheath remaining naked.

---

1,565,322. IRONING MACHINE. EMIL GRUENFELDT, Cleveland, Ohio, assignor to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 30, 1921. Serial No. 456,973. 2 Claims. (Cl. 68—9.)

1. In an ironing machine, a supporting frame, an ironing roll, an ironing shoe engageable with the roll, arms pivoted to the frame and rigidly connected to the shoe, said arms extending downwardly to adjacent the base of the frame, a crank shaft mounted in the base of the

frame, a crank shaft mounted in the base of the frame, crank arms fixed thereto and in engagement with said



pivoted arms, an operating arm fixed to said crank shaft, a pedal lever beneath said crank shaft and a spring connection between said lever and operating arm.

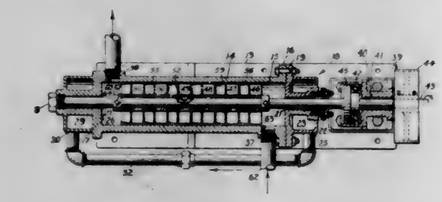
---

1,565,323. METHOD OF COOLING INTERNAL-COMBUSTION ENGINES. HARRY C. HAAK, Scranton, Pa., Filed Jan. 7, 1922. Serial No. 527,721. 3 Claims. (Cl. 252—5.)

1. The method of cooling an internal combustion engine which consists in circulating a frigorific medium thereabout composed of a high boiling mineral oil including a minor quantity of carbon tetrachloride varying from 5 to 15% of the final product.

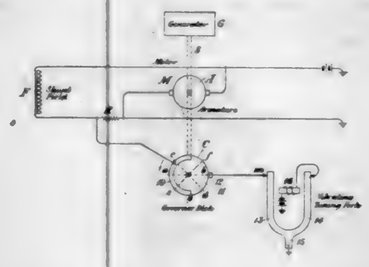
---

1,565,324. ROTARY PUMP. EMANUEL W. HARTMAN, Oakland, Calif. assignor to Hartman Interests, Inc., Los Angeles, Calif., a Corporation of Nevada. Filed Sept. 23, 1924. Serial No. 739,379. 4 Claims. (Cl. 103—89.)



1. In a pump of the character described, a cylinder having a bore with an open end and a closed end, a cover for the open end, a shaft adapted to be supported in the said ends, a series of spaced impellers supported on the shaft between said ends, and a series of deflector rings adapted to be supported in and to the cylinder and between the impellers; said closed end and the cover for said open end each provided with a bearing for the said shaft, a chamber surrounding each bearing and each chamber having an inlet and an outlet and a communication between the chambers for the passage of a liquid to effect the cooling of the said bearings; and the said cylinder having near its open ends a suction inlet and near its closed end a discharge outlet, and a communication leading from the outlet of the chamber at the closed end to the said suction inlet whereby the cooling liquid may be circulated through the pump.

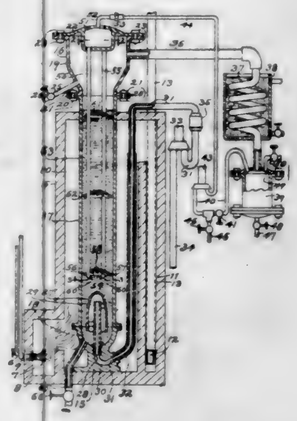
1,565,325. MEANS FOR REGULATING MOTORS. JOSEPH HERMAN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 5, 1923. Serial No. 661,069. 4 Claims. (Cl. 172—293.)



1. A motor regulating arrangement comprising a motor to be regulated, a circuit interrupting commutator driven thereby, a steadily vibrating circuit interrupter whose speed of interruption is independent of said motor, and a circuit extending serially through the contacts of said interrupters for controlling the electrical constants of said motor, the relative length of times that said circuit is opened and closed depending upon the synchronism between said interrupters.

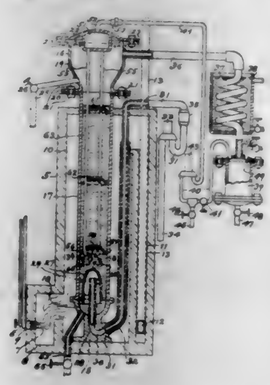
---

1,565,326. ART OF CRACKING HYDROCARBONS. FRED G. NIECE, Cleveland, Ohio, assignor to the International Holding Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 7, 1921. Serial No. 482,964. 10 Claims. (Cl. 196—70.)



1. In the art of cracking hydrocarbons, a process which comprises subjecting to a condensing temperature hydrocarbon vapors and gases passing from a hydrocarbon-cracking chamber, feeding other hydrocarbon into a molten body through an inner chamber in said molten body, and while hydrocarbon is discharged from said inner chamber into said molten body effecting the subjection, to the heat of and within said molten body, of hydrocarbon gases and vapors remaining uncondensed during the subjection of the first-mentioned vapors and gases to the aforesaid condensing temperature.

1,565,327. APPARATUS FOR CRACKING HYDROCARBONS. FRED G. NIECE, Cleveland, Ohio, assignor to The International Holding Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed July 7, 1921, Serial No. 482,964. Divided and this application filed July 13, 1921. Serial No. 484,293. 13 Claims. (Cl. 196—118.)



9. Apparatus of the character indicated comprising a hydrocarbon-cracking receptacle which has a vapor-outlet and contains a molten body penetrable by hydrocarbons and not vaporizable at the required hydrocarbon-cracking temperature, a condenser, means for feeding hydrocarbon gases and vapors to the condenser from the aforesaid vapor-outlet, an inner chamber formed within and discharging into said molten body, means for feeding hydrocarbon into the molten body through said inner chamber, and means for feeding, into said molten body and externally of said inner chamber, gases and vapors which have passed uncondensed through the condenser.

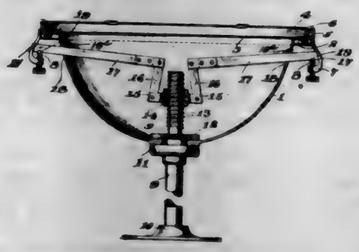
---

1,565,328. POROUS MASS AND PROCESS OF PREPARING THE SAME. ARTHUR B. RAY, Flushing, N. Y., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Oct. 28, 1921. Serial No. 511,171. 3 Claims. (Cl. 23—246.)

1. A process of preparing a porous filling material for acetylene storage tanks, which comprises bonding fragmentary activated carbon with a bonding agent not substantially impairing its absorptive capacity.

---

1,565,329. KETTLE DRUM. GEORGE M. ROBISON, Denver, Colo. Filed May 9, 1923. Serial No. 637,852. 1 Claim. (Cl. 84—419.)



In a kettle drum having a body rotatable on a standard, said standard projecting and threaded within said body and a head secured marginally in a ring slidable over the body, a nut threaded to co-mate with the threaded standard within the body and provided with a plurality of radial lugs, a plurality of radial levers, connecting links pivotally securing said levers by one end to said radial lugs, and a plurality of clamps, each connecting the outer end of a radial lever, with the drumhead ring.

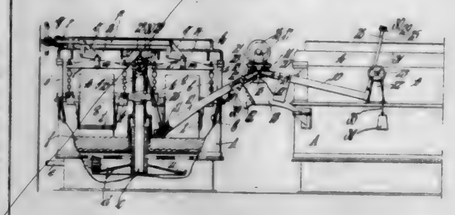
---

1,565,330. BALL BEARING. WINFIELD S. ROGERS, Bantam, Conn., assignor to The Bantam Ball Bearing Company, Bantam, Conn., a Corporation of Connecticut. Filed Jan. 15, 1925. Serial No. 2,572. 3 Claims. (Cl. 308—196.)

1. A ball-bearing comprising an outer ring having an interior annular shoulder and a ball-race of which said shoulder forms a portion, the opposite edge of said outer ring exteriorly provided with an annular inset, an inner race-ring having an exterior annular shoulder and a ball-race of which said shoulder forms a portion, balls rotatable between said races, a flanged ring whose inner diameter is less than the outer diameter of said inset, said flanged portion, at a right-angle to its ring projecting over said balls, and said flanged portion being molecularly expanded by heat and shrunken to fit said inset portion of said outer bearing-ring, thus preventing the component members from being dis-assembled, and thereby forming a complete bearing unit.

---

1,565,331. EMPTYING DEVICE FOR MELANGEURS. ROBERT SAVY, Paris, France. Filed Mar. 21, 1923. Serial No. 626,692. 7 Claims. (Cl. 214—17.)



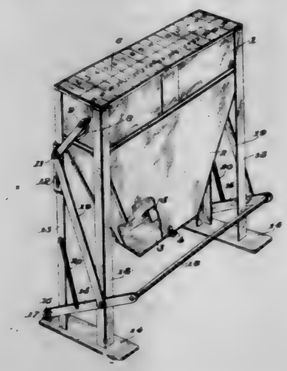
1. Apparatus for removing material from a movable member, comprising, conveying means having its receiving end overlying said member and movable toward and away from the same, means for positively driving said conveying means independently of the movement of said member during a predetermined range only of the movement of said end, and controlling means for said driving means operable to start the conveying means as said end enters said range on approaching said member and to stop said conveying means as said end leaves said range in its movement away from said member.

---

1,565,332. DROP COUNTER. THEODORE B. SCHIMPFF, Scranton, Pa. Filed Sept. 25, 1924. Serial No. 739,955. 4 Claims. (Cl. 232—1.)

1. A drop counter and money receptacle comprising a substantially rectangular shaped body portion, a door hinged at the bottom thereof, a platform hinged at the top of said body member, means for supporting said body member, said body member being provided with oppositely disposed arcuate slots in its ends, a foot

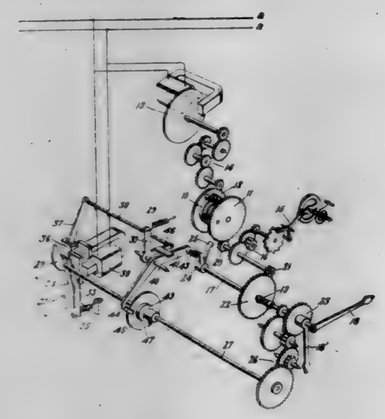
operated device pivoted to said supporting means, a crank connected with said drop platform and extending through said arcuate slots, a link connected between said



foot operated mechanism and said drop platform, whereby when said foot mechanism is depressed the drop platform will also be depressed.

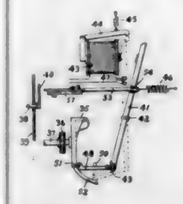
---

**1,565,333. ELECTRIC CLOCK.** FRANK J. SEABOLT, Schenectady, N. Y., assignor to Service Clock Company, a Corporation of New York. Filed Feb. 20, 1924. Serial No. 693,954. 13 Claims. (Cl. 58—34.)



8. The combination with a clock mechanism of means for setting the hands thereof comprising a V shaped element on the minute hand arbor, an electromagnet, a two part setting mechanism one part of which parts is gradually moved with the hand against a bias into holding engagement with the magnet, the other part following said first part quickly when the hands reach a predetermined position, means whereby the second part holds the first part against movement when the latter is released by the magnet unless the hands are in a certain position, said first part in moving in response to its bias carrying the second part with it into engagement with the V shaped element to set the hands.

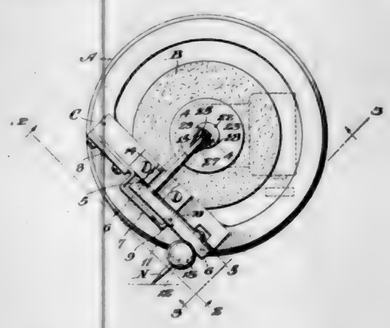
**1,565,334. ELECTRIC CLOCK-SETTING MEANS.** FRANK J. SEABOLT, Schenectady, N. Y., assignor, by direct and mesne assignments, to Service Clock Company, Inc., a Corporation of New York. Filed Jan. 2, 1914. Serial No. 809,849. 22 Claims. (Cl. 58—34.)



22. A setting device for a clock comprising a setting element biased to a predetermined position and arranged to set the hands in moving to said position, a magnet for holding the said device against the bias and means for moving the said element into the control of the magnet.

---

**1,565,335. REPRODUCER FOR LATERAL-CUT RECORDS.** CHARLES E. SEMPLE, Jr., Youngstown, Ohio. Filed Feb. 14, 1924. Serial No. 692,888. 6 Claims. (Cl. 274—35.)



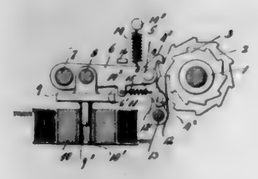
1. A sound reproducer of the class described including a diaphragm, a needle bar, a connection between the needle bar and the diaphragm comprising clamping devices respectively disposed against the inner and outer faces of said diaphragm, and a link rod extending outwardly from the inner clamping device through the diaphragm and the outer clamping device and having its outer end connected with the arm of said needle bar, and a spring interposed between the outer clamping device and the arm for imparting opposing tensioning forces to the diaphragm, said spring being formed from a single length of wire bent intermediate its ends to form curved arms, the connecting portion betwen the arms being disposed against the arm of the needle bar and the free ends of the spring engaging the outer clamping device.

---

**1,565,336. FILM-FEEDING MECHANISM FOR CINEMATOGRAPHS.** FRIEDRICH SEUFERT, Munich, Germany, assignor to Hermann Seufert. Filed May 16, 1924. Serial No. 713,733. 1 Claim. (Cl. 74—54.)

In a film feeding device, the combination with the film feeding shaft, of two ratchet wheels fixed on said shaft, an electro-magnet, a spring actuated lever having a stationary fulcrum and from which is pivotally suspended the armature of said electro-magnet, a spring actuated

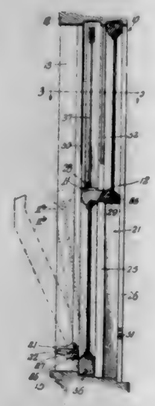
double armed lever pivoted to said first named lever and of which one arm cooperates as pawl with one of said ratchet wheels and a second pawl having a stationary



fulcrum and cooperating with said second ratchet wheel, said second pawl being adapted to slidably engage the second arm of said double armed lever.

---

**1,565,337. WINDOW CONSTRUCTION.** JOSEPH SYLVAN, Cicero, Ill. Filed June 21, 1922. Serial No. 569,806. 4 Claims. (Cl. 20—49.)

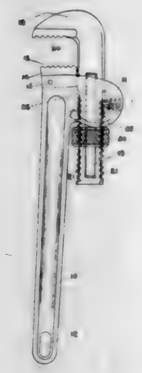


1. In combination with a window frame and a sash therein capable of both a vertical sliding and an inward swinging movement, a plate fixed to the side-member of the frame near its bottom end, said plate having a slot which opens through that edge of the plate adjacent the sash and having a notch which opens into said slot from below, and a laterally extending stud on the sash so positioned with reference to said plate that, in the vertical movement of said sash, said stud will freely pass said plate but in the inward swinging movement thereof, said stud will enter the plate slot to be engaged either in said notch or in the closed end of the slot to hold the sash in different angularly inclined positions.

---

**1,565,338. WRENCH.** WILLIAM O. THEWES, North Ridgeville, Ohio, assignor to The Ridge Tool Company, North Ridgeville, Ohio, a Corporation of Ohio. Filed Sept. 20, 1923. Serial No. 663,741. 4 Claims. (Cl. 81—101.)

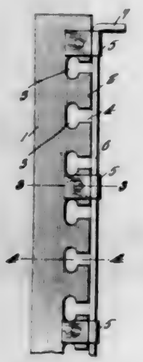
1. A wrench comprising a stationary shank having a handle portion, a channeled housing extending from said shank, said housing having a recess therein opening into the channel, a slidable shank extending through said housing, jaws carried by said shanks, a shoe engaging said movable shank within the channel in said housing, said shoe having lugs protruding therefrom, a coil spring seated within the recess in said housing and bearing



against said shoe, said spring surrounding the lugs on said shoe, and means to secure said movable shank in desired operative position relative to said stationary shank.

---

**1,565,339. FENCEPOST.** JOHN T. THOMPSON, Wheatland, Iowa. Filed Dec. 26, 1923. Serial No. 682,786. 2 Claims. (Cl. 256—52.)



2. An angle iron fence post having one flange provided in its free edge with a plurality of longitudinal spaced transversely extending T-shaped openings with the head of the T arranged longitudinally of the flange and the stem thereof opening through the edge of the flange thereby forming wire receiving seats to hold the wire against accidental release from the post, and keepers carried by said flange and extending beyond the free edge thereof to receive a securing rod.

---

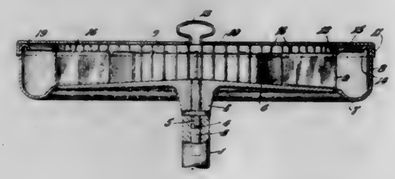
**1,565,340. MANUFACTURING SCISSORS AND THE LIKE.** OSKAR TREIBER, Solingen, Germany. Filed May 28, 1925. Serial No. 33,359. 1 Claim. (Cl. 76—104.)

The method of manufacturing scissors, and the like, consisting in providing a longitudinally extending blank

with longitudinal end extensions, shaping its sides to provide a substantially straight edge on one side adjacent one end extension and a convex edge on the opposite side adjacent the other end extension, shaping the blank by means of a wedge-like die lengthwise of said blank on a line at an angle to the median line thereof and extending from the straight edge to the convex edge, thereby defining the two blades of the scissors, connected along their cutting edges, one terminating in the straight back edge and the other terminating in the convex back edge whereby when the blades are finished one blade will have a rounded end and the other blade will have a sharpened end, securing ears to the end extensions, severing the defined blades, and pivotally connecting the blades.

---

1,565,341. APPARATUS FOR SHELLING CRUSTACEA. KARL D. UMRATH, St. Louis, Mo. Filed Apr. 4, 1924. Serial No. 704,132. 13 Claims. (Cl. 17—2.)

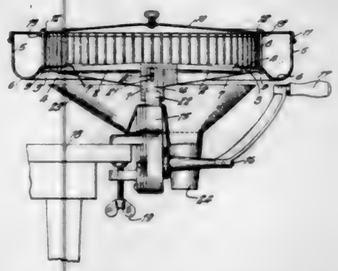


1. Apparatus for shelling Crustacea comprising, a pan adapted and mounted for rotation at high speed, said pan having a perforate circumferential partition or grating dividing the same into inner and outer compartments adapted to respectively receive the shells and the meat thrown therefrom, while said grating is adapted to retain the shells, the outer wall of said pan and said grating being fixed to the body of said pan in order to rotate in unison.

---

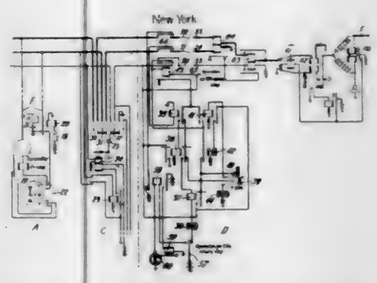
1,565,342. APPARATUS FOR SHELLING CRUSTACEA. KARL D. UMRATH, St. Louis, Mo. Filed Nov. 14, 1924. Serial No. 749,881. 12 Claims. (Cl. 17—2.)

1. An apparatus for shelling Crustacea comprising, a pan adapted and mounted for rotation on its axis at high speed, means for retaining the shells in order to cause the meat to be thrown therefrom into said pan, and means whereby the shells may be discarded through the bottom of said pan.



---

1,565,343. PRINTING-TELEGRAPH-EXCHANGE SYSTEM. GILBERT S. VERNAM, River Edge, N. J., and DONALD B. PERRY, Yonkers, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 10, 1923. Serial No. 674,009. 6 Claims. (Cl. 178—2.)



1. In a telegraph system, a plurality of printing telegraph stations located at distant cities, printing telegraph and impulse sending devices at each of the stations, a plurality of telegraph lines extending between said cities, machine switching apparatus responsive to the operation of said impulse sending device for seizing one of said telegraph lines, machine switching apparatus at the other end of said line, means responsive to the seizure of said telegraph line for sending a preliminary impulse thereover to condition said second mentioned machine switching apparatus for operation, and means operated due to the further operation of said impulse sending device for operating said machine switching apparatus to extend the connection to another of said printing telegraph stations.

---

1,565,344. BROWN TRISAZO DYESTUFFS AND PROCESS OF MAKING SAME. BARTHOLOMÄUS VOSSEN, of Hochst-on-the-Main, Germany, assignor, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 17, 1924. Serial No. 756,550. 11 Claims. (Cl. 260—72.)

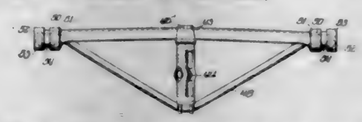
1. The process of producing brown trisazodyestuffs consisting in synthesizing trisazodyestuffs according to the following scheme:

1,565,345. PROCESS OF PRODUCING METHYL ALCOHOL AND METHYLENE CHLORIDE FROM METHANE. JOSEF WEBER, Essen, and PAUL ERASMUS, Berlin-Wilmersdorf, Germany, assignors to the firm Th. Goldschimdt A.-G., Essen, Germany. Filed Apr. 8, 1925. Serial No. 21,690. 3 Claims. (Cl. 260—156.)

1. In processes for the production of methyl alcohol by causing methyl chloride gas to react in a closed chamber under pressure and at an elevated temperature with milk of lime, the steps which consist in introducing the methyl chloride admixed with methylene chloride into the closed chamber, and withdrawing unabsorbed gas comprising methylene chloride from the chamber.

---

1,565,346. BRAKE BEAM AND METHOD OF MAKING SAME. LOREN L. WHITNEY, Hammond, Ind., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 10, 1923. Serial No. 611,726. 6 Claims. (Cl. 29—164.)

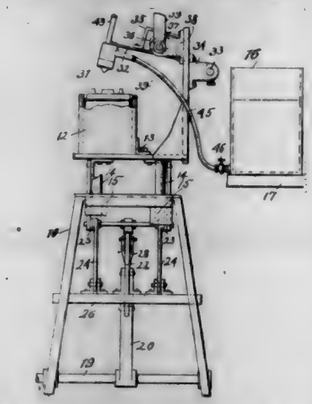


3. The method of securing together the ends of the tension and compression members of a truss type of brake beam consisting in expanding the end portions of the compression member, then folding said expanded ends around the tension member, and then forging shoulders on the ends of said tension and compression members to firmly connect same and form brake head trunnions.

6. A brake beam including tension and compression members connected at their outer ends, said tension member having shoulder portions, and said compression member also having shoulder portions embracing the shoulder portions on said tensions member for cooperating to securely hold together said tension and compression members.

---

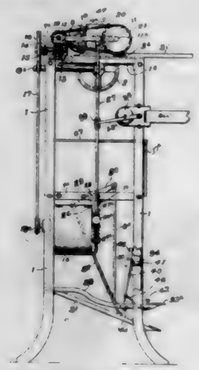
1,565,347. APPARATUS FOR FILLING STORAGE-BATTERY CELLS WITH ELECTROLYTE. ALFRED R. WILLARD, East Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Dec. 7, 1921. Serial No. 520,553. 3 Claims. (Cl. 226—22.)



1. In an apparatus for filling battery cells with electrolyte, means for supporting the cells to be filled comprising a frame and a vertically movable cell support on the frame adapted to hold the cells in upright position during vertical movement, a receptacle adapted to contain the electrolyte, a filling nozzle connected to said receptacle, a nozzle supporting member carried by said support and movable vertically with respect thereto, means for moving the nozzle down onto a cell so as to make a tight connection therewith, and means for lowering the support to a position in which the electrolyte will pass by gravity from the receptacle to the cell, and for raising the support to a position in which the excess electrolyte will drain back into the receptacle, said nozzle having a passage way for the flow of the electrolyte and a passageway for the escape of air, with provision whereby a quantity of electrolyte may be received and retained by the nozzle during the filling operation in excess of that required to fill the cell.

---

1,565,348. IRONING MACHINE. WILLIAM A. ZEIDLER, New York, N. Y. Filed Jan. 5, 1921. Serial No. 435,211. 8 Claims. (Cl. 68—9.)



1. In a domestic ironing machine, a frame, a horizontal cylindrical heated drum journaled therein, a pair of parallel horizontal rolls of smaller diameter then said drum and located above the same, connecting links at each end of said rolls to which both rolls are journaled, other links pivoted to said frame and to said first links, means for driving said rolls, and operating means connected to said first links for raising and lowering the same.

---

1,565,349. LUBRICATING APPARATUS. OSCAR ZERK, now by judicial change of name Oscar Ulyssen Zerk, Cleveland, Ohio, assignor, by mesne assignments, to The Bassick Manufacturing Company. Filed Mar. 14, 1921. Serial No. 452,127. 13 Claims. (Cl. 285—170.)

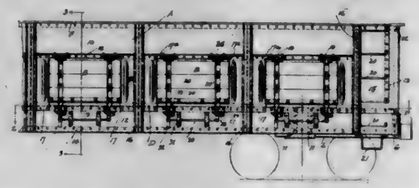
1. In a device of the class described, a cup having a slotted flange on one end, jaws in said slots, and having portions extending within the circumference of said cup and movable radially with relation thereto, whereby the device is adapted for connection with another member.

---

1,565,350. DUMP CAR. ALBERT E. ZIMMER, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 28, 1923. Serial No. 628,177. 9 Claims. (Cl. 105—243.)

1. In a side element for railway cars, the combination with an upper load carrying chord comprising a

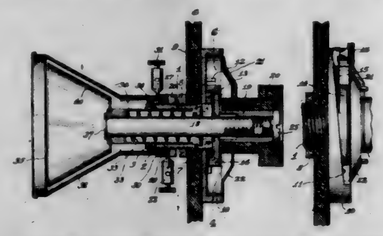
plate of extended depth disposed edgewise to the load; of a lower load carrying chord of similar construction, said chords being spaced apart to provide a dumping opening therebetween; a plurality of spaced members be-



tween said upper and lower chords, said spaced members being rigidly secured to the chords respectively, said chords and spacing members together constituting a single rigid structure; and dumping doors adapted to close the dumping space.

---

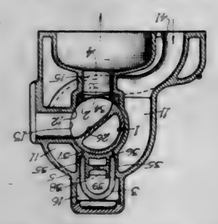
1,565,351. CONDENSER. HAROLD SCOTT DODSON and WILLIAM H. SHIREY, Detroit, Mich. Filed July 26, 1922. Serial No. 577,541. 3 Claims. (Cl. 250—41.)



1. A condenser comprising inner and outer condenser members with the inner condenser member arranged to be adjusted relative to the outer condenser member, a reciprocatory member coaxially of the inner condenser member, a tubular member on said reciprocatory member supporting said inner condenser member, a cam surface adjacent said reciprocatory member, a lever articulated with said reciprocatory member and adapted to bear on said cam surface and cause reciprocation of said reciprocatory member and coarse adjustment of said inner condenser member relative to said outer condenser member, and a secondary adjusting member supported adjacent said lever and adapted by rotation to cause a fine adjustment of said reciprocatory member and said inner condenser member relative to said outer condenser member.

---

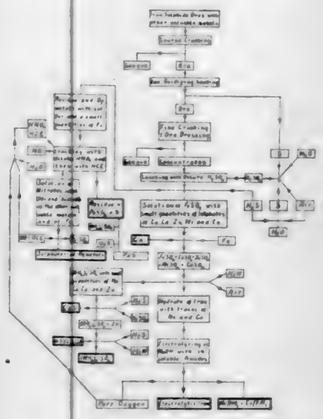
1,565,352. INTERNAL-COMBUSTION ENGINE. JAMES B. ELLIS, Harvey, Ill., assignor of one-half to Charles M. Bradley, Harvey, Ill. Filed Apr. 28, 1923. Serial No. 635,204. 2 Claims. (Cl. 123—59.)



1. In an internal combustion engine, the combination with a cylinder and a crank case the latter of which is adapted to contain oil, of a valve casing having a port providing communication between said casing and cylinder, a cylindrical valve rotatably mounted in said casing and arranged to control the opening and closing of said port, an oil vapor chamber located above said valve and communicating with said crank case, and a wick arranged in said chamber and extending through said casing to a point adjacent said valve, said casing having an oil passage leading from said wick to the periphery of said valve.

---

1,565,353. TREATMENT OF IRON SULPHIDE ORES CONTAINING OTHER METALS. AXEL TEODOR KONSTANTIN ESTELLE, Hagen, Germany. Filed June 12, 1925. Serial No. 37,394. 7 Claims. (Cl. 204—15.)



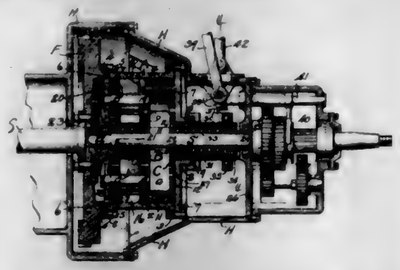
1. A metallurgical process comprising treating sulphide iron ores containing other valuable metals with non-oxidizing heat, cooling and comminuting the ore, concentrating the same, leaching with dilute sulphuric acid, removing the copper from the solution produced, crystallizing the sulphate of iron, treating the crystallized mass with ammonia vapour and air, drying the product, washing out and discharging the ammonium sulphate from other metals and crystallizing the same.

---

1,565,354. TOILET ARTICLE. GEORGE R. FARRELL, Leominster, Mass., assignor, by mesne assignments, to Standard Pyroxoloid Corporation, Leominster, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1923. Serial No. 675,008. 4 Claims. (Cl. 45—98.)

1. As an article of manufacture, a hand mirror having a back of thin sheet pyroxylin inturned at its edge to form a surrounding wall at the edge and having a flat surface at the end of said wall, a front formed in substantially the same way but having a depression for the glass, the two parts being placed together so that their inturned edges register with each other, an outline strip of contrasting pyroxylin inserted between said edges all around the mirror, and plastic material inserted and completely filling the space between the back and front and within the outline strip.

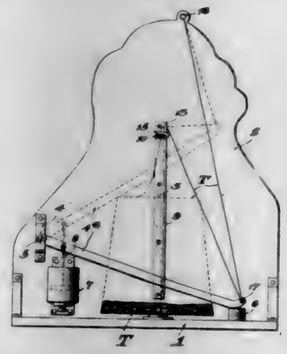
1,565,355. FLUID CLUTCH. JOSEPH E. FARRELL, Jr., Lancaster, Pa. Filed Apr. 18, 1922. Serial No. 555,176. 8 Claims. (Cl. 192—58.)



1. A fluid clutch device including an engine driven unit, a propeller unit arranged therein and providing an oil channel, rotary abutments carried by the propeller unit and operatively connected to the engine driven unit, and a slidable control unit having means for throttling the oil channel.

---

1,565,356. ADVERTISING DEVICE. JAMES E. FARRELL, Throop, Pa., assignor of one-fourth to George Gelatt, Scranton, Pa. Filed Aug. 1, 1924. Serial No. 729,543. 6 Claims. (Cl. 40—125.)

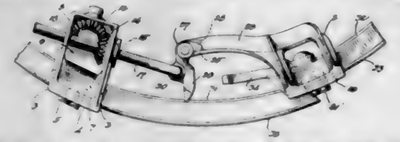


1. In an advertising device, a relatively stationary member formed to receive advertising matter and having the representation of a sound emitting media thereon, a source of twine supply rearwardly of the member and concealed thereby, a lever independent of the member, and pivoted at one end to the rear thereof and concealed thereby, sounding means also rearwardly of the member and concealed thereby, said sounding means being formed to imitate sound emitted by the representation, the lever being formed at its free end to be engaged by the twine so as to be actuated upon paying-out of the twine, and means to operate the sounding means by the lever movements.

---

1,565,357. RIM TOOL. WILLIAM FRICK and FRANK KLIMA, Detroit, Mich. Filed Feb. 21, 1924. Serial No. 694,230. 1 Claim. (Cl. 157—1.)

A rim adjusting tool comprising rim gripping members, a rigid shank carried by one of said members, housing carried by the other of said members an adjustable screw rod extending through said housing, an operating shaft supported by said housing and extending at an angle to the horizontal plane of said housing, gears establishing a driving relation between said shaft and said screw rod, and a connecting member for said shank



and screw rod so that said connecting member may serve for pushing or pulling said shank when said screw rod is adjusted.

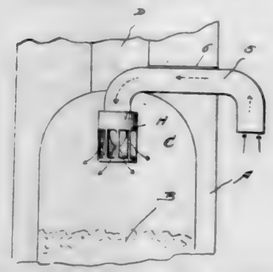
---

1,565,358. ALLOY FOR ELECTRICAL CONTACTS. LELAND A. GARDNER, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 19, 1924. Serial No. 693,900. 5 Claims. (Cl. 200—166.)

1. As an electric contact material consisting of a major part of fine gold, a lesser part of nickel, a still lesser part of zinc, and a small quantity of copper.

---

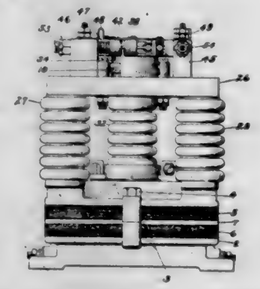
1,565,359. COMBUSTION HEAD. MELVILLE M. GRANT, Alliance, Ohio, assignor of one-half to L. Oscar Frants, Alliance, Ohio. Filed Aug. 28, 1925. Serial No. 53,097. 2 Claims. (Cl. 110—75.)



1. A combustion head of the class described including a plate having its upper surface convexed, partitions rising from the plate forming distributors, and a cylindrical wall formed on the partitions for reception of a pipe, said partitions radiating from the axis of the cylindrical wall.

---

1,565,360. HIGH-SPEED SIGNALING KEY. HENRY E. HALLBORG and HAROLD R. MILLER, Washington, D. C. Filed Oct. 12, 1923. Serial No. 668,217. 8 Claims. (Cl. 178—101.)



1. A high speed signaling key, comprising in combination a casing, a plurality of core sections clamped in said casing, a magnetic barrier member positioned between said core members, a pair of pole pieces car-

ried by each of said core members diagonally opposite one to the other, an armature pivoted between said pole pieces, said armature having a pair of magnetic sections separated by a magnetic barrier, a contact operating spindle carried by said armature, and means whereby one of said armature sections will be acted upon by one pair of said pole pieces and the other magnetic section of said armature will be operated by said other pair of pole pieces.

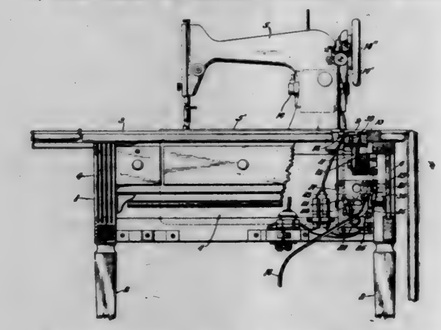
---

1,565,361. METHOD OF AND APPARATUS FOR DETERMINING THE DIRECTION OF WAVE ENERGY. HARVEY C. HAYES, Annapolis, Md. Filed Jan. 31, 1922. Serial No. 533,091. 9 Claims. (Cl. 181—26.)

1. A receiver of wave energy including means for binaurally observing incoming energy, and means operable at the will of the operator for intermingling the energy of the two paths.

---

1,565,362. SAFETY DEVICE FOR ELECTRIC SEWING MACHINES. MARTIN HEMLER, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 3, 1923. Serial No. 629,570. 6 Claims. (Cl. 45—27.)

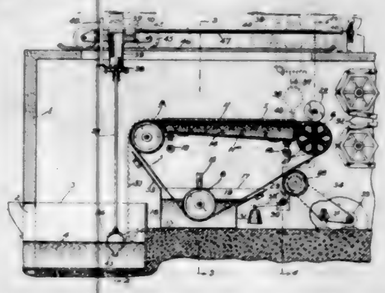


1. The combination with a drop-head sewing machine cabinet, a sewing head adapted to be housed within the cavity of such cabinet or raised to operating position above said cavity, and an electric motor for driving said sewing head, of a manually operated motor-speed regulating rheostat fixedly mounted within said cavity, and means operating automatically when the sewing head is dropped into the cavity of said cabinet to lock said rheostat against accidental operation.

---

1,565,363. DRAWING SHEET GLASS. JOHN C. HENDERSON, New York, N. Y., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 7, 1922. Serial No. 580,028. 15 Claims. (Cl. 49—17.)

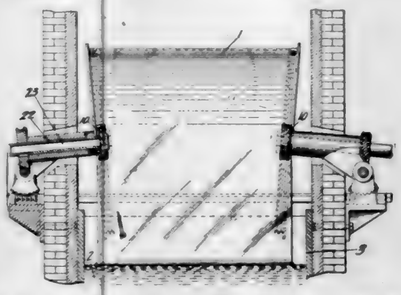
1. In an apparatus for producing a continuous sheet of glass, the combination of a receptacle adapted to contain molten glass, and means to draw the glass sheet from this molten glass, including a belt mounted adjacent to the receptacle so as to provide a substantially horizontal sheet-supporting surface, and means for moving said belt so that said horizontal surface continually recedes from the receptacle, a support located beneath the horizontal run of said belt, said support having a cooling chamber therein, and means for circulating a cooling medium through said chamber.



8. In a sheet glass drawing machine, a conveyor upon which the sheet is drawn and flattened, comprising a belt having a metallic outer sheet-supporting surface, and an inner lining of absorbent material.

---

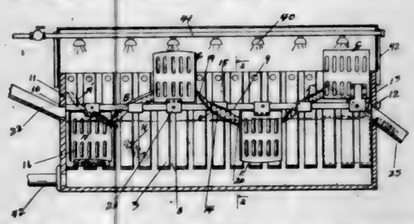
1,565,364. DRAWING SHEET GLASS. JOHN C. HENDERSON, New York, N. Y., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 12, 1923. Serial No. 674,168. 9 Claims. (Cl. 49—17.)



5. In a sheet glass drawing apparatus, means for bending the sheet from one plane to another, comprising means for engaging the sheet edges and drawing them forwardly and outwardly during the bending operation.

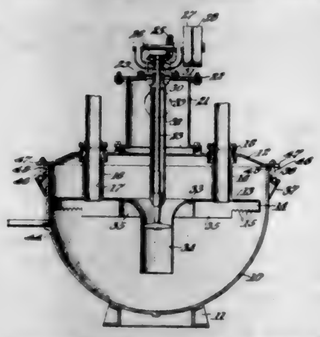
---

1,565,365. FISH-WASHING TANK. JOSEPH F. HIDZICK, San Francisco, Calif. Filed Apr. 6, 1925. Serial No. 20,962. 11 Claims. (Cl. 17—6.)



1. A fish washing tank comprising in combination a tank, a shaft extending therethrough, a series of inclined paddles attached to said shaft and a lifting paddle at the discharge end having means for tilting the paddle at a predetermined point associated therewith.

1,565,366. APPARATUS FOR THE ABSORPTION OF GASES IN LIQUIDS. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 6, 1922. Serial No. 605,279. 23 Claims. (Cl. 23—274.)

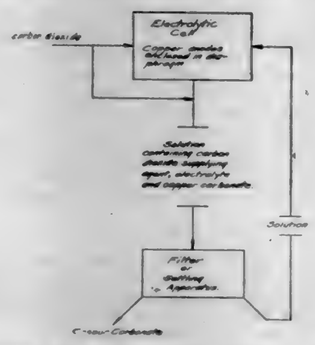


1. In apparatus for impregnating a liquid with a gas, the combination of a closed chamber, a centrally apertured plate having multitudinous small perforations and being peripherally spaced from the wall of the chamber, means for introducing gas beneath the plate, and means for causing circulation of a liquid through the chamber, and radially over the plate.

6. In apparatus for making sulfuric acid, a plate of cast iron having multitudinous small perforations, said plate being composed of a plurality of separately detachable sections.

---

1,565,367. ELECTROLYTIC PROCESS FOR THE PRODUCTION OF COPPER CARBONATE. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 29, 1924. Serial No. 735,023. 3 Claims. (Cl. 204—9.)

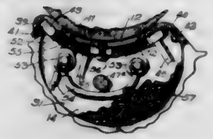


1. Process for the electrolytic production of copper carbonate comprising subjecting a solution containing a carbon dioxid supplying agent and an electrolyte to electrolytic action in the presence of a copper anode, carbonating said solution during the electrolysis thereof, and removing copper carbonate from the electrolyzed solution.

---

1,565,368. IRONING MACHINE. THOMAS E. HUNT, Chicago Heights, Ill., assignor to Quaker Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1922. Serial No. 537,714. 1 Claim. (Cl. 68—9.)

In an ironing machine, the combination with a metallic plate concaved on its outer surface to fit against a roll, of rigid end pieces secured to and extending from the end thereof, a rod connecting said end pieces, electric heating elements disposed against the convex surface



of the plate, means for holding the electric heating elements in place, and heat-insulating material between the electric heating elements and the rod, substantially as and for the purpose described.

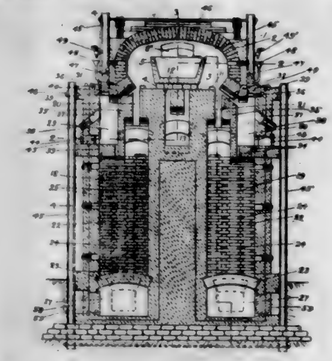
---

1,565,369. CIGARETTE AND MATCH HOLDER. TOMO ISHIKAWA, Honeyville, Utah. Filed June 24, 1925. Serial No. 39,274. 2 Claims. (Cl. 206—48.)

1. A cigarette and match holder comprising a strip of cardboard bent to form the sides and bottom of a cigarette container and one side of a match holder and shield for the heads of matches; a plurality of matches secured on said strip by a short strip of cardboard transversely fastened on the first described strip of cardboard; and an endless elastic fastened on the first described strip of cardboard and adapted to encircle a package of cigarettes between two folds of said cardboard strip.

---

1,565,370. FURNACE. NICHOLAS I. IVANOVSKY, New York, N. Y. Filed Dec. 27, 1924. Serial No. 758,399. 6 Claims. (Cl. 158—4.5.)

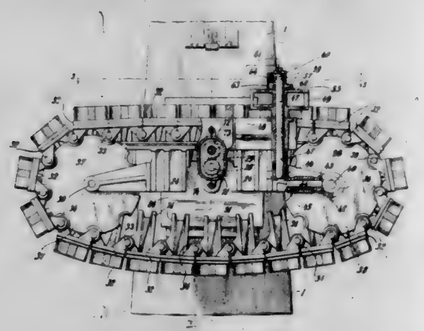


1. In a furnace, the combination with a combustion chamber, a regenerative chamber adjacent to said combustion chamber, a plurality of brick walls forming passages in said regenerative chamber, means to heat said walls by the exhaust gases from said combustion chamber, a gas producing chamber made of refractory material adjacent to said regenerative chamber and to said combustion chamber, the walls of said gas producing chamber being provided with apertures communicating with said regenerative chamber and with said combus-

tion chamber, means to heat the walls of said gas producing chamber by means of the exhaust gases from said combustion chamber, means to admit fuel into said gas producing chamber, and means to admit air into said combustion chamber partly through said regenerative chamber and partly through said gas producing chamber.

---

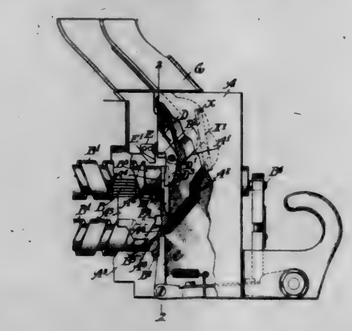
1,565,371. BOTTLE-CAPPING MACHINE. CARL WALKER KENDALL, Glenside, Pa., assignor to Columbia Machine and Stopper Co. Inc., New York, N. Y., a Corporation of New York. Filed June 4, 1920. Serial No. 386,613. 7 Claims. (Cl. 226—84.)



7. A bottle capping machine comprising a capping head, means for moving the capping head in a vertical plane in its cap applying operation, an endless chain bottle carrier below the capping head having projections forming a series of open slots, a pair of diametrically oppositely disposed eccentric pins adapted to work alternately in the successive slots, and means for driving said pair of eccentric pins in timed relation with the movement of the capping head in its cap-applying operations.

---

1,565,372. TYPOGRAPHICAL DISTRIBUTING MACHINE. GEORGE P. KINGSBURY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Mar. 11, 1925. Serial No. 14,683. 12 Claims. (Cl. 199—42.)



1. In a typographical distributing mechanism comprising a distributor bar and a set of matrix conveying screws, the combination of guide means along which the matrices pass by gravity to the screws, said guide means being adapted to support a plurality of matrices in facewise contact, means for arresting the matrices at a point in advance of the screws, and a reciprocating finger for releasing the arrested matrices, one at a time, to permit their escape by gravity into position to be picked up by the screws.

---

1,565,373. IRONING-BOARD COVER. SIGMUND F. KOHN, New York, N. Y. Filed Mar. 28, 1925. Serial No. 19,033. 1 Claim. (Cl. 68—10.)

A cover for ironing boards comprising a cloth strip shaped to lie over the top of an ironing board, reversible board end engaging pockets attached to each end of said strip, one of said pockets being divided longitudinally of said strip, fastening members carried by the portions of said divided pocket, and means for connecting the opposite side edges of said strip beneath an ironing board under tension.

---

1,565,374. PROPELLER. LE ROY KRAMER, Chicago, Ill. Filed Sept. 7, 1918. Serial No. 253,011. 6 Claims. (Cl. 170—159.)

1. A sheet metal propeller or like hollow metal body composed of cupped sheets arranged in opposed relation, each of the sheets provided with projecting marginal lips overlapping and embracing the edge of the other sheet, and the two sheets marginally welded throughout their extent.

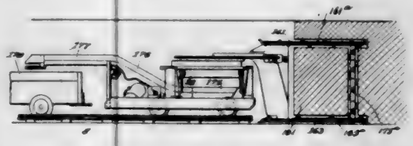
---

1,565,375. PROCESS FOR TREATING FLOUR, MEAL, OR MILLING PRODUCTS AND THE PRODUCTS THEREOF. THILO KROEBER, Westend-Berlin, Germany, assignor to Naamlooze Vennootschap Noury & Vander Landis Handelmaatschappij, Deventer, Netherlands. Filed Apr. 29, 1925. Serial No. 26,787. 5 Claims. (Cl. 83—42.)

1. A process which comprises treating an edible milling product with a substance of the herein described peroxide-aldehyde-ozonide class, the major part of the particles of which are not over 15 $\mu$ in diameter.

---

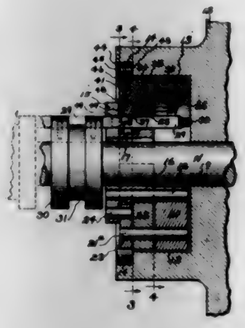
1,565,376. COAL-MINING MACHINE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 18, 1917. Serial No. 197,291. Renewed Apr. 18, 1925. 13 Claims. (Cl. 262—5.)



1. In a mining machine, the combination with a supporting base, of cutting mechanism mounted thereon comprising two spaced apart kerf cutters adapted to form kerfs above and below a section of the mine wall, and a kerf cutter extending between the inner ends of said spaced apart kerf cutters and having cutter bits arranged to cut a kerf between the aforesaid kerfs when said cutting mechanism is moving either inwardly or outwardly or laterally in either direction relative to the material to be mined.

---

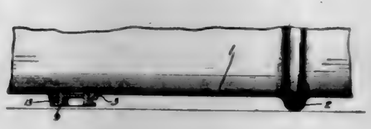
1,565,377. CLUTCH. WALDEMAR L. LINDGREN, Chicago, Ill., assignor, by direct and mesne assignments, to Alfred A. Norton, trustee, Chicago, Ill. Filed Jan. 18, 1924. Serial No. 686,948. 6 Claims. (Cl. 192—43.)



1. In a clutch, the combination with a rotatable driving member, of an annular driven member concentric therewith, a ring interposed between the two members, a pulrality of clutch dogs pivoted on the ring and having their clutching ends adapted to engage the inner periphery of the driven member when swung out from neutral position, means carried by the driving member adapted to swing the clutch dogs to clutching position when the driving member is rotated, and means for swinging the dogs to unclutching position without stopping the driving member, said unclutching means including a lever member for multiplying the power applied for said purpose.

---

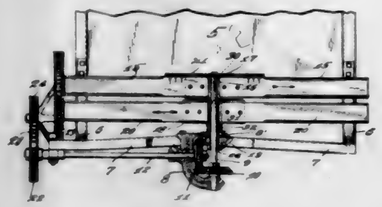
1,565,378. STEEL CONTAINER. SHERMAN G. LONG, Peoria, Ill., assignor to Metal Barrel Corporation, Peoria, Ill., a Corporation of Illinois. Filed Mar. 24, 1922. Serial No. 546,234. 4 Claims. (Cl. 220—89.)



1. In a metal barrel provided with annular corrugations and an annular flanged opening in its corrugated wall projecting outwardly less than the depth of such corrugations, of an internally threaded ring adapted to fit within said flanged opening and provided with an encircling flange of less depth than the width of its threaded portion and of approximately the thickness of the wall of said flanged opening and secured thereto, and the inner face of said ring provided with a plurality of radial draining depressions the base walls of which normally lie approximately in the plane of the outer surface of the barrel to insure thorough draining of material contained therein.

---

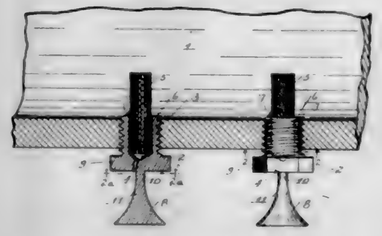
1,565,379. STRAW SPREADER. WALLACE F. MACGREGOR, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Oct. 6, 1924. Serial No. 741,786. 6 Claims. (Cl. 275—8.)



1. In a spreader, a shaft, two sets of scattering arms mounted upon said shaft, and means for rotating said sets of scattering arms in opposite directions.

---

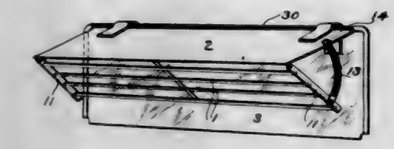
1,565,380. NOZZLE. HOMER B. MARCH, Muskegon, Mich., assignor, by mesne assignments, to The Automatic Irrigation Company, Muskegon, Mich., a Corporation of Michigan. Filed Jan. 10, 1923. Serial No. 611,742. 3 Claims. (Cl. 210—170.)



1. In a device of the character described: a pipe having an opening through its side; a nozzle having a passage therethrough and seated in said opening; a strainer formed from a foraminous sheet rolled into a substantially compact roll, its adjacent convolutions contacting each other, inserted into the nozzle's passage.

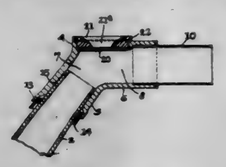
---

1,565,381. WINDSHIELD RAIN SHIELD. ROBERT P. MARTIN, Seattle, Wash., assignor, by direct and mesne assignments, of one-fourth to Hugh Mulligan, forty-seven one-hundredths to Daniel Mulligan, one-tenth to Clarence M. Tuck, and three one-hundredths to Eugene Doran, all of Seattle, Wash. Filed Apr. 19, 1924. Serial No. 707,605. 7 Claims. (Cl. 296—97.)



1. A rain protector for automobile windshields comprising a grid of bars extending horizontally lengthwise of the winshield and having forward rain-impacting surfaces positioned at an angle which deflects the spatter of rain received thereon downwardly, said grid bars being separated and disposed in a plane which inclines from its forward edge downwardly towards the rear.

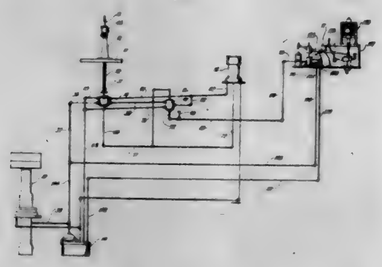
**1,565,382. VACUUM-CLEANER DEVICE.** STANLEY MCCLATCHIE, Stuttgart, Germany. Filed May 7, 1924. Serial No. 711,610. 2 Claims. (Cl. 116—67.)



2. A cleaning apparatus having a passage for air mingled with solid particles, and a diaphragm positioned for impingement by said particles whereby audibly to indicate their passage.

---

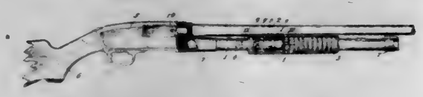
**1,565,383. BRAKE CONTROL.** EZRA B. MEAD, Ottumwa, Iowa, assignor to Ottumwa Iron Works, Ottumwa, Iowa, a Corporation of Iowa. Filed May 13, 1925. Serial No. 29,860. 27 Claims. (Cl. 303—49.)



1. A brake control, comprising in combination fluid pressure means associated with the brake applying mechanism for controlling the action thereof, a source of fluid under pressure, a plurality of lines of communication between said pressure source and said means, and devices including a manipulative member whereby the operator may admit fluid to said means through one of said lines of communication and exhaust the same through either thereof to control the brake application.

---

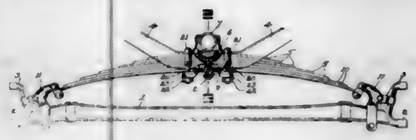
**1,565,384. FIREARM.** CHARLES A. NELSON, Utica, N. Y., assignor to Savage Arms Corporation Utica, N. Y., a Corporation of Delaware. Filed June 12, 1920. Serial No. 388,457. 27 Claims. (Cl. 42—16.)



11. A take-down firearm characterized by means to lock the take-down of the arm, said means being released by the firing means when the latter is in its down position.

26. A firearm comprising a breech-bolt movable downward preliminary to its movement to the rear, a firing pin therein, a hammer pivoted below the path of the breech-bolt, and means for moving the breech-bolt to the rear to move the hammer toward cocking position, characterized by the hammer being provided with a surface, below its point of contact with the firing pin, for engagement by the breech-bolt as the latter is moved downward to move the hammer away from the firing pin preliminary to the rearward movement of the bolt.

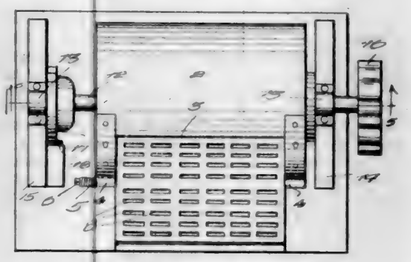
**1,565,385. SPRING ATTACHMENT.** LOUIS OBERCHT, Ashland, Mass. Filed Apr. 4, 1925. Serial No. 20,636. 1 Claim. (Cl. 267—52.)



In a spring attachment wherein a channel cross-member of the chassis frame is provided to receive the leaves of a cross spring seated within said channel and a bearing clip is formed with clip bolts extending downwardly at each side of said channel member; a clip member formed with an intermediate portion forming a seat for the lower leaf of the spring and ledges at the sides of said seat to engage the side edges of the leaf, said ledges being extended laterally to form ears located in a horizontal plane above the plane of said seat and provided with openings to receive the clip bolts, said ears being also formed with marginal ribs, and said clip member being also formed with end ears having openings to receive a pair of clips to engage over the frame member at each side of said bearing clip.

---

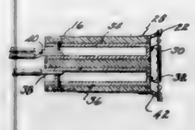
**1,565,386. NAIL-UPRIGHTING DEVICE.** VALENTINE PAGANINI, Roundup, Mont. Filed Aug. 21, 1924. Serial No. 733,396. 7 Claims. (Cl. 1—49.6.)



1. In a nail uprighting device, a support, a barrel-shaped hopper pivotally mounted on said support, a side door of foraminous material, and means for causing the door to be opened into a horizontal position when the hopper is turned on its mounting in one direction.

---

**1,565,387. SURFACE CONTACT FOR ELECTRIC RESISTANCE THERMOMETERS.** ERNEST HENRY PASQUE and ARTHUR BLAINE WALKER, Detroit, Mich. Filed Apr. 13, 1925. Serial No. 22,899. 5 Claims. (Cl. 73—32.)



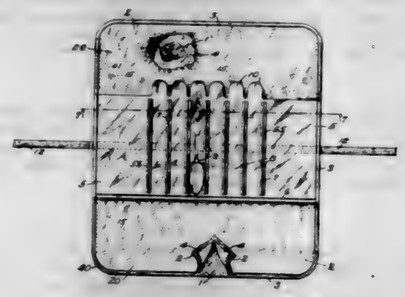
1. In a heat measuring instrument, a handle, a cup shaped tip member at one end of the handle, a contact member mounted on the tip so as to extend across the mouth of said tip and adapted to be brought into surface contact on one side with a body, the heat of which is to be measured, said tip member being provided with restricted air openings through its wall.

**1,565,388. SHOW CASE.** JAMES W. PAULLIN, Red Oak, Iowa. Filed Jan. 6, 1923. Serial No. 611,110. 1 Claim. (Cl. 211—25.)

A combination device of the character described comprising an elongated cabinet divided by partitions into a series of similar compartments, glazed hingedly mounted doors normally covering and closing the respective compartments, legs for supporting the cabinet, certain of the legs being prolonged upwardly to define extensions above the cabinet, a cross piece secured to and bridging the space between said extensions, a plurality of closure members located between said cross piece and the top of the rear edge of the cabinet, a plurality of brackets mounted on said extensions, and shelves mounted on said extensions rearwardly of the closure members.

---

**1,565,389. CONTAINER FOR TABLE SILVER.** WILLIAM PEACOCK, Lititz, Pa., assignor to Woolworth Chemical Company, of Lititz, Pa., a Corporation of Pennsylvania. Filed June 19, 1925. Serial No. 38,264. 4 Claims. (Cl. 150—52.)



1. In a container for table silver the combination of an outer layer; a layer of nonporous material associated therewith; an inner layer; a second layer of non-porous material associated with said inner layers to provide a plurality of pockets; means associated with said last named layer of non-porous material to make each pocket substantially air-tight; means to fasten said container in substantially air-tight folds; and means to secure said container in fastened folded position.

---

**1,565,390. PROCESS FOR WEIGHTING SILKS.** ANTHONY PEPPER, Paterson, N. J. Filed Aug. 14, 1925. Serial No. 50,271. 7 Claims. (Cl. 8—13.)

3. A process for weighting silk fabrics which comprises treating the fabrics with a solution of stannic chloride, then washing the fabrics, treating the washed fabrics with a solution of sodium phosphate, then washing the fabrics, treating the washed fabrics with a solution of acetic acid, then washing the fabrics with cold water, treating the fabrics with a solution of lead acetate, then washing the fabrics and treating the same with a cold solution of sodium phosphate.

**1,565,391. INSTRUMENT STRUCTURE.** RAYMOND T. PIERCE, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1923. Serial No. 638,627. 7 Claims. (Cl. 171—34.)

1. The combination with a support or panel having a plurality of receiving means, of a casing and a plurality of attaching means normally adapted to register with, and to be secured in position by, said receiving means and laterally movably secured to the casing to compensate for discrepancies between the positions of said receiving means relative to said attaching means.

---

**1,565,392. SNAP HOOK.** LAWRENCE B. POWERS, Fulton, S. Dak. Filed May 5, 1925. Serial No. 28,117. 2 Claims. (Cl. 24—265.)

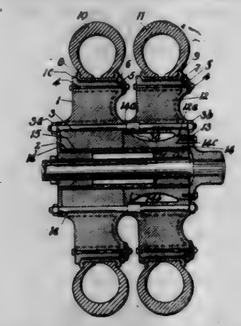
2. The combination with a snap hook, a strap loop, a link connection between the hook and the strap loop, of a spring, said spring engaging the end of the hook and extending rearwardly, the rear end of said spring being provided with an outwardly extending loop, a transversely disposed removable screw extending through the link, the rear end of the hook and the spring loop, said spring loop being provided with an outwardly extending portion detachably connected to the underside of the hook.

---

**1,565,393. DUAL WHEEL FOR VEHICLES.** ELLSWORTH L. PRENTISS, Los Angeles, Calif., assignor to The Pickwick Corporation, Los Angeles, Calif., a Corporation of California. Filed Mar. 10, 1925. Serial No. 14,406. 5 Claims. (Cl. 301—36.)

1. In dual vehicle wheels, a wheel member secured to the hub and provided on its periphery with the conventional spare tire and rim securing means and provided with a plurality of holes through said member, an outer wheel member support provided with an extending flange provided with holes conforming with the holes in said wheel member and provided with two diameter ledges in spaced relation adapted to be secured to the hub of the wheel, a plurality of bolts provided with enlarged portions adapted to rest against said flange and pass through the first mentioned wheel member provided with nuts on their opposite ends adapted to clamp said sup-

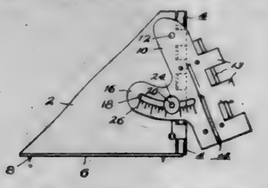
port to said first mentioned wheel member, an outer wheel member provided with a ledge portion adapted to rest on the outer ledge on said support and provided



with enlarged recesses and bolt holes adapted to receive the enlarged portions of said bolts and provided on its periphery with the conventional tire and rim supporting means.

---

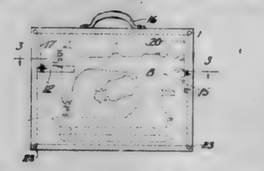
1,565,394. BEVELING AND SQUARING TOOL. AUGUSTUS RAFINER, Kansas City, Mo. Filed Sept. 24, 1923. Serial No. 664,422. 3 Claims. (Cl. 77—62.)



1. A device of the character described consisting of two elements operably connected together at adjacent margins so that they may be folded against each other or adjusted to support each other in upright position, a slotted tool guide pivoted on one of said elements and adapted to guide a tool at any desired angle to the face of an article on which the device is placed, a graduated segment projecting from said tool guide, and means carried by the element on which the tool guide is pivoted for locking said segment to said element.

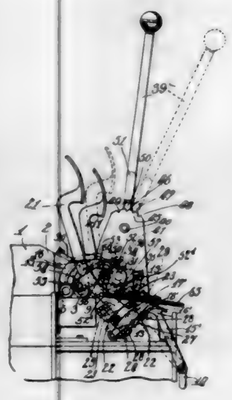
---

1,565,395. SEWING-MACHINE CONTAINER. CHARLES E. REDDIG, Kew Gardens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 15, 1922. Serial No. 601,015. 4 Claims. (Cl. 45—27.)



1. A case for a portable sewing machine comprising a plurality of hinged sections arranged to fold in parallel alignment to form a carrying case for the machine, a hinged supporting member for the sewing machine carried by one section and movable in a direction at right angles with respect to the other sections to support the sewing machine when said sections are opened, and superposed means comprising the other sections forming a work supporting table.

1,565,396. SPEED CHANGING AND CONTROLLING MECHANISM FOR MOTOR VEHICLES OR THE LIKE. HERMAN R. REGAL, Chicago, Ill. Filed Dec. 9, 1924. Serial No. 754,730. 24 Claims. (Cl. 74—89.)



1. In a mechanism of the class described, the combination of a releasing and actuating lever or pedal mounted on and fixed to a high-speed clutch-lever shaft of a transmission mechanism, a low-speed lever, a reversing lever, and a shiftable lever operatively connected with and adapted to be actuated by said first-mentioned lever and movable into and out of engagement with said low-speed lever and said reversing lever alternately.

---

1,565,397. SAFETY AND LIKE PIN. OSCAR E. RICHARDSON, Naugatuck, Conn., assignor to The Risdon Manufacturing Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Aug. 7, 1922. Serial No. 580,072. 13 Claims. (Cl. 24—156.)

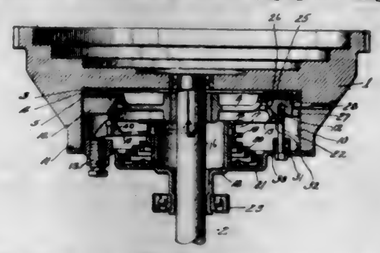
1. A safety or like pin of the outwardly seating type comprising a head having a pin seat, a main limb, and a pointed limb, the latter being spring-pressed outward or away from the main limb and against said seat, and abutment means located opposite the part of the pointed limb adjacent the pin seat and co-operating with the pin seat to form a path or space adapted to permit the free and easy removal of the pointed limb in the absence of pinned fabric between said abutment means and said limb part, but to block removal of the pointed limb when pinned fabric is between the abutment means and said limb part.

---

1,565,398. CLUTCH. CHARLES B. ROSE, East Moline, Ill. Filed Nov. 28, 1921. Serial No. 518,114. 8 Claims. (Cl. 192—68.)

5. A disk clutch having a driving member, a driven member, friction disks for operatively connecting said

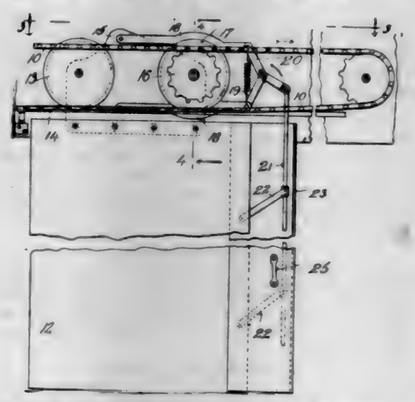
members, an annular ring for transmitting pressure to said disks, a self-aligning device engaging said ring, op



erating means for exerting and relieving pressure on said self-aligning device, and means for retracting said ring when pressure on the self-aligning device is relieved.

---

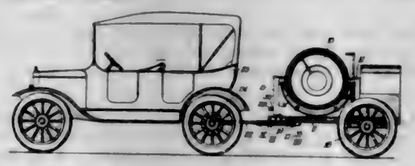
1,565,399. UNIT-DOOR-CONTROL MECHANISM. HAROLD ROWNTREE, Pass Christian, Miss., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed June 4, 1921. Serial No. 475,139. 13 Claims. (Cl. 268—8.)



1. In a unit door control mechanism, the combination with a plurality of doors, of a single operating motor therefor, and means controlled by any door encountering an obstruction in closing for releasing said door from its connection with said motor.

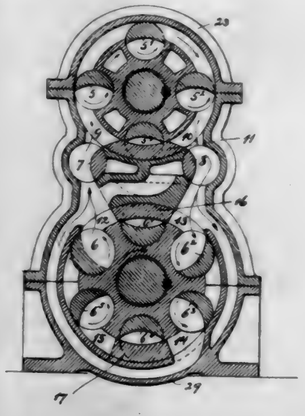
---

1,565,400. DRAFT MECHANISM. ADOLPH W. RYBECK, Milwaukee, Wis., assignor to The T. L. Smith Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 16, 1923. Serial No. 632,299. 8 Claims. (Cl. 280—33.4.)



1. In a trailer construction, a frame, wheels supporting one end of the frame, and an adjustable support having a U-shaped portion adapted in one position to engage the ground, and an oppositely extending arm, and means adapted to secure the arm to maintain the support selectively in horizontal or vertical position.

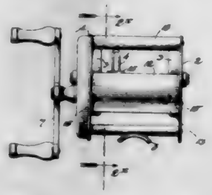
1,565,401. PUMP CONSTRUCTION FOR HYDRAULIC TRANSMISSION GEARS. ERNST SCHAEREN, Winterthur, Switzerland, assignor to William Heinecke, New York, N. Y. Filed Nov. 13, 1922. Serial No. 600,545. 3 Claims. (Cl. 103—125.)



1. In a hydraulic transmission gear, a casing enclosing a pump, a drum in said pump provided with peripheral recesses, vanes in said recesses and a coupling disk eccentrically connected to said vanes and mounted upon an eccentric disk upon the casing for rotating the vanes.

---

1,565,402. FISHING REEL. WILLIAM SCHMID, Coldwater, Mich. Filed Nov. 5, 1924. Serial No. 747,882. 1 Claim. (Cl. 242—84.4.)



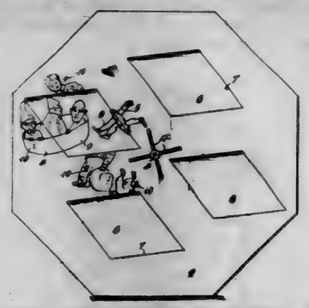
In a fishing reel wherein a spool is eccentrically mounted between reel end plates, and a line level wind mechanism inculding a line guide is operatable in synchronism with said spool; inner and outer tie members for the end plates of said reel, said outer members conforming in curvature to the circumference of said end plates and said inner member conforming in circumference to said spool, one of said outer members having an inturned edge cooperating with the inner member in forming a guide for part of said level wind mechanism and one of said outer members forming a guard over the outer free end of said line guide, the guard member being of a width to form a thumb rest extending from one end plate to the other, and said outer members having ears attached to said end plates.

---

1,565,403. GAME OR PUZZLE. HENRY A. SCHULKE, Cleveland, Ohio. Filed Feb. 24, 1925. Serial No. 11,230. 5 Claims. (Cl. 273—155.)

1. A device of the character described, comprising, a pair of inter-connected relatively rotatable members, one member having openings and carrying portions of pic-

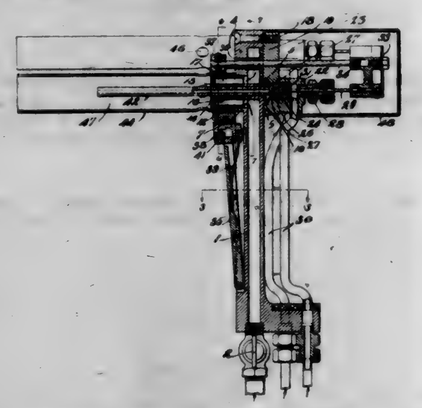
tures on its surface, portions of pictures carried by the other member and singularly alinable with the portion



on the other member to complete a picture, said members being relatively shiftable circumferentially or radially to complete certain pictures.

---

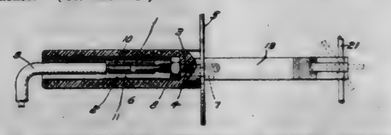
1,565,404. PAINT SPRAYER. WILLIAM G. ABBOTT, Jr., Wilton, N. H. Filed Nov. 23, 1923. Serial No. 676,539. 7 Claims. (Cl. 91—45.)



1. Apparatus for spraying paint comprising an air nozzle having a cylindrical bore, a paint nozzle extending axially through said bore and terminating at a point substantially in rear of the forward end of said air nozzle, and supporting means for said nozzles whereby one nozzle may be removed independently of the other, said air nozzle having an opening remote from the outer end of said paint nozzle to permit atmospheric air to be drawn through the air nozzle by the stream of air flowing therethrough.

---

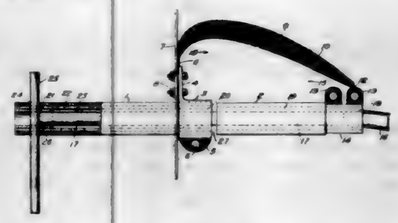
1,565,405. ELECTRODE HOLDER. ARTHUR R. ALLARD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 5, 1920. Serial No. 421,925. 2 Claims. (Cl. 219—8.)



1. An electrode-holder comprising a tubular insulating handle closed at one end, said closed end being provided with a hole smaller in diameter than the internal diameter of said tubular portion, whereby an abutment is provided surrounding said hole, an electric cable, a threaded conducting member having one end secured to the end of said cable and having its other end projecting through said hole, a shoulder being provided intermediate the ends of said threaded member for abutment against the closed end of said tubular member, a nut on the projecting end of said threaded member, and an electrode-holding attachment carried by said nut.

---

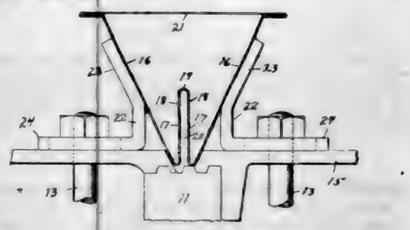
1,565,406. ELECTRODE HOLDER. ARTHUR R. ALLARD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 12, 1920. Serial No. 423,543. 6 Claims. (Cl. 219—8.)



2. In a holder for engaging an object, a pair of telescoping object-engaging members, the outer telescoping member having a portion extending beyond the inner member and having shoulders adapted to grip the object when said outer member is drawn backwardly over the inner telescoping member, said inner telescoping member extending back farther than said outer telescoping member, and gripping means comprising a bowed spring connected between the rear ends of the telescoping members and biased to draw the outer telescoping member backwardly, whereby a predetermined pressure on the gripping means will release the held object.

---

1,565,407. SPRINKLING TROUGH. JACOB BESSON, Carbondale, Pa., assignor to Carbondale Machine Company, Carbondale, Pa., a Corporation of Pennsylvania. Filed Feb. 15, 1924. Serial No. 693,005. 9 Claims. (Cl. 299—58.)

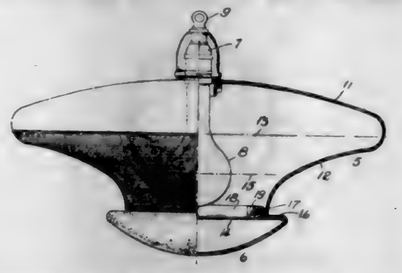


1. A sprinkling trough having an upwardly and longitudinally extending partition formed of a pair of walls spaced apart to form a water passage open along its lower edge, said partition having openings along the upper edge for the delivery of water from said trough downwardly through said passage.

---

1,565,408. LIGHTING FIXTURE. WILLIAM T. BLACKWELL, Westfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 16, 1921. Serial No. 522,746. 12 Claims. (Cl. 240—100.)

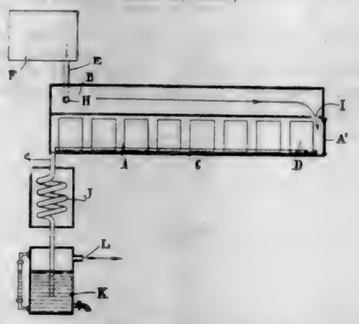
1. A lighting unit comprising a globe, said globe being of a transparent material having its lower portion coated to provide an interior reflecting surface whereby light rays are directed through the upper portion of said globe, an aperture in the said lower portion for the replacement of bulbs, a cover for said aperture having a flange of light-transmitting material, projections of light transmitting material for attaching said cover over the aperture of said globe with the said flange disposed



therearound, said flange being of sufficiently greater diameter than said aperture to provide an appreciable light-transmitting medium to permit the emission of light rays to the exterior of the lower portion of said globe.

---

1,565,409. OIL-GAS APPARATUS. LÉONCE BLANCHET, Paris, France, assignor to La Société de Chimie et a Catalyse Industrielle Siege Social, Paris, France. Filed Aug. 1, 1921. Serial No. 489,010. 2 Claims. (Cl. 48—102.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A unitary oil gas retort embodying a lower catalyzing compartment, and a separate upper vaporizing compartment mounted directly upon and directly communicating with the catalyzing compartment; means for supplying liquid hydrocarbon to the vaporizing compartment; and catalyzers disposed in a plurality of removable rows upon the floor of the catalyzing compartment and over which the vapors from the vaporizing compartment are caused to pass.

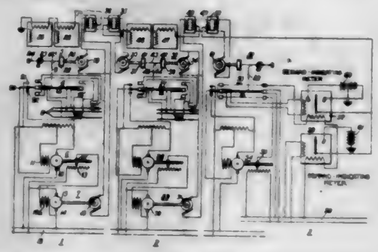
---

1,565,410. RELAY. CLARENCE A. BODDIE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 4, 1920. Serial No. 378,731. 8 Claims. (Cl. 175—320.)

6. In combination, a circuit, a plunger-type relay comprising a movable core member and three windings associated therewith, two of said windings being differentially-connected, and means for energizing said windings in accordance with the voltage and current in said circuit to actuate said core member in accordance with the direction of power flow therethrough.

---

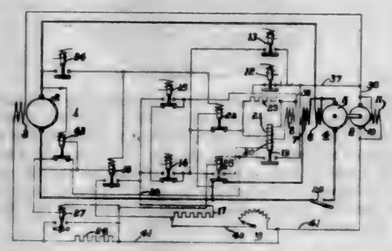
1,565,411. LOAD-REGULATOR SYSTEM. CLARENCE A. BODDIE, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 14, 1920. Serial No. 373,826. Renewed Sept. 18, 1924. 17 Claims. (Cl. 171—312.)



2. In a load-regulating system, the combination comprising a plurality of supply stations, a measuring system for summating the power delivered by the stations in terms of frequency, and means controlled in accordance with the fluctuations in the total power demand for varying the load on the stations, said means comprising a demand instrument adapted to close one control circuit when the total demand exceeds a predetermined value and another control circuit when the total demand is less than another predetermined value.

---

1,565,412. MOTOR-CONTROL SYSTEM. EDGAR M. BOUTON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 24, 1923. Serial No. 641,046. 10 Claims. (Cl. 172—239.)



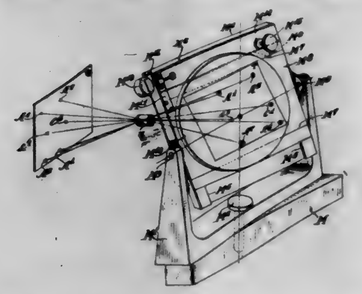
1. The combination with a motor and a separately excited generator for supplying current to the motor, of an extra field-magnet winding for the generator, and means for connecting said extra field winding in circuit with said generator under predetermined voltage conditions when stopping the motor.

---

1,565,413. METHOD OF MAKING MAPS. ARTHUR BROCK, Jr., and LODEWYK J. R. HOLST, Philadelphia, Pa., assignors, by mesne assignments, to Brock & Weymouth, Incorporated, a Corporation of Delaware. Filed Feb. 16, 1924. Serial No. 693,191. 13 Claims. (Cl. 88—24.)

1. In the art of making topographical maps from aerial photographs, the method of preparing pairs of photographic plates suitable for use as stereoscopic pairs which consists in taking a series of photographic negatives from a moving aerial vehicle in such manner that adjacent

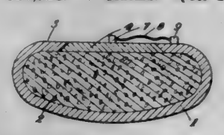
negatives will show in part the same territory, selecting from said series of views a series of pairs showing in part the same territory and each of which includes a point which is at the center of the other selected view, ascertaining by survey the elevation of salient points in territory shown on both views of such pairs, measuring the distances of selected salient points from the line connecting the center point of each view with the conjugate center point of the other view of the pair, and



measuring the parallaxes of points of known elevation as they appear in said views, to ascertain approximately the angle and degree of tilt of said views with reference to a horizontal focal plane and with reference to each other, and reprojecting said views on planes tilted to correct ascertained deviations, to so form a stereoscopic pair of positive plates having ordinates and parallaxes commensurate with horizontal projections in the view point of each plate of such pair.

---

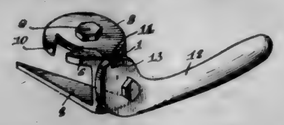
1,565,414. DEVICE FOR CLEANING GOLF BALLS AND SIMILAR ARTICLES. EDMUND JOSEPH BYRNE, Piccadilly, London, England. Filed Nov. 26, 1921. Serial No. 517,924. 7 Claims. (Cl. 15—244.)



1. A golf ball cleaning device comprising a casing of flexible material having an opening therein, a sponge closely fitting in said casing with a portion of the same exposed through the said opening, a closing lid adapted to be fitted in said opening, and means on the lid adapted to engage the interior edge of the opening to produce an effective closure due to the pressure of the sponge on the said lid.

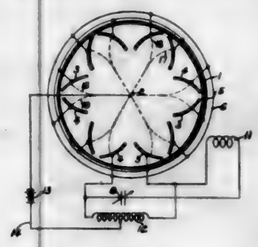
---

1,565,415. STAPLE EXTRACTOR. ERNEST CANTIN, Lemieux, Quebec, Canada. Filed May 11, 1925. Serial No. 29,555. 2 Claims. (Cl. 254—28.)



2. An extractor comprising a bearing piece having a fixed jaw rigidly formed therewith and perpendicular thereto, a movable jaw pivotally mounted upon said fixed jaw, a lever pivoted to said bearing piece and having a notch cut therein, a lug extending from said movable jaw into said notch and a fulcrum piece extending from said bearing member and parallel to said jaws.

1,565,416. ELECTRON-TUBE OSCILLATOR. LEWIS WARRINGTON CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1921. Serial No. 444,636. 24 Claims. (Cl. 250—36.)



1. An oscillation generator comprising an evacuated vessel, a plurality of plate elements electrically connected, a second plurality of plate elements electrically connected to one another and arranged to alternate with the plate elements of the first plurality, an oscillatory circuit connecting one of said pluralities to the other, a cathode, means for establishing an electrostatic field between said cathode and said anodes, whereby a space current is created in said vessel, and means operatively associated with said oscillatory circuit for directing the space current alternately from one plurality of plate elements to the other.

---

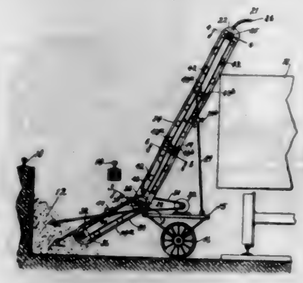
1,565,417. ARC-WELDING PENCIL HOLDER. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 27, 1920. Serial No. 419,804. 8 Claims. (Cl. 219—14.)

2. An electrode holder comprising a handle, a conducting member extending therefrom, and a spring device for holding an electrode secured thereto, said device having an opening through which said member extends, the free end of said device and of said member constituting electrode-holding means.

---

1,565,418. LOADING DEVICE. PAUL V. COLIANNI, Chicago, Ill., assignor of one-half to Melvin B. Benson, Chicago, Ill. Filed Mar. 8, 1923. Serial No. 623,691. 8 Claims. (Cl. 198—10.)

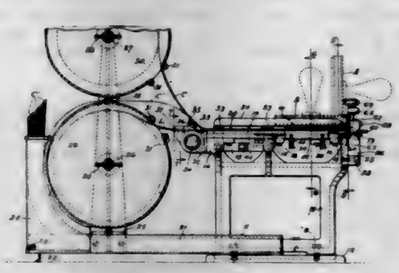
1. In a device of the class described, a conveyor, an extension conveyor, a shaft for pivotally connecting said extension conveyor to said conveyor, said extension conveyor being adapted to be moved to various angular positions relatively to said conveyor, reciprocating agitating



means associated with said extension conveyor, means on said shaft for operating said agitating means, and means for supporting said conveyors in operative position.

---

1,565,419. MACHINE FOR LABELING HAND STAMPS. JAMES COOKE, Omaha, Neb. Filed July 14, 1924. Serial No. 725,927. 7 Claims. (Cl. 101—288.)



1. In a machine of the class described, means for guiding and supporting a label-strip while exposing one side of said strip to receive the imprint of a stamp, means for retaining a mounted label-holder channel in alinement with said guiding and supporting means to receive a label-strip therefrom, and shearing means arranged to sever the label-strip at a point intermediate said channel-retaining means and said strip-guiding and supporting means.

---

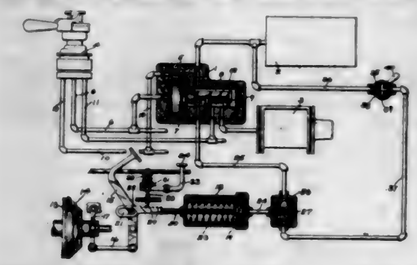
1,565,420. METHOD OF TREATING COATED MATERIALS. EDGAR CORNELL, Jr., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 21, 1923. Serial No. 682,108. 6 Claims. (Cl. 148—7.)

1. A method of treating zinc coated materials which comprises heating the same to a temperature sufficient to change the grain structure of the zinc and then working the material.

---

1,565,421. AUTOMATIC CLUTCH CONTROL. JOHN F. CRAIG, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Dec. 7, 1923. Serial No. 679,283. 5 Claims. (Cl. 192—13.)

1. In a gasoline motor driven vehicle, the combination with a motor clutch, of a valve device for supplying fluid under pressure to effect an application of the brakes on the vehicle, a manually operable valve means for controlling the operation of said valve device, and fluid



pressure operated means operatively connected to said clutch and operated by fluid supplied in the application position of said valve device for releasing said clutch.

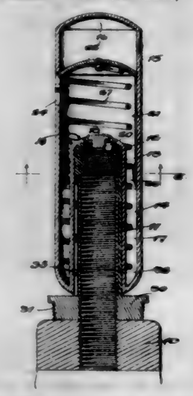
---

1,565,422. WHEELED CARRIER FOR CORN-SHELLER FEEDER EXTENSIONS. WILLIAM T. CRAWFORD, Flanagan, Ill. Filed Mar. 12, 1925. Serial No. 15,043. 1 Claim. (Cl. 214—142.)

A wheeled carrier including an arched axle, rods carried by said axle adapted for engagement at their free ends with a support, a frame supported on said carrier above said arched axle, spring suspension means for said frame, a transverse shaft journaled in said frame, flexible members attached at one end thereof to said shaft, the opposite free ends of said flexible members having hooks carried thereon, a gear wheel keyed to said shaft, an auxiliary frame mounted on said aforementioned frame, a worm gear journaled in said auxiliary frame and adapted to mesh with said gear wheel, and actuating means therefor whereby said chains may be wound around said shaft, as and for the purposes described.

---

1,565,423. PRESSURE INDICATOR. GLENN DAILEY, Bison, S. Dak. Filed Feb. 16, 1924. Serial No. 693,391. 6 Claims. (Cl. 73—111.)

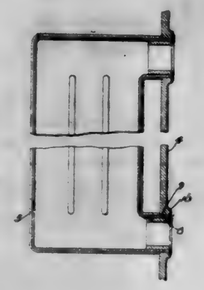


3. A pressure indicator having a casing including an inner pressure receiving barrel, a spring controlled indicating tube within the casing in communication with

said barrel, and a supporting nut having a sleeve to interfit the barrel, said barrel and said sleeve having relatively engaging means to lock the barrel on the sleeve.

---

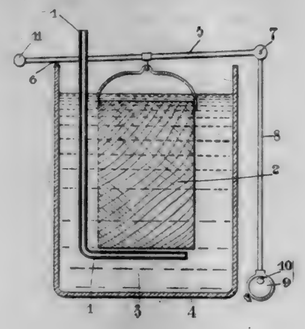
1,565,424. TRANSFORMER RADIATOR. WALTER M. DANN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 16, 1920. Serial No. 431,105. 3 Claims. (Cl. 257—191.)



2. A cooling apparatus comprising a receptacle adapted to contain a fluid to be cooled and having openings provided in the wall portion thereof, and a radiator element provided with tubular projections adapted to extend into said openings to establish communication therebetween, each of said projections being provided with reinforcing sleeve portions adapted to be welded thereto and to the wall of said receptacle adjacent to said openings, said sleeve portions being of such thickness that, when combined with the tubular projections, each of the resulting structures has substantially the same thickness as the wall.

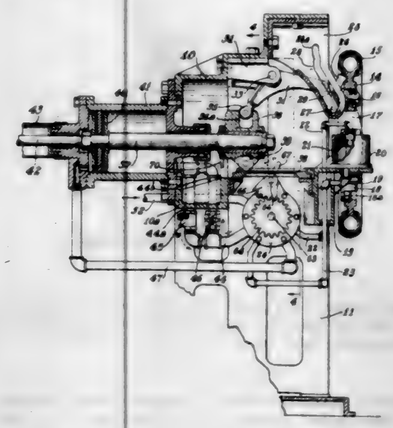
---

1,565,425. DETINNING OF TINNED-IRON SCRAP. HAROLD DAVIES and MATTHEW ATKINSON ADAM, London, England; said Davies assignor to said Adam. Filed June 28, 1923. Serial No. 648,343. 1 Claim. (Cl. 75—56.)



A process of treating tinned iron scrap which consists in immersing the scrap in a solution substantially saturated with iron and tin chlorides in a stripping vessel and injecting a regulable quantity of chlorine gas into the liquid in said vessel in order to regulate the solvent properties of said liquid.

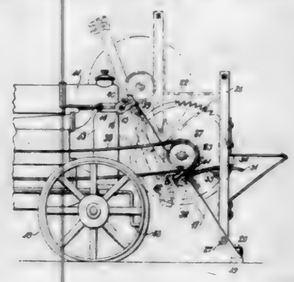
1,565,426. TIRE-STRIPPING MACHINE. DENNIS L. DE WALT, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 17, 1922. Serial No. 544,632. 12 Claims. (Cl. 18—2.)



5. In a tire-stripping machine, the combination of core-supporting means, a series of tire-stripping members grouped about said means, and means for projecting the middle members of said group in advance of the end members.

---

1,565,427. SAW ATTACHMENT FOR TRACTORS. FRANK C. DIXON, Winona, Minn. Filed May 4, 1925. Serial No. 27,980. 2 Claims. (Cl. 143—43.)

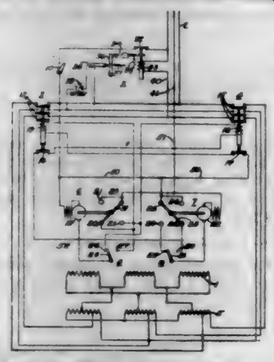


1. A sawing attachment comprising plates adapted to be clamped to the radiator of a tractor, said plates having bosses projecting therefrom, a frame having means adjacent its upper end comprising outwardly open jaws to engage said bosses and adapted to rest at its lower end upon the ground, a shaft journaled upon said frame, a saw mounted upon said shaft, driving means carried by said shaft adapted to be driven by the tractor, and movable means mounted upon the frame to carry material to be cut by said saw.

---

1,565,428. TEMPERATURE-CONTROLLING SYSTEM. WALTER C. DIXON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 7, 1922. Serial No. 550,526. 9 Claims. (Cl. 204—64.)

1. A control system for an electric furnace, provided with a heater element adapted to be connected to an electric circuit to develop two degrees of heating, which comprises two circuits, each of which contains the operating coil of a main switch for connecting the heater



element to the circuit, a selector switch at each end of the two circuits and a thermostat for controlling each selector switch.

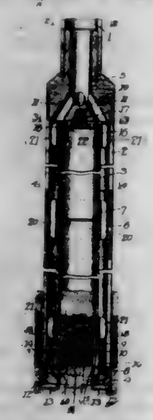
---

1,565,429. SUPPORTER. IDA DODGE, San Francisco, Calif. Filed July 31, 1922. Serial No. 578,773. 1 Claim. (Cl. 2—41.)

An abdomen supporter comprising a tubular member adapted to tightly engage the body of a wearer, terminating in front in a downwardly extending abdomen engaging portion and upwardly in a straight waist encircling edge, said tubular member being made of two layers of cloth superimposed with the threads thereof running diagonally with respect to the waist encircling edge and being continuous over the abdomen and laced at the back of the wearer only.

---

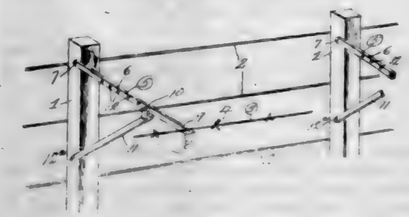
1,565,430. DRILL. FRANK A. EDSON, Norman, Okla., and BYRON B. CARTER, Hinsdale, Ill. Filed Apr. 10, 1922. Serial No. 550,955. 5 Claims. (Cl. 255—72.)



1. In a rotary core-barrel drill of the type specified, the combination of an outer drill casing, a core-barrel rotatably mounted within said casing, and a drill-bit detachably secured to the lower end thereof, said drill being provided with flushing passageways comprising a space formed between the drill casing and the inner core-barrel and passageways in the drill-bit formed by recesses in the inner wall thereof which extend from top to bottom thereof and connect the bore of said drill-bit with the space between the drill casing and inner core-barrel and transverse grooves formed in the face of the drill-bit.

---

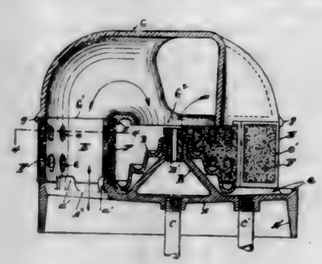
1,565,431. FENCE GUARD. MINER M. FAIRCHILD and GEORGE J. NIX, Poseyville, Ind. Filed Dec. 17, 1924. Serial No. 756,589. 1 Claim. (Cl. 256—11.)



A guard wire supporting bracket carried by a fence, said bracket comprising an outwardly extending arm secured to the side of a fence post and provided with a plurality of apertures, an angularly disposed slot carried by the outer end of said arm and through which a guard wire extends, a brace pivotally connected to said arm and detachably connected thereto through one of the apertures thereof, said brace extending downwardly and inwardly and connected to the side of the post, said brace having its end which is connected to the arm obtusely disposed and bifurcated.

---

1,565,432. LIQUID-FUEL BURNER. JOSEPH W. FLYNN, Erie, Pa. Filed Nov. 7, 1924. Serial No. 748,401. 1 Claim. (Cl. 158—66.)



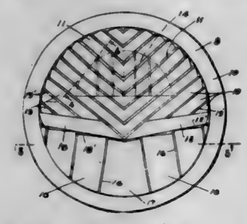
In an apparatus of the class described, a base having a chamber in the intermediate portion thereof to receive fluid fuel, a conical generator plate suspended upon and in spaced relation to the upper wall of said chamber, a fluid fuel jet extending through the apex of said generator plate and communicating with said chamber whereby fluid fuel is supplied to said generator plate, and a tubular air conductor adapted to direct a current of air downwardly upon the apex of said conical generator plate.

---

1,565,433. HEADLIGHT LENS. FREDERICK H. FORD, Waupun, Wis., assignor to The Totalux Company, a Corporation of Wisconsin. Filed Sept. 6, 1921. Serial No. 498,653. 3 Claims. (Cl. 240—48.4.)

1. A headlight lens having a plain portion and a portion provided with diagonally extending prisms, another portion on opposite sides of the plain portion pro-

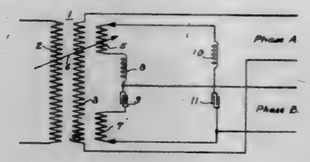
vided with prisms extending slightly at an angle to vertical lines and another portion provided with approximately horizontally extending prisms, all of said



prisms being formed on one side face of the lens member, and vertically extending prisms formed on the opposite side of the lens member.

---

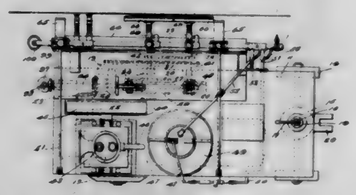
1,565,434. PHASE-SPLITTING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 5, 1921. Serial No. 449,725. 8 Claims. (Cl. 172—238.)



2. An electrical system comprising a primary transformer winding, a main secondary winding, a plurality of auxiliary secondary windings and a plurality of capacitance devices connected between the sets of terminals of said auxiliary windings, said auxiliary windings being loosely and closely coupled, respectively, with said primary winding.

---

1,565,435. COATING MACHINE. THOMAS J. GALBRAITH, Richmond, Va. Filed Mar. 21, 1924. Serial No. 700,871. 10 Claims. (Cl. 91—45.)



1. An apparatus for applying a coating to a sheet comprising a carriage, spray means thereon for spraying the coating material upon the sheet, an air compressor for furnishing air to the spray means, rotary brushes on the carriage for operating upon material sprayed on the sheet, smoothing brushes on the carriage and means on the carriage for actuating the compressor and the rotary brushes.

---

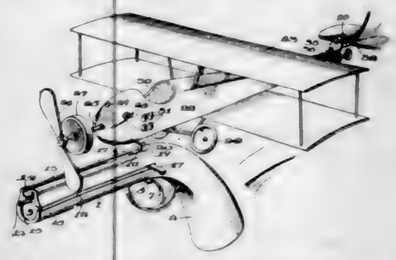
1,565,436. LUBRICATED VEHICLE SPRING. REINHOLD A. GREENWALD, Neenah, and PHILIP J. GAZECKI, Menasha, Wis. Filed Oct. 25, 1923. Serial No. 670,737. 1 Claim. (Cl. 267—50.)

The combination with a semielliptic spring formed from a plurality of superimposed leaves, the intermediate leaves having their upper sides provided with longitudinally disposed grooves having ports of communication adjacent their ends with each other, a securing bolt extending through said leaves and the grooves in a manner whereby they will not interfere with the passage of

lubricant entirely through the grooves, the upper intermediate leaf being provided with transversely disposed air vents located on opposite sides of the bolt, thereby allowing escape of air adjacent the upper side of the spring as a whole.

---

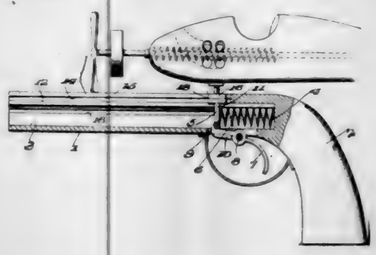
1,565,437. TOY AMUSEMENT DEVICE. JOHN GREIFF, Dayton, Ky. Filed Oct. 29, 1924. Serial No. 746,625. 4 Claims. (Cl. 244—12.)



1. In a device of the character described, a toy aeroplane having a body formed in the similitude of that of a conventional aeroplane, said body having a passage in the forward end portion thereof open at the forward end of the aeroplane and also open rearwardly of the forward end of the aeroplane, said passage being adapted for the reception of a hollow reed or like sound causing element.

---

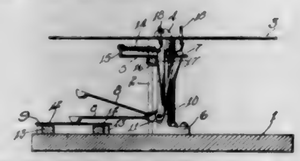
1,565,438. TOY AMUSEMENT DEVICE. JOHN GREIFF, Dayton, Ky. Original application filed Oct. 29, 1924, Serial No. 746,625. Divided and this application filed Mar. 18, 1925. Serial No. 16,473. 1 Claim. (Cl. 124—10.)



A projector of the character described comprising a pistol-shaped body, the bore of the barrel of said body having an end wall at its inner end, said barrel having a slot in the lower portion thereof at the rearward end of the barrel and having a longitudinal guide way above the bore of the barrel parallel with said bore, said barrel also having a longitudinal slot establishing communication between said bore and said guide way and having also a longitudinal slot through the upper wall of the guide way, said longitudinal slot and said guide way being open at the forward end of the barrel, a slide piece movable longitudinally of the bore of the barrel and having a neck portion extending through the longitudinal slot between the bore of the guide way and the bore into said guide way and a head portion partially received in said guide way and having a reduced portion received in the longitudinal slot in the upper wall of the guide way, a propelling spring arranged between said slide and the inner end wall of the bore and attached at one end to said slide piece and at its other end to the inner end wall of the bore, said spring being adapted to be compressed by said slide piece when the latter is moved rearwardly from the forward end of the bore, trigger controlled means carried by said body and extending through the slot in the lower side of the barrel for engaging with said slide piece to hold the latter releasably in position to compress said spring, a thrust member upstanding from the head of said slide piece, and an aeroplane having a thrust receiving member on its bottom adapted to be engaged by the thrust member on said slide piece of the projector, said thrust receiving member on the bottom of the aeroplane body having a slot located below the longitudinal median line of the body and being open at its rearward end, said slot being adapted to receive the upper end portion of said thrust member.

---

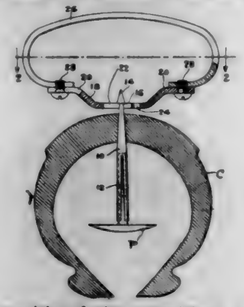
1,565,439. MUSICAL INSTRUMENT. HERMAN HAAS, Marengo, Ill. Filed Mar. 29, 1923. Serial No. 628,562. 1 Claim. (Cl. 84—102.)



A musical instrument comprising a frame, a perforated disc rotatably carried by said frame, the openings in said disc being arranged in concentric circles, keys carried by said frame, tone plates carried by said frame and adapted to be set into vibration by said keys, means for yieldingly holding said keys in contact with said tone plates, deadening means for stopping the movement of said keys after said keys have struck the tone plates, and pins removably disposed in said openings, said pins having enlarged portions disposed intermediate between the ends thereof whereby either end of said pins may be inserted in the openings, said pins being adapted to move said keys when said disc is rotated whereby the device is adapted to play various tunes.

---

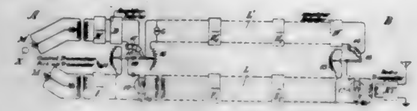
1,565,440. TIRE-REPAIRING DEVICE. EDWARD HAINKE, Grand Rapids, Minn. Filed Oct. 19, 1925. Serial No. 63,275. 3 Claims. (Cl. 152—26.)



2. A tire repairing device comprising a needle having a hollow longitudinally split portion at one end thereof and a portion tapering toward the other end of the needle, a sharp head providing a shoulder at the outer end of said tapering portion, and a holder adapted to engage said shoulder.

---

1,565,441. AUTOMATIC VOLUME REGULATION OF TRANSMISSION SYSTEMS. HAROLD S. HAMILTON, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 3, 1924. Serial No. 735,677. 9 Claims. (Cl. 178—44.)



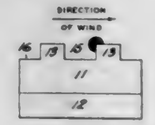
1. In a signaling system, a transmission medium capable of transmitting a relatively narrow range of volume, means to generate signaling energy having variations of volume extending over a range greater than that which the medium is capable of transmitting, means for changing the volume of the energy generated when it departs from a normal volume, a controlling arrangement for said last mentioned means controlled in accordance with the volume of the energy generated to produce an adjustment of said volume changing means proportional to the amount the volume of the generated energy has departed from normal, and means at the receiving station for automatically producing a compensating change in the volume of the received energy in the opposite direction.

---

1,565,442. [WITHDRAWN.]

---

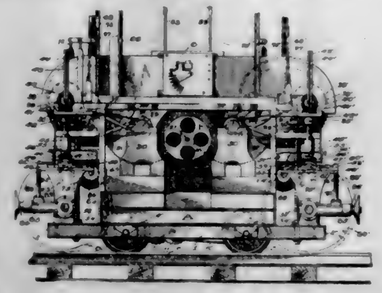
1,565,443. FRONT SIGHT FOR HIGH-VELOCITY WEAPONS. JOHN W. HARKOM, Melbourne, Quebec, Canada. Filed Dec. 13, 1920. Serial No. 430,255. 3 Claims. (Cl. 33—57.)



3. A foresight for weapons firing a single projectile comprising a block to be disposed transversely of the barrel of the weapon, the upper edge of said block being divided on opposite sides of its center by upwardly extending rectangular projections, the end edges of which projections provide graduations dividing the block into sighting portions for use in allowing for different wind velocities.

---

1,565,444. STONE-BLOCK-SAWING MACHINE. NAGEEB T. HASHIM, Manila, P. I. Filed Dec. 18, 1924. Serial No. 756,793. 4 Claims. (Cl. 262—19.)

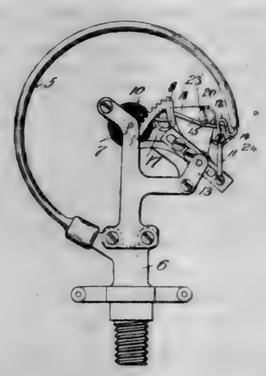


1. A stone block quarrying machine comprising a vehicle adapted to be propelled over the surface of a stone bed, saw carriages adjustably mounted on opposite ends of said machine, saws rotatably carried by said saw car-

riages to cut kerfs into the stone bed beyond the ends of the machine, and means for independently adjusting and operating said saws, whereby the work beyond the range of one saw is completed by the other at each setting of the machine.

---

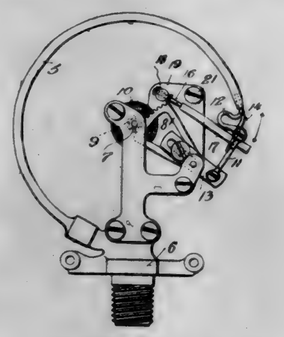
1,565,445. RETARD GAUGE. OTTO W. HEISE, Bridgeport, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed May 16, 1921, Serial No. 470,076. Renewed May 12, 1925. 5 Claims. (Cl. 73—109.)



1. The combinatio with a gauge movement, and a pressure responsive element, of a retard spring, means to support said spring at one end, the other or free end of said spring being arranged in the path of movement of the pressure responsive element, and a cam stud constituting an abutment engaging an intermediate portion of the spring, and means to adjust said cam stud to vary the point of application of said spring with respect to the pressure responsive element.

---

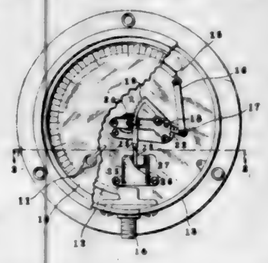
1,565,446. RETARD GAUGE. Otto W. Heise, Bridgeport, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed June 11, 1921. Serial No. 476,687. 12 Claims. (Cl. 73—100.)



1. A gauge mechanism having a Bourdon tube and means for modifying its action comprising a lever, a fulcrum therefor disposed intermediate the ends of the lever, means connecting one end of the lever to the Bourdon tube, said means being constructed to allow unrestrained freedom of movement to the Bourdon tube through a predetermined range, means opposing resilient resistance to movement of the other end of the lever, a movable index, means tending to retain the index at one limit of its path of movement, and means for transmitting movement of the lever to the index.

---

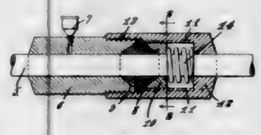
1,565,447. DAMPENING DEVICE FOR PRESSURE GAUGES. OTTO W. HEISE, Bridgeport, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1922. Serial No. 548,262. 8 Claims. (Cl. 73—109.)



1. A pressure indicating device comprising a movable index, a pressure responsive element, a damping device, and motion multiplying connections operative throughout the entire range of movement of the pressure responsive element for transmitting movement from the latter to the index and to the damping device.

---

1,565,448. LUBRICANT RETAINER. DANIEL ALBERT HEWITT, Thomasville, N. C. Filed June 7, 1921. Serial No. 475,685. 1 Claim. (Cl. 286—30.)

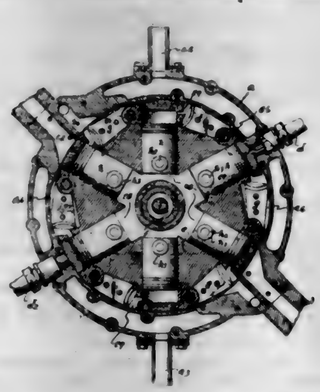


In a device of the character described, a bearing having inclined end walls and having external threads formed adjacent to one end thereof, a packing gland nut having internal ribs and having threads adapted to cooperate with the threads of the bearing to removably secure the packing gland nut to the bearing, a follower having inclined walls and having grooves to receive the ribs, a packing member disposed between the inclined walls of the bearing member and inclined walls of the follower, and a coiled spring positioned between the follower and packing gland nut to force the follower into engagement with the packing member.

---

1,565,449. ROTARY INTERNAL-COMBUSTION ENGINE. JAMES F. HIGBEE, Detroit, Mich. Filed Nov. 15, 1923. Serial No. 674,846. 1 Claim. (Cl. 123—17.)

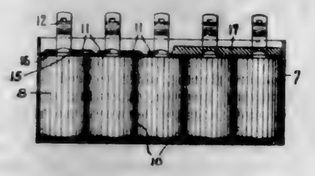
In apparatus of the character described, a stator having exhaust and intake passageways and cam grooves in its opposite side walls, a rotor having radially arranged compression chambers each provided with a piston having bearings on opposite sides mounted in the cam grooves in the stator to reciprocate the pistons upon rotation of the rotor, said rotor provided with a cavity in its outer surface open to the stator adjacent to each compression chamber and intermediate successive compression chambers communicating at one end with one compression chamber, a swinging vane pivoted at one end in said cavity having an arcuate face opposite the opening to the compression chamber closely engaging interiorly said opening an arcuate face of the rotor, providing an explosion space between the arcuate face of the vane and the opposite face of the rotor intermediate



the entrance to the compression chamber and the wall of the stator, said parts being so arranged that rotation of the rotor draws an explosive mixture into the compression chambers, discharging the same into the explosion chamber at one end of the swinging vane.

---

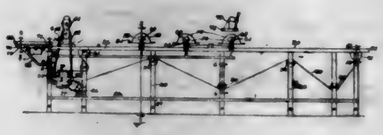
1,565,450. ELECTRIC BATTERY AND METHOD OF MAKING THE SAME. HARRY H. HIPWELL, Pittsburgh, Pa. Filed Feb. 26, 1925. Serial No. 11,765. 3 Claims. (Cl. 136—109.)



1. The combination with a battery structure having a plurality of cells, of partitions dividing said cells and cover plates seated upon the cells and fitting between the said partitions, the said cover plates each being provided with openings for cell terminals.

---

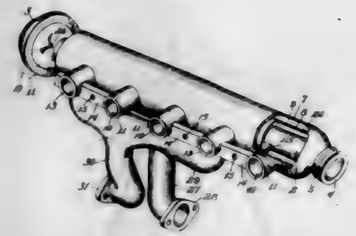
1,565,451. METHOD AND APPARATUS FOR FINISHING PHOTOGRAPHIC PRINTS. EDWARD J. HOFFMANN, Cincinnati, Ohio. Filed Apr. 29, 1925. Serial No. 26,744. 16 Claims. (Cl. 34—12.)



1. In a device for drying photographic prints the combination with a conveyor, of a series of heat reflectors mounted in spaced relation above the conveyor adjacent one end thereof, and means for directing cooling air longitudinally of the conveyor.

---

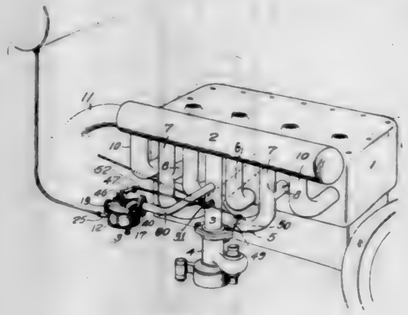
1,565,452. VAPORIZER. THEODORE B. HOGG, Pittsburgh, Pa. Filed Nov. 2, 1923. Serial No. 672,448. 5 Claims. (Cl. 48—107.)



3. A vaporizer comprising a body portion made up of three concentric tube portions, the innermost tube portion being in communication with the space between the outer and intermediate tube portions at one end of the vaporizer, exhaust gas inlet passages opening through the outer tube portion, vapor outlet passages opening into the vaporizing space between the intermediate and inner tube portions, a fuel inlet pipe opening into the vaporizing space between the inner and intermediate tube portions, and a baffle extending longitudinally between the innermost tube portion and the intermediate tube portion and cutting off direct communication between the fuel inlet pipe and the vapor outlet passages.

---

1,565,453. FUEL MOISTENER. THEODORE B. HOGG, Dayton, Ohio. Filed Feb. 15, 1924. Serial No. 693,081. 8 Claims. (Cl. 123—25.)



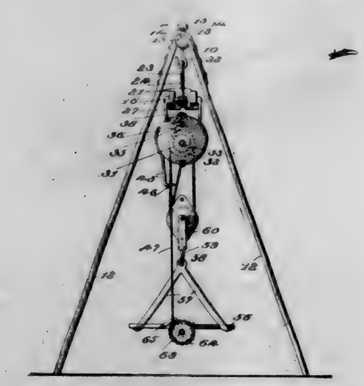
1. An explosive engine, an exhaust gas vaporizer, a heavy fuel carbureter having communication with said vaporizer, means for controlling delivery from said carbureter, a water atomizer for delivering a moist air mixture to the communication between the heavy fuel carbureter and the vaporizer, and means for controlling the delivery from the water atomizer simultaneously with the control of the delivery from the heavy fuel atomizer, said means operating to permit initial delivery from the water atomizer following a predetermined delivery from the heavy fuel carbureter.

---

1,565,454. HOIST AND CONVEYER. ANSON P. HORSINGTON, Powell, Wyo. Filed Sept. 21, 1923. Serial No. 664,064. 3 Claims. (Cl. 212—76.)

1. A hoist and conveyer comprising, in combination, parallel frame members each having arms projecting

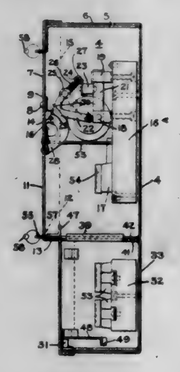
therefrom, wheels upon said arms adapted to travel upon a track, disk rigidly secured to said frame in spaced relation, a shaft passing through said disks, pulley blocks



journaled on said shaft, ratchet teeth upon said pulley blocks, and pawls pivoted on said disks adapted to hold a load suspended from said blocks.

---

1,565,455. SWITCH MECHANISM. HARRY G. HOKE, Stillwater, Okla. Filed June 16, 1922. Serial No. 568,676. 15 Claims. (Cl. 200—50.)

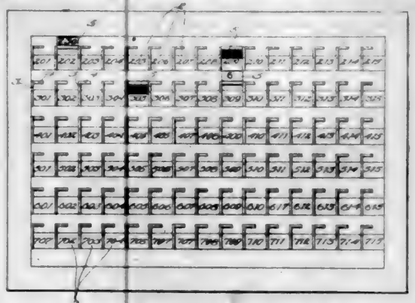


13. The combination with a switch, of an enclosure therefor, a closure member for said enclosure interlocked with said switch, a cabinet associated therewith and a closure member for said cabinet interlocked with said first closure member.

---

1,565,456. CALL SHEET. DENZELL E. HOLT, Seattle, Wash. Filed Dec. 23, 1924. Serial No. 757,741. 2 Claims. (Cl. 40—67.)

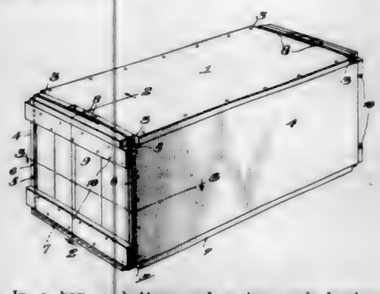
2. A call board divided into a number of distinct indicating spaces, a supporting arm carried by the board for cooperation with each space, said arm including a lateral bearing portion spaced from the board, and a call card adapted for slidable cooperation with said bearing portion and capable of being moved to a position to expose one side of the card immediately above the space or to expose the other side of the card as partly overlying the space, the respective sides of the cards being marked



to indicate different information, the cards being readily separable from the bearing portions of the arms to permit any card of the series to cooperate with any arm.

---

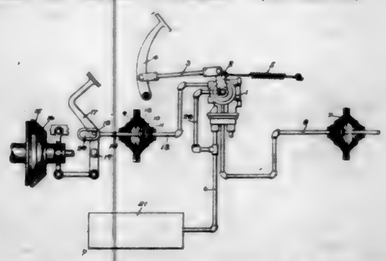
1,565,457. BOX. JOHN L. HOOD, Pawtucket, R. I. Filed Mar. 20, 1924. Serial No. 700,512. 6 Claims. (Cl. 217—66.)



1. In a box, a bottom and a top each having cut-outs in the corners thereof, sides secured to the top and bottom and having grooves extending across the end edges thereof, ends engaged between the sides and top and bottom, metal straps having sides arranged in the grooves and top and bottom parts engaged about the box top and bottom and disposed in the cut-outs and nailed to the sides, top and bottom, and cleats at the box ends engaged with the box top and bottom and extending over the adjacent parts of the grooves and sides of the straps.

---

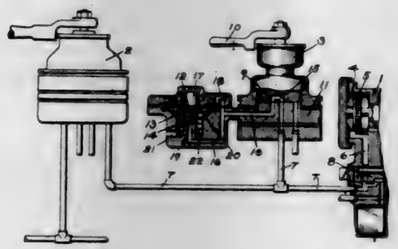
1,565,458. MOTOR-VEHICLE-CONTROL DEVICE. HENRY D. HUKILL, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 20, 1924. Serial No. 733,108. 2 Claims. (Cl. 192—1.)



1. In a vehicle control mechanism, the combination with an engine clutch and a vehicle brake, of fluid pressure operated means for controlling the engine clutch, fluid pressure operated means for applying the brakes, and means operated upon release by the operator for supplying fluid under pressure to operate said clutch operating means and said brake applying means.

---

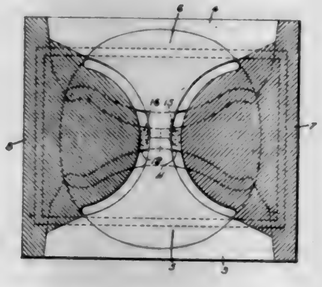
1,565,459. FLUID-PRESSURE BRAKE. JOHN HUME, Houston, Tex., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 8, 1924. Serial No. 711,850. 4 Claims. (Cl. 303—41.)



1. In a fluid pressure brake, the combination with an application cylinder and an application cylinder pipe connected to said cylinder, of a valve for venting fluid under pressure from said pipe, a movable abutment, subject to fluid pressure in said pipe for operating said valve, and a brake valve device for controlling communication from said pipe to said movable abutment.

---

1,565,460. MOLD FOR CASTING INSULATORS. MARSDEN H. HUNT, Oakland, Calif., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 11, 1923. Serial No. 667,881. 11 Claims. (Cl. 25—129.)

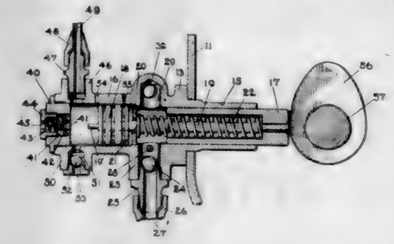


1. A mold for forming insulators of the link type comprising a structure having core portions disposed in crossed spaced relation to form the interlinked openings thereof and constructed for withdrawal from the insulators that are molded therein.

---

1,565,461. LIQUID-FEED SYSTEM. ERNEST R. HUNTLEY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 14, 1920. Serial No. 373,850. 6 Claims. (Cl. 158—36.)

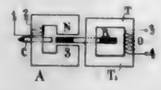
1. In a fuel feed system, a main tank, a carbureter, a valved pumping chamber adapted to be fed by gravity from said main tank, a fuel conduit extending from said pumping chamber to said carbureter, an air compressor, a conduit from said compressor leading to the top of said



pumping chamber, and a safety valve for relieving the pressure produced by said compressor when the needle valve of the carbureter is closed.

---

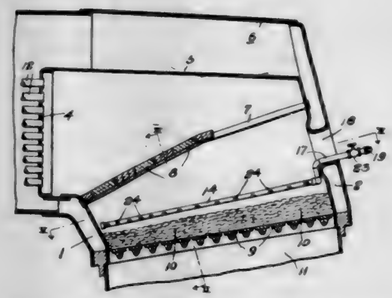
1,565,462. ELECTROMAGNETIC TOOL. NICOLAS JAPOLSKY, London, England. Filed Jan. 13, 1925. Serial No. 2,197. 2 Claims. (Cl. 172—126.)



1. An electromagnetic tool comprising in combination an electromagnet of constant polarity having an air gap a reciprocative member which is an electric conductor, arranged in the air gap, and means for supplying alternating current to said member to cause in the air gap its reciprocation.

---

1,565,463. DEVICE FOR ELIMINATING SMOKE IN BOILER FURNACES. CHARLES P. JOHNSON, Pittsburgh, Pa. Filed Aug. 11, 1924. Serial No. 731,252. 3 Claims. (Cl. 110—81.)



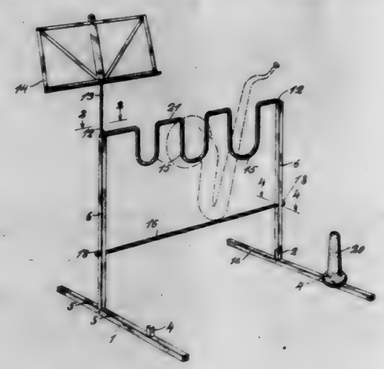
1. The combination of a furnace having a fire box provided with a grate adapted to support a fuel bed, a header disposed within the fire box adjacent the side wall thereof, said header being positioned, so as to gradually approach the said grate at its front end, a series of spaced nozzles for distributing water from the header above the grate downwardly upon the fuel bed, said nozzles being arranged to discharge a greater quantity of water at the front end of the grate than at its rear end.

---

1,565,464. MUSICAL-INSTRUMENT RACK. THOMAS KAY, Denver, Colo. Filed June 9, 1925. Serial No. 35,985. 1 Claim. (Cl. 248—40.)

A rack for supporting musical instruments comprising in combination a pair of base members adapted to rest upon a floor each of said base members having an

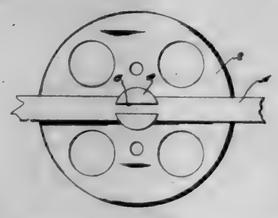
upwardly projecting plug, vertical supporting bars telescopically secured respectively to said plugs, a horizontal bar connecting said vertical bars at a point above said plugs, said vertical bars having openings in their upper ends, and a supporting bar having depending ends re-



spectively adapted to enter said opening, said supporting bar having a U-shaped loop intermediate its ends, said loop being open at the top and extending downwardly below the upper extremities of the vertical bars, for the reception of a musical instrument.

---

1,565,465. BAR HANGER. JAMES F. KEARNEY, Chicago, Ill., assignor to Kearney Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 17, 1922. Serial No. 601,549. 1 Claim. (Cl. 247—22.)

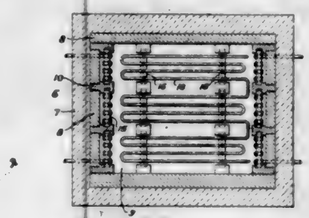


In a bar hanger, the combination with a bar, of a hanger structure comprising a threaded shank, an engaging head formed on said shank and provided with an opening for receiving said bar, a nut threaded on said shank, a plate having an opening to receive the head, the opening in the head on the shank being equal in height and width to the width of said bar, and said head further provided with a slot extending out through its outer end and communicating with said first named opening, said slot being of a width equal to the thickness of said bar, said nut being countersunk to snugly encompass that portion of the head projecting from the plate and adjacent the threaded shank, whereby that part of the nut surrounding the countersink will engage one face of the plate to cooperate with the bar in retaining the plate against movement.

---

1,565,466. FURNACE RESISTOR MOUNTING. ALVIN D. KEENE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1923. Serial No. 675,864. 10 Claims. (Cl. 204—64.)

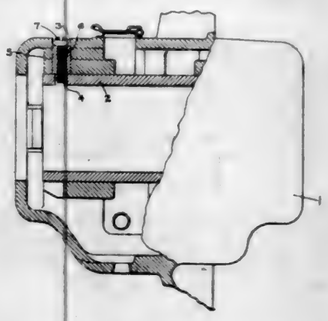
2. In an electric resistance furnace, in combination, a refractory wall, a plurality of refractory members of substantially T-shape, projecting from said wall, a resistor-supporting member extending between said re-



fractory members, and a plurality of resistor members secured to said resistor-supporting member.

---

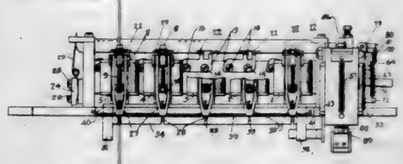
1,565,467. BEARING. CHARLES W. KINCAID, Carrick, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 24, 1922. Serial No. 596,588. 8 Claims. (Cl. 308—38.)



1. The combination of a housing having an opening therein, an annular bearing fitted in the housing and provided with an opening registering with that of the housing, a sleeve of predetermined length fitted into the housing opening and having one end in engagement with said bearing, said sleeve forming a shoulder in said opening, and a shouldered pin of predetermined length fitted shoulder-to-shoulder into said sleeve and projecting into the bearing opening.

---

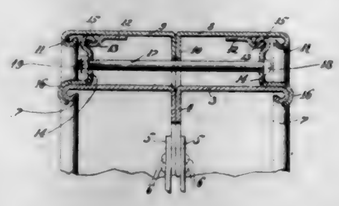
1,565,468. SELECTIVE MECHANISM. EDWARD E. KLEINSCHMIDT, Long Island City, N. Y., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 7, 1923. Serial No. 617,572. 22 Claims. (Cl. 178—33.)



1. In a selective mechanism, a plurality of selectively movable members; means responsive to selective combinations of electrical impulses controlling selective setting movement of said members; releasing means for permitting the setting movement of the selected members; and control means between said first mentioned and said releasing means; said releasing means controlling said first mentioned means through said control means to permit response of said first mentioned means to a succeeding selective combination of impulses, while said members are still set in accordance with the preceeding selective combination.

---

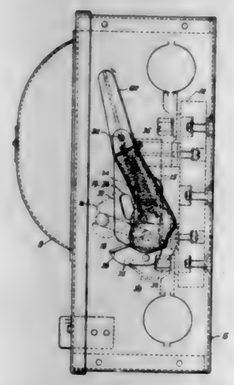
1,565,469. SUPPLEMENTAL RIM FOR POWER PULLEYS OR BELT WHEELS. FRANK P. KOBERT, Worcester, Mass., assignor to Kobert Supplementary Pulley Rim Co., a Corporation of Massachusetts. Substitution for application Serial No. 279,676, filed Feb. 28, 1919. Renewed May 26, 1921, Serial No. 470,204. This application filed Feb. 6, 1922, Serial No. 534,569. Renewed Feb. 23, 1924. 6 Claims. (Cl. 64—17.)



2. The herein described means for enlarging a pulley or belt wheel comprising a supplemental rim provided on its inner side with oppositely arranged hook members and devices adapted to engage said hook members and the outer edges of the main rim of the pulley or belt wheel.

---

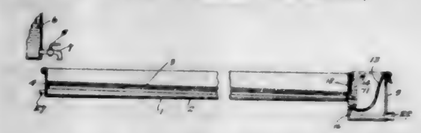
1,565,470. SWITCH MECHANISM. HUBERT K. KRANTZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 25, 1923. Serial No. 659,258. 6 Claims. (Cl. 200—67.)



1. Switch mechanism comprising a movable switch member, a contact member therefor, a rotatable operating member for the switch member, a hollow operating handle mounted for rotation about the axis of rotation of the operating member, a crank within the handle secured to the operating member and having a lost-motion connection thereto and a spring within the handle for moving the crank with a snap action when the switch member is release from the contact member.

---

1,565,471. METHOD OF HEATING HONEY. ALECK G. KUYKENDALL, La Mesa, Calif. Filed Apr. 7, 1924. Serial No. 704,842. 3 Claims. (Cl. 99—11.)



1. The method of preserving honey which consists in subjecting a thin sheet thereof to excessive heat for a brief period.

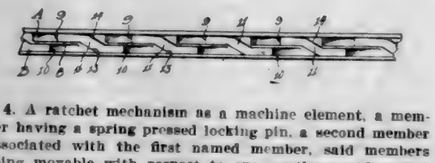
---

1,565,472. REFRACTORY CEMENT WITH A BASE OF ZIRCONIUM ORE. FRÉDÉRIC CHARLES FRIDTJOF LE COULTRE, Marseille, France, assignor to "Societe d'Etude des Agglomérés," Paris, France. Filed Oct. 9, 1924. Serial No. 742,724. 4 Claims. (Cl. 106—9.)

1. A refractory cement having a base of zirconium ore comprising a mixture of substantially pure oxide of zirconium, an organic binder, an inorganic binder and finely crushed powder of zirconium ore.

---

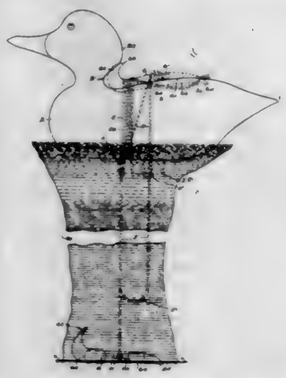
1,565,473. RATCHET MECHANISM. WILLIAM R. LEE, Galena, Kans. Filed July 20, 1925. Serial No. 44,883. 5 Claims. (Cl. 74—16.)



4. A ratchet mechanism as a machine element, a member having a spring pressed locking pin, a second member associated with the first named member, said members being movable with respect to one another, said second named member having a wall formed with a pair of parallel courses, one of said courses having a plurality of ratchet teeth formed therein for engaging with the locking pin, said member being further provided with a groove for guiding the pin from one course to the other.

---

1,565,474. ANCHOR FOR DECOYS. RAYMOND S. LINK, Syracuse, N. Y. Filed Sept 14, 1925. Serial No. 56,340. 5 Claims. (Cl. 43—3.)

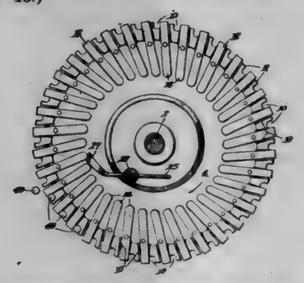


1. The combination with a decoy and an anchor cable secured thereto, of an anchor supported by the cable comprising an arched body having diverging prongs at one end and having grappling hooks at its opposite end

adapted to prevent dragging of the anchor longitudinally, said hooks being arranged to form a yoke adapted to straddle the neck of the decoy when the anchor and decoy are prepared for transportation or storage, and means for preventing dragging of the anchor laterally.

---

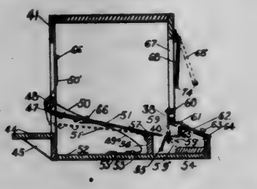
**1,565,475. MACHINE FOR CUTTING BUTTON BLANKS.** GEORGE A. LIPPINCOTT, Philadelphia, Pa. Filed May 6, 1922. Serial No. 559,039. 7 Claims. (Cl. 79—15.)



1. In a machine for the purpose described, the combination of a rotary holder provided with a circumferential peripheral groove and a series of passages extending parallel to the axis of the holder and intersecting said groove, each said passage being adapted to receive a blank to be cut, a stop supported by the holder adjacent one end of each said passage for determining the extent to which the blank in said passage shall extend beyond the peripheral groove in one direction, means for simultaneously adjusting all of said stops axially of the holder, and a saw extending into said peripheral groove and adapted to sever the blanks successively as the rotating holder carries them across the path of the saw.

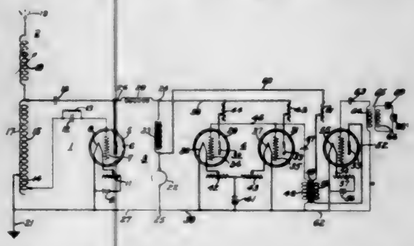
---

**1,565,476. METHOD AND MEANS FOR DETERMINING THE EGG PRODUCTION OF FOWLS.** ARLINGTON P. LITTLE and MYRTLE T. LITTLE, Golden, Colo. Filed Mar. 1, 1924. Serial No. 696,333. 4 Claims. (Cl. 119—47.)



4. In a trapnesting system of the character described, comprising a plurality of consecutively arranged pens for fowls, a plurality of laterally aligned trapnests interposed between every two consecutive pens, said trapnests each comprising a spring elevated inclined platform, a normally open entrance door adapted to be closed by the weight of a fowl upon the spring elevated inclined platform, an egg receptacle adjacent one end of the platform, a normally closed exit door, means normally engaging and holding said exit door in closed position, means actuated by the weight of an egg adapted to release said first mentioned means, means on said second mentioned means to prevent the egg from dropping into said receptacle thereby preventing the first mentioned means from returning to its normal door engaging position, and means operated by the weight of the hen leaving the nest to actuate said second mentioned means to allow the egg to drop into said receptacle and allow said first mentioned means to return to normal door engaging position after the hen has left the nest.

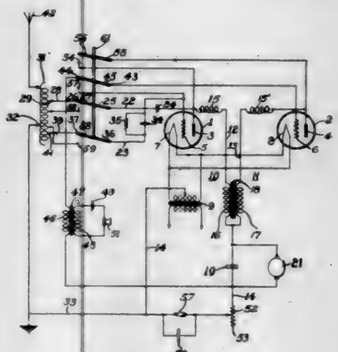
**1,565,477. VACUUM-TUBE STABILIZING MEANS.** DONALD G. LITTLE, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 1, 1922. Serial No. 540,326. 4 Claims. (Cl. 179—171.)



1. In a radio sending device, a generator and a modulator operatively associated therewith, said modulator including a plurality of tube devices in parallel and means for separately adjusting the plate potential of each of said tube devices.

---

**1,565,478. RADIOTRANSMITTER.** DONALD G. LITTLE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1923. Serial No. 630,265. 7 Claims. (Cl. 250—17.)



1. A pair of tubes provided with plate circuits including transformer windings, said plate circuits being interlinked through said transformer windings, means for at will connecting said tubes in parallel and means included in one of said plate circuits for controlling the parallel operation of said tubes.

---

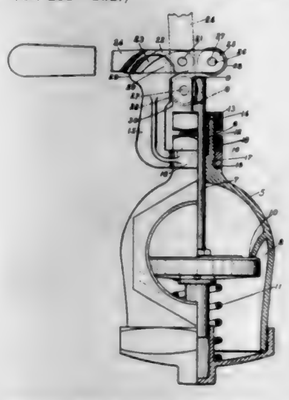
**1,565,479. ROTARY TOOTHBRUSH.** JOHN LORRAINE and RALPH S. HAUGH, Medicine Hat, Alberta, Canada. Filed Aug. 1, 1922. Serial No. 578,879. 1 Claim. (Cl. 15—26.)

A rotary tooth brush structure comprising a relatively short cylindrical casing adapted to serve as a handle grip, a tube journaled in the casing, said tube being relatively long and having an end portion extending for a considerable distance beyond the end of the casing, a cylindrical brush fixed to the distal end of the tube and having all of its bristles exposed, means for retaining

the tube against longitudinal movement with relation to the casing, a plunger slidably mounted in the tube and completely housed therein, there being pin and spiral groove connection between the plunger and the tube, a handle carried by the plunger and normally disposed beyond the end of the casing and a coil spring housed in the tube and interposed between the plunger and the brush.

---

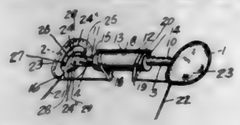
**1,565,480. VALVE.** RANDALL MCFARLAN, Cincinnati, Ohio. Filed Apr. 13, 1925. Serial No. 22,781. 3 Claims. (Cl. 251—132.)



1. In a device of the class described the combination with a valve casing having a reciprocating valve stem extending therefrom, a bracket mounted on the casing and having a lug overhanging the casing, of an operating lever pivotally mounted on the lug on one side of the longitudinal center of the valve stem, a roller revolubly mounted on the lever on the opposite side of the longitudinal center of the valve stem when the lever is in inoperative position, and a spring operative upon the valve stem for yieldingly retaining said valve stem at its outermost limit of reciprocation, the lever being adapted to normally assume an inoperative position extending transversely of the valve stem and adapted to be moved about its pivotal mounting whereby the roller is moved through an arc to contact and depress the valve stem against the yielding resistance of the spring until the roller is moved beyond the center line of the valve stem, after which the pressure of the spring on the valve stem will cause the valve stem to further move the roller through its arcuate path into abutment with the bracket whereby the roller is wedged between the valve stem and the bracket for retaining the lever in an operative position in substantially parallelism with the valve stem.

---

**1,565,481. TONSIL HEMOSTAT.** DONALD MCKAY, Collingwood, Ontario, Canada. Filed Oct. 20, 1923. Serial No. 669,756. 7 Claims. (Cl. 128—325.)



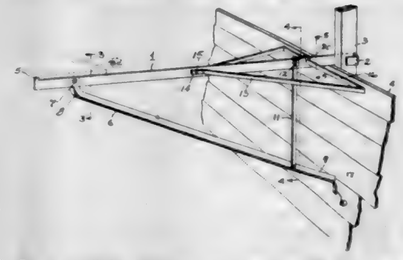
1. In a tonsil hemostat, a pressure plate adapted to support a pad and to fit a tonsil bed, means engaging the opposite side of the throat, means located between such engaging means and the pressure for forcing the pressure into the tonsil bed, and a pull cord operable from the exterior of the patient's mouth for withdrawing the pressure plate out of engagement with the bed.

**1,565,482. WEFTLESS TIRE-FORMING CORD BAND.** JOSEPH A. MCLANE, Washington, D. C., assignor to Ultratex Products Company, a Corporation of Maine. Filed Jan. 18, 1923. Serial No. 612,378. 3 Claims. (Cl. 139—383.)

1. A textile article of manufacture for the continuous production of weftless rubberized cloth therefrom during the passage of the same through suitable rubber-applying means, said article comprising a multiplicity of cords or warps arranged in parallel relation to form a weftless band of relatively great length and terminating in woven sections at each end adapted to provide means for maintaining the cords or warps in flat parallel relation and furnish a wind-up portion upon which the cords of the unwoven length of the band are wound in parallel relation and maintained in such relation in the winding.

---

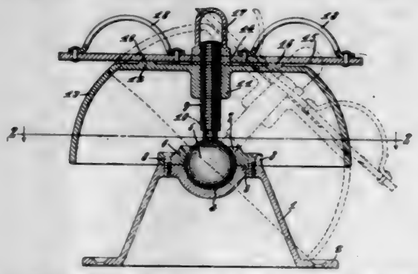
**1,565,483. SCAFFOLD BRACKET.** ARCHIBALD MCLAREN, Cleveland Heights, Ohio. Filed July 12, 1924. Serial No. 725,717. 7 Claims. (Cl. 304—33.)



1. In a scaffold bracket, the combination of a main supporting bar provided with a hook at the inner end adapted to engage an upright, a supporting member pivotally connected to said main bar near the end opposite to said hook and having limited angular movement away from said bar, and a triangular brace member pivoted to said bar and with its base parallel to the wall boards and provided with means for engaging said bar to prevent relative sidewise movement between said bar and said brace.

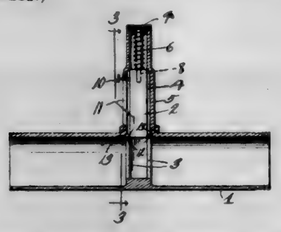
---

**1,565,484. EXERCISER.** ROBERT B. MCWHIRTER, Newark, Ohio. Filed Dec. 1, 1923. Serial No. 677,998. 2 Claims. (Cl. 272—57.)



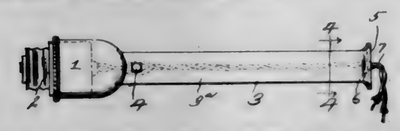
1. The combination with a pedestal and an annular flange thereon, of a table above the pedestal, an adjustable universal bearing connection between the top of the pedestal and the center of the table, an annular flange depending from the table for rolling engagement with the pedestal flange when the table is tilted, a foot rest supported by the table, and means for holding the feet of the user upon the foot rest.

1,565,485. VALVE. ALLEN E. MELSON, Maynard, Ohio. Filed May 23, 1925. Serial No. 32,356. 3 Claims. (Cl. 67—115.)



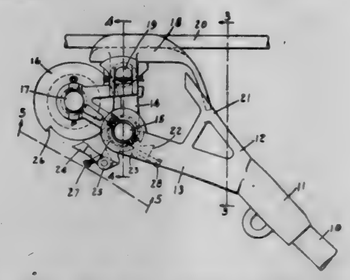
1. A pressure controlled valve for gas pipe lines comprising a casing, vertically disposed spaced guide ribs at opposite sides of the casing, an extension casing carried by said casing, a gate valve slidably mounted in the extension casing and adapted to move downwardly between the spaced guide ribs, a guide sleeve carried by said valve, a removable cap carried by the extension casing, a guide rod carried by said cap and extending into the sleeve, a coiled spring surrounding the sleeve and interposed between the cap and the valve and a handle member carried by the valve and extending outwardly through a vertically elongated slot in the side of the extension casing and forming means whereby the valve may be manually moved to open position.

1,565,486. ELECTRIC CONNECTER. BENJAMIN F. MOODY, Detroit, Mich. Filed Apr. 8, 1925. Serial No. 21,614. 2 Claims. (Cl. 173—359.)



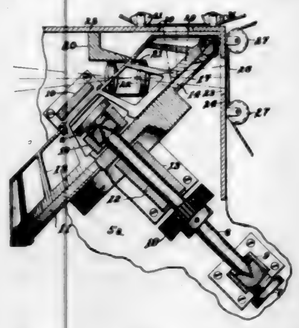
1. The combination with an electric plug, an electric wire leading to said plug, of a holder for said plug, said holder comprising an elongated U-shaped handle member having oppositely disposed arms, clamping jaws carried by the free ends of the arms of the handle member and engaging opposite sides of the plug, said electric wire carried by the plug extending rearwardly between the arms of the handle member and through an aperture in the rear end thereof and means extending through said arms of the handle member for forcing the same together.

1,565,487. SLIDING TROLLEY. OTTO MOORE, Frankfort, Ind., assignor to Trolley Shoe-Wheel Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 22, 1922. Serial No. 570,135. 11 Claims. (Cl. 191—59.1.)



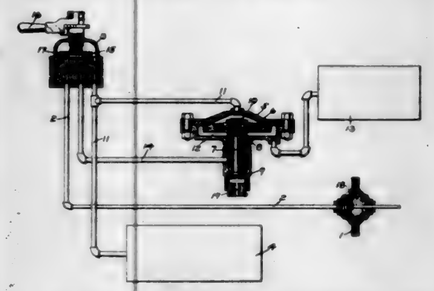
1. A sliding trolley for an electric driven vehicle comprising a trolley harp, a contact member pivotally mounted upon said harp in position to engage and make contact with a trolley wire only when the trolley is moving in one direction, and a second contact member pivotally mounted upon said harp for making contact with the trolley wire when moving in the opposite direction, said members being removably mounted thereon independently of each other.

1,565,488. MOVING-PICTURE CAMERA. MILTON M. MOORE and FRIEND F. BAKER, Los Angeles, Calif. Filed May 31, 1921. Serial No. 474,018. 4 Claims. (Cl. 88—16.4.)



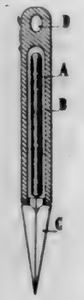
1. A motion picture camera comprising a case having apertures in the end and top thereof; a revoluble shaft mounted in said case; a lens holder in said case; a lens in said holder adapted to project an image through the end aperture; a member mounted on said shaft; said member having a plurality of reflecting surfaces in the outer portion spaced by openings between the reflecting surfaces and a non reflecting portion, said reflecting surfaces being adapted to deflect the image through the top aperture and the nonreflecting portion to prevent the image from passing through either aperture.

1,565,489. MOTOR-VEHICLE BRAKE. JOSEPH C. MORRELL, White Plains, N. Y., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 3, 1924. Serial No. 710,783. 3 Claims. (Cl. 303—63.)



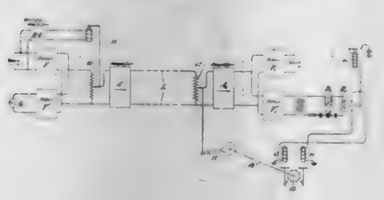
1. In a fluid pressure brake, the combination with a brake valve device for controlling the application and release of the brakes, of a source of fluid under pressure from which fluid is supplied by operation of said brake valve device to apply the brakes, and an emergency valve provided with an exhaust port through which fluid is released by operation of said brake valve device in releasing the brakes and operating upon loss of pressure from said source for closing said exhaust port and for effecting an application of the brakes.

1,565,490. APPARATUS FOR APPLYING CURATIVE TREATMENT WITH A RADIOACTIVE SUBSTANCE. ANTOINE MUGUET, Ile-St.-Denis, France. Filed June 28, 1922. Serial No. 571,581. 1 Claim. (Cl. 174—177.)



A device of the character described comprising an elongated tubular vial containing a radioactive substance, an outer metallic casing enclosing said vial, said casing being open at one end and closed at the other and provided with an opening at the closed end for the reception of a withdrawing element and a pointed needle having a butt end of sufficient size to close the open end of the casing and provided, at said butt end with a reduced extremity adapted to fit within the casing, said needle being free to be readily removed from the casing.

1,565,491. VOLUME CONTROL OF TRANSMISSION. HARRY NYQUIST, Jackson Heights, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 13, 1924. Serial No. 737,585. 10 Claims. (Cl. 178—44.)



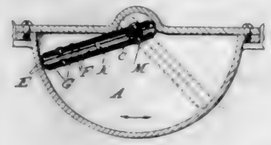
1. In a signaling system, a transmission medium, an adjustable transmission element at the transmitting end of said medium, means to apply signaling currents to said transmission element, means to adjust said transmission element in accordance with the variations in volume of the signaling current, means to apply a control frequency to said transmission element, a compensating transmission element at the receiving station, and means responsive to a change in amplitude of the received control current to adjust said compensating transmission element to compensate for the change in amplitude of the received control current.

1,565,492. AUTOMOTIVE BRAKE DEVICE. CLYDE A. OHL, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 11, 1924. Serial No. 685,561. 1 Claim. (Cl. 188—152.)

In a vehicle brake, the combination with a brake drum and braking members mounted in said drum, of a cover plate for said drum, a brake chamber carried by said cover plate, a wedge for spreading said braking members, a movable abutment in said brake chamber for operating said wedge, and members interposed between

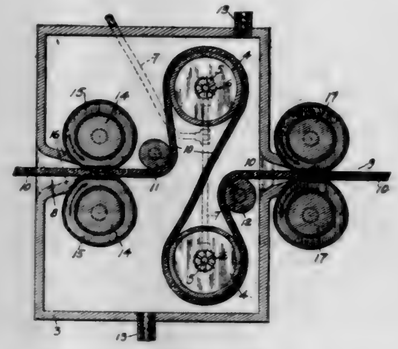
said wedge and said braking members and connected to said cover plate for preventing lateral movement of said braking members.

1,565,493. FLUID-PRESSURE MOTOR. JOHN R. OISHEI, Buffalo, and ERWIN C. HORTON, Hamburg, N. Y., said Erwin C. Horton assignor to said John R. Oishei, Buffalo, N. Y. Filed May 10, 1923, Serial No. 638,028. Renewed Mar. 11, 1925. 15 Claims. (Cl. 74—109.)



1. A fluid pressure motor having a piston and a piston shaft projecting therefrom, said piston having pressure-receiving portions along said shaft at opposite sides thereof, bearings for said shaft, and an opening in said piston at said shaft, whereby air passing along said piston shaft through said bearing enters behind the pressure-receiving portions of said piston.

1,565,494. APPARATUS FOR DRYING SHEET MATERIAL. IAN D. PATTERSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 31, 1922. Serial No. 578,672. 4 Claims. (Cl. 94—48.)



3. Apparatus for drying sheet material comprising a container having a plurality of openings adapted for the passage of sheet material, and means for sealing the openings, said means comprising two adjacently disposed rotatable members each having mounted thereon a flexible container having a fluid confined therein, said containers being adapted to engage the material passing through the opening, and also the edges of the opening.

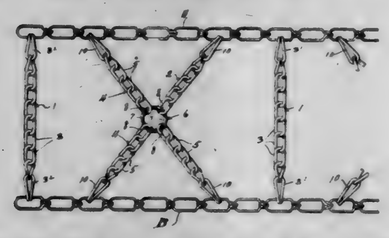
**1,565,495. PROCESS BY WHICH ALUMINUM METAL AND ITS ALLOYS MAY BE APPLIED TO FERROUS METAL.** CARL W. PFEIL, Greenbank, Wash. Filed May 1, 1922. Serial No. 557,705. 10 Claims. (Cl. 91—70.1.)

2. The process of applying an aluminum coating to a base metal which consists in very finely dividing the aluminum in a bath of an air-excluding film-producing material, applying the compound thus formed to the metal to be coated and heating.

**1,565,496. PROCESS FOR MAKING AND COMBINING CORRODE-RESISTING METALS.** CARL W. PFEIL, Greenbank, Wash. Filed Sept. 20, 1922. Serial No. 589,464. 8 Claims. (Cl. 91—70.1.)

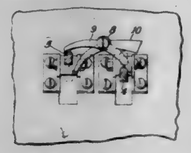
1. A process of providing a corrode-resisting metallic combination for composite ferrous metals, which consists in heating a tin-coated ferrous metal until the tin melts and mixing finely divided aluminum with the molten tin until it can absorb no more.

**1,565,497. ANTISKID DEVICE.** ALEXANDER CASWELL RANKIN, Greeneville, Tenn. Filed Mar. 4, 1924. Serial No. 696,849. 1 Claim. (Cl. 152—14.)



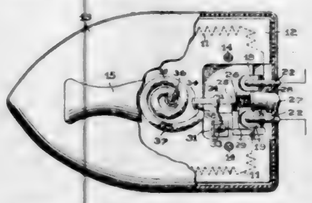
An anti-skid device comprising side chains, a plurality of like sections disposed between said side chains, each of said sections consisting of two units, one of said units comprising a circular member disposed intermediately between said side chains and diagonal chains leading therefrom and connected at their inner ends thereto, the outer ends of the diagonal chains being separately secured to individual links of the side chains, said circular member being undulated to provide offsets with notches therebetween for engaging the inner end link of the diagonal chains and to provide ground engaging means between said links, said diagonal chains to provide anti-skid and anti-slip means, and a cross chain connecting the side chains at a point substantially midway between each pair of adjacent sets of diagonal chains, said cross chain being spaced from said adjacent pairs of diagonal chains.

**1,565,498. INTERLOCKING DEVICE.** ERNEST K. READ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 24, 1920. Serial No. 412,544. 6 Claims. (Cl. 74—83.)



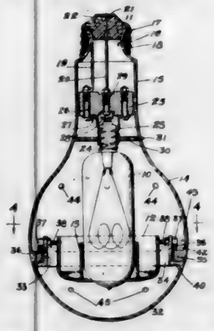
1. In an interlock device, the combination with a pair of levers, of an arm pivoted intermediate its ends and having each end extending across one of the levers to prevent either of said levers being moved to advanced position while the other lever is in advanced position, and a second arm pivoted intermediate its ends and having a weighted end extending across one of the levers and the other end extending downwardly in position to normally abut the side of the other lever to maintain it normally in retracted position.

**1,565,499. SAFETY SWITCH FOR ELECTRIC IRONS.** THOMAS A. REID, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1921. Serial No. 520,605. 5 Claims. (Cl. 200—136.)



1. A temperature-limiting means for an electrically heated device comprising a switch mounted on the body portion of said heated device, means manually actuated from the outside of a cover member of said heated device for moving said switch to its closed position, and thermally controlled means, comprising a closed tube filled with a fusible material and having one end rigidly mounted on the body portion of said heated device, for holding said switch in its closed position and for permitting said switch to open upon the occurrence of a predetermined temperature in the body portion.

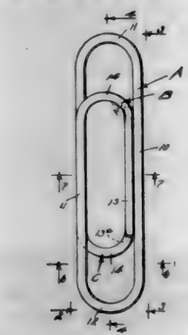
**1,565,500. ELECTRIC VAPORIZER.** EDWARD RITTER, New York, N. Y. Filed Dec. 3, 1924. Serial No. 753,664. 12 Claims. (Cl. 219—45.)



6. In a dispenser, the combination with a heating unit and a fluid container mounted adjacent thereto, of a casing having a plurality of parts, one of which supports said container and has lug means for engaging the other part, said other part having a rib to co-operate with said lug thus retaining said casing parts in engagement, said lug means comprising a spring pressed follower, while said rib is provided with stop means co-operating therewith to govern the movement therealong.

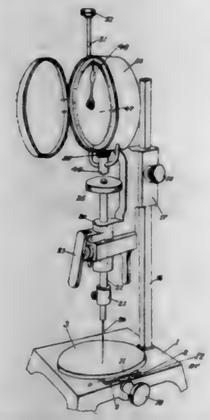
**1,565,501. PAPER CLIP.** FRANK HOWARD ROBINSON, Jr., Brea, Calif. Filed June 19, 1924. Serial No. 720,940. 1 Claim. (Cl. 24—261.)

A clip of the character described including an elongate loop having one side formed of a continuous part and the other side formed of two overlapping parts extending in opposite directions and inclined to the plane of the loop so that their outer ends are at opposite sides of the plane of the loop, and two parts corresponding to



said overlapping parts and located immediately inside the continuous part of the loop and each connected with the outer end of one of the overlapping parts.

**1,565,502. PENETROMETER.** FRED RODLER, Cincinnati, Ohio. Filed Oct. 23, 1924. Serial No. 745,487. 6 Claims. (Cl. 265—12.)



1. In a penetrometer, the combination with a base and standard, of an adjustable element on the standard, said element having a gauge and needle plunger thereon, a material supporting table on the base, and means for giving micrometer adjustment in height to the table to provide fine adjustments of the position of the surface of a piece of material to be tested.

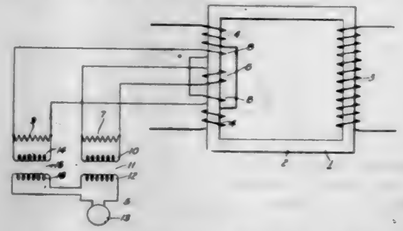
**1,565,503. WOOD PRESERVATION.** CLARK T. HENDERSON and LUDWIG ROSENSTEIN, San Francisco, Calif.; said Rosenstein assignor to said C. T. Henderson, San Mateo County, Calif. Filed June 21, 1922. Serial No. 569,922. 16 Claims. (Cl. 99—12.)

1. An emulsion for wood preservation which consists of about 85% of a water repellent, water insoluble fluid permanently mixed with about 10% of a toxic inorganic salt in an aqueous solution, and about 5% of an emulsifying organic agent.

13. As a new wood impregnating agent an emulsion capable of being diluted with oil but immiscible with water comprising an oily wood preserving agent, an aqueous wood preserving agent and an emulsifying agent.

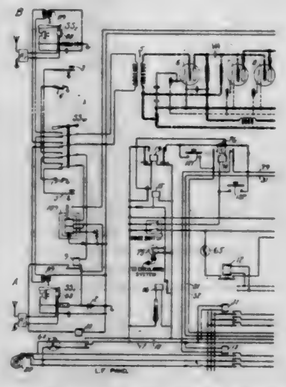
16. As a new product wood impregnated with an emulsion of an aqueous solution of a toxic inorganic salt in an asphalt base mineral oil.

**1,565,504. MEASURING DEVICE.** HAROLD H. RUDD, Edgewood, and ALLAN P. BENDER, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1918. Serial No. 251,392. 6 Claims. (Cl. 73—32.)



1. A temperature-measuring device for a transformer comprising an exploring winding having a relatively high temperature coefficient, an exploring winding having a relatively low temperature coefficient, said windings being inductively and thermally associated with the transformer, means for causing the currents traversing the windings to exert opposing effects, and means for indicating the resultant of said effects.

**1,565,505. RADIOTRANSMITTER.** FRANCIS M. RYAN, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1924. Serial No. 731,906. 15 Claims. (Cl. 250—17.)

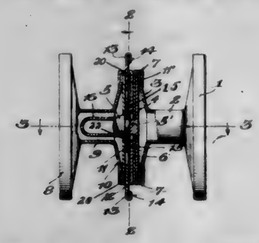


14. In a radio transmitting system employing a plurality of vacuum tubes, means for making changes in the circuit, means for automatically shutting off the power supply to said tubes while a change in the circuit is being made and for switching the power on to the tubes when the circuit change has been made.

**1,565,506. SEPARABLE BUTTON.** LESSER SAMUELS, New York, N. Y. Filed Mar. 7, 1924. Serial No. 697,490. 5 Claims. (Cl. 24—110.)

1. In a separable button, a male member having a stem and a bend therein, a female member having a head, a hollow post flanged outwardly, a plate engaged against the flange and having a slotted rim, a pair of

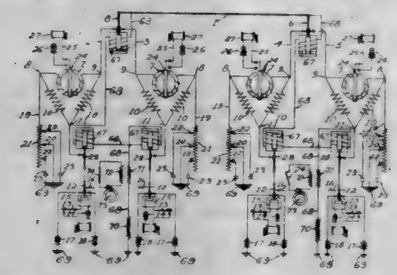
clamping members having arms slidable in said slots of the rim and having relatively opposed jaws to grip the stem of said head of the male member therebetween, a plate engaged with said rim and over the clamping members and having its edge rolled over the rim and flange of the post and slotted to receive said arms, and a flat



U-shaped spring in the hollow post formed independent of the clamping members and having fingers at each end thereof, the fingers extending outwardly in opposite directions and being engaged with the respective clamping members on opposite sides of the jaws to tension the latter in a direction toward each other.

---

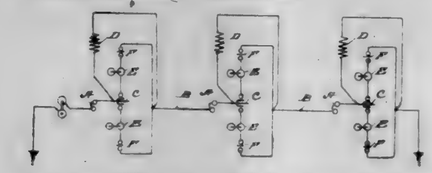
1,565,507. TELEGRAPH SYSTEM. EUGENE SIXTEN SANDBERG, Indianapolis, Ind. Filed May 23, 1924. Serial No. 715,264. 12 Claims. (Cl. 178—71.)



1. An electrical communication system comprising a main line, a plurality of sub-lines at each end thereof, a distributor at each end operated synchronously by periodically varying current energy transmitted through the main line for connecting the several sub-lines thereat in succession to the main line, and by-pass circuits at each end for shunting the periodically varying current around the said sub-lines, the said by-pass circuits each including a high resistance to prevent the signalling current from being shorted therethrough.

---

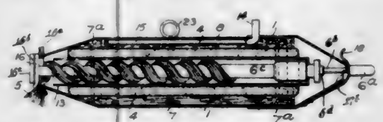
1,565,508. DUPLEX METHOD OF AND APPARATUS FOR SENDING TELEGRAPHIC MESSAGES. EUGENE SIXTEN SANDBERG, Harrisburg, Pa., assignor of fifteen per cent to H. O. S. Sandberg, Harrisburg, Pa., and ten per cent to Leland B. Newell, Springfield, Ill. Filed Sept. 4, 1920, Serial No. 408,147. Renewed Sept. 19, 1925. 8 Claims. (Cl. 178—50.)



1. A current-dividing relay for telegraph lines using alternating current, comprising a polarized magnet influenced by the alternating current, a vibrator in the alternating current circuit and operated by said magnet to vibrate in synchronism with the alternating current, contact posts forming terminals of independent line circuits including telegraph instrument sets, said posts being alternately engaged by the vibrator on each complete cycle of movement, and a high resistance unit in series with the polarized magnet having one end operatively connected with the magnet and its other end to a contact post to be engaged by a main line wire.

---

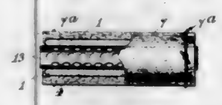
1,565,509. MEANS FOR AND PROCESS OF CURLING AND WAVING HAIR. PETER SARTORY, Bayswater, London, England. Filed Aug. 4, 1924. Serial No. 730,122. 3 Claims. (Cl. 132—36.)



1. The combination with a steaming tube, of an exothermically operating tubular member disposed within the steaming tube including an inner annular layer of chemical material, and an outer layer of fibrous material, said chemical material being such as to react exothermically with a liquid, and said fibrous layer being capable of distributing a liquid reagent which can produce such reaction in said layer.

---

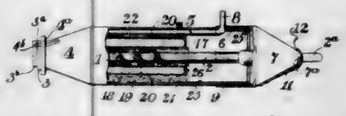
1,565,510. EXOTHERMIC HEATER. PETER SARTORY, Bayswater, London, England. Original application filed Aug. 4, 1924, Serial No. 730,122. Divided and this application filed Dec. 24, 1924. Serial No. 757,934. 4 Claims. (Cl. 132—36.)



2. An exothermically operating tubular heater for use in curling and waving human hair upon a curler, comprising the combination with a support including a skeleton member of cylindrical section, and a porous fabric covering said member, of a layer of chemical material surrounding said fabric, and a layer of fibrous material surrounding the chemical layer, such chemical material being such as to react exothermically with a liquid, and the fibrous material being capable of acting as a distributor of the liquid to the chemical layer.

---

1,565,511. STEAMING TUBE. PETER SARTORY, Bayswater, London, England. Original application filed Aug. 4, 1924, Serial No. 730,122. Divided and this application filed Dec. 24, 1924. Serial No. 757,935. 7 Claims. (Cl. 132—36.)

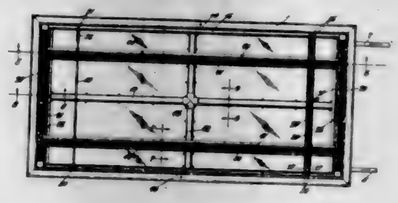


1. In combination, a steaming tube, a closure for the root end of the tube, an axial member connected to said closure and extending through said tube beyond the tip end thereof, a shoulder on the axial member at the tip end thereof, a lug on said tube at the tim pend, a cap for the tip end, a helically slotted flange to said cap extending beyond the lug, the cap having a central aperture to pass over said axial member, a spring detent

fixed on said cap for constricting the central aperture behind said shoulder, so that on rotation of the cap on the steaming tube, the cap bearing on the lug is forced axially of the tube by reason of the detent engaging the shoulder of the axial member to force the closure of the axial member steam tight against the root end of the steaming tube.

---

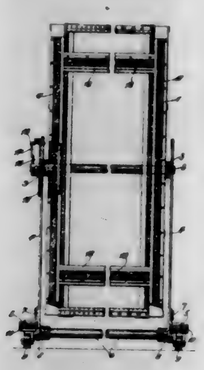
1,565,512. APPARATUS FOR STRETCHING AND DRYING LAUNDERED ARTICLES. ALBERT O. SCHRAMM, St. Louis, Mo., assignor to Schramm Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 17, 1924. Serial No. 707,158. 21 Claims. (Cl. 34—17.)



6. In an apparatus of the character described, a frame comprising channel end members having their flanges extending outwardly, channel bars attached to said end members and having their flanges extending inwardly, side frame members rigid with said end members, racks upon the flanges of said channel bars adjacent to said end members, a longitudinal bar, a shaft rotatively connected with said longitudinal bar, and pinions on said shaft meshing with said racks.

---

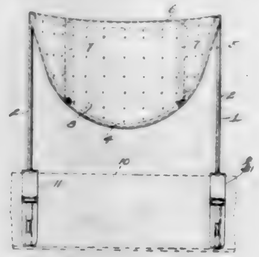
1,565,513. APPARATUS FOR STRETCHING AND DRYING LAUNDERED ARTICLES. ALBERT O. SCHRAMM, St. Louis, Mo., assignor to Schramm Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 17, 1924. Serial No. 707,159. 5 Claims. (Cl. 34—17.)



5. An apparatus of the character described, comprising a carriage, an axle rotatively supported by said carriage, a frame attached to said axle, an arm rigid with said axle and having a hole therethrough, a plate rigidly supported by said carriage and having an arcuate series of holes therethrough, and a pin arranged to pass through the hole in said arm and through any selected one of the holes in said plate.

---

1,565,514. HEADREST. AMANDA J. SCHUMACHER, Columbus, Ohio. Filed June 25, 1923. Serial No. 647,420. 2 Claims. (Cl. 155—174.)



2. A head rest of the character set forth comprising a pair of vertical transversely spaced arms, said arms terminating at their upper ends in horizontally and forwardly extending portions, said last named portions being terminated at their forward ends in a downwardly directed substantially semi-circular loop, said loop being disposed in a relatively vertical plane in advance of the said vertically extending portions of said arms, brace means extending inwardly from said loop, and a substantially concave head supporting pad connected with said loop and said brace means, said pad being situated between said loop and said vertically extending arms.

---

1,565,515. WASHABLE BLACK SILK PIECE GOODS AND PROCESS OF DYEING THEM. JOSEPH SEYER, Hawthorne, N. J., assignor to Standard Silk Dyeing Co., Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 1, 1922, Serial No. 604,390. Divided and this application filed Feb. 24, 1923. Serial No. 621,075. 13 Claims. (Cl. 8—5.)

8. The process of producing washable black silk piece goods which comprises working the goods in a boiling bath containing logwood and fustic extracts, working them in a boiling bath containing hematine extract and soap, treating them with hot tannic acid and tartar emetic, and cleansing them in a hot soap solution.

12. Black silk piece goods dyed in the piece and having the characteristics of fastness to washing in luke warm soap water, evenness in shade, and of not bleeding in cold water or discoloring non-silk fibers.

---

1,565,516. PROCESS OF DYEING SILK. JOSEPH SEYER, Hawthorne, N. J., assignor to Standard Silk Dyeing Co., a Corporation of New Jersey. Filed Mar. 15, 1923. Serial No. 625,257. 6 Claims. (Cl. 8—5.)

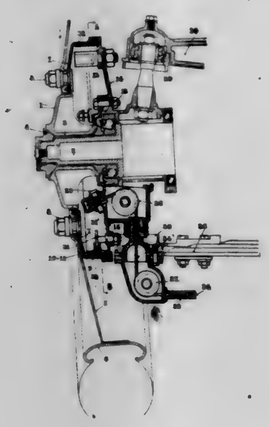
6. The process of dyeing silk piece goods weighted in the skein with a tin compound, which comprises treating them with disodium phosphate solution containing a direct dye.

---

1,565,517. BRAKE FOR MOTOR VEHICLES. MAURICE SIZAIRE, Courbevoie, France, assignor to Societe des Automobiles Sizaire, Courbevoie, France. Filed Feb. 3, 1925. Serial No. 6,592. 3 Claims. (Cl. 188—194.)

1. A brake device for the wheels of motor vehicles comprising a brake drum secured to said wheel, a brake lining secured to the interior of said drum, a non-rotatable annular plate carried by the hub of the wheel, a divided resilient ring located within said drum and adapted to cooperate with said lining, said divided ring having recesses at its ends, a stop secured to the annular plate for engagement with said recesses, adjustable guide rollers mounted on said plate and engaging with the di-

vided ring for the purpose of adjusting said ring in relation to the brake lining, an extension at one end of said ring, the other end of the ring having an opening therein, a bell crank lever pivotally mounted on said extension, one arm of said bell crank lever engaging



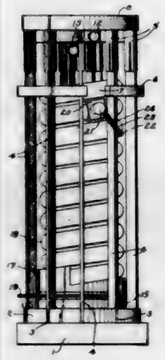
with said opening, operating means connected to the other arm of said bell crank lever, and springs attached to the ring and the plate, said springs being adapted to normally contract the ring and separate it from the brake lining.

---

1,565,518. TUBING BLEEDER. ELMER D. SMYSER, Fellows, Calif., assignor of one-third to Roy M. Smith and one-third to Perl E. Williams, both of Fellows, Calif. Filed June 12, 1925. Serial No. 36,733. 8 Claims. (Cl. 103—221.)

1. A tubing bleeder for wells including a tubing section having a side opening, a bleeder valve closing said opening, fragile means retaining said valve in closed position, and means operable upon turning of the tubing section for releasing said valve by destruction of said fragile means.

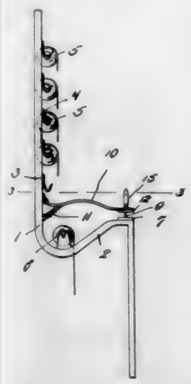
1,565,519. APPARATUS FOR MAGNETIC SPRING TESTING. THOMAS SPOONER, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1921. Serial No. 463,362. 7 Claims. (Cl. 175—183.)



1. Apparatus for testing helical springs of magnetic materials comprising a cylindrical cage, a rotatable base for mounting a coil spring centrally therein, means for rotating said base, means for passing magnetic flux through said spring, a coil adapted to be engaged with the spring to be tested and means connected to said coil for noting flux densities in said spring.

---

1,565,520. DISPLAY RACK AND CUTTER. COLONEL B. STOCKTON, Prentiss, N. C. Filed Mar. 5, 1924. Serial No. 697,074. 1 Claim. (Cl. 164—42.)

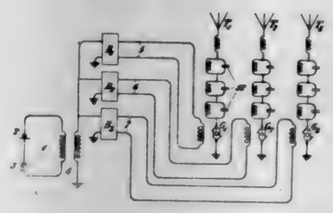


A cutter for a display rack comprising standards having upwardly curved bottom end portions, a plate mounted upon the extremities of the end portion and bridging the space between them, said plate provided with a longitudinally extending slot starting adjacent one end thereof and terminating coincident with the other end, arms pivotally mounted upon the standards, a second plate connected with the free ends of said arms and having a slot with its ends disposed between the ends of the second plate and adapted to register with the slot in the first plate, said second plate being shorter than

the first plate, spring means for retaining the second plate above and on the first plate, a knife mounted for longitudinal movement along the slot of the second plate so that its blade may extend through the slot of the first plate, and means carried by the knife and engageable with the second mentioned plate for preventing the knife from moving vertically with relation to said second mentioned plate.

---

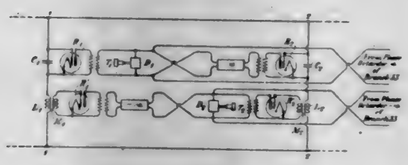
1,565,521. SECRET-COMMUNICATION SYSTEM. JOHN STONE STONE, San Diego, Calif., and CLAUDE CUSTER ROSE, East Orange, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 8, 1920. Serial No. 429,137. 13 Claims. (Cl. 250—9.)



1. In a radio transmission system, a sending station, means at said sending station for dividing the message frequency band into sub-bands and for radiating each of said sub-bands on a separate carrier frequency, means at said sending station for producing a disturbing low frequency band, and means for radiating said low frequency band on carrier frequencies intermediate in the frequency scale to said first mentioned carrier frequencies.

---

1,565,522. CARRIER-CURRENT MULTIPLEX SIGNALING SYSTEM. JOHN STONE STONE, San Diego, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 23, 1923. Serial No. 676,624. 6 Claims. Cl. 179—15.)

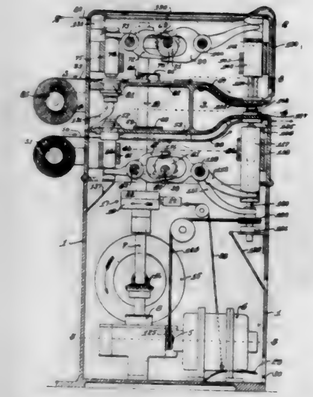


1. A conductor carrying currents of several different frequencies to be separated in their effects, respective branch conductors appropriate to the respective frequencies, respective apparatus to be actuated by electromotive forces in said branches and cross-connecting means to each apparatus from the other branches to neutralize the effect through the corresponding branch due to currents to which the other branches are appropriate.

---

1,565,523. GROMMET MAKING AND SETTING MACHINE. JOHN LENARD STUART, Oakland, Calif., assignor to Stuart Machine Co., San Francisco, Calif., a Corporation of California. Filed July 28, 1924. Serial No. 728,686. 32 Claims. (Cl. 218—14.)

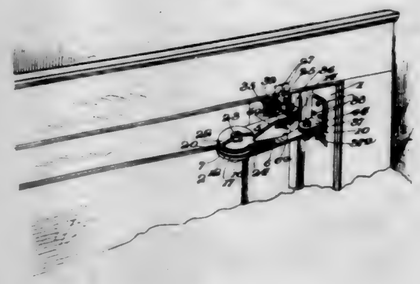
1. In a machine for making and setting grommet members with co-operating washer members, means for supporting a blank having one of said members partially formed therein; means for automatically positioning the



other member in setting relation thereto; and means for removing the partially formed member from its blank and setting it with said other member in the work.

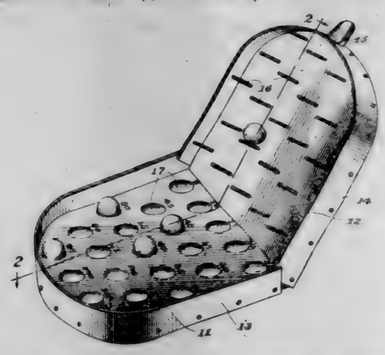
---

1,565,524. DOOR CONTROL. WILLIAM BRYAN SUMMERALL, Atlanta, Ga. Filed Dec. 10, 1924. Serial No. 755,096. 4 Claims. (Cl. 292—275.)



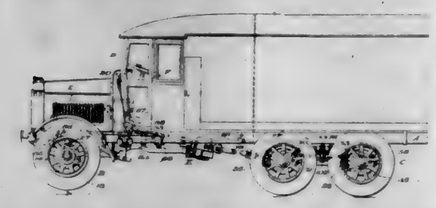
1. A device of the character described comprising a pair of flat bar-like arms, one of said arms having a concavo-convex laterally enlarged end portion formed with an arcuately curved marginal edge, the other of said arms having a laterally enlarged flat end portion formed with an outwardly curved marginal edge, said enlarged end portions having central openings formed therethrough adapted to be placed in alignment when the arms are disposed with the flat enlargement above the concavo-convex enlargements, a spacing disk between said enlargements, a second spacing disk superimposed on said flat enlargement, a convexo-concave clamping disk superimposed upon said last named spacing disk, said spacing disks and said clamping disk having central openings in alignment with one another and with the openings of said enlargements, a bolt having the shank thereof extending through said aligned openings, a nut in threaded engagement with said bolt for cooperating with the bolt to secure said enlarged end portions of the arms and said disks in superposed relation, means whereby one of said arms is pivotally attached at its other end to a door, and means whereby the other of said arms is secured at its other end to the frame for said door.

**1,565,525. GAME APPARATUS.** MARTIN TATOSIAN, Bridgeport, Conn. Filed Jan. 19, 1925. Serial No. 3,275. 1 Claim. (Cl. 273—120.)



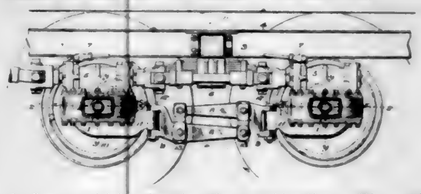
A game apparatus of the class described, comprising a horizontally disposed base member having a series of pockets positioned therein, a connected inclined member disposed at an angle with relation to the base member, a flange extending around the edge portion of both said base and inclined member, a series of pins positioned in the inclined member, and balls to be released at the upper end portion of the inclined member and adapted to roll down the incline between the said pins and into the pockets of the base, said flange having an opening at the upper portion of the inclined member, and a lip at said opening for receiving the balls and guiding them into the opening as the game is played.

**1,565,526. RUNNING GEAR FOR MOTOR VEHICLES.** ELLIS W. TEMPLIN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 30, 1921. Serial No. 481,519. 11 Claims. (Cl. 180—22.)



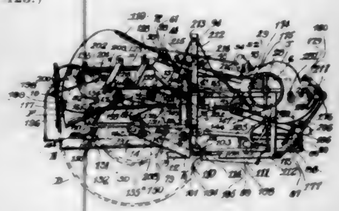
11. A motor vehicle chassis comprising a frame, two pairs of rearwardly located road-engaging wheels, axles for said wheels, housings for said axles, supporting springs extending between said housings and pivotally connected to each housing, each of said supporting springs being pivotally connected to said frame, and torque neutralizing mechanism connected the housings comprising a swivel sleeve mounted on one housing and adapted to turn about a horizontal axis at right angles to the axis of the housing, a pair of spaced parallel flat bar spring members positioned on edge to permit flexibility in a horizontal direction and relatively great stiffness in a vertical direction, one of said bars being pivotally connected to one of said housings to swing about a vertical axis, a supporting sleeve formed in said swivel sleeve adapted to receive the other end of said spring member and permit longitudinal movement of the member in the sleeve, the other bar member being pivotally connected to said swivel sleeve to swing about a vertical axis substantially parallel with the aforesaid vertical axis, and a supporting sleeve formed in the other housing adapted to slidably receive the other end of the last named bar member.

**1,565,527. TORQUE-NEUTRALIZING MECHANISM FOR MOTOR VEHICLES.** ELLIS W. TEMPLIN, Akron, Ohio, assignor to the Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 19, 1921. Serial No. 508,844. 17 Claims. (Cl. 180—22.)



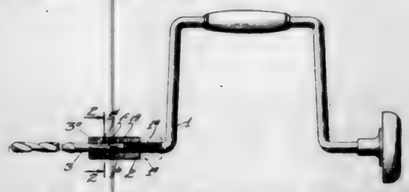
1. In a vehicle chassis, the combination with a plurality of relatively movable live axles and individual housings mounted freely thereon, of torque neutralizing mechanism comprising superposed laterally spaced bars pivotally connected respectively to opposite housings, and means connecting the bars for relative adjustment in a vertical plane to oppose the torque effect of one axle against the torque effects of the adjacent axle.

**1,565,528. SHEAF SHOCKER.** FREDERICK JAMES THODY, Swift Current, Saskatchewan, Canada. Filed Oct. 19, 1920. Serial No. 417,952. 42 Claims. (Cl. 56—423.)



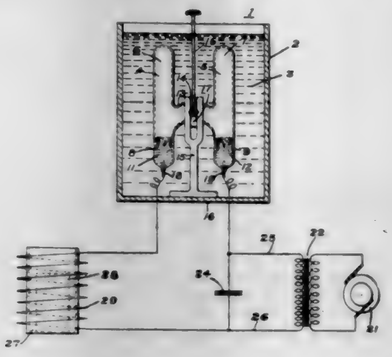
1. A sheaf shocker of the character described, comprising a collapsible shock forming basket, means for discharging the sheaves into the basket, and means for closing, turning and lowering the basket to discharge the sheaves in the form of a shock, and supporting mechanism for the basket including a pivoted supporting lever, and means for moving the lever forwardly during lowering of the basket to permit the latter to drop vertically and means for opening the basket.

**1,565,529. TOOL COUPLING.** CHARLES S. THOMAS, San Diego, Calif. Filed June 12, 1922. Serial No. 567,620. 2 Claims. (Cl. 279—91.)



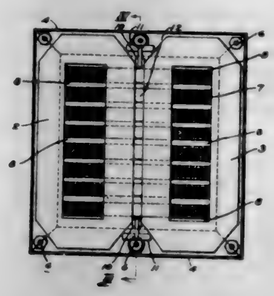
1. A tool coupling, including a shank member provided with a transverse hole therethrough and with reduced and outwardly diminishing furcations with fin ends, a tool member having a transverse head and a reduced outwardly increasing, angled male end conforming in shape but slightly larger than the opening formed by the furcations, said head fitting tightly the hole and said angled end adapted to spread the furcations of said shank member making it larger, and a sleeve adapted to fit over said shank member and be shifted thereon toward the tool member for clamping said tool member between the furcations of said shank.

**1,565,530. MERCURY-VAPOR SPARK GAP.** PHILLIPS THOMAS, Edgewood, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1921. Serial No 493,491. 4 Claims. (Cl. 250—38.)



1. In a spark-gap device, an H-shaped container, the two upright portions constituting distinct chambers, a vaporizable electrode at the lower end of each chamber, the cross connection being a tube connecting said chambers and affording a space-current path, the portions of each chamber above the cross connection constituting condensing chambers and having a greater cooling surface than said cross connection.

**1,565,531. LOCOMOTIVE TRANSFORMER.** ARTHUR W. THOMPSON, East McKeesport, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1923. Serial No. 668,520. 4 Claims. (Cl. 175—356.)



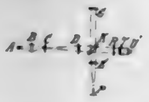
1. The combination with a laminated core structure comprising a plurality of loop portions and a coil surrounding one side of each of said loop portions, of end frames for said core structure and means for spacing said loop portions to provide a ventilating duct therebetween.

**1,565,532. METHOD OF MAKING VENTILATING STRIPS FOR TRANSFORMERS.** FRANK H. TUPPER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,181. 14 Claims. (Cl. 18—59.)

1. A method of joining molded articles which comprises roughening the surfaces to be joined, placing on said roughened surfaces a binder which is adapted to harden under the influence of heat and pressure, inserting

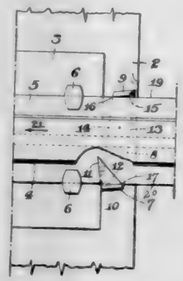
said articles in a press with their treated surfaces in engagement and applying heat and pressure thereto to form an integral structure.

**1,565,533. MANUFACTURE OF LENSES AND IN APPARATUS THEREFOR.** FRANK TWYMAN and ALFRED GREEN, London, England, assignors to Adam Hilger, Limited, London, England. Filed Nov. 10, 1923. Serial No. 674,032. 11 Claims. (Cl. 88—56.)



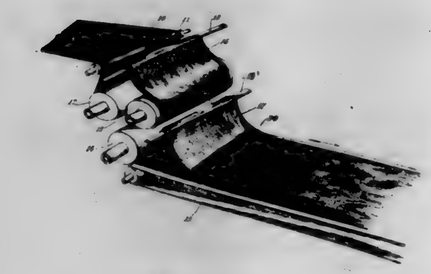
1. In the manufacture of lenses, dividing a beam of light into two parts, passing one part through a negative lens, the virtual focus of the negative lens being coincident with one of the conjugate foci of the lens under test through the lens under test, and then combining the two parts and causing the resulting beam to converge to a focus, thus producing interference rings arranged in the form of a contour map of the imperfections.

**1,565,534. RAIL ANCHOR.** DAVID F. VAUGHAN, Riverton, N. J. Filed July 10, 1924. Serial No. 725,098. 14 Claims. (Cl. 238—330.)



1. The combination with a railroad rail and a stationary element of a road bed supporting the same, of a rail anchor comprising a bar extending horizontally and diagonally beneath the rail base with one end portion of the bar nearer to said element than the other end portion thereof, a part projecting upwardly from the end portion of the bar farthest from said element and having a bearing rising from the longitudinal side of the bar nearest to said element and adapted to engage one side of the rail base, a part projecting upwardly from the end portion of the bar nearest to said element and having a bearing rising from the longitudinal side of the bar farthest from said element and adapted to engage the opposite side of the rail base, and means to hold the anchor in engagement with the rail, the parts being so relatively arranged that when the rail creeps it will engage the bar with said element and tend to move it from its diagonal position toward a position normal to the length of the rail and thereby cause said bearings to bind against and grip the respective sides of the rail.

1,565,535. METHOD AND APPARATUS FOR REDUCING ADHESIVENESS OF PLASTIC MATERIAL. ANTONI WALEZAK, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1924. Serial No. 688,888. 5 Claims. (Cl. 18—50.)

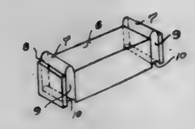


1. The method of reducing the adhesiveness of an unvulcanized, compounded rubber which comprises brushing the surface thereof with a non-adhesive brushing element, independently of any application of a coating material to said rubber.

1,565,536. PROCESS OF REMOVING RUST. WALTER EMIL WANDEL, New Orleans, La. Filed Dec. 11, 1922. Serial No. 606,289. 4 Claims. (Cl. 87—5.)

1. The process of cleaning rusty or corroded iron preparatory to painting which comprises covering the metal with a layer comprising a drying oil and a chemically basic body, allowing the layer to harden sufficiently to form a coherent mass by the drying of such oil and then stripping off the mass together with the included rust, etc.

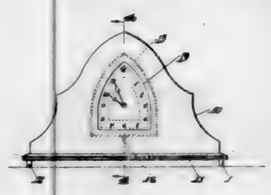
1,565,537. WALL STRUCTURE. WILLIAM A. WELLS, Spokane, Wash. Filed July 17, 1923. Serial No. 652,025. 2 Claims. (Cl. 72—102.)



1. In a wall structure a pair of parallel courses laid in courses and comprising superposed blocks having complementary grooves and ribs on opposite horizontal faces and complementary ribs and grooves on opposite ends, and rectangular tie blocks connecting said sections, each said tie block having near its ends a pair of lateral ribs on two adjoining faces and a pair of lateral grooves on the other two adjoining faces, said ribs and grooves at the respective ends of the tie blocks being in the same transverse plane of the tie blocks.

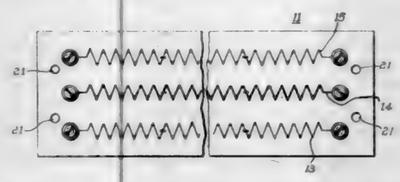
1,565,538. CLOCK CASING. JOSEPH WILCOX, Jr., Athol, Mass., assignor to Wilcox Novelty Company, Athol, Mass., a Corporation of Massachusetts. Filed June 13, 1925. Serial No. 36,984. 5 Claims. (Cl. 58—53.)

1. A clock casing forming a permanent enclosure for a clock movement and comprising a front member, a base member fixed thereto, and a movement support firmly secured to said front member and also to the



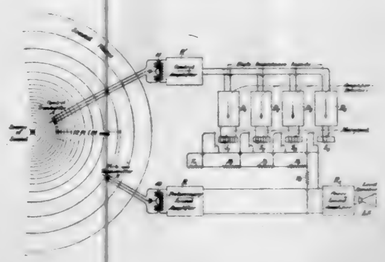
base member and forming a brace between said parts, said support being effective to frictionally retain a movement therein.

1,565,539. ELECTRIC SPACE HEATER. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 27, 1923. Serial No. 671,173. 3 Claims. (Cl. 201—63.)



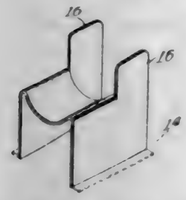
1. A heating unit comprising an elongated, relatively narrow, plane supporting member, and a plurality of spaced and parallel-extending resistor members mounted on one surface of said supporting member, one of said resistor members having a heat capacity equal to that of the other resistors combined.

1,565,540. AUTOMATIC VOLUME REGULATION OF TRANSMISSION SYSTEMS. SUMNER B. WRIGHT, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 3, 1924. Serial No. 735,661. 9 Claims. (Cl. 178—44.)



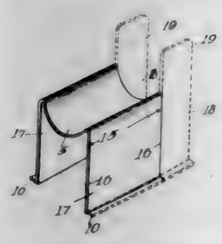
1. In a signaling system, means to translate signaling energy into electrical energy having variations of volume, a transmission circuit upon which said electrical energy may be impressed, and means automatically responsive to a change in the volume of said electrical energy to so change the volume of the energy transmitted that it will vary through a range different from that of the impressed energy, the variations in volume of the transmitted energy remaining proportional to the variations in volume of the impressed electrical energy.

1,565,541. METHOD OF MAKING BOILERS. ROBERT W. BIRCHFIELD, Joliet, Ill., Filed Aug. 4, 1923. Serial No. 655,637. 11 Claims. (Cl. 29—157.4.)



1. The herein described method of forming inside wrapper sheets of the kind described, which consists in providing a flat sheet of the required dimensions, subjecting the sheet to pressure and thereby distorting the sheet out of its flat condition and simultaneously forming a concave crown sheet and depending side sheets.

1,565,542. METHOD OF MAKING BOILERS. ROBERT W. BIRCHFIELD, Joliet, Ill. Filed Aug. 4, 1923. Serial No. 655,638. 4 Claims. (Cl. 29—157.4.)



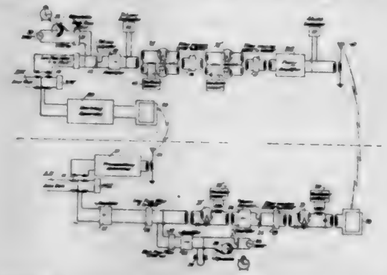
1. The herein described method of forming the inner shell of a boiler which shell includes a main crown sheet, depending side sheets and side sheets for an auxiliary combustion space rising above the main crown sheet, which method comprises forming a main section of the shell with a suitable crown sheet and depending side sheets and attaching extensions to the rear ends of the side sheet portions having portions which extend above the main crown sheet to form the side sheets of the auxiliary combustion chamber.

1,565,543. MANUFACTURE OF NORMAL BUTYL ALCOHOL. FIRMIN BOINOT, Melle, France, assignor to Commercial Solvents Corporation, Baltimore, Md. Filed Apr. 14, 1924. Serial No. 706,310. 5 Claims. (Cl. 260—135.)

3. A process for producing butyl alcohol which comprising adding a lactate to a carbohydrate mash undergoing butyl-acetone fermentation whereby the ratio of butyl alcohol to acetone in the resulting mash is increased.

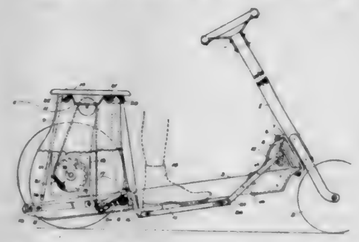
1,565,544. RADIO TRANSMISSION SYSTEM. RALPH BOWN, Wyoming, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 18, 1924. Serial No. 738,511. 5 Claims. (Cl. 250—2.)

1. In a signaling system, a transmission medium, an adjustable transmission element at the transmitting end of said medium, means to apply signaling current to said transmission element, means to adjust said transmission element in accordance with the variations in volume of the signaling current, means to apply a control frequency to said medium, means to vary the volume of said control frequency in accordance with the adjustment of said transmission element, a compensating transmission element at the receiving station, means at said receiving station to receive said controlling frequency



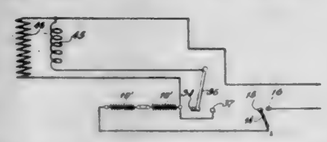
and indicate changes in the volume thereof, and means to adjust said compensating transmission element to compensate for the adjustment of the transmission element at the sending station in accordance with the indications produced by said control frequency.

1,565,545. VELOCIPEDE. JULIEN A. BEIRD, Oakland, Calif., assignor to H. C. White Company, North Bennington, Vt., a Corporation of Vermont. Filed June 8, 1922. Serial No. 565,595. 22 Claims. (Cl. 208—38.)



1. In a vehicle of the character described, a steering post carrying a front wheel, a body carrying an axle and two rear wheels, a centrally disposed reach member connecting the steering post and body, said reach member being of oblong cross section with its longer cross dimension disposed in a vertical plane and passing rearwardly under the axle, lateral framing secured to the rearward portion of the reach member and to the sides of the body, a pair of operating treadles pivotally supported at their forward ends by the reach member and extending rearwardly along the sides of said member with their rearward ends projecting over said framing into said body and adapted to oscillate therein.

1,565,546. MOTOR STARTER AND CIRCUIT CONTROLLER. ALFRED W. BURKE, Pelham Manor, N. Y. Filed Aug. 13, 1921. Serial No. 491,906. 1 Claim. (Cl. 172—279.)

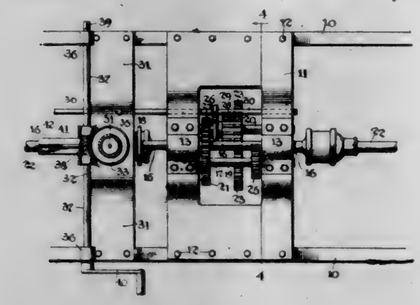


A split phase motor comprising in combination a starting winding, a running winding, means for closing a circuit to said windings comprising a starting switch and a running switch, means for closing said starting

switch and said running switch, means for opening the starting switch while the running switch remains closed, means for preventing a second closing of the starting switch until the running switch has been opened and an electromagnet in circuit with the running winding and operative to automatically open said running switch.

---

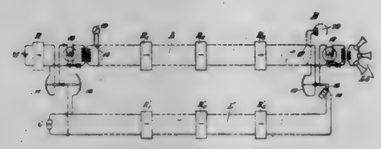
1,565,547. DERRICK ATTACHMENT TO MOTOR-DRIVEN VEHICLES. HARRY H. BUSH, Miami, Fla. Filed May 7, 1924. Serial No. 711,731. 1 Claim. (Cl. 74—7.)



A device of the class described comprising a main drive shaft, a driven shaft adapted to support a winding drum, a gear rotative with said driven shaft, coacting counter shafts in spaced relation, a master gear rotative with said drive shaft, spaced gears rotative with one of said counter shafts, one of which is in constant engagement with the gear of said driven shaft, a shipper sleeve rotative with the other counter shaft and slidable thereon, a gear rotative with said sleeve and adapted to be alternately engaged with and disengaged from the gear of said driven shaft, a gear having elongated teeth and in constant engagement with the master gear and adapted to be engaged with the other gear of the other counter shaft when the sleeve and its attached gears are adjusted longitudinally of the counter shaft with which they are rotative, and means for adjusting said sleeve.

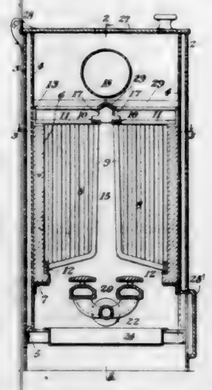
---

1,565,548. ARRANGEMENT FOR CONTROLLING VOLUME RANGE. ALVA B. CLARK, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 19, 1924. Serial No. 721,135. 24 Claims. (Cl. 179—171.)



1. The method of transmitting a wide range of energy volume over a transmitting medium capable of transmitting only a narrow range of energy volume, which consists in generating energy varying in volume over a range wider than the volume range of a transmitting medium, producing a change in the volume of the energy to be applied to the medium when the energy volume exceeds the limits of the transmitting medium, transmitting the energy over the medium with variations in volume extending over a narrower range than that of the energy originally generated, receiving the energy thus transmitted over the medium, and producing a compensating change in the volume of the received energy.

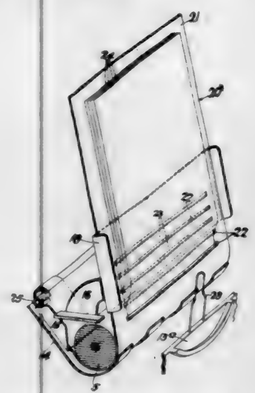
1,565,549. MEANS FOR INCINERATING REFUSE. HARRY L. COWLES, New York, N. Y. Filed Mar. 28, 1923. Serial No. 628,195. 8 Claims. (Cl. 110—18.)



1. The combination of a rectangular casing, two refuse compartments supported on opposite inside wall faces of said casing, rectangular in plan, having a common flue between them, and flues at each end connected to the first-mentioned one, the side and end walls of each of said compartments being composed of a multiplicity of substantially vertical bars joined at their upper ends to a horizontal U-shaped bar, and the bars forming the sides next to the common flue being L-shaped at the lower part and joined at the bottom to a horizontal bar resting on the casing wall, the lower portions of the bars of the two end walls in each compartment joined to the two end L-shaped bars respectively, heating means under said refuse compartments, and a roof over the tops of the flues inclined towards said compartments.

---

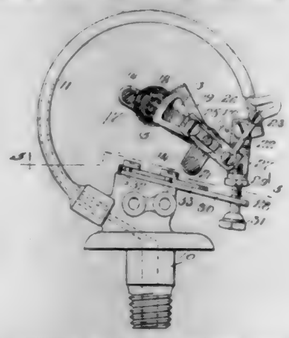
1,565,550. TYPEWRITING MACHINE. CLARENCE M. CREWS, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 10, 1923. Serial No. 650,601. 8 Claims. (Cl. 197—126.)



1. The combination with a typewriting machine having a rear paper-table, and a revoluble platen, of a flexible carbon-carrier having a plurality of transverse openings, and a plurality of carbon-sheets mounted upon transverse members adjacent thereto, said carrier arranged to have the plies of a plurality of continuous work-sheets threaded through said openings and interleaved with said carbon-sheets, to form a work-pack to be fed underneath and around said platen, said carbon-carrier being provided with stops to co-operate with said rear paper-table to hold said carrier from movement while said work-sheets are being drawn through said openings and beyond said carbon-sheets.

---

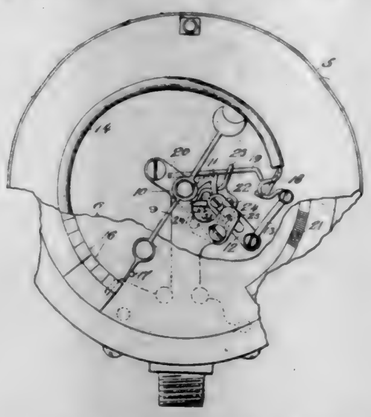
1,565,551. RETARD GAUGE. ERNEST B. CROCKER, Stratford, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Sept. 16, 1920. Serial No. 410,631. Renewed May 12, 1925. 15 Claims. (Cl. 73—109.)



3. In a pressure gauge, a graduated dial, a hand or pointer cooperating therewith, a pressure responsive element, connections intermediate said element and hand or pointer to actuate the latter, and adjustable means permitting said connections to be adjusted, in combination with an auxiliary retard spring member, independent connections intermediate said pressure responsive element and said retard spring member, and adjustable means for varying the flexibility of said spring member.

---

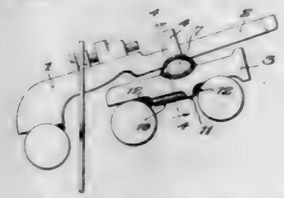
1,565,552. RETARD DEVICE FOR BOURDON GAUGES. ERNEST B. CROCKER, Stratford, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Apr. 12, 1920. Serial No. 373,142. 17 Claims. (Cl. 73—109.)



1. In a Bourdon tube gauge, a casing, a Bourdon tube, a dial hand or pointer, connections intermediate said dial hand or pointer and tube for actuating the former by the latter, and a frame arranged within the casing and upon which said connections are mounted, in combination with an auxiliary retarder mounted on said frame and arranged to engage an element moving with the tube only under conditions of excessive pressure whereby to impose a supplemental resistance thereon, and means by which the effective action of said retarder can be adjusted.

---

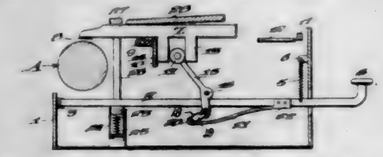
1,565,553. TOP-ROLL SADDLE. EZRA DIXON, Bristol, R. I. Filed Feb. 9, 1925. Serial No. 8,088. 2 Claims. (Cl. 19—138.)



2. In a top roll saddle, a back saddle having a pair of lubricant-receiving cavities, a wick carrier on the under side of the saddle, the saddle having openings establishing communication between the cavities and carrier, a wick in the carrier having its ends projecting beyond the carrier ends and a lubricant conveying lip extending outwardly from a side of the saddle and communicating with each of the cavities.

---

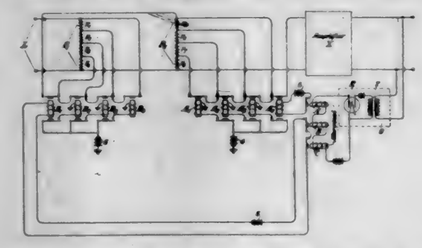
1,565,554. TYPEWRITING MACHINE. EINAR B. ERIKSEN, Brooklyn, N. Y., assignor, by mesne assignments, to Bates-Roebling Patents Co. Inc., New York. Filed April 18, 1922, Serial No. 555,496. Renewed Mar. 12, 1925. 7 Claims. (Cl. 197—25.)



1. In a typewriting machine, a type action comprising a type bar, a key lever, a bell crank lever, one arm of the bell crank lever engaging the type bar, a link pivoted at the other end of the bell crank lever, and a flat spring pivoted to said link at one end and rigidly fastened to the key lever at the other end.

---

1,565,555. ARRANGEMENT FOR AUTOMATICALLY CONTROLLING VOLUME OUTPUT. CHARLES H. FEITER, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 11, 1924. Serial No. 725,487. 14 Claims. (Cl. 178—44.)

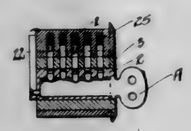


1. A transmission line including an amplifier, a plurality of potentiometers associated with the input of said amplifier, a volt-meter rectifier device bridged across the output of said amplifier, a plurality of relays con-

nected in series with the output of said rectifier device, one of said relays being adjusted to operate on current of a predetermined voltage, another of said relays being adjusted to operate on current of a lesser voltage, and means controlled by said relays for controlling said potentiometers.

---

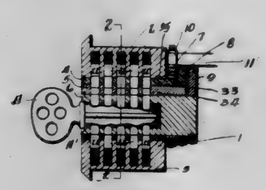
1,565,556. PIN-TUMBLER LOCK. JULES A. FREMON, Leeper, Mo. Filed Oct. 27, 1921. Serial No. 510,830. 20 Claims. (Cl. 70—93.)



1. In a changeable-key pin-tumbler lock, a sectional rotatable cylinder, all the sections of which must be united to operate the lock and which must be moved relative to each other to change the lock key, and means for uniting the cylinder sections.

---

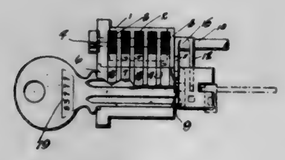
1,565,557. PIN-TUMBLER LOCK. JULES A. FREMON, Leeper, Mo. Filed Dec. 8, 1921. Serial No. 520,949. 22 Claims. (Cl. 70—93.)



3. In a multiple key lock, a rotatable plug, a rotatable member surrounding the same and limiting its rotation, a second member surrounding said first-mentioned member and limiting its rotation, means for uniting said members and adapted to disunite the same when said plug is rotated to the limit provided by said rotatable member.

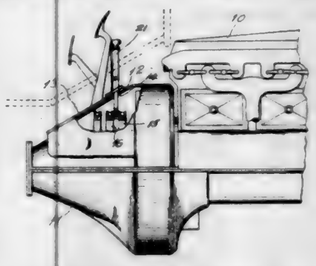
---

1,565,558. PIN-TUMBLER LOCK. JULES A. FREMON, Leeper, Mo. Filed Jan. 23, 1922. Serial No. 531,215. 19 Claims. (Cl. 70—47.)



1. In a pin tumbler lock, a rotatable plug, and a longitudinally removable lock in said plug provided with pin tumbler recesses.

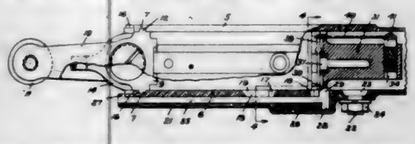
1,565,559. TRANSMISSION LOCK. GEORGE A. GILLEN, Jersey City, N. J., assignor to Gillen Laboratories Corporation. Filed Jan. 25, 1922, Serial No. 531,628. Renewed Apr. 25, 1925. 10 Claims. (Cl. 188—81.)



1. The combination with a planetary transmission having forward and reverse bands, of a locking means associated with said transmission for tightening both the forward and reverse bands simultaneously.

---

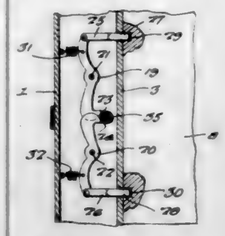
1,565,560. HAND-TRIGGER MECHANISM. WALTER T. GORTON, U. S. Army. Filed July 11, 1924. Serial No. 725,438. 18 Claims. (Cl. 89—27.) (Granted under the act of Mar. 3, 1883; 22 Stat. L. 625.)



18. A machine gun, embodying a firing mechanism, reversible means for actuating the firing mechanism, and means for operating the aforesaid means either right handed or left handed.

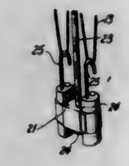
---

1,565,561. RURAL-MAIL-BOX LATCH. ANDREW J. GREEN, Jamestown, N. Dak. Filed Mar. 24, 1924. Serial No. 701,553. Renewed Oct. 29, 1925. 3 Claims. (Cl. 292—33.)



1. A device of the class described comprising a receptacle, a door hingedly supported thereon and adapted to co-operate with a door opening provided therefor in the receptacle, locking means for said door comprising a pair of levers pivotally supported intermediate their ends in said receptacle, the inner opposed ends of said levers being arranged in overlapping relation and being curved in opposite directions, the outer ends of said levers having bolts extending outwardly therefrom for engagement with recesses provided in the door, resilient means associated with the outer portions of said levers for normally holding the bolts out of engagement with the recesses in the door, and means for moving said bolt into locked engagement with the recesses in the door.

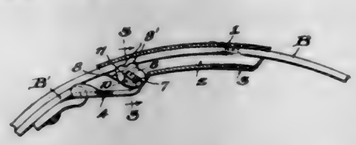
1,565,562. ELECTRON-DISCHARGE DEVICE. THOMAS R. GRIFFITH, Dover, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Feb. 21, 1925. Serial No. 10,761. 12 Claims. (Cl. 250—27.)



1. A filament support comprising a flattened metal cylinder, an insulating member within said cylinder, means surrounding said cylinder and retaining said member therein, and a filament carried by said member.

---

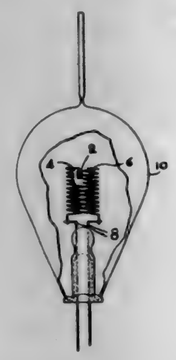
1,565,563. BUCKLE. GASTON A. GUYOT, Attleboro, Mass. Filed Dec. 24, 1924. Serial No. 757,911. 3 Claims. (Cl. 24—191.)



2. In a belt buckle, a front, a lever pivoted to the front and having an angular lip, and a swinging jaw pivoted on the lip ends in axial alinement with the pivot of the lever and having movement independent of the lever and being engagable with the lip ends to have the extent of its swinging movement restricted thereby.

---

1,565,564. METHOD OF AND MEANS FOR INTRODUCING POTASSIUM OR OTHER VAPORS IN LAMPS. AARON MARTIN HAGEMAN, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 23, 1923. Serial No. 653,116. 13 Claims. (Cl. 176—7.)



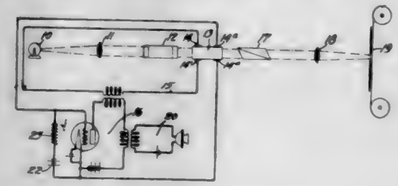
1. The method of introducing a free alkali metal into an electrical discharge device which comprises preparing a relatively high melting point amalgam of said metal and introducing the amalgam in the said device in contact with a metal part of the device.

1,565,565. ELECTRIC GAS LAMP. ERTLE LESLIE HARRINGTON, Saskatoon, Saskatchewan, Canada, assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 2, 1922. Serial No. 533,709. 4 Claims. (Cl. 176—122.)

1. In an electric gas lamp, a plurality of electrodes each consisting of a film of conducting metal adherent to a non-conducting surface in intertwined spiral relation.

---

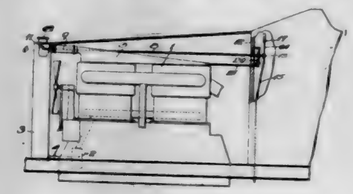
1,565,566. TRANSLATING DEVICE. RALPH V. L. HARTLEY, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 25, 1923. Serial No. 647,482. 7 Claims. (Cl. 179—171.)



2. In combination, a light source, a pair of crossed light polarizing devices, a piezo-electric crystal interposed between said devices, and means for supplying electrical oscillations thereto.

---

1,565,567. RADIATOR VENT AND ALARM DEVICE. HERMAN C. HEATON, Berwyn, Ill. Filed Dec. 5, 1919. Serial No. 342,784. 8 Claims. (Cl. 116—109.)



6. In an automobile, the combination of an internal combustion engine, a circulatory water cooling system for cooling said engine, said circulatory system comprising a radiator, a vent pipe extending back from said radiator to a point adjacent the dash of said automobile, an alarm whistle, a discharge connection, and valve means for controlling the communication of said vent pipe with either said alarm whistle or said discharge connection.

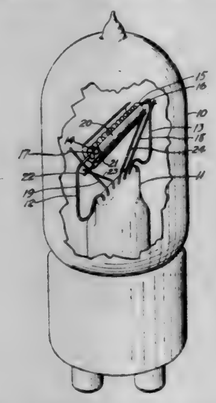
1,565,568. DROP WEIGHT FOR PATTERN MECHANISM. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Looms Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 22, 1925. Serial No. 57,905. 6 Claims. (Cl. 139—77.)

1. In a loom pattern mechanism having a harness lever and an operating connector removably attached thereto, a drop weight operating normally to hold the connector and lever in operative relation, yielding means to hold the weight against the connector, and a support to hold said yielding means temporarily in position to relieve the pressure between said drop weight and the connector.

1,565,569. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 21, 1922. Serial No. 576,462. 5 Claims. (Cl. 250—27.)

1. An electron discharge device comprising an enclosing vessel having a stem, an electrode assembly supported from said stem, said assembly comprising apertured discs, a plurality of electrodes supported by the said discs and a socket in the wall of said enclosing vessel, whereby a rod may be passed through the apertures and seated in said socket during the assembly of the device properly to position the electrode assembly within the vessel.

1,565,570. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 20, 1923. Serial No. 671,353. 3 Claims. (Cl. 250—27.)

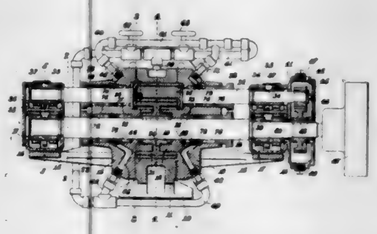


1. An electron discharge device comprising a filament, a helical wire grid surrounding said filament, said grid having its ends extending tangentially in opposite directions, supporting members attached to the ends of said grid, an anode surrounding said other electrodes, said anode comprising a substantially cylindrical metal sheet having a longitudinally extending rib, a rod extending through said rib, and supporting members attached to the ends of said rod.

1,565,571. LIFT BRIDGE. ERNEST E. HOWARD and HENRY C. TAMMEN, Kansas City, Mo., assignors to Harrington, Howard & Ash, a Copartnership consisting of John Lyle Harrington, Ernest E. Howard, and Louis R. Ash. Filed Feb. 2, 1925. Serial No. 6,159. 6 Claims. (Cl. 14—42.)

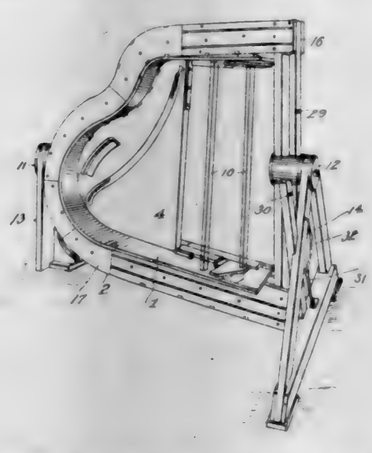
1. A lift bridge comprising towers, a movable lift span between the towers, tackles carried by the towers for supporting the movable span, the tackles including pulleys attached to the movable span, counterbalance weights, and cables supporting the weights, said cables passing over the towers and around the pulleys, the combined weight of the counter-balance weights being not in excess of one-half the weight of the span and operating mechanism on the span for rotating the pulleys carried thereby.

1,565,572. ROTARY PUMP. JUSTUS R. KINNEY, Boston, Mass. Filed July 23, 1923. Serial No. 653,095. 5 Claims. (Cl. 103—125.)



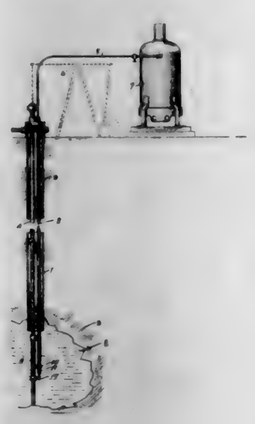
1. A rotary pump comprising a casing having therein a cylindrical chamber provided with an inlet and an outlet passage extending therefrom; a revoluble shaft; end plates on opposite sides of said casing having annular flanges extending toward each other with their end faces separated and provided with annular grooves surrounding said shaft; a member secured to said shaft and positioned between said annular flanges; blades positioned between said annular flanges and the cylindrical wall of said chamber and secured to said member; a revoluble gate between said inlet and outlet provided with a depression to receive said blades during the rotation of said shaft; and a valved pipe leading to said inlet and through which any portions of the material being pumped and leaking into said grooves may be withdrawn into said chamber.

1,565,573. MACHINE FOR TRIMMING GRAND-PIANO CASES. JOSEPH KLEPAC, New York, N. Y., and LOUIS MATIRKO, Elizabeth, N. J., assignors to Brambach Piano Co., New York, N. Y., a Corporation of New York. Filed Feb. 21, 1923. Serial No. 620,376. 6 Claims. (Cl. 144—144.)



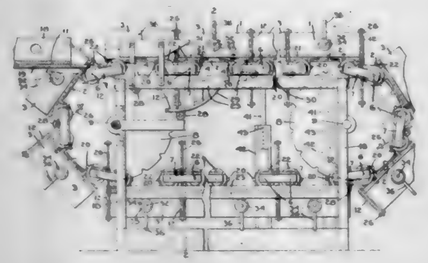
1. Means for receiving and fitting a grand piano case and holding the same, and means above and below said receiving means for guiding a cutting tool while trimming the edges of said case.

1,565,574. WELL-CLEANING PROCESS. CHARLES LARSEN, Denver, Colo. Filed June 27, 1924. Serial No. 722,818. 2 Claims. (Cl. 166—21.)



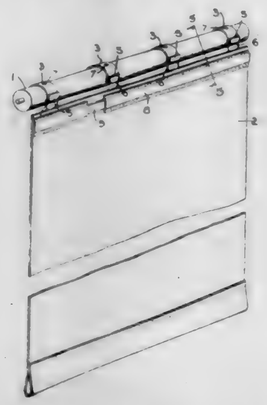
1. A method of cleaning oil wells, which consists in generating steam at a pressure of substantially one thousand pounds per square inch and conducting the same to the bottom of a well where it is permitted to expand and liberate its heat whereby the walls of the well become heated sufficiently to melt any solidified paraffine, and whereby the water of condensation will cause soluble matter to enter into solution, and simultaneously removing the liquids from the well.

1,565,575. MACHINE FOR MOLDING CONCRETE BLOCKS. SAMUEL S. LEVY, Boston, Mass. Filed Dec. 24, 1923. Serial No. 682,523. 10 Claims. (Cl. 25—99.)



1. In a machine for molding concrete blocks, the combination with a plurality of molds connected together to form an endless chain arrangement, each mold being open at one end and having at the other end a guide extending to the top of the mold, a partition movably carried by each guide, each partition when in operative position closing the end of the mold by which it is carried and also the open end of the adjacent mold, means for filling the molds, and means to move the partitions in their guides thereby to withdraw them from between the molds after the molded blocks are formed.

1,565,576. WINDOW SHADE. SAMUEL S. LEVY, Boston, Mass. Filed May 18, 1925. Serial No. 31,057. 1 Claim. (Cl. 156—25.)



The combination with a shade roller, of a plurality of shade-holding members applied thereto, each member having a semi-circular shape to partially embrace the shade roller and provided at one end with teeth that are embedded in the roller and at the other end with hook portions, and a shade having loops in its upper edge to hang on the hook portions.

1,565,577. TESTING DEVICE. JOHN MCDONOUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1922. Serial No. 551,292. 12 Claims. (Cl. 73—51.)

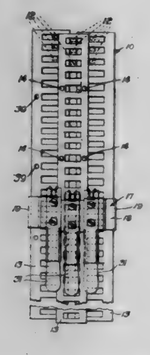
1. In a device for determining the resilience between maximum and minimum limits of a spring, a casing serv-

ing as a hand grip, a member pivotally mounted within said casing and adapted to engage a spring to be tested, resilient means for actuating said member, and means

under the joint control of the member and the spring to be tested to indicate the strength or weakness of the spring.

---

1,565,578. TESTING FIXTURE. JOHN MCDONOUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1922. Serial No. 551,298. 8 Claims. (Cl. 179—175.)

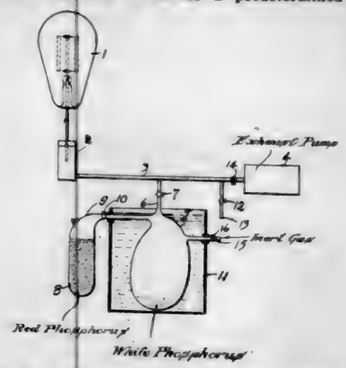


2. A testing fixture for testing electrical connections between terminals, comprising a self contained device associable with, and removable from as a unit the terminals at one end of the connections, a member movable thereon to successively engage the terminals, and signalling means, said signalling means associated with said last mentioned member and the opposite terminals and adapted to indicate when the connections between the terminals are correct.

---

1,565,579. METHOD OF INTRODUCING GETTER MATERIALS INTO INCANDESCENT LAMPS. DUNCAN MACRAE, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 28, 1921. Serial No. 488,098. 8 Claims. (Cl. 176—7.)

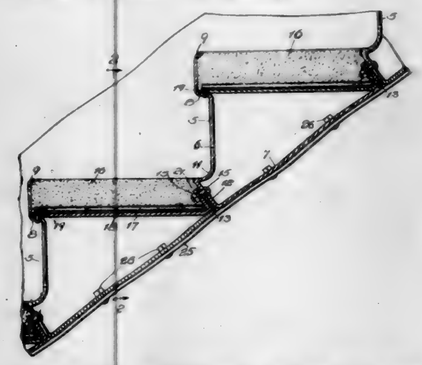
1. The method of introducing a predetermined quantity of a vaporizable material into an envelope which consists in accurately regulating the temperature of said vaporizable material to create a predetermined vapor



pressure thereof in an enclosed container, exhausting said envelope and conducting said vapor from said container into said envelope.

---

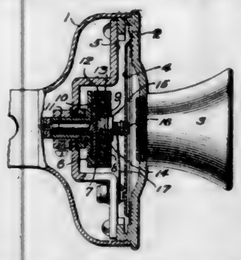
1,565,580. STAIR CONSTRUCTION. JAMES S. MANTON, Chicago, Ill. Filed Apr. 16, 1923. Serial No. 632,276. 17 Claims. (Cl. 72—96.)



16. In a stair construction, a riser, a soffit, and a removable pan disposed between the said soffit and riser.

---

1,565,581. TELEPHONE TRANSMITTER. CHARLES RUBY MOORE, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1921. Serial No. 505,060. 12 Claims. (Cl. 179—122.)



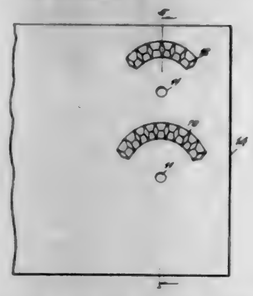
1. A transmitter comprising an electrode chamber, a pair of annular electrodes disposed in the marginal wall of said chamber, and an annular insulating barrier between said electrodes projecting into the interior of said chamber.

1,565,582. CRUTCH PAD. CHRISTIAN MOORE, Akron, Ohio. Filed Jan. 26, 1925. Serial No. 4,668. 8 Claims. (Cl. 135—52.)

1. In a pad of the class described, an elastic sheath adapted to fit over the arm piece of a crutch and a sponge rubber cushion in said sheath.

---

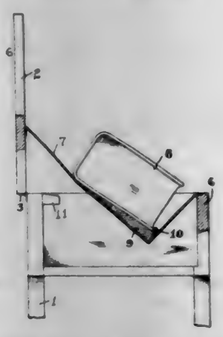
1,565,583. ETCHED LITHOGRAPHED PLATE AND METHOD OF MAKING SAME. FREDERICK H. MOORE, Chicago, Ill. Filed Sept. 6, 1924. Serial No. 736,283. 11 Claims. (Cl. 41—42.)



1. The method of making an etched, coated plate comprising etching a smooth plate to provide relatively deep and narrow outlines thereon offset from the surface of said plate and lithographing the surface of said plate after said plate has been etched.

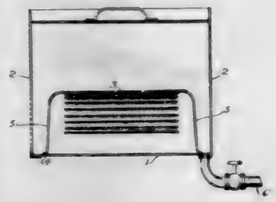
---

1,565,584. ARTICLE-TRANSFER MEANS. WILLIAM N. NEIDIG, Toledo, Ohio. Filed Feb. 21, 1925. Serial No. 10,802. 4 Claims. (Cl. 45—85.)



2. In an article transfer device, a container, a movable closure for said container, flexible transfer means connected to a fixed part of said container and also to said movable closure, means for pivoting said movable closure to said container to permit the opening of said closure to a horizontal position where the opening movement is arrested, the flexible part of said transfer means spanning across the top of the open container when said movable closure is opened, and means for compensating for the sag of said flexible transfer means when the device is open.

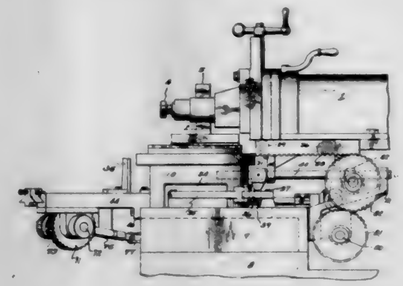
1,565,585. OSCILLATING WASHING MACHINE. JOHN NELSON, Newton, Iowa, assignor to Automatic Electric Washer Co., a Corporation of Iowa. Filed Feb. 20, 1924. Serial No. 693,978. 1 Claim. (Cl. 68—21.)



An oscillatable wash tub, a closed V-shaped hump attached to the bottom of the tub with its ends spaced from the end walls of said tub to provide drain passages, and a drain pipe extending through the bottom of one of said passages.

---

1,565,586. NUT-CASTELLATING MACHINE. MAYHEW E. NOYES, Marion, Ohio. Filed Aug. 13, 1923. Serial No. 657,160. 9 Claims. (Cl. 10—72.)



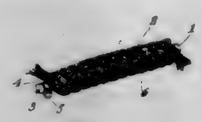
1. In a machine for castellating nuts, the combination with a reciprocable head, of a cutter carried by the head having a blade of a character to cut a slot in the end of a nut, a holder having a series of recesses arranged in a circle each adapted to receive a nut, and means for indexing the holder to bring successive nuts to position for the cutting operation.

---

1,565,587. BUMPER. CARL B. PARSONS, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of New York. Filed Apr. 28, 1924. Serial No. 709,374. 2 Claims. (Cl. 293—55.)

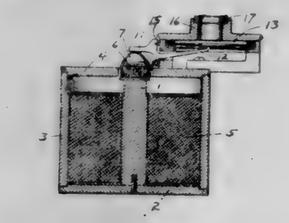
1. In a bumper, spaced-apart impact members having rearwardly bent end portions turned toward each other into abutting relationship and fastened together, and an elliptic spring support for each end of said impact members extending lengthwise thereof and secured thereto over the gap therebetween.

1,565,588. HAIRDRESSING DEVICE. CHARLES F. PORTER, New York, N. Y.; Sarah Harriett Porter, executrix of said Charles F. Porter, deceased, assignor to Sarah H. Crawford, Chicago, Ill. Filed Mar. 22, 1921. Serial No. 454,362. 6 Claims. (Cl. 132—41.)



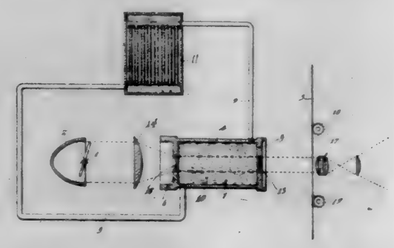
1. In a device of the class described, a member adapted to have a strand of hair wrapped upon it and having notches in its end and normally curved, a resilient hair embracing member extending through a notch in each end of said first named member and having retaining parts at its ends, said embracing member being held in said notches by its resilience.

1,565,589. TELEPHONE RECEIVER OR TRANSMITTER. FRANK J. REICHMANN, Chicago, Ill. Filed June 25, 1923. Serial No. 647,615. 8 Claims. (Cl. 179—108.)



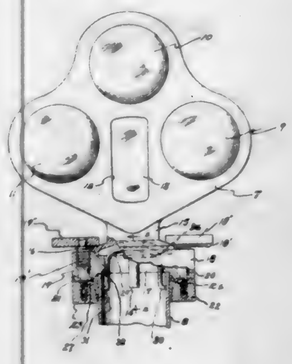
1. Means for connecting a solenoid-carrying spool to a rocking lever, comprising a cap having a hollow frusto conical side portion secured at its larger end to the spool and having a flat end connected to the smaller end of the said side portion, the entire cap being formed of resilient material, and means fastening the radially inner portion of the said tip to the lever while leaving the radially outer portion of the tip free to be flexed.

1,565,590. METHOD OF AND APPARATUS FOR PROJECTING COOL LIGHT. MAX J. RITTERRATH, Hollywood, Calif. Filed Oct. 11, 1920. Serial No. 416,026. Renewed Nov. 15, 1923. 2 Claims. (Cl. 88—24.)



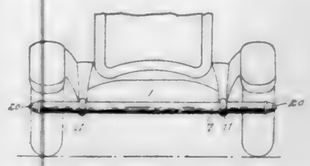
1. The method of projection consisting in converging the radiations from a source thereof, then diverging said radiations before they come to a focus, passing the radiations thus projected through a constantly changed cooling liquid to abstract heat produced by the intra-red radiations, and then passing the radiations without convergence through the object to be projected.

1,565,591. VEHICLE SIGNAL. FRANK ROMANOWSKI, Detroit, Mich. Filed Apr. 15, 1925. Serial No. 23,228. 4 Claims. (Cl. 220—61.)



1. A securing means of the class described, comprising a split ring, adapted for mounting on a tubular supporting member in embracing relation, the peripheral surface of said ring being beveled toward one edge throughout a major portion of its surface and being oppositely beveled toward the opposite edge throughout the remainder of its surface; a locking ring adapted for mounting on said split ring having its inner surface beveled to engage the larger beveled peripheral surface of said split ring; bosses projecting outwardly at diametrically opposite points on said locking ring; a co-operating ring adapted for resting upon the upper edge of said tubular member; and means for moving said locking ring into close relation to said co-operating ring for clamping said split ring in clamping relation on said tubular member.

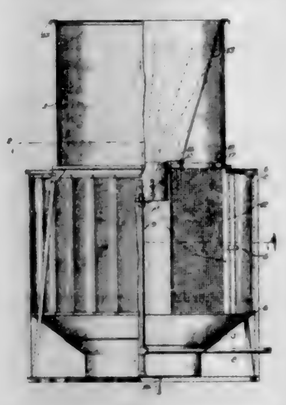
1,565,592. AUTOMOBILE BUMPER. GEORGE SAUER, Chicago, Ill., assignor, by mesne assignments, to Automobile Equipment Manufacturing Corporation, of Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1924. Serial No. 732,373. 6 Claims. (Cl. 293—55.)



1. In combination, a vehicle frame, an automobile bumper comprising a rigid elongated member of uniform cross section, a rigid clamping member surrounding said elongated bumper member and clamped thereto, a rigid arm rigidly attached to the vehicle frame and held against movement relative thereto, bolt means attaching said clamping member to said arm, and means for holding said clamping member and arm rigidly together and against relative movement in a vertical plane upon loosening of said bolt means.

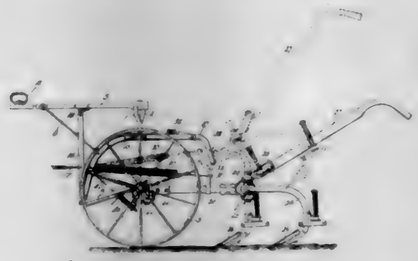
1,565,593. SPRAY TOWER. BERT R. SAUSEN, Oak Park, Ill., assignor to Binks Spray Equipment Co., a Corporation of Illinois. Filed Feb. 15, 1923. Serial No. 619,177. 9 Claims. (Cl. 261—116.)

1. A cooling tower comprising an upper spray chamber surmounting a drip chamber, means for spraying liquid into the spray chamber, and upright screens disposed below the spraying means and along which the drip of the spray descends, the drip chamber having its sides formed of louvres for admitting air and the screens being



disposed in the path of the air admitted between the louvres, the louvres extending vertically and having their faces disposed for imparting rotary movement to the air admitted between them.

1,565,594. CULTIVATOR. JOHN P. SEAHOLM, Moline, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed Sept. 22, 1922. Serial No. 589,778. 4 Claims. (Cl. 97—200.)

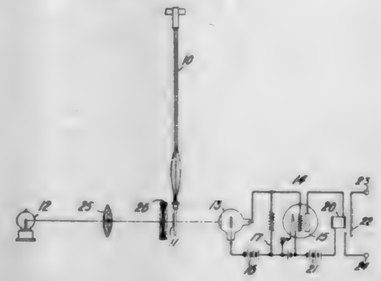


1. In a cultivator having a framework and an axle, a drag bar support pivoted to the axle, a drag bar connected to said support on one side of the axle, and a resilient stop connected to the support on the other side of the axle, said stop including a link pivoted to the drag bar and extending downwardly so that, in one position of the drag bar support, the latter contacts the link to move it bodily with the support, and resilient means interposed between the link and a portion of the cultivator framework to oppose motion of the link when it is contacted by the drag bar support to fix the normal position of the support but serving to permit it to be moved beyond its normal position when it is desired to temporarily cultivate deeper.

1,565,595. CURRENT-RECTIFYING DEVICE. WALTER O. SNELLING, Allentown, Pa. Filed Feb. 28, 1923. Serial No. 621,945. 1 Claim. (Cl. 250—31.)

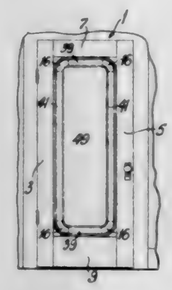
In the preparation of contact rectifying products the process which comprises contacting a metal with the vapor of an element of the sulfur group at a temperature above the reaction temperature of the two materials, but below the temperature of fusion of the reaction product formed.

1,565,596. SIGNAL SYSTEM. HOMER C. SNOOK, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 15, 1923. Serial No. 674,901. 7 Claims. (Cl. 250—1.)



1. A time signal system which comprises a pendulum for intercepting a beam of light at equal time intervals, said pendulum having means for varying the ratio of the time of interception of said beam to the period of oscillation of the pendulum, means sensitive to said light beam comprising a photoelectric cell, and a thermionic amplifier for producing electrical pulses in accordance with the interception of said light beam.

1,565,597. DOOR. EDWARD J. SPIESBACH, East St. Louis, Ill. Filed Apr. 9, 1925. Serial No. 21,815. 7 Claims. (Cl. 20—35.)

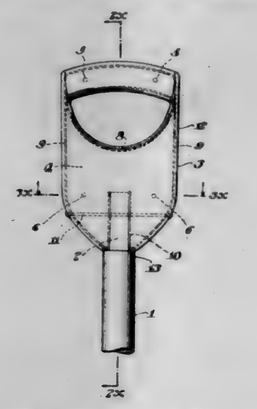


1. A door comprising a frame, corner blocks set into four corners of said frame, molding pieces set along the edges of said frame and between said corner blocks, and a panel adapted to fit within the confines of said molding pieces and said corner blocks.

1,565,598. CONTROL OF THE SOFTENING TEMPERATURE OF VITREOUS MATERIAL. WILLIAM CHARLES SPROESSER, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 17, 1922. Serial No. 595,214. 16 Claims. (Cl. 49—82.)

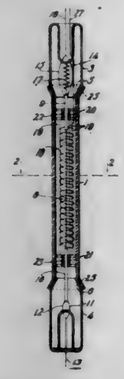
1. The method of potentially increasing the softening temperature of vitreous material a desired amount comprising applying a material to the surface thereof to react chemically therewith.

1,565,599. HANDLE FOR TOOLS. WILLIAM HATTON STEVENS, Hollidaysburg, Pa. Filed Oct. 18, 1922. Serial No. 595,443. 4 Claims. (Cl. 294—57.)



4. A tool handle having a D-hand piece comprising a metal core and a body of baked composition composed of a fibrous material mixed with a binder and completely encasing said core.

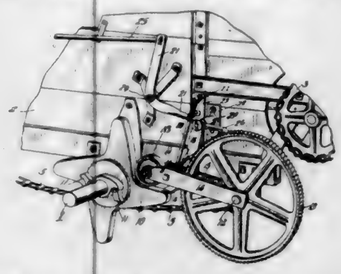
1,565,600. ELECTRON-DISCHARGE DEVICE. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Mar. 20, 1916, Serial No. 85,457. Patent No. 1,353,976, dated Sept. 28, 1920. Divided and this application filed Aug. 30, 1920. Serial No. 406,858. 28 Claims. (Cl. 250—27.)



1. An electron discharge device comprising an evacuated vessel having an inwardly projecting neck, a block of insulating material adjacent said neck, an electrode unit supported from said block, and an element of insulating material connected to the end of said unit remote from said neck and slidably contacting with the walls of said evacuated vessel.

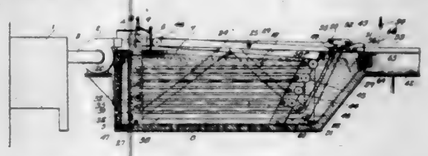
1,565,601. FEEDING MECHANISM FOR SPREADERS. STARLEY S. SWANSON, Stoughton, Wis., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed May 5, 1924. Serial No. 711,099. 4 Claims. (Cl. 74—54.)

1. In a spreader, a drive shaft, a cam carried thereby, a ratchet wheel for driving a feeding mechanism, an arm having a roller for engaging the cam, a pawl carried by the arm for engaging the ratchet wheel, a link connected to the arm for varying the amplitude of movement of the arm, a bell crank lever one arm of which is



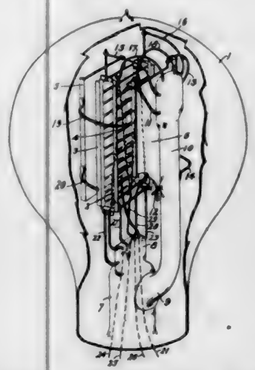
connected to a controlling means and the other arm of which is arranged to loosely receive the link, and a spring between the bell crank lever and the end of the link.

1,565,602. METHOD OF TREATING VEGETABLE FIBERS. PERCY THOMPSON, Kansas City, Mo., assignor of one-half to Seth H. Leach, Kansas City, Mo. Filed Mar. 10, 1924. Serial No. 698,180. 6 Claims. (Cl. 8—2.)



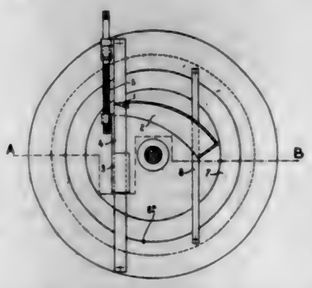
2. The herein described method of bleaching vegetable fiber, which consists in subjecting the fiber in a divided state to the action of a wet bleach and then drying the fiber by subjecting it to the action of a large volume of hot dry air at an appreciable velocity.

1,565,603. ELECTRON-DISCHARGE DEVICE. RUSSELL F. TRIMBLE, Elizabeth, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1918. Serial No. 256,825. 3 Claims. (Cl. 250—27.)



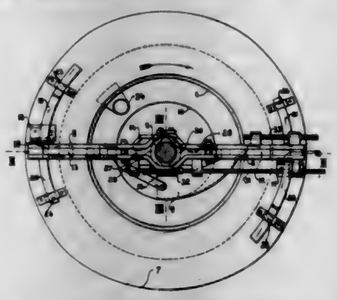
1. In an electron discharge device, a containing vessel comprising a stem terminating in a flat press, a plurality of leading-in wires sealed in said press and lying substantially in the same plane, an arbor anchored to said stem at a point removed from said press, and a plurality of electrodes supported by said arbor in planes substantially parallel to the plane of said leading-in wires.

1,565,604. MEANS FOR EMPTYING A REVOLVING OPEN-TOP CENTRIFUGAL SEPARATOR. EVERT VAN DER MOLEN, Groningen, Netherlands. Filed Sept. 26, 1924. Serial No. 740,133. 2 Claims. (Cl. 233—22.)



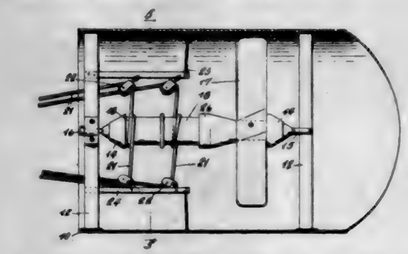
1. In an open top centrifugal separator including a drum, a blade within said drum for scraping accumulated material from the wall thereof, means for drawing said blade gradually into said accumulated material, and means associated with said blade for directing the material scraped by it gradually upwardly, across said drum and over the wall opposite said blade including an inclined runway and guide extending from a point within said drum adjacent said blade gradually upwardly, across said drum to a point above and outside of the wall opposite said blade.

1,565,605. APPARATUS FOR REMOVING MATERIAL FROM THE WALL OF A REVOLVING CENTRIFUGAL BASKET SUSPENDED FROM A VERTICAL SPINDLE. EVERT VAN DER MOLEN, Groningen, Netherlands. Filed Dec. 16, 1924. Serial No. 756,333. 5 Claims. (Cl. 210—70.)



1. In apparatus for removing accumulation of material from the wall of a centrifugal basket suspended from a vertical spindle, a scraper, a ploughlike member adapted for cooperation with said scraper to direct material loosened by said scraper to a bottom opening of the basket, a substantially radial guideway for said scraper, means for reciprocating said scraper along said guideway, means for supporting said guideway over the basket, means for preventing said guideway from rotating with the spindle, means allowing said guideway to move in a horizontal plane over said support but preventing it from vertical movement relative to said support, and a clutch device for coupling said guideway with the spindle in such a manner as to permit only of rotary motion of said spindle relative to said guideway.

1,565,606. SWIMMING APPARATUS. CHARLES VERBSKY, Cleveland, Ohio. Filed Nov. 28, 1924. Serial No. 752,707. 3 Claims. (Cl. 9—18.)

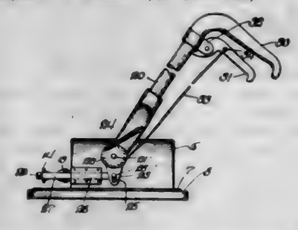


3. A swimming apparatus comprising, an open ended shell, rotatable shaft arranged centrally and longitudinally in the shell, a screw propeller fixed to the forward end of the shaft, a pair of spaced sheaves arranged upon the shaft, means interengaging the shaft and sheaves at times, pairs of pulleys arranged at opposite sides of the sheaves and in spaced relation thereto, and operating cords extending about the sheaves and through the pulleys and designed for attachment to the feet of a person using the apparatus.

1,565,607. GAME, CHARLES F. WAITE, Cambridge, Mass., assignor of one-half to David A. Barber, Cambridge, Mass. Filed Feb. 24, 1923. Serial No. 621,060. 4 Claims. (Cl. 273—38.)

1. A toy man having an arm movable in a substantially vertical plane and a stationary arm extended in a substantially horizontal plane toward the movable arm, said movable arm having a hand portion comprising two jaws for grasping a ball, one of said jaws being movable and co-operating with said stationary arm to strike the latter on the forward movement of the movable arm and release the ball.

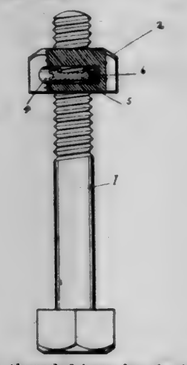
1,565,608. POLISHING DEVICE. HARRY C. H. WALSH, Jr., Chicago, Ill., assignor of one-fourth to Vandiver J. Van Horn, Chicago, Ill. Filed Feb. 19, 1923. Serial No. 620,002. 1 Claim. (Cl. 15—138.)



A polishing device, comprising a metal base plate, a relatively thick flat sheet of felt secured to the under side of said base plate, a liquid receptacle substantially U-shaped in cross section mounted on said base plate, the latter forming the bottom closure for said receptacle, valves pivoted on said base plate and controlling openings therein to permit liquid to be discharged from receptacle into said sheet of felt, a valve stem extending into said receptacle from one end thereof to control said valves, a spring in said receptacle to close said valve, a handle fixed to said receptacle, a spring retracted rotatable wheel on said receptacle, a lever on said handle, a cord connecting said lever with said wheel to rotate the

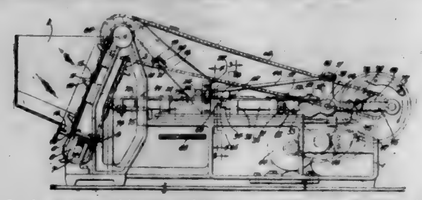
latter against its spring tension, a slotted arm fixed to said wheel, and a bent arm engaging the slot in said arm and said valve stem, whereby the valves in said receptacle may be controlled by said handle lever.

1,565,609. NUT LOCK. MILTON WARD WEBSTER, Toronto, Ontario, Canada, assignor to John A. Carter, Toronto, Canada. Filed May 22, 1924. Serial No. 715,174. 1 Claim. (Cl. 151—26.)



A nut having a threaded bore for the bolt, a recess arranged transversely of the bore and communicating therewith, in combination with a pin slidingly and rotatably fitted within the recess, said pin having at one end an inclined retention member for engaing the threads of the bolt when the pin is turned to the locking position, and at the other end a slot for the turning of the pin in the recess, said pin having between its ends a clearance for the bolt, and a burr at the outer end of the transverse recess for engaging in the slotted end of the pin and maintaining the inclined retention member in engagement with the bolt threads.

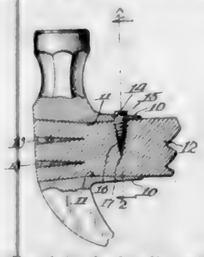
1,565,610. NUT-CRACKING MACHINE. ROBERT E. WOODSON, Webster Groves, Mo. Filed Dec. 22, 1922. Serial No. 608,408. 9 Claims. (Cl. 146—12.)



1. A nut cracking machine comprising a shuttle for supporting nuts to be cracked, a rigid jaw, a jaw movable to and from said rigid jaw to crack nuts placed successively upon said shuttle, a chute, a shuttle having a longitudinal groove of less width than the length of the nuts received from said chute and arranged to support the nuts above the plane of said jaws, means for moving said second shuttle, and a wiper for discharging the nuts from the end of the second shuttle to the first shuttle in positions in which the ends of the nuts are toward said jaws respectively.

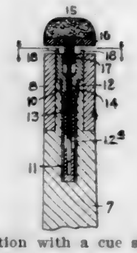
1,565,611. TOOL-HANDLE-HOLDING MEANS. RUDOLPH ADE, Evansville, Ind., assignor to Evansville Tool Works, Evansville, Ind., a Corporation of Indiana. Filed Aug. 11, 1923. Serial No. 656,882. 1 Claim. (Cl. 306—32.)

The combination of a tool head having a handle opening therethrough and having an extension provided as part of said opening an adze-eye of the character described having a relatively long axis and a relatively short axis in cross view, said extension having a hole therein for a wedge to extend therethrough in the direction of said relatively long axis, a wood handle in said handle opening, means for holding the outer end portion of the handle tightly in the outer portion of the handle opening, and a threaded cone-shaped wedge in said



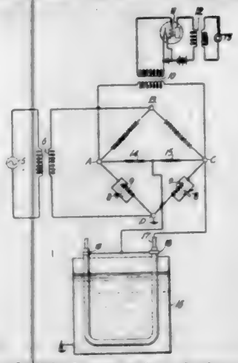
hole and extending into the handle, said wedge having a cylindrical head of a diameter permitting it to pass into said hole to provide for advancing the wedge from time to time by a threading action beyond its normal relative position.

1,565,612. CUE TIP. VINCENT AJELLO, Pittsburgh, Pa. Filed Mar. 20, 1925. Serial No. 16,998. 4 Claims. (Cl. 273—70.)



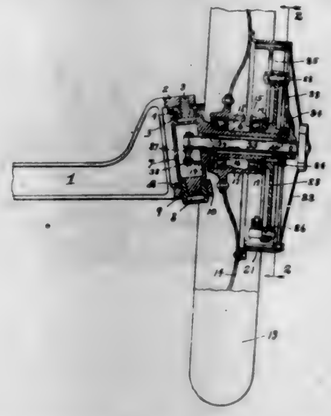
1. The combination with a cue stick, of tip structure comprising a threaded member secured to the stick, means for yieldably holding said member against longitudinal movement, a tip, and a threaded member secured to the tip and adapted to engage with the first-named threaded member.

1,565,613. ELECTRICAL MEASURING APPARATUS. GUSTAVUS A. ANDEREGG, Blackheath, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 10, 1923. Serial No. 618,426. 10 Claims. (Cl. 175—183.)



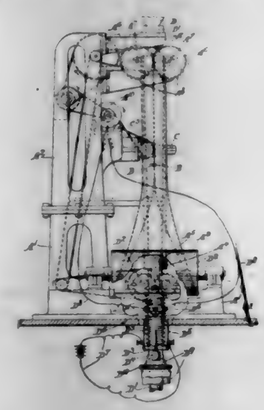
1. In an electrical measuring device, a Wheatstone bridge and means, including a balanced circuit, associated therewith to eliminate excessive errors due to surface leakage over the material to which the measuring device is applied.

1,565,614. BRAKE MECHANISM. BENJAMIN H. ANIBAL, Detroit, Mich. Filed May 22, 1924. Serial No. 715,052. 7 Claims. (Cl. 188—194.)



1. In combination, a hollow axle, a wheel mounted thereon, a brake mechanism attached to the outer side of the wheel, and means extending through the axle and through the wheel from said brake mechanism to the inner side of the wheel for operating said brake mechanism.

1,565,615. MACHINE FOR MAKING AND FILLING BAGS. ADELMER M. BATES and JOHANN E. DANCKER, Chicago, Ill., assignors to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed May 20, 1919. Serial No. 298,452. 59 Claims. (Cl. 112—11.)



36. A tube forming machine comprising a form consisting of two tubes, one of them substantially the same size as the tube being formed, the other of lesser cross sectional area, means for drawing a continuous strip of fabric along said tubes comprising fabric engaging members adapted to clamp the fabric against the tubes and means for driving said members at the same velocity, means for stretching the fabric about one of the form tubes, means for joining its edges to form the fabric tube, means for feeding forward a continuous flowing tube of fabric, and means responsive to the flow of fabric for controlling the means for feeding it out, said controlling means comprising a collar engaged by and adapted to be forced along with the flowing tube of fabric, means for yieldingly resisting the movement of the collar, switch members carried by the collar, and a latch associated with the said switch members for resisting movement of the collar in the same direction as the tube, the strip stretching means comprising a roller in engagement with the fabric, the axis of rotation of which is inclined to the line of movement of the strip.

1,565,616. METALLIC TIRE BEAD AND PROCESS OF MANUFACTURING THE SAME. FRANK H. BEYEA, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Aug. 17, 1921. Serial No. 493,150. 8 Claims. (Cl. 245—1.5.)

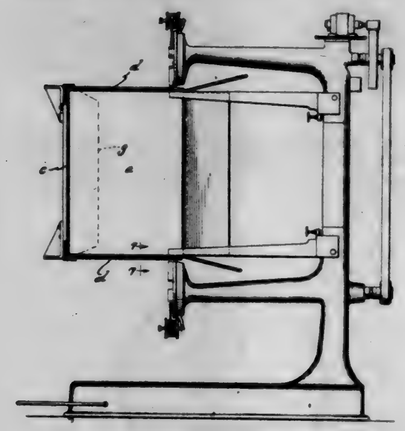
1. A wire ring for use in tire beads or for similar purposes, comprising a circular core wire and a wrapping wire surrounding the core wire, the ends of the wrapping wire being overlapped.

6. The process of manufacturing tire beads comprising forming a core of wire, wrapping a second wire over the said core until it is covered, and overlapping the ends of the second wire on the outside of the core.

1,565,617. CABLE BEAD FOR TIRES. FRANK H. BEYEA, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Sept. 8, 1921. Serial No. 499,304. 5 Claims. (Cl. 245—1.5.)

5. A circular tire bead comprising a core wire of soft steel and a covering wire of hard steel, the ends of the covering wire being held together by solder which also unites the covering wire to the core wire and prevents a shifting of the two wires.

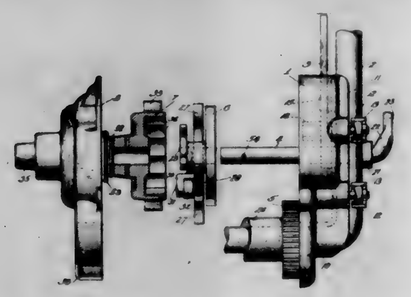
**1,565,618. METHOD OF ASSEMBLING FIBER SHIPPING CASES.** HERBERT R. BLISS, Niagara Falls, N. Y. Filed Dec. 30, 1924. Serial No. 758,923. 7 Claims. (Cl. 93—42.)



1. A method for assembling shipping cases constructed of fiber board or equivalent material comprising a body blank and one or more other blanks, which method comprises the setting up of the blanks and holding them temporarily together in box form, then while so holding placing the box over an anvil and driving metal fasteners thereinto to stitch the other blanks to the body blank.

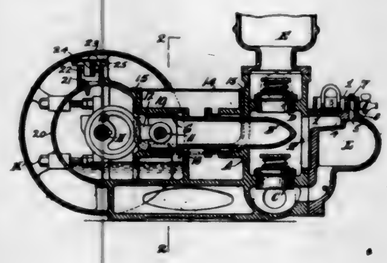
---

**1,565,619. CLUTCH.** JOSEPH E. BODA, Moline, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed Feb. 9, 1922. Serial No. 535,130. 5 Claims. (Cl. 192—62.)



1. The combination with an agricultural implement crank axle having an arm and a crank wrist upon which a ground wheel may be journalled, of a power lift mechanism comprising a compact unit located adjacent the bend in the crank axle and on the inside thereof so that it will be between the crank axle arm and a ground wheel journaled on the crank wrist, said mechanism including a housing member clamped to the crank axle arm adjacent the wrist, a stub shaft journaled at one end in said housing member, a dog plate fixed to the stub shaft and housed by said housing member, a clutch disk journalled on said stub shaft, a driving gear on the crank wrist meshing with the clutch disk, and a complementary housing member forming a bearing for the other end of the stub shaft and adapted to be attached to the first housing member to enclose all of said parts.

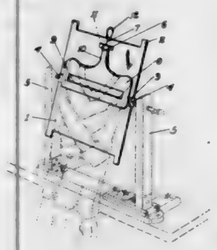
**1,565,620. PUMP.** NELSON E. BRIGHAM, South Hadley Falls, Mass., assignor to Worthington Pump and Machinery Company, New York, N. Y., a Corporation of Virginia. Filed Aug. 10, 1921. Serial No. 491,098. 3 Claims. (103—202.)



1. The combination with a pump frame having a pump cylinder and crosshead guide integral therewith, an outside packed pump plunger and crosshead working in said cylinder and guide and a shaft and connection to the crosshead for reciprocating said plunger of a metallic shield for the exposed operating parts, said shield being secured in position by spring engagement with the pump frame.

---

**1,565,621. GARMENT WRAPPING AND HANGING FORM.** BERNARD CAHN, Sacramento, Calif. Filed Jan. 28, 1924. Serial No. 688,957. 4 Claims. (Cl. 223—59.)

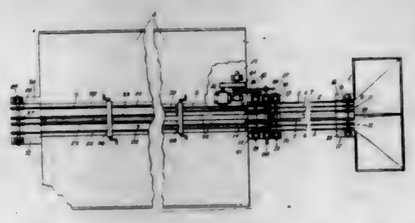


1. A garment wrapping and hanging form including a flat wrapping element having an orifice near one end, a hanger to normally lie against the wrapper element, a neck on the hanger projecting through and free for vertical swinging and unlimited rotative movement within the orifice, and a head on the outer end of the neck extending across the orifice to normally prevent retraction of the neck through said orifice.

---

**1,565,622. FRUIT GRADER.** JAMES CASSIE, Courtland, Calif. Filed July 7, 1924. Serial No. 724,594. 15 Claims. (Cl. 209—71.)

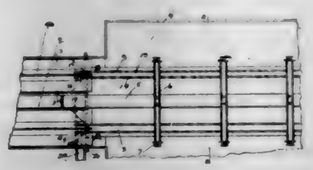
1. A grader having a pair of spaced conveyors each moving in substantially a direct line without reversals from the conveying part of the grader adapted to size fruit therebetween, means to drive the conveyors, a sectional guide for one of the conveyors, means to move a portion of the guide laterally of the direction of travel of the conveyor without substantially altering the position of contiguous sections whereby the spacing of the conveyor may be greater at a position near the feeding-in end than further along the conveyor to receive fruit



thereat, said means to move the portion of the guide also being adapted to move the portion inward to narrow the spacing of the conveyor to pass the fruit on.

---

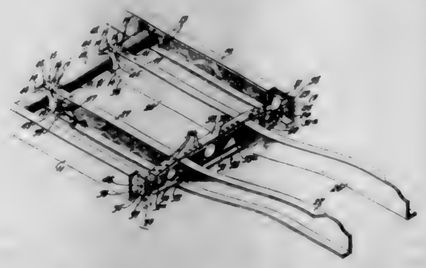
**1,565,623. FRUIT-SIZING MACHINE.** JAMES W. CASSIE, Courtland, Calif. Filed May 11, 1925. Serial No. 29,329. 7 Claims. (Cl. 209—102.)



1. A fruit sizer comprising in combination a pair of spaced guide rods adapted to size fruit therebetween, rope conveyors operable in said guide rods, the guide rods and ropes being continuous from one end of the sizer to the other, one of said guide rods being fixed and the other shiftable laterally thereto, means to bend the shiftable guide rod to alter the distance apart at different positions of its length, said conveyors remaining in contact with said guide rods.

---

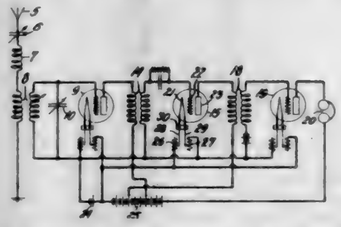
**1,565,624. DETACHABLE SUBFRAME FOR VEHICLES.** ROLAND CHILTON, Keyport, N. J., assignor to Aeromarine Plane and Motor Company, Inc., a Corporation of New York. Filed Aug. 11, 1924. Serial No. 731,373. 20 Claims. (Cl. 180—64.)



1. In a detachable power plant supporting unit for a vehicle the combination of, a relatively wide vehicle main frame terminating behind the front wheels of the vehicle so as to afford clearance for the steering thereof, a relatively narrow power plant frame, each frame including two side members spaced apart, the power plant side members spaced less than the main frame side members, a cross member rigid with the vehicle frame and spaced from the ends thereof and adapted for engagement by the ends of the power plant frame and a cross member rigid with the power plant frame and intermediate the ends thereof and extended to detachably engage the ends of the vehicle frame.

---

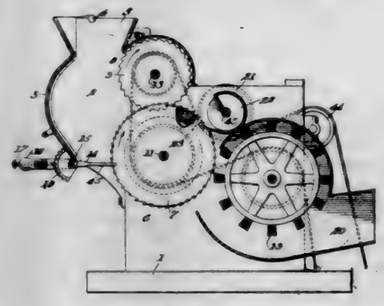
**1,565,625. SIGNALING SYSTEM.** HENRY P. CLAUSEN, Mamaroneck, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1923. Serial No. 678,937. 7 Claims. (Cl. 179—171.)



1. In combination, a vacuum tube having a cathode, a control and a plate electrode, a source of potential for said tube, and means included in the cathode circuit for effecting changes in the potentials applied to said control and plate electrodes without changing the current in the cathode circuit.

---

**1,565,626. COTTON GIN.** WILLARD D. DOREMUS, deceased, late of Washington, D. C., by Effie F. Doremus, administratrix, Washington, D. C., assignor to Thomas Morton Gittings, trustee, Washington, D. C. Filed Sept. 8, 1920. Serial No. 409,018. 3 Claims. (Cl. 19—55.)



3. In a cotton gin, a cylinder comprising gin saws, and a cylinder comprising disks having angular teeth on their peripheries, the cylinders being rotatable in the same directions and so arranged that the saws and disks overlap, the forward sides of the teeth on the disks in respect of their direction of movement being of less abrupt incline than the opposite sides thereof.

---

**1,565,627. VISIBLE DISPENSING DEVICE.** JERALD G. DOTY, St. Louis, Mo. Filed July 28, 1924. Serial No. 728,632. 5 Claims. (Cl. 137—104.)

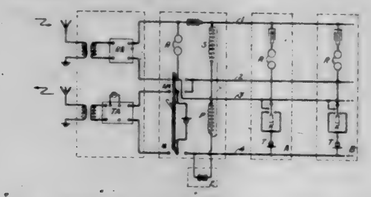
1. A visible dispensing device comprising a receptacle, a pipe opening into the receptacle, a tube enclosing the discharge end of said pipe within the receptacle, a tubular fitting attached to said pipe within said tube, a valve chamber in connection with said fitting having an outlet therethrough to said tube, a valve enclosed in said chamber, a stem extending from said valve through said outlet

and through the end of said tube, a lever pivotally supported by said tube engaging said stem, a second lever pivotally supported by said tube and movable vertically

to positions beyond dead center on opposite sides of its pivot with respect to said first named lever, a spring connecting said levers on opposite sides of their pivots, and a float connected to the outer end of said second lever.

---

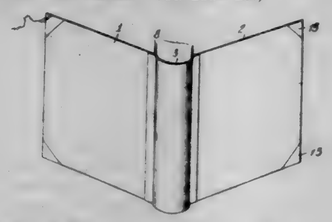
**1,565,628. TELEPHONE INTERCOMMUNICATING SYSTEM FOR AEROPLANES.** GEORGE D. EDWARDS, East Orange, and WILLIAM H. CAPEN, Mountain Lakes, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 25, 1920. Serial No. 412,864. 5 Claims. (Cl. 179—2.)



1. An intercommunicating system, comprising a master station set, and a plurality of local stations, each having a transmitter and receiver, means whereby said master station may engage in two-way communication with a distant station, and simultaneously each of said local stations may transmit to and receive from all of the other local stations, and means whereby said master station may listen in at will on the receiver circuits of all of the local stations together and each of the local stations may listen in on the master station, said means comprising a single circuit-closing means at each station.

---

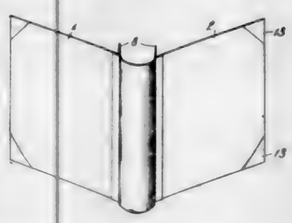
**1,565,629. BOOK AND COVER.** HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 11, 1918. Serial No. 257,706. 25 Claims. (Cl. 281—29.)



1. The book having covers comprising a plurality of layers of canvas fabric carrying and impregnated with cured phenolic condensation cementing material, vulcanized rubber corner and other reenforcements secured to said covers, a flexible canvas fabric back carrying soft cured phenolic condensation cementing material and having attaching portions incorporated in and cemented to said covers and book elements having connected attaching connecting portions cemented and permanently connected to said back and covers.

---

**1,565,630. PROCESS OF MAKING BOOKS AND COVERS.** HENRY C. EGERTON, Passaic, N. J., assignor to Harry L. Duncan, Ridgewood, N. J. Original application filed Oct. 11, 1918, Serial No. 257,706. Divided and this application filed Nov. 18, 1921. Serial No. 516,085. 14 Claims. (Cl. 281—27.)



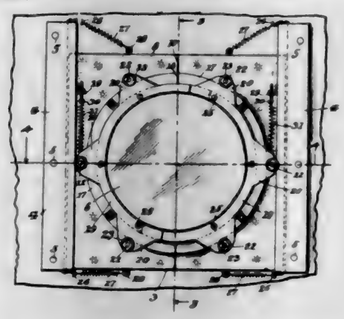
1. The process of making book covers which comprises superimposing a number of layers of canvas fabric carrying phenolic condensation cementing material to form stiffened covers, interposing flexible back members to unite said covers and incorporating vulcanized rubber wear resisting members on exposed portions of said covers and uniting and molding the elements of said covers and simultaneously curing said phenolic condensation material and vulcanized rubber by subjecting the elements to a heat and pressure curing treatment.

---

**1,565,631. WATER CLOSET.** WILLIAM R. FENSOM, Richmond, Va., assignor of one-half to Stanyarne Wilson. Filed Oct. 16, 1924. Serial No. 744,073. 2 Claims. (Cl. 277—16.)

1. The combination of a valve casing having an inlet connection at its lower end and an outlet at the side and a tapered portion between the lower end and said outlet, a non-threaded sleeve fitting within the casing and having a tapered inner end which fits against the tapered portion of the casing and also having a valve seat at said lower end, and an opening in the side registering with said outlet, a plug valve adapted to close upwardly against the seat, a cap on the upper end of the casing, confining the sleeve in place, and a stem connected to the plug valve and working thru said cap.

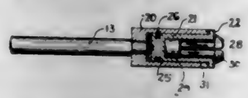
**1,565,632. PACKING BOX FOR PULP AND PAPER BEATERS.** WINFIELD J. FISH, Hamilton, Ohio, assignor of one-half to Abner Cress, Hamilton, Ohio. Filed Feb. 6, 1925. Serial No. 7,329. 6 Claims. (Cl. 92—24.)



1. In a packing box apparatus for beater shafts, a pair of parallel guide plates permanently secured in position, a packing element slidably mounted between said guide plates comprising a plurality of superimposed plates and rings, and spring means between said guide plates and packing element to yieldingly retain the latter in position, as and for the purposes described.

---

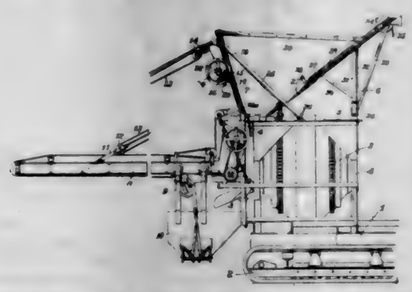
**1,565,633. MUSIC-ROLL SPINDLE.** STANLEY L. FISHER, Chester, Conn., assignor to The Pratt Read Player Action Company, Deep River, Conn. Filed May 6, 1921. Serial No. 467,342. 24 Claims. (Cl. 242—69.)



1. A music roll spindle comprising a shaft, a member rotatably carried by the shaft, a roll socket engaging means carried by said rotatable member and resiliently urged relatively thereto into snug engagement with the roll socket.

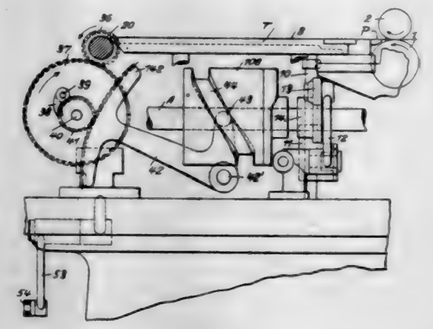
---

**1,565,634. BOOM DRIVE.** CHARLES E. FOOTE, Nunda, N. Y., assignor to The Foote Company, Inc., Nunda, N. Y., a Corporation of New York. Filed May 29, 1925. Serial No. 33,690. 15 Claims. (Cl. 214—17.)



1. In combination with a concrete paver, a boom, an A-shaped frame mounted on the paver, said frame tiltable from an upright to a horizontal position, and an adjustable cable extending from the frame to the boom and said frame and cable supporting the boom when the frame is in its horizontal and upright positions.

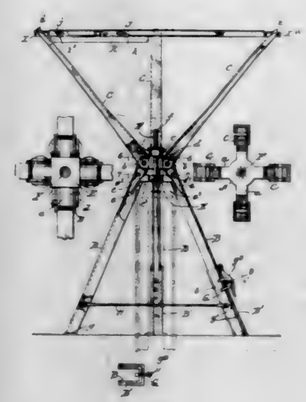
**1,565,635. METHOD AND MACHINE FOR MAKING PAPER TUBES.** PAUL GANGLER, Esslingen, Germany, assignor to the Firm Fr. Hesser Maschinenfabrik-Aktiengesellschaft, Stuttgart-Cannstatt, Germany. Filed Oct. 31, 1922. Serial No. 598,187. 8 Claims. (Cl. 93—81.)



1. Machine for making paper tubes comprising a mandrel, means for rotating said mandrel, means for feeding tube forming material towards said mandrel, means for cutting rhombic sheets from the material, means for operating said cutting means, a gripper hinged in a recess of said mandrel and adapted to engage the leading point of the rhombic sheet and means for operating said gripper.

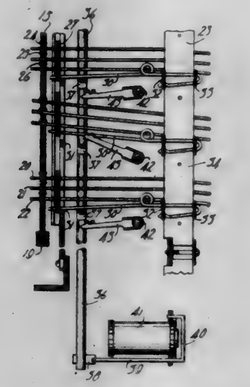
---

**1,565,636. FOLDING STOOL.** CHARLES GOETZ, New York, N. Y. Filed Feb. 19, 1923. Serial No. 619,860. 7 Claims. (Cl. 155—135.)



1. A folding stool embodying a foldable underframe and a collapsible seat structure, said seat structure being flexible and held in stretched demountable condition to said underframing, said underframing comprising legs and arms and an interposed member to which adjacent ends of said legs and arms are pivoted and means between said legs for distending the latter, said means including wedges on the legs adjacent said interposed member.

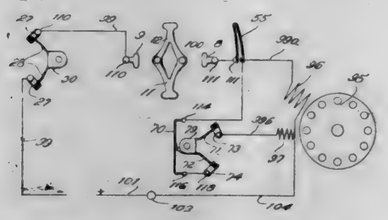
1,565,637. TELEPHONE SWITCH. HAROLD W. GOFF, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,465. 7 Claims. (Cl. 179—27.5.)



1. In a switching device, switch contacts, a slotted support and a retracting spring for moving said contacts held in said slots through the medium of its own tension.

---

1,565,638. INDUCTION-MOTOR-STARTING AND OVERLOAD SWITCH. ALBERT R. GOLDRICK, Cleveland, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 14, 1923. Serial No. 651,595. 14 Claims. (Cl. 172—279.)

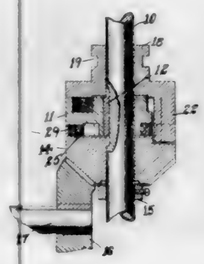


1. In combination, a motor having a field winding including a starting coil, a switch mechanism controlling the field and comprising contacts tending to open, a second switch mechanism having a similar group of contacts, carrier members supporting the contacts, a latch mechanism for engaging each carrier member, a manually operated mechanism for closing the contacts and for setting the latches, electro-responsive means associated with each switch mechanism for releasing the latches to allow the contacts to open upon an overload current traversing the field winding and a third switch mechanism operated only when said manually operable mechanism is actuated, for completing the starting coil circuit.

---

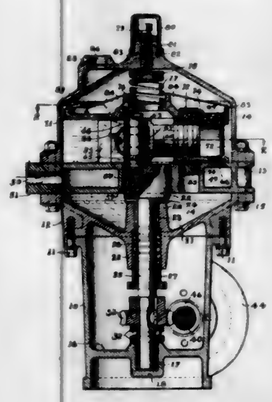
1,565,639. CLUTCH. ALBERT A. GORDON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 31, 1924. Serial No. 716,855. 4 Claims. (Cl. 192—67.)

1. A clutch having, in combination, a shaft to be driven, a member fixed to said shaft and having a peripheral recess therein, a driving member loose on said shaft and having a corresponding peripheral recess, a third member manually slidable on said shaft and having a projection slidable in said recesses to connect said driving member to said fixed member, said projection having an inner lug, a ring mounted in the upper face of said driving member and forming a shoulder for said lug, said ring having two peripheral recesses therein on opposite sides thereof to receive said lug, and means to turn said ring relative to said fixed and driving members.



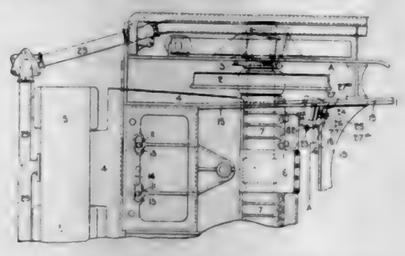
---

1,565,640. PUMP. LEE B. GREEN, Lakewood, Ohio, assignor of one-third to Earl L. Jones, Cleveland, Ohio, and one-third to Cassius L. Finney, Canton, Ohio, and one-third to Conrad B. Krause, Cleveland, Ohio. Filed Mar. 6, 1924. Serial No. 697,264. 8 Claims. (Cl. 230—6.)



1. In apparatus of the class described, the combination of a casing, a vertically arranged crankshaft therein, a horizontally arranged oscillating cylinder in said casing, a plunger in said cylinder operatively connected with said shaft to be actuated thereby, said casing being adapted to hold a lubricant in which said cylinder and plunger are submerged, a member cooperating with the upper side of said cylinder and having a port through which gases are discharged into said lubricant, and said casing having an outlet for gases above the surface of the lubricant.

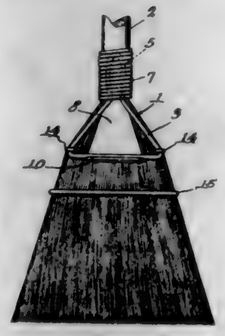
1,565,641. STEAM OR OTHER LOCOMOTIVE COMPRISING BOOSTER ENGINE OR MOTOR. HERBERT NIGEL GRESLEY, Hadley Wood, England. Filed Feb. 20, 1925. Serial No. 10,596. 8 Claims. (Cl. 105—48.)



1. In a locomotive, a main frame, trailer wheels, an axle on which said trailer wheels are fixed, a booster engine structure supported by said main frame and in driving connection with said axle, and means adapted to transmit directly to said main frame the thrusts set up when the booster engine is operating.

---

1,565,642. BROOM HOLDER. JOHN R. HARVEL, Muskogee, Okla. Filed Mar. 31, 1925. Serial No. 19,656. 1 Claim. (Cl. 15—171.)



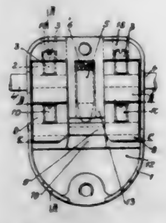
In a broom holder, a handle, spring clamping jaws securely arranged on opposite sides of the handle and normally extending in diverging relation, said jaws being formed of wire material and extending outwardly beyond the handle, cross ties slidably connected to the jaws, said cross ties being adapted to be moved towards the outer ends of the jaws to cause the jaws to move inwardly, and plates positioned under the jaws and secured to the handle and adapted to engage the side faces of a broom head inserted between the jaws.

---

1,565,643. OIL-PACKING WASHER. ROBERT LEE HAYS, Dallas, Tex. Filed Apr. 30, 1925. Serial No. 27,049. 1 Claim. (Cl. 288—1.)

A packing washer having a cylindrical split body provided with an annular flange of spaced radial segments; ears on the split portions of said body; a porous washer interiorly abutting said flange, and means to connect the said ears together.

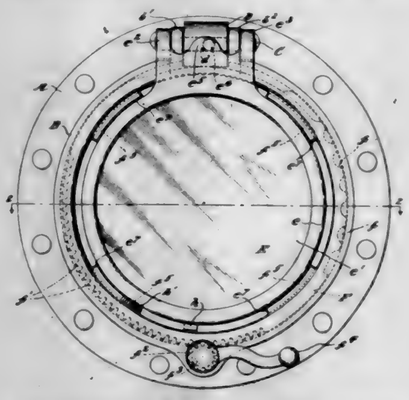
1,565,644. AUTOMATIC EXCESS-HEAT FUSE FOR ELECTRIC MACHINES AND APPARATUS. WILLIAM HICKEL, Zurich, and OTTO PLETSCHER, Jr., Albisrieden, Switzerland. Filed Aug. 11, 1923. Serial No. 656,885. 2 Claims. (Cl. 200—120.)



1. An automatic excess heat fuse for electric machines and apparatus, comprising a casing of insulating material, a snugly fitting lid connected detachably to said casing, two spaced contact pieces secured to said casing, spaced contact pieces connected to the lid so as to bear against the contact pieces of the casing, a fuse pin carried by the contact pieces of the lid so as to bridge the gap between them, and a spring-pressed plunger of non-combustible insulating material held by the casing so as to bear normally against the fuse pin and so as to be interposed between the pin holders when the fuse burns out.

---

1,565,645. PORT LIGHT. HARRY B. HILLS, Hudson, N. Y. Filed Jan. 6, 1922, Serial No. 527,876. Renewed June 5, 1925. 12 Claims. (Cl. 114—178.)



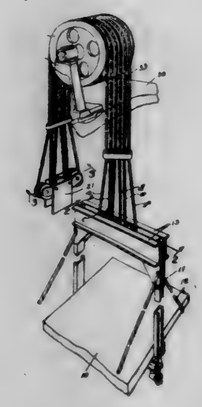
1. The combination with a casing for an opening; a cover for covering and uncovering the opening; a pivotal connection between the casing and cover; a ring having gear teeth for moving the cover on the pivotal connection; a shouldered recess on said ring; and a lip fitting in said recess to prevent its distortion when moving the cover on its pivotal connection.

---

1,565,646. CABLE EQUALIZER FOR ELEVATORS AND THE LIKE. JOHN W. HOBBS, Indianapolis, Ind., assignor to The Home Elevator Company, Indianapolis, Ind. Filed May 27, 1924. Serial No. 716,161. 4 Claims. (Cl. 187—1.)

3. A cable equalizing attachment for connecting the ends of the cables with an elevator and its counterweight, comprising a pair of levers having their adjacent ends pivotally connected and fulcrumed between their

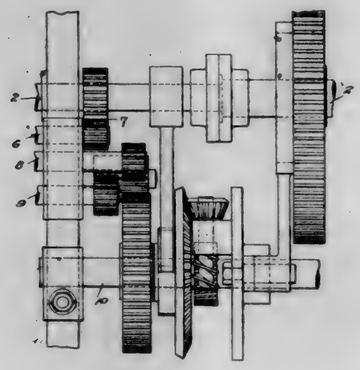
ends to said elevator, a similar pair of levers having their adjacent ends pivotally connected and fulcrumed between their respective ends to said counter-weight, pulley blocks pivotally mounted on the extreme ends of said levers, a pulley block pivotally mounted on the



pivotal connections between the adjacent ends thereof, two or more of said cables having one end directly connected with the last mentioned pulley blocks on said elevators and counter-weight, and the other cables partially passing about and having their ends connected with the first mentioned pulley blocks.

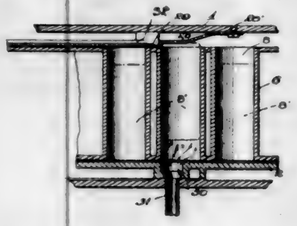
---

1,565,647. MACHINE FOR COMBING COTTON, WOOL, AND THE LIKE. JAMES HORRIDGE, Bolton, England, assignor to John Hetherington and Sons Limited, Manchester, England. Filed Apr. 16, 1924. Serial No. 706,806. 2 Claims. (Cl. 19—120.)



1. In a combing machine, the combination of a pair of nippers, three pairs of detaching rollers disposed in parallelism with said nippers, means for imparting to the pair of rollers nearest the nippers a continuous forward rotary motion, and means for imparting to both of the remaining pairs a partial forward and reverse motion, whereby the piecing operation is effected in the middle pair of rollers.

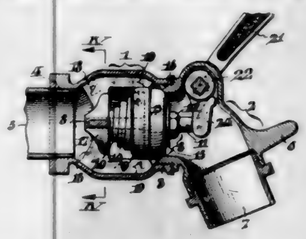
1,565,648. MACHINE FOR TRIMMING FRUITS. SIMMS T. HOYT, Honolulu, Territory of Hawaii, assignor to Hawaiian Pineapple Company, Limited, Honolulu, Hawaii, a Corporation of Hawaii. Filed Jan. 20, 1905. Serial No. 3,632. 17 Claims. (Cl. 146—6.)



1. A machine for trimming fruit, comprising a traveling carrier provided with a plurality of tubes each adapted to receive a fruit, a knife located adjacent the path of travel of said carrier, and means for admitting fluid under pressure into one end of the tubes, whereby to move the contained fruit longitudinally therein, and project the end of the fruit into the plane of the knife.

---

1,565,649. FAUCET. JAMES A. JENSEN, Philadelphia, Pa., assignor to Quaker City Iron Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 25, 1924. Serial No. 739,809. 5 Claims. (Cl. 251—156.)



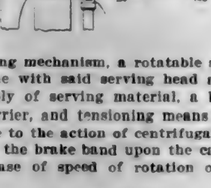
1. In a faucet of the character described, the combination of a casing providing a concentric abutment head having the leading face divergently sloped and a valve seat; a hollow closure member afforded guidance in the abutment head while movable toward and away from the valve seat; a spring influential upon the closure member to resist valve opening; said abutment head operating with the closure member to form a confined cavity for wholly accommodating the spring when compressed.

5. In a faucet of the character described, the combination of a casing providing a valve seat; a closure member having a rearward projecting stem movable toward and away from the valve seat; and a fixed abutment head centrally pierced to slidingly receive the stem of the closure member, said head being supported coaxially within the casing by a number of radial ribs, and said ribs extended longitudinally of the casing to assist in guiding said closure member.

---

1,565,650. CHECK VALVE. WILLIAM A. KEE, Joplin, Mo., assignor of one-fourth to Jesse A. Worley and one-fourth to Cullis M. Humphreys, both of Baxter Springs, Kans. Filed Dec. 30, 1924. Serial No. 758,870. 2 Claims. (Cl. 251—127.)

1. A check valve comprising a relatively large valve chamber having substantially axial inlet and outlet openings, a valve seat arranged in said chamber, a valve adapted to engage against one side of said seat, said casing being provided with a substantially radial opening substantially equal in width to the diameter of said valve, and a cover for said radial opening, a portion of said valve being adapted to engage the walls of said



chamber to be guided thereby, said cover being provided with an inward extension adapted to engage another portion of said valve to serve as a guide therefor.

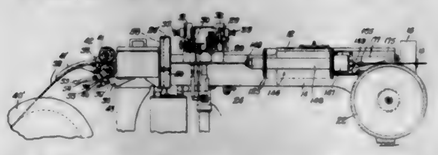
---

1,565,651. CHANGEABLE FINGER RING. MARTIN KLASS and SAMUEL STERN, New York, N. Y. Filed Apr. 30, 1924. Serial No. 710,030. 3 Claims. (Cl. 63—16.)

3. A finger ring comprising a pair of circular bands alike in all respects and arranged in reversed relation, said bands having between them two opposed spaces to receive stones, said bands being closed in at two opposite points and fixedly united, forked ears extending laterally from each side of said bands at their connections, and semi-circular side elements pivoted to the sides of said bands adjacent the closed in portions to fold adjacent the sides of said bands, said side elements having stone receiving openings in their peripheral faces and having designs on their side surfaces.

---

1,565,652. TAPING MACHINE. FREDERIC SHIELDS KOCHENDORFER, River Forest, and MILTON EARL ROBINSON, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 31, 1922. Serial No. 585,562. 42 Claims. (Cl. 117—41.)



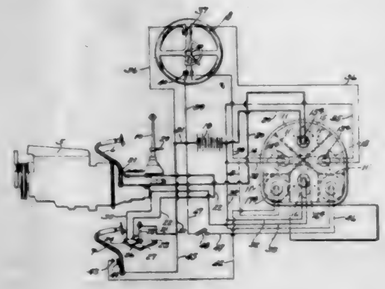
1. In a serving mechanism, a rotatable serving head, a carrier rotatable with said serving head and adapted to support a supply of serving material, a brake band engaging said carrier, and tensioning means for said brake band responsive to the action of centrifugal force whereby the pressure of the brake band upon the carrier decreases with the increase of speed of rotation of said serving head.

---

1,565,653. AUTOMOBILE TRAFFIC SIGNAL. WILLIAM H. KRUMPELMANN, St. Paul, Minn. Filed Oct. 11, 1922. Serial No. 593,869. 1 Claim. (Cl. 200—59.)

The combination with a motor-propelled vehicle equipped with a selective gear transmission having a gear shift lever, of primary and secondary contact plates insulated from each other, the former located in three and the latter in one quadrant of a circle, and a contact

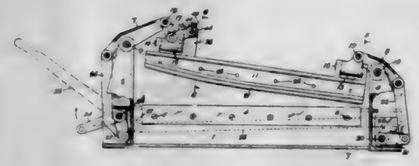
member carried by said shift lever and movable over said primary and secondary contact plates but being out of electrical contact with both thereof when said shift lever is in neutral position, said movable contact being thrown



into engagement with said primary contact plate when said shift lever is in low, intermediate or high position and being engageable with said secondary contact plate when said lever is in position for reverse.

---

1,565,654. CUTTING MACHINE. ALFRED LAUKHUFF, Shorewood, Wis. Filed June 19, 1923. Serial No. 646,330. 18 Claims. (Cl. 164—58.)



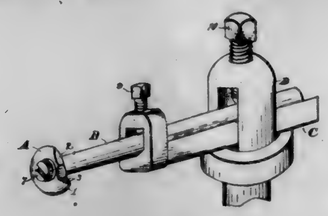
1. In a cutting machine the combination of relatively movable blades and mechanism adapted to close the blades with a retarded shorter movement at one end and an accelerated longer movement at the other end.

---

1,565,655. METALLIC BOBBIN FOR PHOTOGRAPHIC OR LIKE FILMS. GEORGES EUGENE LEFEBVRE, Joinville-le-Pont, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Filed Aug. 19, 1924. Serial No. 732,929. 2 Claims. (Cl. 242—71.)

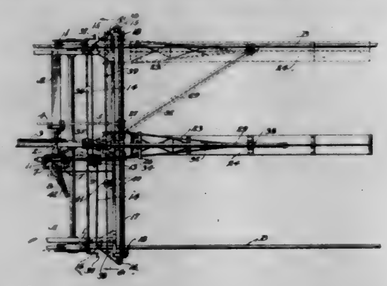
1. A bobbin for photographic films, comprising in combination a metallic tube formed by a blank cylindrically bent so as to bring its longitudinal edges into contact, two metallic discs forming the cheeks of the bobbin and being provided with a central aperture and circularly disposed slots, tongues being struck up in the metal of said discs close to said slots, the transverse edges of said blank being provided with tongues that are engaged into said slots and under the tongues of the said discs, and the latter tongues being forced down upon the tongues of the blank, the whole being driven down flush with the surface of the discs.

1,565,656. LATHE TOOL. FRED J. LEGGOTT, Battle Creek, Mich. Filed July 5, 1923. Serial No. 649,597. 1 Claim. (Cl. 29—98.)



In a tool of the class set forth, the combination with a disc-shaped cutter having a peripheral notch and formed with a round central hole having a longitudinally fluted wall, a round supporting bar having a reduced concentric longitudinally fluted shank, said shank being complemental with and adapted to receive said cutter, said bar having a clearance space between the inner ends of the ribs on its fluted shank and a shoulder of said bar against which said cutter is adapted to operatively abut from either side, and means to secure said cutter on said bar, substantially as and for the purpose set forth.

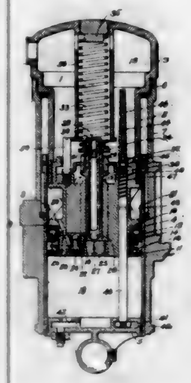
1,565,657. ROAD-FINISHING MACHINE. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed May 20, 1922. Serial No. 562,480. 19 Claims. (Cl. 94—46.)



1. A machine for finishing concrete roads comprising a support adapted to travel over the subgrade on which the concrete aggregates are to be laid, a finishing member disposed longitudinally of the road and movable longitudinally upon said support for performing its finishing work, while in engagement with aggregates laid upon the road subgrade, means to effect such movement of the finishing member longitudinally of the road and means to gradually vary the point of application of the finishing member to the plastic aggregates in a direction transversely of the road and during said longitudinal finishing movement of the longitudinal finishing member.

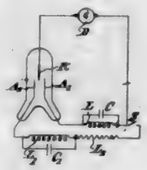
1,565,658. AIR-SPRING SUSPENSION. RICHARD LIEBAU, New Haven, Conn., assignor to The Westinghouse Air Spring Company, a Corporation of Pennsylvania. Filed Feb. 26, 1919. Serial No. 279,434. 3 Claims. (Cl. 267—65.)

1. In an air spring, relatively movable members having a sliding joint therebetween and forming a cushion chamber capable of extension and compression movements, a chamber for collecting the oil passing said joint, a pump operable upon compression and extension movements of said spring and constructed so as to function both as an air and as an oil pump for pumping air and oil from said collecting chamber to said cushion



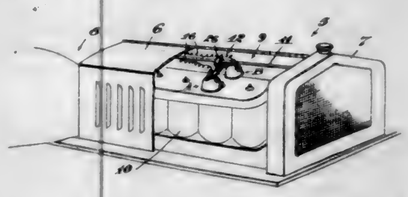
chamber, and means including a minute spiral channel for bleeding air from said cushion chamber upon abnormal extension movements of said spring.

1,565,659. HIGH-VACUUM DEVICE FOR INFLUENCING CURRENTS. JULIUS E. LILIENFELD, Kew Gardens, N. Y. Filed Sept. 3, 1921. Serial No. 498,391. 11 Claims. (Cl. 250—27.)



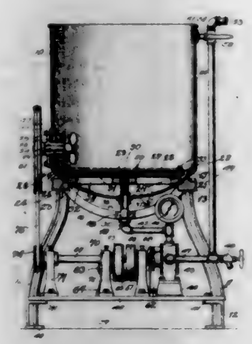
4. Apparatus of the character described, comprising an envelope evacuated to such a degree that ionization is substantially prevented, an unheated cathode having a surface of small radius of curvature, an anode in close proximity to the said surface, a second anode, means including the cathode and the first anode for producing a non-oscillatory discharge and means including the second anode for producing an oscillatory discharge.

1,565,660. AUTO HOOD LAMP. MARY L. LITTLE, Long Beach, Calif. Filed June 29, 1925. Serial No. 40,235. 3 Claims. (Cl. 240—7.1.)



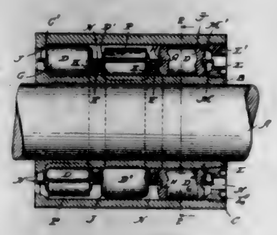
1. In an auto hood lamp, a pair of complementary brackets, adapted to be placed end to end and having their meeting ends upturned and forming collectively a pair of jaw members, clamping means connecting the upturned end portions of said bracket, and a lamp carried on the outer ends of each of said brackets.

1,565,661. FILTER. FRANK B. LOMAX, Chicago, Ill. Filed Sept. 29, 1924. Serial No. 740,432. 19 Claims. (Cl. 127—22.)



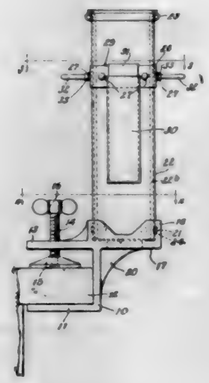
2. In combination, a container, a horizontal filtering partition separating said container near the bottom into two superposed compartments, means for agitating the material in the upper compartment, means for withdrawing material from the lower compartment, a stand for supporting the container and a connection between the stand and the bottom of the container for securing the latter in position on the stand, said means comprising an outlet through which the material is withdrawn and having openings leading into the lower compartment.

1,565,662. ROLLER BEARING. CHARLES I. LOTT, Norfolk, Va. Filed Oct. 7, 1920. Serial No. 415,223. Renewed Oct. 14, 1925. 5 Claims. (Cl. 64—62.)



1. The combination with a one-piece cylindrical bearing member having at one end an annular projection forming a conical bearing surface, of a concentric sleeve spaced from said member and having an annular projection forming a conical, co-acting bearing surface in the plane of the projection first mentioned, an annular series of cylindrical rollers fitting the space between said surfaces, primarily movable into and out of one end of said space, and terminally diminished to form rounded end surfaces, and a conical ring secured in said end to retain the rollers in place.

1,565,663. HOLDER FOR PLUMB RULES. JOHN LUNDSTROM, Evanston, Ill. Filed Apr. 26, 1924. Serial No. 709,108. 3 Claims. (Cl. 206—16.)



1. A holder for a plumb rule and the like embodying a clamp, a portion of the clamp being shaped to form a base and upstanding walls, a tubular element open at both ends, one of the ends of the tubular element being disposed within the said walls and supported by the said base, and interlocking means, between the walls of the tubular member and the said upstanding walls.

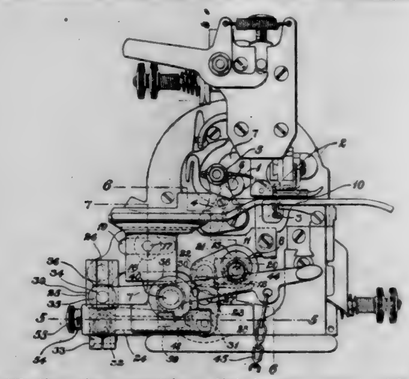
1,565,664. FASTENING DEVICE. CLARENCE MAYER, Chicago, Ill., assignor to Nature's Rival Co., Chicago, Ill., a Corporation of Illinois. Filed July 16, 1923. Serial No. 651,745. 1 Claim. (Cl. 2—265.)

As an article of manufacture hook tape comprising a strip of tape having hooks riveted thereto in spaced relation with the entirety of the hooks lying between the edges, and a superposed strip of tape completely overlying the shanks and the rivets of said hooks on said first named strip and having openings intermediate its edges, the return-bend portions of the bills of the hooks projecting through said openings, both of said strips constructed and arranged to be sewed to a garment by parallel rows of stitching along the opposite edges on opposite sides of the row of hooks with the fabric concealing the rear ends of the rivets; said strip of tape, overlying the hook strip, presenting portions cooperating with the shanks of the hooks between the return bends and the rivets.

1,565,665. SEWING MACHINE. JOSEPH M. MERROW, Hartford, Conn., assignor to The Merrow Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 20, 1923. Serial No. 658,382. 7 Claims. (Cl. 112—210.)

1. Sewing machine feed mechanism including in combination, a pair of eccentrics, a feed dog carrier supported for oscillatory and reciprocatory movement and embrac-

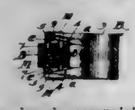
ing one of the eccentrics, a rocker having pivotal connection with the feed dog carrier, a fulcrum pivot movably associated with the rocker, a link in engagement



with the other eccentric, a link in engagement with the rocker, and a second rocker having pivotal connection with each of the links.

---

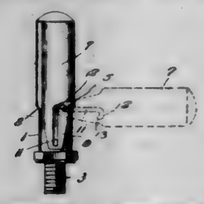
1,565,666. COMMUTATOR BRUSH. HENRY W. MUHLEISEN, Los Angeles, Calif. Filed Jan. 11, 1923. Serial No. 612,101. 6 Claims. (Cl. 200—26.)



3. A commutator brush comprising an integral body having a sleeve formed thereon for attachment to a driving shaft, and a pair of arms radially extended from said sleeve and spaced apart, the adjacent edges of said arms being correspondingly tapered outwardly in opposite directions, a supporting member slidably held in the ends of said arms, a roller rotatably held on said supporting member between said arms, and means within said supporting member and engaging the tapered edges of said arms for resiliently holding said roller outwardly from said sleeve, said arms having end portions for limiting the outward movement of said roller.

---

1,565,667. DUST CAP. EMANUEL NELSON and ADOLPHUS ADDISON BASSETT, Glendale, Calif. Filed Oct. 31, 1924. Serial No. 747,039. 2 Claims. (Cl. 152—12.)



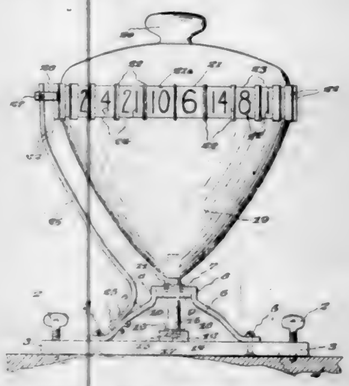
1. A dust cap comprising a sleeve threaded at its lower end on the usual valve stem, laterally extending pins at diametrically opposite points on the upper portion of the sleeve, a cap member, ears on the lower portion of the cap at diametrically opposite points, said ears being provided with bayonet slots for cooperation with the aforementioned pins on said sleeve to permit the cap to normally cover the upper end of the valve stem, and further permit the outward swinging movement of the cap with respect to the sleeve for uncovering the upper end of the valve stem for inflating purposes.

1,565,668. HAMMER. MOSES NICHOLLS, Libertyville, Ill., assignor of one-half to Milton J. Wolcott, Exeland, Wis. Filed Mar. 3, 1924. Serial No. 696,631. 1 Claim. (Cl. 145—61.)

In a device of the type described, a handle for supporting a tool head, superimposed metal and fiber inserts disposed at the side of said handle at the tool head supporting end thereof, said inserts being of uniform thickness throughout their length, said handle tapered toward the tool supporting end to a relatively narrow extremity, and said inserts being further fashioned to the same width as said handle at the outer end and being relatively narrow in width at the neck portion of the handle, and means for securing said inserts against removal from said handle.

---

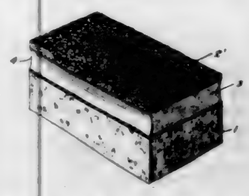
1,565,669. AMUSEMENT DEVICE. HARRY E. O'REILLY, Chicago, Ill. Filed Nov. 2, 1923. Serial No. 672,360. 3 Claims. (Cl. 273—143.)



3. An amusement device comprising a base having bearings, a gyratory member having a shaft supported by said bearings, said member being provided with a series of indications and radial members dividing said indications, an arm on said base and having a pointer adapted to engage said radial members, and manual engaging means on said gyratory member for actuating the same.

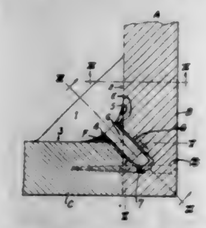
---

1,565,670. DRAFTSMAN'S POUNCE BLOCK. FLOYD PHILP, Lompoc, Calif. Filed Sept. 30, 1924. Serial No. 740,883. 3 Claims. (Cl. 91—62.5.)



1. A pouncing device for tracing cloth and other drawing surfaces comprising a block of pounce material having a strip of fibrous material secured thereto.

1,565,671. WEB-FORMING ATTACHMENT FOR FOUNDRY PATTERNS AND THE LIKE. CHARLES H. REEDER, St. Louis, Mo. Filed Apr. 29, 1925. Serial No. 26,605. 9 Claims. (Cl. 22—164.)



9. In a foundry pattern and the like, wall portions arranged at an angle to each other so as to form a corner, a fillet in said corner, said pattern being provided with an opening circular in cross section which extends through said fillet and into a wall of the pattern, and a web-forming attachment, said web-forming attachment comprising a wing having edge faces adapted to contact with faces of said wall portions, a curved face uniting said edge faces and adapted to contact with a face of said fillet, fillets on said wing adjacent to said edge faces and said curved face, and a prong formed on said wing and projecting from the curved face thereof, said prong being rectangular in cross section and being forced into said circular opening in said pattern to secure said wing to said pattern.

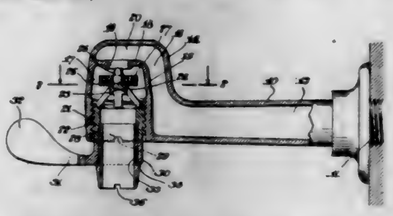
---

1,565,672. DISPLAY DEVICE. RUSSELL I. RHODES, Attleboro Falls, Mass., assignor to The Mason Box Co., Attleboro Falls, Mass., a Corporation of Massachusetts. Filed Dec. 24, 1924. Serial No. 757,900. 4 Claims. (Cl. 211—28.)

1. A display tray or the like, comprising a body member having a wall of relatively stiff penetrable material, angular wing members for supporting said tray in inclined position, and metal non-resilient plates of bendable metal having integral attaching prongs which respectively engage said wall and said wing members, whereby said wing members may be folded flat against said wall for shipment, or swung outward at right angles thereto and retained in supporting position.

---

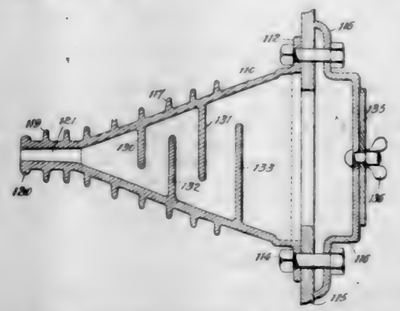
1,565,673. FAUCET. CHESTER RICK, Philadelphia, Pa. Filed Aug. 17, 1923. Serial No. 657,880. 8 Claims. (Cl. 251—8.)



2. A faucet comprising a body having a supply passage and a valve chamber separated by an internal partition wall, there being an inlet opening in said wall at the upper end of said valve chamber, a tubular member connected with said body and rotatable with respect thereto, a valve carried by said tubular member for closing said inlet opening, a spout member secured to and projecting below said tubular member, a shoulder on said spout member, and a handle clamped between the lower end of said tubular member and the shoulder on the spout member.

---

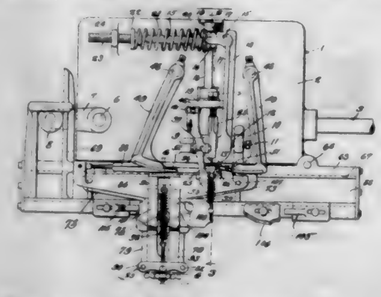
1,565,674. COAL CARBURETOR. DAVID WENTWORTH ROBB, Amherst, Nova Scotia, Canada. Filed Jan. 19, 1923. Serial No. 613,747. 4 Claims. (Cl. 110—75.)



1. A coal carburetor consisting of a conoid and an integral flat arcuate portion, the latter having a narrow slotted nozzle, a plurality of baffles extending from the central portion only of the upper wall of the conoid, and additional baffles staggered with respect to the first mentioned baffles for causing the air passing from the entrance of the carburetor to the center of the nozzle to travel in a tortuous path while permitting free passage of the air from the entrance to the sides of the nozzle.

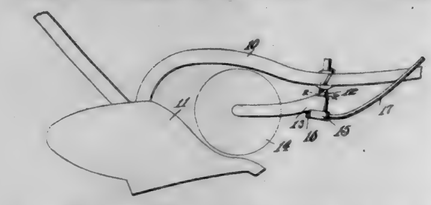
---

1,565,675. MACHINE FOR SETTING AND FILING SAWS. EDGAR L. ROOT, Defiance, Ohio. Filed Nov. 28, 1922. Serial No. 603,785. 4 Claims. (Cl. 76—33.)



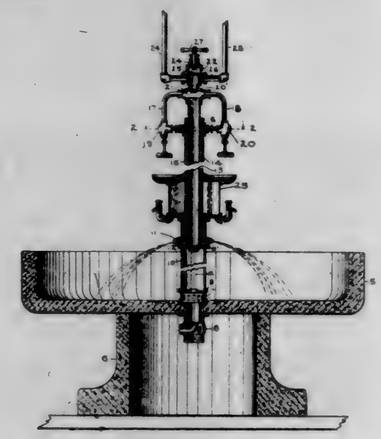
1. The combination with saw gripping means, of a carriage mounted for reciprocation, a guide extending therefrom, separate heads slidably mounted relative to the guide, sharpening files carried by the respective heads, arms extending from the respective heads, an equalizing link pivotally mounted on the arms, yielding means engaging the link for holding the arms normally pressed toward the saw, adjustable means for limiting the movement of said arms toward the saw, a slide shiftable with one of the heads and movable bodily relative to both heads, means operated by the movement of the slide in one direction relative to the head for withdrawing one of the files from the saw, means operated by the movement of the slide in the opposite direction for withdrawing the other file from the saw, and stationary means in the path of the slide for producing relative movement of the slide and heads during the completion of the respective movements of the carriage.

1,565,676. COLTER ATTACHMENT. HARRY H. SANDMAN, Havana, Ill. Filed May 28, 1924. Serial No. 716,394. 1 Claim. (Cl. 97—193.)



A weed deflector for use in connection with the stem and fork of a plow colter comprising an upwardly curved deflector arm having a collar on one end thereof, means for adjustably securing said collar to said stem and a lug extending from one end of the collar in parallel relation to the axis of the collar at a point diametrically opposite to said arm and arranged to lie within the bifurcation of said fork, whereby to limit the side swing of said colter fork.

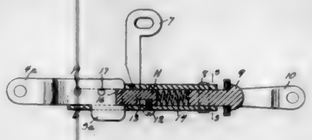
1,565,677. OVERHEAD-SUPPLY WASHFOUNTAIN. LOUIS SCHLESINGER and HERMAN E. HEINE, Milwaukee, Wis., assignors to Bradley Washfountain Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 17, 1925. Serial No. 37,782. 5 Claims. (Cl. 4—191.)



1. An overhead supply washfountain, comprising a standard having a basin thereon, a tubular member extending upwardly from the basin, a fountain mounted on the tubular member and having a line of spray openings, another tubular member connected to the fountain and surrounding the first mentioned tubular member and extending upwardly from said fountain to form a water conduit between the two tubes, a mixing chamber above the tubular member, and valved controlled means for supplying water to the mixing chamber.

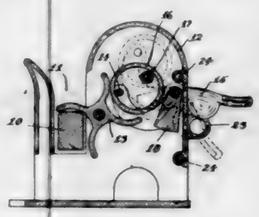
1,565,678. LOCKING CHAIN SNAP. ELMER SEVERSON, Deerfield, Wis. Filed Sept. 2, 1925. Serial No. 54,158. 1 Claim. (Cl. 24—230.)

In a device of the kind described, a square tubular frame with the forward top portion removed and a mortise through the bottom plate adapted to receive the tang of a latch, a plurality of aligned mortises through both top and bottom plates, one for admitting a key, and the other for disposing a pin for securing a headed bolt within the rear end of the frame, for revolubly mounting a clevis for attaching to a chain, a latch with the outer end bifurcated for attaching a chain, and the inner end provided with a notched tang adapted to seat in the mortise in the bottom of the frame, a



slidable bolt disposed within the frame the rear end contacting a spring between it and the front end of the headed bolt, and the front end adapted to enter the notch in the latch, a channel in one side of the bolt for admitting a key, and one in the bottom to receive a screw for restricting the forward movement of the same, in combination with a key for unlocking the latch.

1,565,679. SWITCH-STAND LOCK. LARKIN R. SHAFFER, Garland, Utah. Filed Feb. 4, 1925. Serial No. 6,824. 6 Claims. (Cl. 70—128.)

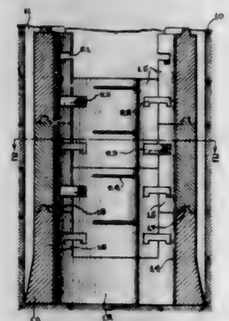


1. In a switch stand lock, the combination of a casing, a switch lever associated with the casing, a latch comprising a plurality of arms journaled in said casing, one of said arms being adapted to engage the lever, an abutment within the casing adapted to be engaged by another of said arms to hold said latch in its lever locking position, and means for removing said abutment to free the latch arms and switch lever.

1,565,680. SAFETY RAZOR. WESLEY L. SILVERWOOD, Baltimore, Md. Filed May 25, 1925. Serial No. 32,754. 4 Claims. (Cl. 30—12.)

1. In a safety razor a substantially rectangular clamping plate and a relatively large rib extending transversely of said clamping plate so as to cause the skin to be formed into one or more ridges when the razor is in use, thereby simulating the ordinary process of shaving with an old style razor.

1,565,681. WELL CASING. KRISTEN SONDERBY, Rockford, Ill. Filed May 4, 1925. Serial No. 27,940. 10 Claims. (Cl. 72—12.)

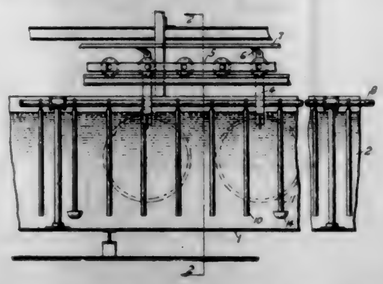


1. A well casing comprising a base, a plurality of interlocking sections upon said base, means for locking said sections together to form an integral unit, and a plurality of steps secured to a predetermined number of said locking means to permit ingress or egress of the casing.

1,565,682. COMPOSITE PAVEMENT OR ROADWAY AND METHOD OF CONSTRUCTING THE SAME. CHARLES M. STRAHAN, Athens, Ga., assignor of one-half to Sam E. Finley, Atlanta, Ga. Filed Mar. 7, 1923. Serial No. 623,481. 10 Claims. (Cl. 94—6.)

1. The method of constructing roadways, pavements and the like which comprises forming hollow cellular units with closed sides and bottoms in the body of the road structure of waterproof cementitious material in sheet-like form, packing the cellular units with a filling material, and applying a cover of waterproof material to the cell units.

1,565,683. METHOD AND APPARATUS FOR ELECTROPLATING. JOSEPH G. SWAIN, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 12, 1923. Serial No. 674,119. 9 Claims. (Cl. 204—18.)

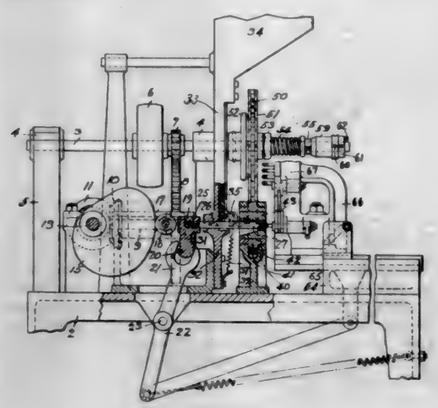


1. In a process of electroplating, the steps of subjecting the article to be electroplated to an electrolyte charged simultaneously from anodes of zince and metallic mercury.

1,565,684. APPARATUS USED FOR THE STERILIZING OF TOOTHBRUSHES AND SIMILAR ARTICLES. VICTOR JULIEN MARIE THÉSÉE, Brest, France. Filed May 21, 1923. Serial No. 640,469. 1 Claim. (Cl. 206—15.1.)

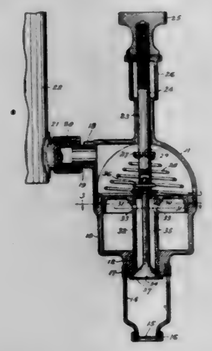
A sterilizer for tooth brushes including an open ended hollow prismatic body of polygonal shape in cross section formed of glass free from lead, one of the walls of the body being relatively wide and flat to serve as a support when the body is in a horizontal position and the opposite wall being of convexed formation while the remaining portions are concaved, the ends of the body being annular, perforated caps for removably closing the ends of the body, a second cap arranged in spaced relation to and engaged by one of the first mentioned caps, and a relatively small sterilizing substance containing vessel arranged in the space between the last mentioned caps and having a perforated cover, substantially as and for the purposes set forth.

1,565,685. MACHINE FOR APPLYING NUTS TO BOLTS. HANSON THOMAS, Pittsburgh, Pa. Filed Nov. 20, 1920. Serial No. 425,446. 3 Claims. (Cl. 10—155.)



3. In a machine for assembling nuts and bolts, the combination with a rotatable member for supporting a nut in screwing-on position, a support for a bolt, means for moving a bolt carried by said support to nut receiving position, means for rotating said rotatable member, yieldable driving means for said member, and adjustable means for varying the pressure exerted by said driving means to render the same inoperative when the resistance to screwing on movement reaches a predetermined degree.

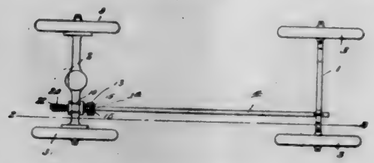
**1,565,686. DISPENSING VALVE.** THOMAS L. TITUS, Omaha, Nebr. Filed Jan. 24, 1925. Serial No. 4,559. 7 Claims. (Cl. 221—103.)



1. In a device of the class described, a casing having a cylinder portion and a reduced neck extending from one end of said cylinder, a piston fitting slidably in said cylinder portion and having a tubular stem fitting slidably in said neck, said piston and tubular stem having valve-seats formed at opposite ends of the passage through the same, there being ports through the side of the stem connecting the cylinder-space with said passage intermediate said valve-seats, and a pair of valves connected for coincident movement and adapted to engage the respective valve-seats to close alternatively the ends of the passage through the piston and tubular stem.

---

**1,565,687. TIRE-DEFLATION SIGNAL APPARATUS.** JOHN W. TOMLINSON, St. Petersburg, Fla. Filed Nov. 3, 1922. Serial No. 598,713. 1 Claim. (Cl. 200—58.)

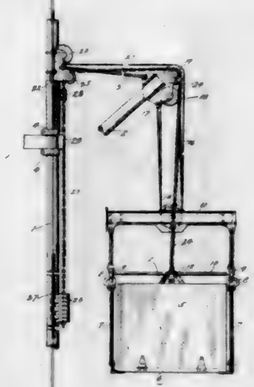


A flat tire detector for an automobile, comprising a bar adapted to be disposed transversely of both axles of the automobile, means for fixedly securing the bar to one axle, means for connecting the bar with the other axle whereby the bar may have rotary movement in respect to the last mentioned axle, a bifurcated terminal carried by the last mentioned axle, and a terminal mounted upon the bar and disposed transversely of the bifurcated terminal, the last mentioned terminal being disposed between the bifurcations, and normally spaced from the inner edges of the bifurcations.

---

**1,565,688. BATCH-BOX-HOISTING APPARATUS.** EMIL L. TRANAAS, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 3, 1922. Serial No. 572,546. 14 Claims. (Cl. 212—41.)

1. In combination, a crane comprising a boom, a mast on which said boom is hung equipped with a stationary hook, a dumping box for carrying a batch of material from one place to another and having dumping means for discharging the material therefrom, grappling devices for the said box, hoisting means on the crane connected with said devices and including a flexible part movable up and down as the box is moved up and down, and a



stop member carried by said flexible part adapted to be thrown into and out of cooperative relation to the said hook by a swinging movement of the crane substantially as described.

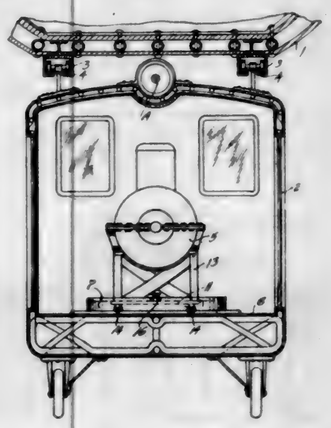
---

**1,565,689. PROCESS OF TREATING ORES.** WILLIAM R. VAN SLYKE, Eveleth, Minn. Filed Mar. 7, 1921. Serial No. 450,624. 3 Claims. (Cl. 75—14.)

1. The process of treating iron ores comprising sintering the burden to produce a porous structure therein, adding a nonporous fuel thereto and smelting the charge to recover the iron-content.

---

**1,565,690. ENGINE MOUNTING.** EBER H. VAN VALKENBERG, Monroe, Wash., assignor of one-half to Oscar Silverstein, Spokane, Wash. Filed Apr. 27, 1925. Serial No. 26,079. 4 Claims. (Cl. 244—25.)



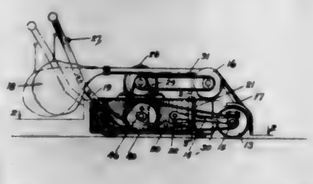
1. In an engine mounting the combination with a stationary arcuate track and an oscillatable bearing head and means for centering said head on its vertical axis, of an engine having a base plate supported in said track, a propeller shaft operated by the engine and journaled in said head, and a propeller on the shaft.

**1,565,691. ELECTRODE FOR USE IN THE CONTACT PROCESS OF MAKING SULPHURIC ACID.** FRANZ VORLÄNDER and HERMANN WEBER, Wolfen, Kreis Bitterfeld, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed June 29, 1925. Serial No. 40,450. 7 Claims. (Cl. 185—7.)

1. In the art of making sulphuric acid by the contact process, an electric precipitator the electrodes of which are composed of frame elements carrying a coat of lead, the frame elements consisting of material which does not react upon sulphuric acid evolving hydrogen.

---

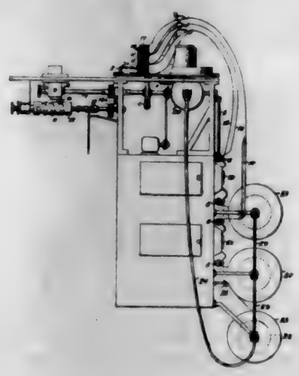
**1,565,692. FLOOR-DRESSING MACHINE.** GUY C. WALTER, Denver, Colo. Filed June 24, 1924. Serial No. 722,099. 4 Claims. (Cl. 51—176.)



1. In a floor dressing machine, the combination of a carriage, a jack-shaft thereon, a motor having a driving connection with the jack shaft, a worm-gear to propel the carriage by movement of the shaft, a clutch controlling the operation of the gear, mechanism for the operation of the clutch, including a sliding cam member in operative connection with the clutch, a rotary cam-member in spring-urged engagement with the other, a lever fulcrumed on the carriage, and means for rotation of the rotary cam member by movement of the lever.

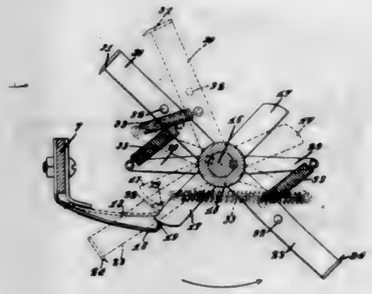
---

**1,565,693. CINEMATOGRAPHIC-FILM PRINTER.** EDWARD JOHN WAY, Johannesburg, Transvaal, South Africa. Filed Apr. 23, 1923. Serial No. 634,188. 3 Claims. (Cl. 95—75.)



1. In combination with a machine, such as a film printing machine adapted for operating on several films together and including film feeding mechanism, a rotatable carrier, adapted to carry several film coils, means geared to said film feeding mechanism for rotating said carrier to cause delivery of film from film coils on the carrier at the same linear rate at which the film is fed by the feed mechanism, and means for winding simultaneously several films which have passed through the machine.

**1,565,694. COTTON CHOPPER.** HENRY F. WEAVER, Ezra, Ill. Filed Apr. 28, 1924. Serial No. 708,471. 4 Claims. (Cl. 97—15.)

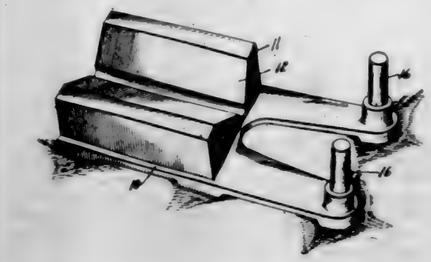


1. A cotton chopper including a frame rotatable shaft, arms rotatable therewith and mounted for limited independent rotation, a cutting element carried by each arm, springs for yieldingly swinging the arms in predetermined positions relative to the shaft, separate means upon the frame and cooperating with the arms for separately retarding said arms during the rotation of the shaft to increase the tension of the springs, and means rotating with the shaft for releasing the restrained arms.

4. In a cotton chopper the combination with a rotatable shaft, of arms mounted for limited independent rotation upon the shaft, cutting elements carried by the arms, springs attached to the arms for holding them yieldingly against independent rotation, resilient restraining means extending close to the path of the arms, means on the arms for engagement with the restraining means for holding the arms successively against rotation with the shaft and to place the springs under increased tension, and means rotatable with the shaft for shifting the restraining means to release the held arm for actuation by its tensioned spring.

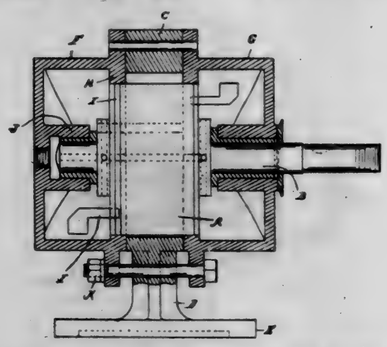
---

**1,565,695. WORK-TESTING FIXTURE.** OSCAR A. WEBSTER, Edgewood, R. I., assignor to Allen Wrench & Tool Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 1, 1921. Serial No. 457,601. 6 Claims. (Cl. 33—180.)



1. A work-testing fixture comprising a frame having an elongated body portion with a finished testing surface disposed longitudinally thereof for supporting one end of the work to be tested, and a pair of cooperating spaced-apart standards on said frame having testing surfaces extending at right angles to the testing surface of said body portion and spaced therefrom in the direction of its length.

1,565,696. ROTARY PUMP. THOMAS C. WHITEHEAD, Detroit, Mich. Filed July 23, 1923. Serial No. 653,284. 9 Claims. (Cl. 230—30.)



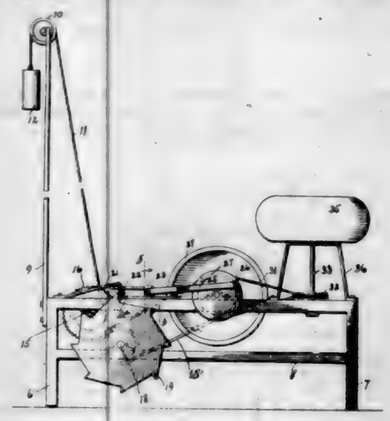
1. A rotary gas pump comprising a rotor having one or more radial blades slidably connected therewith and of a length less than the length of the rotor, a housing for the gas surrounding said rotor having an eccentric wall with which said blades contact, and concentric portions containing oil on the opposite ends of said eccentric portion surrounding the end portions of the rotor, and sealing rings mounted upon and movable with said rotor engaging said surrounding concentric wall of the housing.

1,565,697. TAMPING TOOL. WILLIAM C. WOLFE, Anderson, Ind. Filed Mar. 20, 1925. Serial No. 17,006. 6 Claims. (Cl. 104—14.)

1. A tool of the character described, including a spade-like member having a passage therethrough, a flexible hose communicating with said passage for conducting fluid under pressure therein, and a flared bottom to said member having an eolngated slot adjacent thereto in communication with said passageway for directing the fluid laterally for engaging said material.

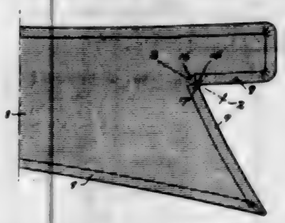
1,565,698. CREAM-TESTING MACHINE. HARRY A. WRIGHT, Hillsboro, Ohio. Filed Oct. 8, 1921. Serial No. 506,476. 3 Claims. (Cl. 185—27.)

1. An apparatus of the class described comprising a supporting frame, a vertical standard and pulley mounted thereon, said standard secured to the frame, a cable having a weight attached to one end and wound over said pulley, a horizontal shaft and reel rotatable thereon for receiving the wound cable, ratchet and pawl mechanism for preventing retrograde movement of the wound reel, a driven shaft and meshed gearing whereby the same may be operated by the reel, a spring held ratchet wheel supported on one end of the driven shaft, a reciprocating slide for releasing the holding spring of said ratchet wheel, a power shaft supported on the frame, a rotatable member secured to one end of the power shaft, a



balance wheel mounted on the opposite end of said power shaft, a pitman pivoted at one end of the rotatable member and at its opposite end to the slide an operating arm carried by the slide and disposed in the path of the teeth on the spring held ratchet wheel, a pulley on the power shaft, a vertical shaft and pulley thereon supported on the frame, and a cross cable trained about said pulleys whereby centrifugal force may be communicated to a member on said vertical shaft.

1,565,699. METHOD OF FOLDING THE EDGES OF COLLARS FOR PERSONAL WEAR. ALEXANDER F. ZAKRZEWSKI, Green Island, N. Y. Filed Aug. 1, 1925. Serial No. 47,395. 2 Claims. (Cl. 2—143.)

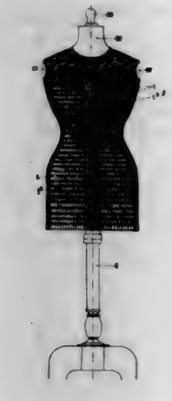


1. A method of folding fabric at the edge of a reentrant angle therein comprising the preliminary folding over of a narrow section of the fabric at said angle, and subsequently slitting the remainder of the edge fold in a line bisecting said angle.

1,565,700. ADJUSTABLE DRESS STAND. HENRI ZILBERSTEIN, Paris, France. Filed Feb. 12, 1923. Serial No. 618,486. 2 Claims. (Cl. 223—18.)

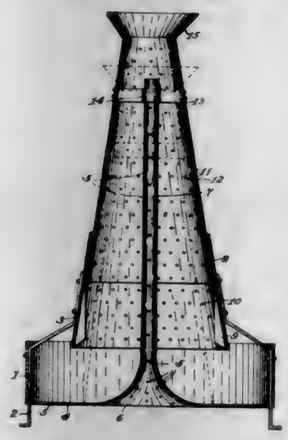
1. An adjustable dress stand comprising: a plate forming the base of the bust,—adjustable arms radially mounted in the plate,—means for securing these arms in position,—an air chamber having the shape of the bust of a dress stand of reduced dimensions resting on the plate,—an inflating valve on the said chamber,—a

member forming the neck and members forming the shoulders of the bust,—an extensible carcass covering the air chamber and formed by springs connected to-



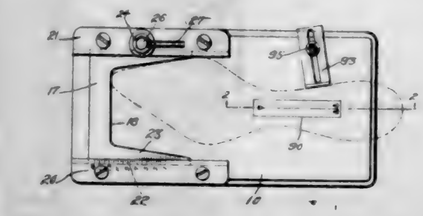
gether as well as to the arms of the plate and to the neck and shoulder members of the bust,—means for obtaining, by the inflation of the air chmaber, a bust exactly reproducing that of a given person.

1,565,701. GRAIN SPROUTER. HENRY APPEL, Waterloo, Iowa. Filed Sept. 8, 1924. Serial No. 736,587. 1 Claim. (Cl. 47—14.)



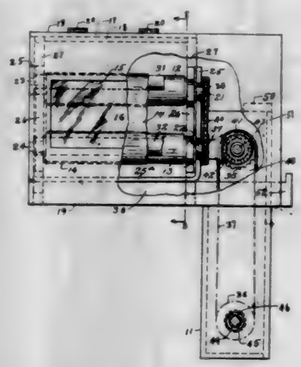
A grain sprouter, comprising in combination, an open top receptacle, an apertured tubular ventilator open at upper and lower ends with its lower end opening through and fixedly mounted in the bottom of said receptacle, a hollow frustal body fixedly mounted centrally above said receptacle and spaced therefrom at the bottom and sides, parallel vertical guide flanges mounted on the inner wall of the frustal body, another hollow frustal body mounted telescopically within the lower frustal body first-mentioned to have its open lower end slide between and in contact with said guide flanges to guide it centrally while subsiding, an apertured bearing member mounted across the upper inner end of the second-mentioned frustal body to slidingly fit the said tubular ventilator, and both frustal bodies and the bottom of the receptacle being numerously minutely apertured for ventilation purposes.

1,565,702. APPARATUS FOR LOCATING SHANK STIFFENERS IN SHOE SOLES. REINHARD E. BARTELS, Lynn, Mass. Original application filed Apr. 26, 1920, Serial No. 376,633. Divided and this application filed May 17, 1922. Serial No. 561,592. 5 Claims. (Cl. 33—180.)



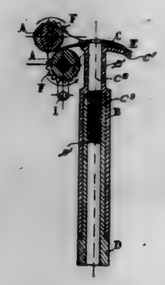
1. A device for locating a shank stiffener with its forward end at a desired point on a shoe sole, comprising a plate on which the sole is placed, said plate having a recess adapted to receive the shank stiffener, and an adjustable slide on said plate, whereby when the slide is adjusted for a given size and style of sole, and the toe of the sole of said size and style abuts thereagainst, the point will lie at the forward end of said recess.

1,565,703. NEXT-STOP-INFORMATION SIGN IN PASSENGER TRAINS. WOLF BERMAN, New York, N. Y. Filed May 24, 1923. Serial No. 641,166. 9 Claims. (Cl. 40—86.)



1. In a changeable stop sign of the class set forth, the combination of a casing comprising two vertical side rails each having notches formed at its front edge, one above the other, a pair of bearing blocks fitted removably in said notches, a pair of main rollers journaled horizontally in the bearing blocks aforesaid, a flexible strip for stop names attached to and rolled upon the respective rollers, a window arranged in front of the rollers through which the names are readable in succession, guiding means to maintain the reading space of the strip at a constant position with respect to the window, and means under the control of an operator for rotating the rollers in either direction for adjusting the strip according to the stops.

1,565,704. SELF-SETTING SAFETY RAZOR. RAOUL BOIZARD, Paris, France. Filed Dec. 10, 1924. Serial No. 755,015. 10 Claims. (Cl. 30—12.)



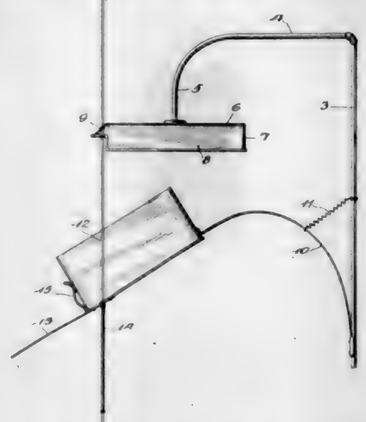
1. A self-stropping safety razor, comprising a handle, a blade holder at one end thereof, and a sharpening device adapted to directly engage and sharpen both faces of the adjacent edge of a blade disposed in normal shaving position in the holder.

---

1,565,705. AUTOMATIC CONTROL WINDING MECHANISM FOR CLOCKS. JOHN MONROE BONER, Evansville, Ind. Filed Aug. 9, 1924. Serial No. 731,175. 2 Claims. (Cl. 58—41.)

1. A clock mechanism comprising a drive shaft, a driven shaft, a drum, differential means connecting said drive shaft to said drum, and said drum to said driven shaft, said drum housing said means, means for rotating said drum to actuate said driven shaft, said last named means comprising a cable attached to and wound about said drum, a weight secured to the free end of said cable, electrically controlled means for actuating said driving shaft, a switch for connecting said means with a source of current, said switch being actuated by the lateral movement of said cable as said cable is wound or unwound from said drum.

1,565,706. RURAL MAIL BOX. MILFORD M. BROWER, Seattle, Wash. Filed Nov. 5, 1924. Serial No. 747,944. 6 Claims. (Cl. 232—40.)



2. A device of the class described comprising a standard, a cover fixedly carried by the standard, a receptacle, and means resiliently supporting the receptacle from the standard, said means being adapted to permit the receptacle to move bodily toward and away from the cover.

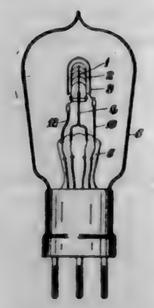
---

1,565,707. FENCEPOST. JOSEPH E. BROWN, Maquoketa, Iowa. Filed June 11, 1925. Serial No. 36,484. 1 Claim. (Cl. 256—48.)

A fence post comprising front and side members, flanges extending laterally from the respective side members, said front member being provided with a series of spaced transversely extending fence wire guide slots, the side members being provided with vertically extending fence wire receiving slots, communicating at their upper ends with the respective guide slots, the inner face of the front member adjacent the vertical slots formed in the side members being cut away whereby the base of the cut away portions will support the fence wires, and a series of spring tongues secured at their upper ends on the inner face of the front member, the lower free ends of the tongues extending over the respective guide slots.

---

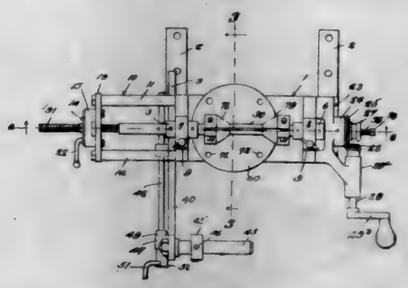
1,565,708. THERMIONIC VALVE. WILLIAM RICHARD BULLIMORE, London, England. Filed Oct. 11, 1922. Serial No. 593,849. 8 Claims. (Cl. 250—27.)



1. A thermionic valve comprising a vitreous container, an arched cathode filment, a hollow grid electrode enclosing said filament and having flat sides meeting along a curved edge disposed parallel to said filament, an anode of similar shape to and of larger dimensions than said grid electrode enclosing said filament and grid electrode and means for independently and rigidly supporting all of said electrodes from a reentrant tube in said vitreous container.

---

1,565,709. REAMING MACHINE. JOHN BURGH, Denver, Colo. Filed July 18, 1922. Serial No. 575,796. 3 Claims. (Cl. 77—2.)

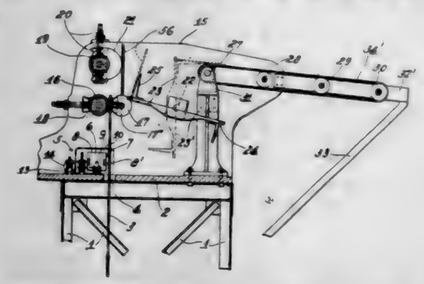


1. In a machine of the class described, a supporting frame, a cutter bar mounted for longitudinal movement therein, actuating means for said bar, a longitudinally slotted work supporting arm, headed screws extending from said frame through the slot in said arm to provide for its longitudinal adjustment, cooperating means carried by said arm and frame for adjusting the arm, and a right angularly extending shaft carried by the arm to support the work.

---

1,565,710. BREAKING AND TRANSFERRING MECHANISM FOR SHEET-GLASS-DRAWING MACHINES. THOMAS B. CAMPBELL, Jr., Pittsburgh, Pa. Filed Apr. 11, 1923. Serial No. 631,330. 11 Claims. (Cl. 49—3.)

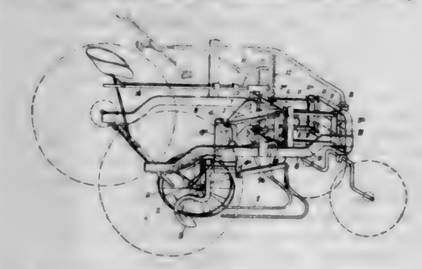
11. The combination with a vertical glass drawing machine and a carrier device extending laterally from the line of draw, of a transfer device in the form of a flat sided member mounted for rotation below the carrier



and having projecting supporting ledges at the ends of each of the sides of the member.

---

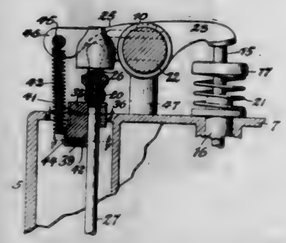
1,565,711. MACHINE FOR TOPPING ROOT CROPS. JAN ČERVINKA, Prague, Czechoslovakia. Filed Feb. 13, 1925. Serial No. 8,969. 5 Claims. (Cl. 55—107.)



1. A machine for topping root crops, comprising in combination a main frame, a system of links forming a parallelogram pivoted to the said main frame, so as to be capable of swinging horizontally and vertically, a second frame pivotally attached to the said system of links and a pair of sledge runners, a pair of guide members and a topping knife mounted on the said second frame, as set forth.

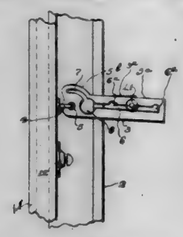
---

1,565,712. SILENCER FOR GAS-ENGINE-VALVE MECHANISM. GEORGE H. CHARNOCK, Buffalo, N. Y. Filed Feb. 6, 1923. Serial No. 617,360. 10 Claims. (Cl. 123—90.)



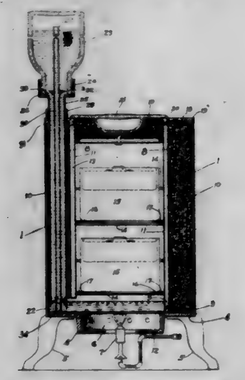
9. A take-up device for gas engine valve mechanism comprising a U-shaped yoke adapted to straddle a push rod and bear against a shoulder thereon, and provided on the inner sides of its legs with opposing recesses, a coupling block secured in the recesses of said legs and engaging the adjacent side of said rod, and a spring for lifting said block and yoke.

1,565,713. DOOR-LOCKING DEVICE? NIELS CHRISTIANSEN, Newport News, Va. Filed Mar. 7, 1924. Serial No. 697,557. 8 Claims. (Cl. 292—265.)



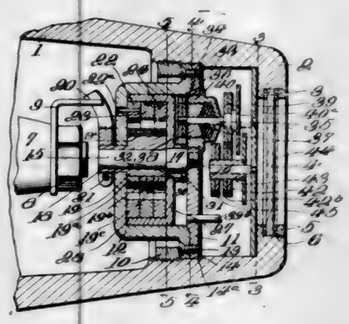
1. A device for holding a door ajar and for locking the same in closed position embodying two units, one of said units comprising an attaching member including a pivot element, and an arm connected adjacent one end with the said pivot element, said arm having a longitudinal slot formed in one wall with a series of notches, the slot adjacent the pivoted end of the arm, having an arcuate terminal branch, one wall of the said slot, substantially at the juncture of the slot and its branch having a recess therein of dimensions greater than the width dimension of the slot, the other unit comprising an attaching member, a stud extending therefrom for sliding engagement in the slot and the branch thereof, and a head upon the stud of a diameter greater than the width dimension of the slot and less than that of said recess in the wall of the slot, the stud being engageable in the branch of the slot when the arm is suspended from its pivot, to lock the door in closed position, and being engageable selectively in the notches in the wall of the slot when the arm is extended outwardly from its pivot, to hold the door ajar, the head of the stud being engageable through the recess in the wall of the slot to provide for disengagement of the arm from the stud to render the device inactive and permit of free opening and closing of the door.

1,565,714. COOKER. CLAUD J. CLEFTON, Owatonna, Minn., assignor, by mesne assignments, to Ruth P. Clefton, St. Paul, Minn. Filed Dec. 27, 1920. Serial No. 433,299. 2 Claims. (Cl. 53—2.)



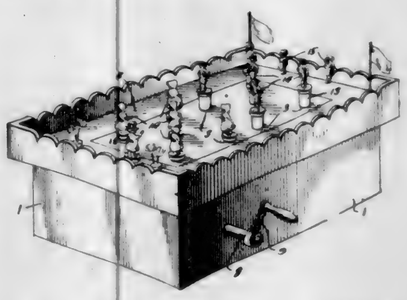
1. A cooking unit having in combination a casing, a cooking compartment therein, a heating element to heat water in the compartment, a tubular waterway adapted to be inserted in the casing and to extend from the casing exterior to the compartment, a hermetically sealed water container adjacent the upper end of the waterway and opening thereinto, an air vent member extending longitudinally in the waterway and connecting the container interior and the compartment, the upper end of the vent member being above the lever of the water in the container and its lower end substantially at the normal level of water in the compartment whereby water passes through the waterway when the lower end of the air vent member is uncovered and automatic maintenance of the normal water level is assured, and a valve exteriorly carried by said air vent to close said waterway and adapted to be opened when the waterway is inserted in the casing.

1,565,715. REVOLUTION COUNTER AND TOTALIZER. JAMES M. DAYTON, Hartford, Conn., assignor to The Dayton Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Dec. 15, 1924. Serial No. 756,016. 6 Claims. (Cl. 235—95.)



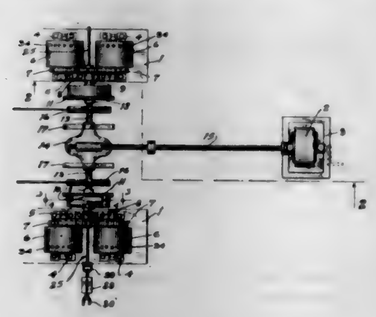
4. In a revolution counter, a registering train, a frame, an element having a rotative movement relative to said frame, and devices to transmit said movement to said train including internally meshed gear trains and selective clutches therefor to reduce the ratio of transmission and to rectify movement resulting from the reverse rotation of said element.

1,565,716. JUMPING-FIGURE TOY. CARL A. DIEDERICHS, Pittsburgh, Pa. Filed June 2, 1925. Serial No. 34,458. 3 Claims. (Cl. 46—40.)



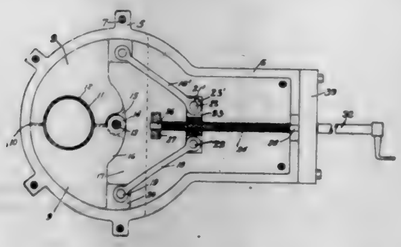
1. In a toy, the combination of a box having apertures through its top, a series of rods extending transversely thereof and rotatably mounted in its side walls, gears mounted on each of the rods, said gears being in mesh with each other, means for actuating one of the rods, plates affixed to each of the rods and revolving therewith, plates mounted on the first mentioned plates and freely movable vertically, posts removably mounted on said second named plates, and extending through said apertures, and dolls mounted on the posts.

1,565,717. BRAKE-TESTING MACHINE. PAUL J. DONAVAN, Los Angeles, Calif. Filed Feb. 19, 1925. Serial No. 10,222. 7 Claims. (Cl. 265—25.)



1. In a machine for testing automobile brakes, in combination, two spaced pairs of rollers, said rollers being rotatable about parallel axes, each pair being adapted to support one of the rear wheels of an automobile, a source of power, means for connecting the source of power to the rollers for the purpose of rotating the rollers in the same direction, said connecting means comprising, a differential mechanism having two axially aligned shafts adapted for independent rotation, means for connecting each of said shafts to a pair of rollers, a brake mechanism applied to each of said shafts and a dynamometer between each brake mechanism and the corresponding set of rollers whereby the power transmitted to each set of rollers may be measured.

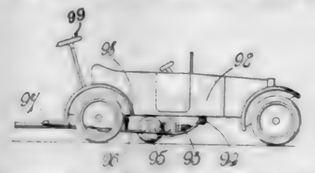
1,565,718. SAFETY DEVICE FOR OIL WELLS. EDWARD DORMAN, Houston, Tex. Filed Dec. 31, 1923. Serial No. 683,689. 4 Claims. (Cl. 166—15.)



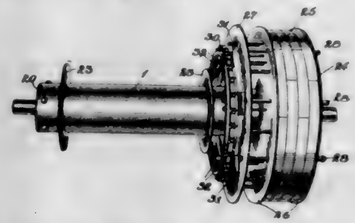
1. In a device of the character described, a well casing, a housing thereon, a valve therein comprising two interfitting, cooperating, arcuate plates pivoted on a common axis to swing toward or away from each other to close or open the passage from said casing through said housing, a threaded shaft in said housing, a nut on said shaft, links connecting said nut and said valve plates, and means to rotate said shaft from a distance.

1,565,719. PERAMBULATOR OR BABY CARRIAGE. WILLIAM HENRY DUNKLEY, Birmingham, England. Filed Feb. 14, 1923. Serial No. 618,979. 2 Claims. (Cl. 180—11.)

1. The combination of a child carrying body having road wheels, a platform pivotally mounted beneath said body and extending rearwardly to provide a stand for an attendant passenger, a power unit on said platform, means carried by said power unit for transmitting the drive to the ground, and means for normally suspending the platform out of contact with the ground but allow it to be moved into contact therewith by the attendant passenger.

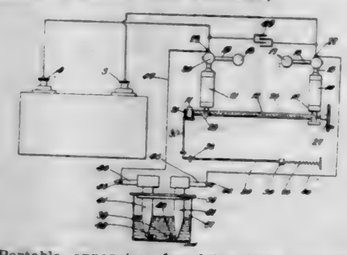


1,565,720. PONY BULL WHEEL. WALKER S. ESTES, Tulsa, Okla. Filed Jan. 17, 1924. Serial No. 686,900. 6 Claims. (Cl. 242—117.)



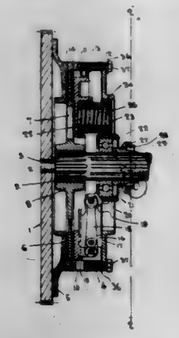
1. A pony bull wheel set, including a shaft, spaced annular members mounted thereon forming a drum, a brake wheel mounted on the shaft, an annular member mounted on the shaft and spaced from the brake wheel, and a plurality of rods connecting the annular member to the brake wheel, the annular member, brake wheel and rods cooperating to form a second drum of greater diameter than the first-mentioned drum.

1,565,721. APPARATUS FOR DETERMINING DIELECTRIC STRENGTH. ALFRED WALKER EMPSON, London, England. Filed Jan. 17, 1923. Serial No. 613,308. 2 Claims. (Cl. 175—183.)



1. Portable apparatus for determining the dielectric strength of oil and other insulating materials comprising in combination a supporting base having mounted thereon an induction coil, terminals serving to connect the primary winding of said coil to a secondary battery, relatively movable electrodes constituting a spark gauge, means for varying the distance between said electrodes, fixed test electrodes, electrical conductors connecting said spark gauge and test electrodes in parallel to the secondary winding of the induction coil, an index, a mechanical connection between one movable spark gauge electrode and the index whereby the said index moves as a function of the variation in the spark gauge gap, a scale over which said pointer moves and calibrations disposed on said scale to denote values in terms of dielectric strength substantially as described.

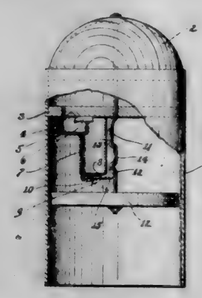
1,565,722. CLUTCH CONSTRUCTION. EDWIN R. EVANS, Detroit, Mich. Filed Oct. 2, 1922. Serial No. 591,945. 10 Claims. (Cl. 192—68.)



1. In a clutch, the combination with a driving member and a driven member, of a plurality of movable members, of spring means between said movable members for moving one of said movable members against said driven member to hold the latter against said driving member, and levers connecting said movable members and actuated by said spring means for multiplying the force exerted by the latter.

---

1,565,723. TALKING TOY MECHANISM. FRED EVANS, Summit, N. J., assignor, by mesne assignments, to Voices Incorporated, a Corporation of Delaware. Filed Mar. 21, 1923. Serial No. 626,497. 6 Claims. (Cl. 46—46.)

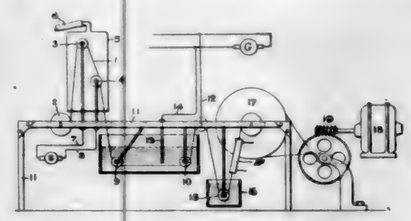


1. A device of the class described comprising, in combination, an air chamber provided with a collapsible wall, a weight attached to said wall by a rod, the said rod having a plurality of cam humps of different lengths, sound producing means in communication with the interior of said air chamber and sound controlling means in communication with said producing means, said sound controlling means including an orifice, a door therefor, said door being provided with an extension contacting successively with the humps on said rod whereby the movements of said rod will control the position of said door.

---

1,565,724. FILAMENT AND METHOD OF MANUFACTURE THEREOF. GORTON R. FONDA, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 29, 1920. Serial No. 399,798. 7 Claims. (Cl. 176—132.)

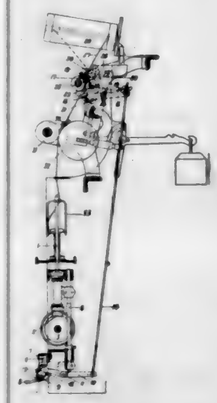
5. The method of producing a wire consisting of a preponderant amount of a refractory metal and a metal alloyable therewith and capable of diffusing therethrough which consists in providing a wire consisting of a refractory metal with a coating of the alloyable metal



and then heating the coated wire to a temperature sufficiently high to cause alloyage and diffusion of the coating metal throughout said wire.

---

1,565,725. SPINDLE AND ROVE STOPPING ASSEMBLY FOR SPINNING FRAMES AND LIKE TEXTILE MACHINERY. GORDON FRASER, NORMAN FRASER, and JOHN FRASER, Arbroath, Scotland. Filed July 7, 1925. Serial No. 41,954. 4 Claims. (Cl. 118—7.)



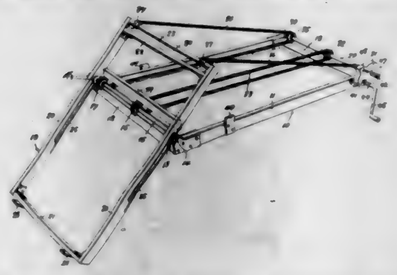
1. A spindle and rove-stopping assembly for spinning or similar frames comprising a spindle, a driver therefor, an upper pair of separable rove-feeding rollers, a rove-nipping device above said feeding rollers, a lower pair of rove-drawing rollers, a conductor to said drawing rollers, and pedal-operated connections for disengaging said spindle from said driver and concomitantly therewith closing said nipping device and separating said feeding rollers whereby to cause a break in the rove above said drawing rollers, leaving the rove in said conductor.

---

1,565,726. LOADING AND UNLOADING DEVICE. ROBERT C. FRAZA, Dixon, Ill. Filed Jan. 26, 1925. Serial No. 4,853. 2 Claims. (Cl. 298—14.)

1. In a device of the character described, a relatively stationary frame adapted to be mounted upon a vehicle chassis, a shaft journally mounted at the rear end of said frame, a relatively movable frame mounted for longitudinal sliding and vertical tilting upon said stationary frame, an operating shaft journaled at the forward end of the stationary frame, drive elements on

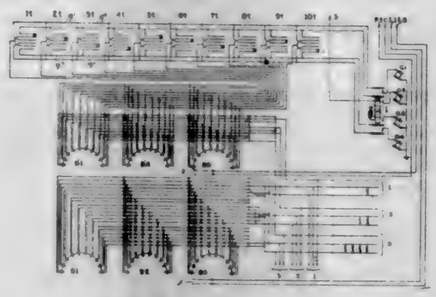
both of said shafts, a flexible member trained about said drive elements, a member carried by said flexible member, means on the movable frame normally engaging



said last-named member, and means connected with said last-named member and the forward end of the movable frame and operatively driven by the second-named shaft for controlling tilting of the movable frame.

---

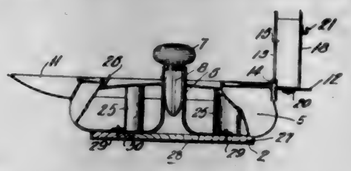
1,565,727. TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Chicago, Ill. Filed Mar. 14, 1917, Serial No. 154,790. Renewed Dec. 19, 1924. 17 Claims. (Cl. 179—17.)



1. In a telephone system, a connector switch, line bank contacts for the connector, ringing contacts for the connector bank corresponding to the line contacts, a plurality of sources of different signaling currents, line and signaling wipers for the connector, a connecting rack for interchangeably connecting said sources of signaling current and the bank ringing contacts, and a connection extending from the signaling wiper to a line wiper for conducting signaling current from the selected bank signaling contact to said line wiper.

---

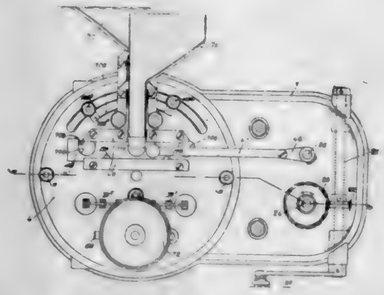
1,565,728. ASH TRAY FOR SMOKERS' USE. CHARLES FREDERICK GAUNT, Birmingham, England. Filed Sept. 25, 1922. Serial No. 590,280. 5 Claims. (Cl. 131—51.)



1. An ash tray for smokers' use consisting of a bowl having an open top and a unit constructed and arranged to be removably positioned within the bowl, said unit consisting of a plate having a plurality of apertures therein, and a plurality of tubes having their upper ends registering with the apertures, said tubes having their lower ends resting upon the bottom of the bowl when in position therein and supporting the plate in horizontal position extending across the bowl adjacent the top thereof.

---

1,565,729. AUTOMATIC MACHINE FOR THE MANUFACTURE OF CAPSULES. LOUIS PIERRE EMILE GENAT, Paris, France. Filed Sept. 17, 1923. Serial No. 663,233. 12 Claims. (Cl. 226—42.)



1. An automatic machine for the manufacture of capsules, comprising a stationary perforated upper plate, a stationary perforated lower plate, a movable perforated intermediate plate, means carried by said upper and intermediate plates for dosing and compressing a determined quantity of material contained in one capsule, means for feeding the lower capsule shells into the perforations of said intermediate plate and of said lower plate successively, means carried by said upper and intermediate plate for feeding the measured quantity of material into said lower shells, means for feeding the upper capsule shells into the perforations of said intermediate plate, and means carried by said lower plate for closing the capsules.

---

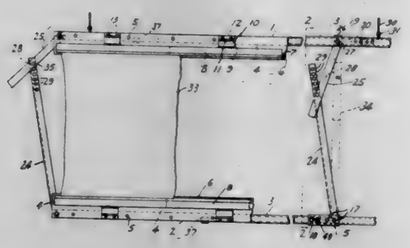
1,565,730. HEADREST ATTACHMENT FOR CHAIRS. JOHN GILMOUR, Owensboro, Ky. Filed Dec. 3, 1923. Serial No. 678,261. 2 Claims. (Cl. 155—174.)

1. In a head rest attachment for chairs, transversely spaced forked standards adapted to fit loosely over a chair back and having downwardly extending rear members provided with an upper transverse connection bearing a pad and downwardly extending forward lever members one for each of said rear members and having each at its upper end a fulcrum connection with the related rear member and being movable upon their fulcrums in the same plane and parallel to said pad, whereby said

lever members are adapted to cooperate with the transversely curved surface of said chair back to hold the head rest securely in position.

---

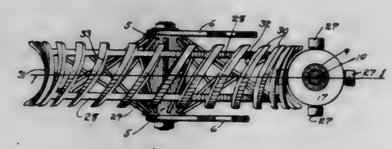
1,565,731. FRAME FOR STRETCHING SHADE CLOTH. LOUIS B. GIRARD, Los Angeles, Calif., assignor to Columbia Mills Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1925. Serial No. 26,424. 4 Claims. (Cl. 211—24.)



1. In a cloth stretching frame a rail comprising a plurality of sections placed end to end, connecting means rigidly secured to one of said sections adjacent the end thereof, means non-rigidly securing said connecting means to the adjacent section so as to permit relative angular displacement between said sections and stop means on said connecting means and on the section to which it is nonrigidly connected adapted to co-operate to limit such relative angular displacement.

---

1,565,732. DRIVING MECHANISM. CHARLES F. GODDARD, Denver, Colo., assignor to The Union Machine Company, Denver, Colo., a Corporation of Colorado. Filed Apr. 8, 1920, Serial No. 372,326. Renewed Jan. 24, 1924. 30 Claims. (Cl. 180—74.)

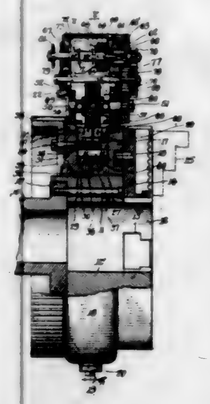


1. In driving mechanism, the combination of a movably supported element providing a substantially open endless zone encompassed by a continuous series of spaced cross bars wholly located exteriorly of said open zone and having diagonally disposed engaging faces, and a second movably supported element providing a continuous series of separately projected roller members so associated with said cross bars as to successively ride longitudinally along a complementary diagonal face thereof with a propelling action.

---

1,565,733. POWER-OPERATED CHUCK. LOUIS E. GODFRIAUX, Madison, Wis., assignor to Gesholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Mar. 16, 1925. Serial No. 15,706. 8 Claims. (Cl. 279—114.)

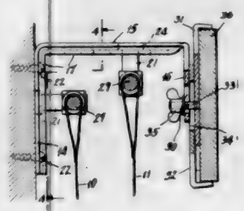
1. In a chuck, the combination of a spindle, a chuck body mounted on said spindle, jaws carried by said chuck body, a jaw-actuating cam plate, means, including a planetary gear system, normally rotating said cam plate in the same direction and at the same speed as said chuck body, said gear system including a pair of internally toothed ring gears, means normally holding said ring gears against rotation during rotation of the chuck, and power actuated means for effecting rotation



of both said ring gears at differential speeds whereby to rotate said cam plate relatively to the chuck for chucking and unchucking the work.

---

1,565,734. SUPPORTING BRACKET FOR CURTAINS, DRAPERIES, AND THE LIKE. BENJAMIN B. GREENHUT, Astoria, N. Y., assignor of one-third to David D. Grunhut and one-third to Abraham S. Greenhut, both of New York, N. Y. Filed May 9, 1925. Serial No. 29,021. 12 Claims. (Cl. 156—22.)

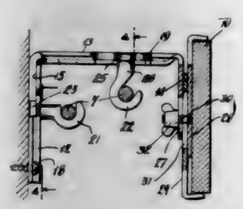


1. A device of the class described comprising a back plate and top plate and a front plate, all of unitary construction, said back plate and top plate being offset to form a continuous recess through said plates, and said plates having apertures opening outwardly through one side edge thereof and into said recesses, the inner ends of the apertures being enlarged, and coupling members adapted to be mounted in said apertures and retained against displacement from said plates, said coupling members having heads which enter the recess in said plates.

---

1,565,735. SUPPORTING BRACKET FOR CURTAINS, DRAPERIES, AND THE LIKE. BENJAMIN B. GREENHUT, Astoria, N. Y., assignor of one-third to David D. Grunhut and one-third to Abraham S. Greenhut, both of New York, N. Y. Filed May 9, 1925. Serial No. 29,073. 12 Claims. (Cl. 156—22.)

9. A central supporting bracket for curtain poles and rods, said bracket being fashioned to form a U-shaped body comprising a back member, a top member and a front member, hook-shaped rod supporting devices provided with heads for detachable engagement with the back and top members, and said back and top members



being apertured and recessed to receive the heads of said hook devices to support said hook devices in different positions of adjustment on said back and top members.

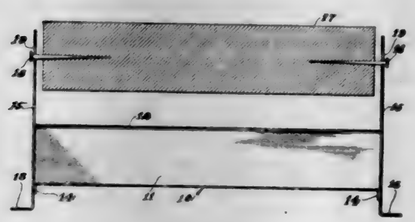
---

1,565,736. BLUISH SULPHURIZED INDOPHENOL-BENZIDINE DYE AND PROCESS OF MAKING THE SAME. LOUIS HAAS, Paris, France, and EMIL REBER, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed May 7, 1923. Serial No. 637,322. 4 Claims. (Cl. 260—19.)

4. The new dyestuffs obtained by sulphurizing the leuco-derivatives of the indophenols obtained by condensation of nitrosophenols with carbazole in presence of benzidine, constituting in a dry state dark blue powders insoluble in water, soluble in concentrated sulphuric acid with blue colorations, producing with sodium hydrosulphite and caustic soda yellow vats, and with alkali metal sulphides greenish vats, which dye the vegetable fibre in blue shades very fast to washing, to light, and to chlorine.

---

1,565,737. CHICK FEEDER. ABIJAH E. HAMPTON, Pittstown, and CHARLES S. MARSHALL, Baptistown, N. J. Filed Sept. 18, 1922. Serial No. 588,757. 3 Claims. (Cl. 119—61.)

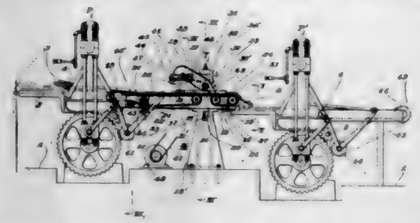


1. A chick feeder comprising a trough; plates secured to the ends of the trough; an angular bar of less length than the distance between and extending above the plates, and pivot pins extending from the ends of the bar supported by the plates and held against transverse movement relative thereto but freely movable upwardly therefrom.

---

1,565,738. BRICK MACHINE. GEORGE B. HANEY, Ashland, Ky., assignor to Ashland Fire Brick Company, Ashland, Ky., a Corporation of Kentucky. Filed Nov. 28, 1923. Serial No. 677,392. 9 Claims. (Cl. 25—105.)

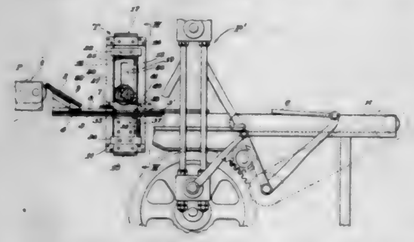
1. A brick machine comprising in coordinated relation a press, a brick trimmer, a repress, and a brick conveyor, the trimmer being positioned above the conveyor and adapted to remove excess material from the tops



of bricks passing thereunder, and the conveyor comprising a brick-supporting horizontally-moving member passing under the cutter in positively spaced relation thereto.

---

1,565,739. TRIMMING MECHANISM FOR BRICK MACHINES. GEORGE B. HANEY, Ashland, Ky., assignor to Ashland Fire Brick Company, Ashland, Ky., a Corporation of Kentucky. Filed Feb. 29, 1924. Serial No. 695,928. 17 Claims. (Cl. 25—104.)



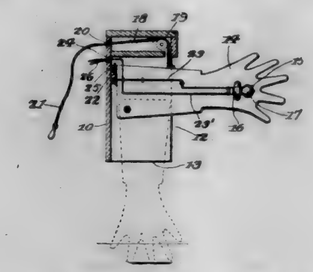
1. In combination with a press having a feed table and means for feeding the bricks into the press, of a trimmer mounted on the table, the trimmer being so disposed relatively to the press and table that the said feeding means forces the bricks through the trimmer prior to reaching the press and during its continued movement in the same direction to the press.

---

1,565,740. SAFETY ATTACHMENT FOR GAS STOVES. WILLY HANS, New York, N. Y. Filed May 15, 1925. Serial No. 30,528. 2 Claims. (Cl. 126—42.)

1. A gas-stove including a gas supply pipe, a plurality of independent gas-cocks connected to said pipes, each cock comprising a shell, a plug oscillatable in the shell provided with a handle, a pipe section on each shell tapped into said supply pipe, and a pipe section on the opposite side of each shell, a rigid strip placed on top of the pipe sections connecting said shells with said supply pipe, said strip being adapted to bear adjacent its upper longitudinal edge against the handles of said plugs, a rod placed below the other set of pipe sections, a plurality of springs attached at one of their ends to said strip adjacent the lower longitudinal edge of the latter and at their other ends adjacent the upper longitudinal edge of said strip, said springs being carried around said rod, and a detent pivotally mounted upon said rod and provided with a hook-shaped free end adapted to engage said strip.

1,565,741. AUTOMOBILE SIGNAL. ERNEST J. HART, Rochester, N. Y. Filed Mar. 7, 1921. Serial No. 450,125. 1 Claim. (Cl. 116—54.)



An automobile direction signal including a substantially rectangular casing having its outer side partly open and its lower end entirely open, a signal arm pivotally mounted at its inner lower corner in the casing and movable through the said partly open side and open end into and out of signaling position, a transverse wall above the partly open side and having a vertical opening therein, a guide pulley mounted in the casing directly above said opening, and a cord secured to the intermediate portion of the upper outer edge of said arm and extending upwardly through said opening, around said guide pulley, and through an opening in the closed side of the casing.

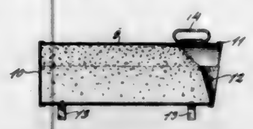
1,565,742. CURTAIN ROD. WILLIAM C. KENNEY, Cranston, R. I., assignor to Kenney Manufacturing Company, a Corporation of Rhode Island. Filed May 13, 1925. Serial No. 29,944. 2 Claims. (Cl. 156—19.)

1. A sectional curtain rod comprising two end members of channel shape cross section having inturned lateral flanges, and formed for telescopic engagement with each other, and a coupling member of similar cross section comprising end portions formed for telescopic engagement with the end members, and laterally tapered resilient shoulders intermediate the end portions adapted to be frictionally embraced by one of said end members.

1,565,743. METALLIC-DOOR STRUCTURE. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 31, 1920. Serial No. 400,399. 12 Claims. (Cl. 296—44.)

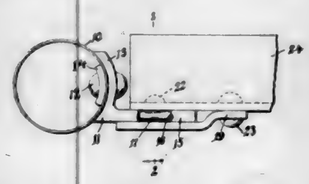
9. In a curtain rod supporting structure, a plurality of stampings cooperating when assembled together to form a holder, a curtain rod socket seated in said holder, and cooperating means on said holder and said socket to prevent relative rotation therebetween.

1,565,744. PORTABLE REFRIGERATOR TANK. CHARLES B. LONGSTRETH, Denver, Colo. Filed Apr. 6, 1925. Serial No. 20,975. 2 Claims. (Cl. 220—1.)



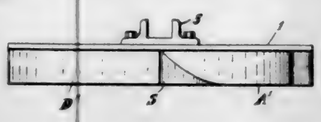
1. A portable refrigerator tank adapted to receive a freezing mixture consisting of broken ice and salt whose volume decreases as it melts, comprising an elongated tubular body member having one end completely closed by a transverse member which forms the bottom when the tank stands vertically, the other end being partially closed by a transverse member that extends upwardly from one side to such a distance that when the tank lies with its axis horizontal, its capacity for liquid will be sufficient to hold all the liquid that results from the melting of a full charge of freezing mixture, said tank being also provided with supports for holding the tank in a horizontal position.

1,565,745. BEDPOST LOCK. EDWIN C. MCFARLANE, Brooklyn, N. Y., assignor to Special Stamping and Manufacturing Corp., New York, N. Y., a Corporation of New York. Filed Jan. 7, 1925. Serial No. 991. 1 Claim. (Cl. 5—294.)



A bedpost lock comprising a bracket adapted to be secured to the post and having a portion thereof extending from the post, said extended portion of the bracket having a tapered slot, a plate having a wedge to one side thereof for engaging the slot, and an arm extending from the plate and offset to the same side as the wedge, said wedge having bosses on the sides thereof for better engaging the sides of the slot, and said wedge and arm having means for securing thereto an angle iron of a bed frame.

1,565,746. POLISHING WHEEL. DANIEL F. MCGOVERN, Montpelier, Vt. Filed Mar. 20, 1924. Serial No. 700,721. 3 Claims. (Cl. 51—209.)

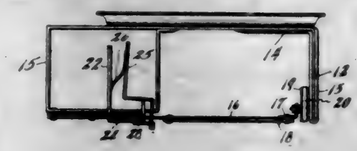


1. A polishing wheel comprising a disc having on its working face radially spaced groups of segmental flanges, the spaces between said groups being relatively staggered as to each other and constituting uninterrupted aisles extending from adjacent the center of the disc to the tips of the outermost flanges of said groups, and the tips of the outermost flanges of said groups starting at substantially the periphery of the disc and overlapping the discharge ends of said aisles and constituting with the included flanges of its group a spaced series of abrasive intake openings.

1,565,747. SIDE-WALL TUYÈRE. CHARLES F. MILLER, Moore, Pa., assignor to Westinghouse Electric and Manufacturing Company. Filed Apr. 2, 1923. Serial No. 629,538. 9 Claims. (Cl. 110—75.)

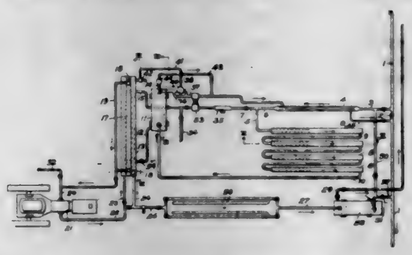
1. A side wall tuyère for stoker furnaces comprising a perforated metal plate and a plurality of steel strips partially embedded in the metal plate and partially protruding from the plate.

1,565,748. SERVING TRAY. LUKE G. MONSCHKE, Dallas, Tex., assignor of one-third to H. W. Caldwell and one-third to J. A. Flemister, both of Dallas, Tex. Filed Nov. 26, 1923. Serial No. 677,110. 2 Claims. (Cl. 45—51.)



1. The combination with a serving tray, of a pair of spaced legs depending from one side of the tray, a bracket depending from the other side of the tray, a head, a pair of toggle levers carrying the head at one end and pivoted to the bracket, a carriage mounted to slide on the bracket and connected with the levers for operating the same, a spring tension connection between the carriage and the levers, and a hand grip on the carriage.

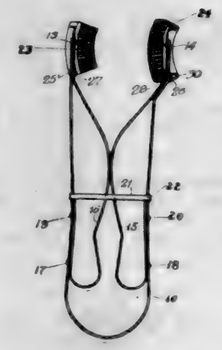
1,565,749. RECOVERY OF GASOLINE FROM NATURAL GAS. HOMER A. MORSON, Stoffel, W. Va., assignor to South Penn Oil Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 12, 1922. Serial No. 606,371. 8 Claims. (Cl. 196—8.)



1. The process of recovering gasoline from natural gas, comprising removing gasoline constituents from the gas by subjecting it under an elevated pressure to an absorbing menstruum to remove the gasoline constituents from the gas, maintaining the increase in gravity of the menstruum due to its absorption of constituents from the gas at not more than 1° Baumé, and subsequently separating from the menstruum by reduction of pressure on it and without elevating its temperature the constituents previously absorbed by it.

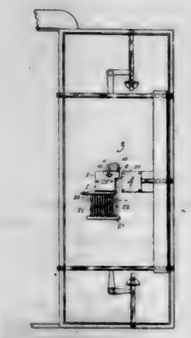
4. The process of removing gasoline from wet natural gas, comprising first compressing and cooling the gas to remove as a liquid a portion of the gasoline from it, then removing uncondensed gasoline from the compressed gas by subjecting the gas to an absorbing menstruum, separating the menstruum from the denuded gas, subsequently reducing the pressure upon the charged menstruum to remove from it as vapor its gasoline content, and mixing the vapor thus removed from the menstruum with wet natural gas before it is subjected to the compression and cooling step.

1,565,750. TOOTHBRUSH. SAMUEL NATHANSON, Roxbury, Mass. Filed June 20, 1924. Serial No. 721,355. 2 Claims. (Cl. 15—167.)



1. A tooth brush comprising a U-shaped resilient member, brushes pivotally mounted at the ends of said member, said ends having slots therein, and springs connected to said U-shaped member and having extensions movable in said slots for the purpose described.

1,565,751. BURGLAR PROTECTION FOR SAFE DOORS. THOMAS F. NELSON, Tacoma, Wash. Filed Jan. 5, 1925. Serial No. 708. 7 Claims. (Cl. 109—6.)

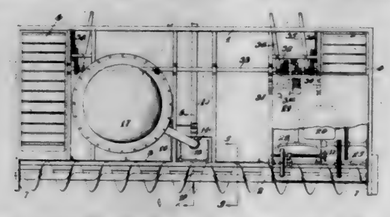


1. A burglar protection for safe doors comprising a receptacle containing vapor under pressure; a breakable extension of said receptacle; a spring actuated body adapted to break said extension; a holding means restraining said body from action; and a removable prop for said holding means.

1,565,752. SCRAPING MACHINE. EUGENE M. NICHOLS, Philadelphia, Pa. Filed June 2, 1924. Serial No. 717,317. 5 Claims. (Cl. 210—128.)

1. A scraping machine including a screw conveyor having right and left hand threads adapted to collect foul matter at a discharge point, a plate mounted in the rear of the conveyor adapted to prevent overflow of the col-

lected matter onto the cleaned surface, a receptacle in the rear of the plate adapted to receive the collected matter, the plate having an opening to permit passage



of the collected matter into the receptacle, means for propelling the machine and means for actuating the conveyor.

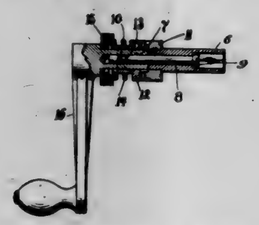
---

1,565,753. FUSE. ELMER L. OGLE, Chicago, Ill., assignor to Federal Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 1, 1921. Serial No. 497,585. 1 Claim. (Cl. 200—113.)

In an electric fuse for use in multiphase circuits, in combination with a cylindrical fuse body and a removable cartridge containing a fusible element and a heating coil associated therewith, said cartridge having auxiliary contacts on the outside of its body connected to said heating coil, terminals on the cylindrical fuse body adapted to connect said auxiliary contacts with conductors outside of said fuse, each terminal consisting of a member adapted for connection with an outside conductor, said member having a reduced, threaded end, the fuse body being provided with a threaded hole, a tubular internally and externally threaded thimble engaged in the hole in said body and projecting beyond the body wall on one side and having its outer end turned down against the cylindrical outside surface of said fuse body to lock the thimble against turning with respect to said fuse body, and the reduced threaded end of said terminal member being screwed into said thimble with its end flush with the inner end of said thimble in position to engage said auxiliary contact.

---

1,565,754. WINDING KEY. WILLIAM G. ORTH, Dayton, Ohio, assignor to Ohmer Fare Register Company, Dayton, Ohio, a Corporation of New York. Filed May 7, 1923. Serial No. 637,364. 6 Claims. (Cl. 74—33.)



1. A winding key comprising a manual member, a second member adapted to engage an element to be turned thereby, said second member being recessed longitudinally and comprising a longitudinal bore in alinement with but of smaller diameter than said recess, a similar bore in said manual member, a headed stud passing through said bores, the head resting in said recess, a dowel pin passing transversely through said stud and said manual member, whereby said manual member and said second member are retained against relative longitudinal displacement.

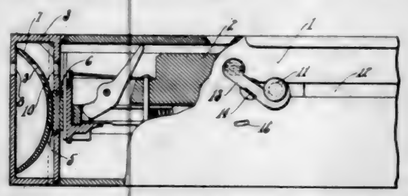
---

1,565,755. METHOD OF TREATING INGOT MOLDS. WILLIAM HAIG RAMAGE, Girard, Ohio. Filed May 27, 1924. Serial No. 716,180. 20 Claims. (Cl. 148—21.)

5. The method of treating iron ingot molds cast in sand molds, which method comprises removing the ingot mold from the sand as soon as the ingot mold can be safely handled, plunging the ingot mold into a chilling water bath, and annealing the ingot mold by its own heat in an enclosed quiescent atmosphere.

---

1,565,756. AUTOMATIC GUN. HUGH M. ROCKWELL, Bristol, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed Jan. 17, 1919, Serial No. 271,740. Renewed Sept. 25, 1925. 10 Claims. (Cl. 89—2.)

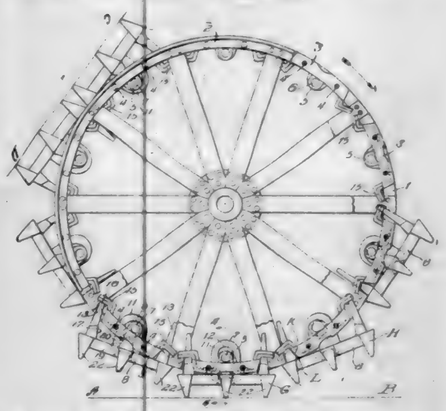


1. In a gun, a receiver, a member therein adapted to be reciprocated at each opening and closing of the breech, a housing removably carried by said receiver, and an arcuate resilient member mounted in said housing, said resilient member being adapted to cushion the rearward thrust of said reciprocating member.

8. In a gun having a charging handle operating in a slot in the receiver, an arm pivotally mounted on the receiver to the rear and above the slot, a hook on said arm adapted to extend under and engage the charging handle, a finger-piece on said arm, and means to retain said arm in an inoperative position.

---

1,565,757. TRACTION WHEEL. LOUIS E. SLAUSON, Rock Island, Ill. Filed Aug. 5, 1921. Serial No. 490,026. 10 Claims. (Cl. 305—13.)

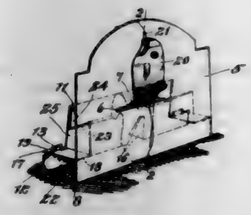


3. In a traction wheel, a rim including a pair of side members and a series of intermediate members secured thereto, each intermediate member presenting an outer face substantially flush with the side members and having

a pair of bearing members and a pair of guides, traction shoes each having a portion adapted to be located between bearing members, means for loosely pivoting the traction shoes to said bearing members, and means carried by said traction shoes cooperating with the guides on the intermediate members to keep the shoes in alignment with the rim.

---

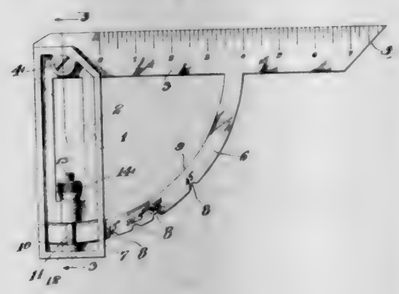
1,565,758. DISPLAY DEVICE. ADOLPH G. SNIDER, Brooklyn, N. Y. Filed Aug. 28, 1924. Serial No. 734,592. 4 Claims. (Cl. 40—149.)



1. A display device formed from an integral blank, comprising a front panel section having an opening therein, a rear supporting panel section, connecting sections between said front and rear panels, said sections being bent with respect to each other, and a display member comprising a part cut out from the connecting sections adapted to extend upwardly from said rear panel section and be projected through the opening in the front panel section for display in front thereof.

---

1,565,759. BEVEL SQUARE. MARK SPRENKLE, Bridgeton, N. J. Filed Jan. 2, 1924. Serial No. 683,847. 5 Claims. (Cl. 33—117.)

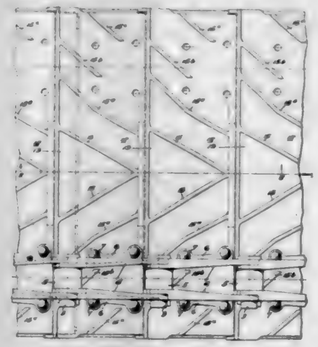


1. A bevel square including a head having a slit in one end; a blade pivoted to the other end; an arcuate slide on the blade adjustable in the slit; a plunger slidable in said head and engaging the slide for keeping it in adjusted position; means for securing the plunger in such adjusted position; and resilient means for automatically drawing the plunger against the slide.

---

1,565,760. CONVEYER. PAUL SUTHERLAND, Inspiration, Ariz., assignor to American Manganese Steel Company, Chicago Heights, Ill., a Corporation of Maine. Filed Dec. 13, 1924. Serial No. 755,645. 8 Claims. (Cl. 198—195.)

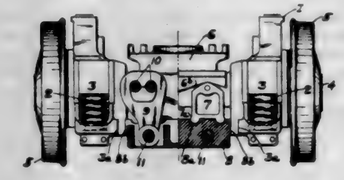
1. An endless conveyer comprising a plurality of hingedly connected floor segments, the conveyer having a lower run on which material accumulates during the operation of the conveyer and means carried by the con-



veyer adapted to direct this material over the sides of the conveyer when the conveyer is in operation.

---

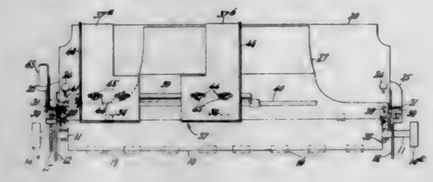
1,565,761. TRUCK FOR RAILROAD ROLLING STOCK. CHARLES W. TODD, Schenectady, N. Y. Filed Jan. 22, 1925. Serial No. 3,896. 8 Claims. (Cl. 105—189.)



1. In a railroad truck, the combination of a frame; a bolster adapted to traverse laterally relative thereto; and two lateral resistance elements, each arranged to operate separately during a portion of the lateral displacement of the bolster, the operation of said elements being in consecutive relation.

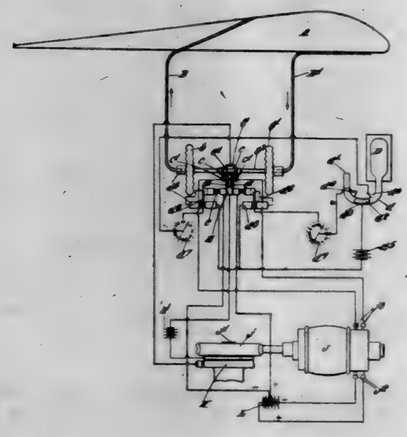
---

1,565,762. TYPEWRITING MACHINE. HARRY H. VICKERS, Corona, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 20, 1923. Serial No. 620,167. 6 Claims. (Cl. 197—127.)



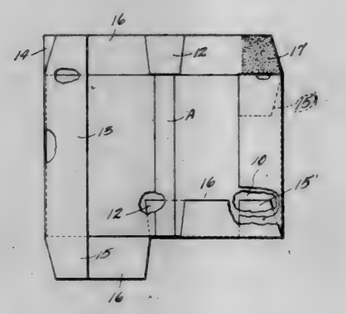
1. In a typewriting machine, a platen, a platen carriage, two tables at the rear of the platen, one spaced forward of the other, for guiding work-sheets down to the platen, the forward table being normally secured in a fixed position and having a lip adjacent the platen for supporting the sheet on the forward table out of the path of the sheet on the rearmost table, and means settable for adjusting said forward table in other fixed positions relatively to the platen, for varying permanently the width of the sheet-opening between the lip and the platen.

1,565,763. AUTOMATIC CONTROL OF AIRCRAFT. OLIVER HENRY DOUGLAS VICKERS, Westminster, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed May 8, 1923. Serial No. 637,424. 6 Claims. (Cl. 244—29.)



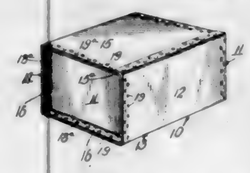
1. In automatic aircraft control apparatus, primary control mechanism, a reversible rotary electric motor, a motor contact device operated by the said primary control mechanism and adapted to support the said rotary motor in either direction, and a variable hydraulic pump and motor system having its liquid flow regulated by the said electric motor, the said hydraulic system being adapted to effect the operation of the aircraft control, and a follow-up contact device by which the electric motor circuit is broken after a predetermined movement of the rotary motor.

1,565,764. BOOK COVER. ALBERT T. WALRAVEN, Dallas, Tex. Filed Feb. 24, 1925. Serial No. 11,077. 4 Claims. (Cl. 281—34.)



1. A book cover comprising a sheet having opposite marginal portions folded inwardly to form flaps, the outer end portions of said flaps and the continuous portions of the sheet being cut off obliquely across the lines of the respective folds to form tabs for tucking in behind the cover boards of the book, back tabs being cut from the margins of the sheet and tucked between the sheet and the back of the book, the remaining marginal portions of the sheet being folded inward to form flaps, and means for securing the flaps of the cover in place.

1,565,765. BOX. HARRISON B. WALTER, Chicago, Ill., assignor to Chicago Mill and Lumber Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1923. Serial No. 629,093. 2 Claims. (Cl. 229—6.)



1. A box comprising a tubular body and an end secured within said body, said end consisting of a blank of the area of the end of the box with flap extensions at the four sides thereof, said flap extensions being offset from the plane of the end and being then bent at right angles with one face against the shoulder formed in thus offsetting, and means for attaching said flap extensions in flat engagement against the proximate flat faces of the tubular body comprising a body of cement and a plurality of tongues cut from the two engaged parts and depressed with the body of cement between them beyond the planes of the board parts.

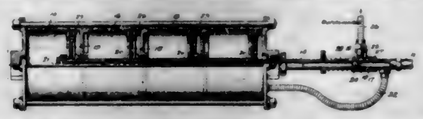
1,565,766. PROCESS FOR THE PREPARATION OF EXPLOSIVE CHARGES BY MEANS OF LIQUID OXYGEN OR AIR. GUILLAUME WEBER, Hayange, France, assignor to The Société: les Petits Fils de François de Wendel & Cie., Hayange, Moselle, France. Filed Oct. 11, 1923. Serial No. 667,894. 9 Claims. (Cl. 102—6.)

1. The process for preparing explosive charges containing liquid oxygen or air according to which tight receptacles are first inserted into the mine holes and the materials constituting the charge are then placed in said receptacles, said materials being saturated with liquid oxygen or air.

1,565,767. VACUUM BRAKE. CHARLES R. WESTBROOK, San Francisco, Calif., assignor, by mesne assignments, to Simplex Air Brake Company, a Corporation of California. Filed Dec. 1, 1922. Serial No. 604,145. 8 Claims. (Cl. 121—38.)

3. In a vacuum brake system for an engine operated automobile, the engine having an intake manifold in which a partial vacuum is created, a cylinder having a plurality of separate chambers axially displaced, a common hollow piston rod for all of the chambers, pistons

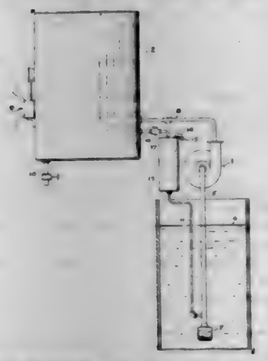
carried by the rod, one for each chamber, the hollow space in the rod connecting to one side of each chamber, a valve member slidable on the rod, and serving to control the connection between the intake manifold and the hollow space in the rod, said rod having another separate hollow space also controlled by the valve member to uncover it to atmosphere while the first hollow space is connected to the intake manifold, and vice versa, and means forming a connection from the second hollow space to only a portion of those sides of the cylinders which are out of communication with the first hollow space, the remaining of these sides being permanently connected to atmosphere.



1,565,768. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. CONRAD H. ZIERDT, Rosedale, Penn Township, Allegheny County, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1924. Serial No. 703,681. 8 Claims. (Cl. 246—37.)

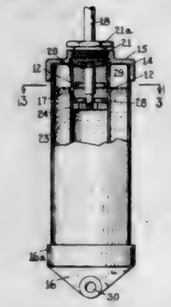
1. In combination, a stretch of railway track, a source of alternating track circuit current connected across the rails of the stretch, a transformer having a primary winding connected across the rails of the stretch, a track relay connected with the secondary of said transformer, an impedance connected across the rails of said stretch, and a source of train governing loop current having one terminal connected with said impedance and the other terminal connected with an intermediate point in said primary winding, the parts being so proportioned that if a track rail breaks so that all of the loop current flows through one section of said primary winding the current induced thereby in the secondary winding will not be of sufficient value to operate said track relay.

1,565,769. WATER-SUPPLY SYSTEM. GEORGE R. ALEXANDER, Oakland, Calif. Filed Dec. 10, 1923. Serial No. 679,649. 8 Claims. (Cl. 103—6.)



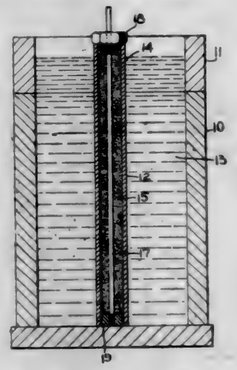
1. A liquid supply system embodying in its construction a storage tank, a pump for delivering liquid to said tank from a source of supply, a suction pipe for said pump, a foot valve on said suction pipe and means actuated by pressure from the storage tank for forcing air into said tank.

1,565,770. SHOCK ABSORBER. ZARIB ALMESAN, New York, N. Y. Filed May 29, 1924. Serial No. 716,589. 8 Claims. (Cl. 188—88.)



1. A shock absorber comprising an outer cylinder, an inner cylinder, the latter communicating adjacent the top and bottom with said outer cylinder, a liquid in said cylinders and a piston including a piston rod and a piston head operating within the inner cylinder to cause a flow of liquid from the inner cylinder into the outer cylinder upon an upward movement of the piston, said piston head having a port opening therethrough, and a disc mounted on said rod and movable with respect to the piston head to permit the passage of the liquid through said port opening on a downward movement of the piston, and to entirely close the openings against the flow of liquid therethrough on the upward movement of the piston.

1,565,771. PROCESS OF MAKING TUBULAR BODIES. PERCY A. E. ARMSTRONG, Loudonville, N. Y., assignor to Ludlum Steel Company, Watervliet, N. Y., a Corporation of New Jersey. Filed Aug. 18, 1919. Serial No. 318,253. 1 Claim. (Cl. 29—188.)

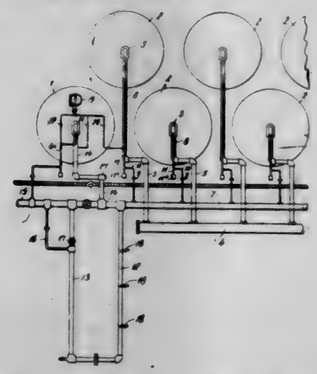


The process of making tubular bodies, such as hollow drill steel, which comprises casting an ingot of relatively high carbon steel about a tube of lower carbon steel having a higher melting point than the cast material, whereby welding and substantially carbon equalization of the two steels are secured at least in part, hot rolling the ingot with a core in said tube for elongation and reduction of cross section, whereby the welding and carbon equalization of the two steels are carried out to a further extent, and removing the core, thereby providing a tubular body having a body portion initially of

steel relatively high in carbon and a bore lining initially of steel relatively low in carbon made substantially homogeneous by welding and substantial equalization of carbon content under heat.

---

1,565,772. DRAINAGE SYSTEM. GEORGE H. BARRUS, Boston, Mass. Filed July 28, 1922. Serial No. 578,034. 13 Claims. (Cl. 34—48.)



1. A system of the class described, comprising a plurality of drying cylinders, means for supplying heating steam to said cylinders, means for removing the contents of said cylinders comprising a drainage main and individual drainage connections between the respective cylinders and said main, and means for maintaining a continuous pressure difference between the cylinders and said drainage main comprising a restricted portion of constant area interposed in each of said individual drainage connections.

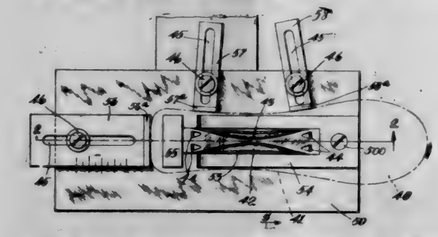
---

1,565,773. EMBALMING FLUID. EDMUND BARTA, Chicago, Ill. Filed Apr. 7, 1924. Serial No. 704,861. 1 Claim. (Cl. 27—21.)

An embalming fluid consisting of bichlorid of mercury, sodium chlorid, sodium hydroxid, crystallized thymol, crystallized camphor, eosin rubrum, formol, concentrated formaldehyde, and bergamot oil.

---

1,565,774. APPARATUS FOR LOCATING SHANK STIFFENERS ON SHANK PIECES FOR TURN SHOES. REINHARD E. BARTELS, Lynn, Mass. Original application filed Apr. 26, 1920, Serial No. 376,633. Divided and this application filed May 17, 1922. Serial No. 561,593. 6 Claims. (Cl. 33—180.)



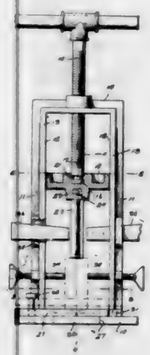
1. A device for locating a shank stiffener in a desired position on a shank, comprising a support, means on the support for holding the shank stiffener definitely positioned on the support, and abutments on the support against which the shank may be placed so as to position the shank above the shank stiffener in position to be attached thereto in the desired position.

1,565,775. DEVICE FOR USE IN APPLYING COSMETICS. CHARLES BASH, Brookline, Mass. Filed Jan. 26, 1925. Serial No. 4,948. 9 Claims. (Cl. 132—78.5.)

1. A pad of the character described comprising a body of elastic material, and an envelope of thin rubber inclosing said body.

---

1,565,776. PRESS. ADELBERT R. BENEDICT, South Tacoma, Wash. Filed Aug. 16, 1924. Serial No. 732,542. 2 Claims. (Cl. 29—85.)



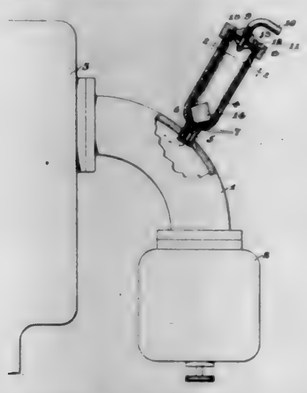
1. In a press of the type described, a base having a notch opening through one side thereof and terminating centrally of the base in a semicircular cove, a pair of standards arranged at opposite sides of the cove and extending upwardly from the base, a bridge-piece connecting the standards at their upper ends, a press bar guided by the standards and having means for attaching dies thereto, means extending through the bridge-piece for vertically adjusting the press bar upon the standards, a swingable arm pivotally connected to the base at one end and combining with said base to fill the notch thereof and to combine with the cove of the notch to provide at the center of the base beneath the press bar an opening, the pivotal connection of said arm and base permitting vertical movement of the arm with relation to the base, said arm in its closed position abutting the standards at one side face, and means upon the base engaging the opposite side face of the bar when in the closed position preventing movement of the bar until the same is shifted vertically from the base.

---

1,565,777. SYNTHETICALLY-MADE PRECIOUS STONE AND METHOD OF PRODUCING THE SAME. DAVID BERTOLINI, Locarno, Switzerland, assignor to Swiss Jewel Company, S. A., Locarno, Switzerland. Filed Jan. 20, 1925. Serial No. 3,683. 5 Claims. (Cl. 106—36.1.)

5. A synthetic stone having the hardness of a natural sapphire and the color and appearance of a natural aquamarine composed of alumina, and oxides of magnesium, cobalt and vanadium in the proportion of approximately 86% of alumina, 14% of oxide of magnesium and a trace each of oxide of cobalt and oxide of vanadium.

1,565,778. CARBON-REMOVING ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JOHN BIRD, Camden, Me. Filed June 24, 1924. Serial No. 722,098. 3 Claims. (Cl. 123—198.)



3. An attachment for gasoline engines comprising a tubular member exteriorly threaded adjacent each end, the bore of said body restricted at one end and said restricted bore communicating with the main bore by a plurality of small flaring passages communicating with the main bore about its periphery, a closure cap adapted to engage the threads on the other end of the body, said cap having air inlet ports and a centrally located stem in threaded engagement with the cap, a disk adapted to seat over said stem and against the inner face of the cap and spring mounted on the inner end of the stem to resiliently force the disk to its seat substantially as specified.

---

1,565,779. COMPOSITION FOR REMOVING CARBON DEPOSITS. JOHN BIRD, Camden, Me. Filed June 4, 1925. Serial No. 35,025. 2 Claims. (Cl. 87—5.)

1. A composition in the form of a tablet consisting of ammonium carbonate and powdered naphthalene.

---

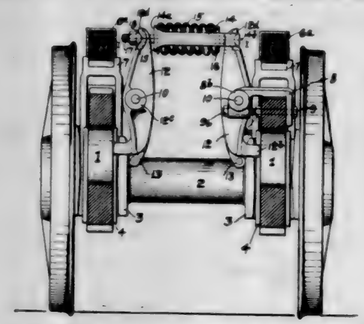
1,565,780. AUTOMOBILE WASH BRUSH. LOUIS P. BLAKEY, Germantown, Pa. Filed Sept. 8, 1923. Serial No. 661,687. 4 Claims. (Cl. 15—128.)

1. An automobile wash brush comprising a head, means for supplying water to the head, a stud projecting from the outer end of the head, a shield arranged to fit about the inner side of the head and having an opening in its outer end to receive the stud for supporting the outer end of the shield, and releasable means engaging the inner end of the shield for detachably securing the same to the head.

---

1,565,781. LATERAL-MOTION DEVICE FOR LOCOMOTIVE DRIVING BOXES. JAMES G. BLUNT, Schenectady, N. Y. Filed Jan. 22, 1925. Serial No. 3,958. 7 Claims. (Cl. 105—80.)

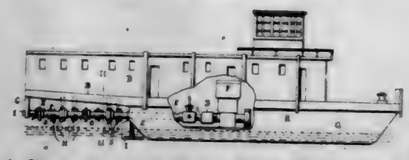
1. In a locomotive engine, the combination of a frame; driving axle boxes mounted in said frame and capable of a limited lateral movement relative thereto; an axle rotating said boxes; and mechanism supported by the frame comprising means for transmitting lateral movement of one box to bring pressure upon the portion of



the frame housing the opposite box and of reacting against the first mentioned box to exert pressure to restore it to normal position.

---

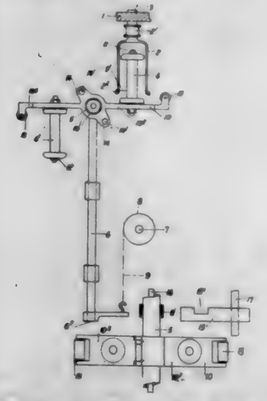
1,565,782. PROPELLER MECHANISM FOR VESSELS. PETER W. BOLT, Wilkinsburg, Pa. Filed June 13, 1924. Serial No. 719,727. 10 Claims. (Cl. 115—37.)



1. In a screw propeller mechanism for vessels, the combination with driving means mounted in the hull, of a horizontally disposed shaft extending rearwardly from the hull, means for imparting rotary motion in either direction to said shaft from said driving means, and a plurality of propellers mounted in tandem and in spaced relation to each other on said shaft, the propellers being immersed below their axes only.

---

1,565,783. DOFFING MECHANISM FOR SPINNING, TWISTING, AND LIKE FRAMES. THOMAS ALEXANDER BOYD, HAROLD ARTHUR BOYD, and JAMES BOYD, Glasgow, Scotland. Filed Sept. 4, 1925. Serial No. 54,439. 5 Claims. (Cl. 118—18.)

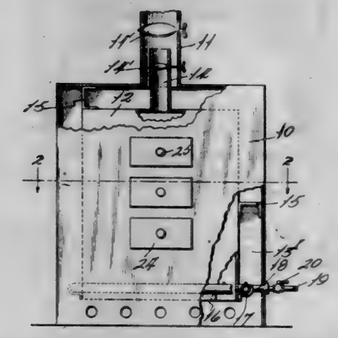


1. In a spinning, twisting or like frame, in combination, a flyer rotatable on a vertical axis, an axially bored axle member rotatable on a horizontal axis, a bobbin

carrier mounted on said axle member, said carrier serving to support a plurality of bobbins in the same vertical plane as said flyer and adapted on rotation with said axle member to bring the bobbin to be filled into coaxial relation with said flyer, and yarn cutting means including a member movable in the bore of said axle member.

---

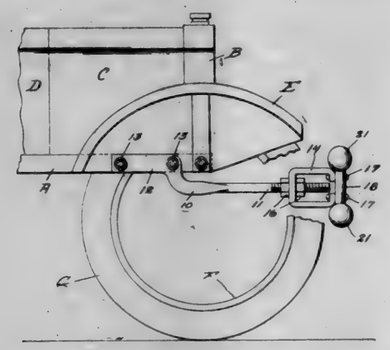
1,565,784. TOASTING OVEN. THOMAS O. BROOKS, Dallas, Tex. Filed June 19, 1923. Serial No. 646,314. 3 Claims. (Cl. 126—278.)



1. In an oven, an outer shell, an open bottom inner shell having a top vent and disposed within the outer shell spaced therefrom, a burner in the space between the shells comprising the sole heating means therefor, whereby the inner shell is free from flames and fumes of the burner, and means for supporting articles of food spaced from the side walls of the inner shell for toasting.

---

1,565,785. AUTOMOBILE BUMPER. THOMAS F. BUCK, New Castle, Pa. Filed Feb. 25, 1925. Serial No. 11,522. 12 Claims. (Cl. 293—55.)

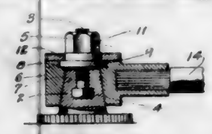


1. A bumper for motor vehicles comprising a pair of arms adapted to be secured to the frame bars, U-shaped yokes carried by the forward ends of said arms, uprights carried by the yokes, and transverse members carried by the uprights.

---

1,565,786. BATTERY TERMINAL. WILLIAM A. BURKHOLDER, Junction City, Kans. Filed Mar. 28, 1924. Serial No. 702,610. 2 Claims. (Cl. 173—259.)

1. A battery terminal comprising a binding post, a socket member to fit over the binding post, a nut rotatably mounted in the socket member and co-operating with the binding post the nut being rotatable in one direction to force the socket member longitudinally upon



the binding post and rotatable in an opposite direction for forcing the socket member away from the binding post.

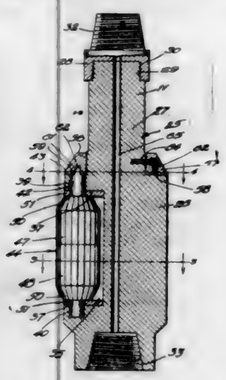
---

1,565,787. FLANGEWAY GUARD. CARROLL BURTON, Johnstown, Pa. Filed Sept. 25, 1925. Serial No. 58,557. 10 Claims. (Cl. 238—8.)

1. The combination with a rail of a track structure, of a flangeway guard comprising a base portion, a back portion rigidly supported from said base portion, and a top portion adapted to be bridged between said back portion and the rail, said top portion being freely movable independent of said base and back portions to permit renewing and spiking of the track rail.

---

1,565,788. REAMER. ANTHONY E. CARLSON, Los Angeles, Calif. Filed Jan. 26, 1925. Serial No. 4,765. 4 Claims. (Cl. 255—71.)

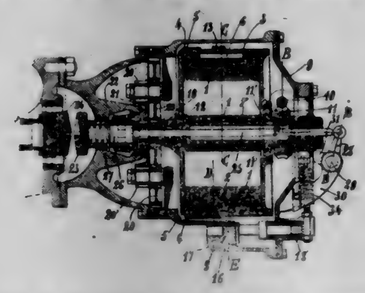


1. In a reamer of the class described, the combination of: a body, said body comprising cutter cavities formed therein and openings formed at each end of said cavities; bearing pins extending into said openings; a split securing ring carried by said body for securing said bearing pins in place; and cutters carried on said bearing pins in said cavities.

---

1,565,789. MECHANICAL STARTER FOR INTERNAL-COMBUSTION ENGINES. PIERRE ROGER LOUIS AUGUSTE CARMIER, Paris, France, assignor to Société Anonyme dite: Matériel et Accessoires d'Aviation, Paris, France. Filed Apr. 24, 1923. Serial No. 634,307. 3 Claims. (Cl. 185—41.)

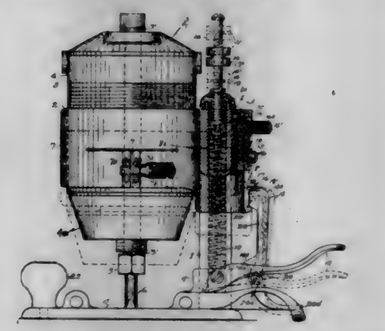
1. A mechanical starter for internal combustion engines comprising a casing secured to the crank case of the engine, a spring box revoluble in said casing, a spiral spring, wound therein and secured to the same at its outer end, a shaft passing through the spring box, a device for winding the spring which acts upon the inner end thereof, an extension of the shaft of the spring box which is independent of the said shaft and is adapted to be driven by the spring box, an actuating disk



mounted on the end of the engine shaft, a coupling device acting by the jamming of rollers situated between said disk and the extension of the axle of the spring box, and means for immobilizing the spring box during the winding and the stopping and for releasing the same when starting the engine.

---

1,565,790. PORTABLE ROUTING MACHINE. RAY L. CARTER, Syracuse, N. Y. Filed Mar. 21, 1925. Serial No. 17,419. 4 Claims. (Cl. 90—12.)

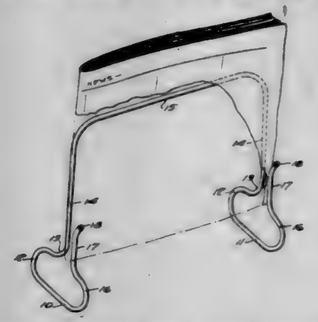


1. A holder adapted to adjustably support a routing machine and the like, said holder being formed with a guide-way whose axis is parallel to the axis of the routing machine, a pedestal slidably received in said guide-way upon which said holder is reciprocable for moving the routing machine towards and away from the work, tension means for normally holding the routing machine in the idle position, a lever for moving the routing machine towards the work, means operable within and concentric to said pedestal for gaging the extent of the latter movements, a locking device for restraining said tension means from restoring the routing machine to the idle position, and means for releasing said locking device for freeing the tension means from said restraint.

---

1,565,791. NEWSPAPER HOLDER. EDWARD P. CHALFANT, Yonkers, N. Y. Filed Apr. 14, 1925. Serial No. 23,093. 3 Claims. (Cl. 40—151.)

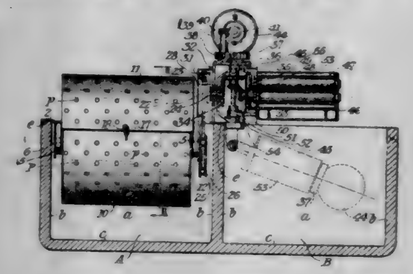
3. A device for supporting a newspaper or the like from a table, said device being in the form of a single piece of bent wire having an inverted U-shaped upper portion carried above the table by downwardly extending leg portions in the form of substantially parallel loops, each loop being in the plane of the corresponding side of the U, and including rearwardly bent upper portions



and forwardly extending base portions adapted to rest on the table, the end portions of the piece of wire being bent up adjacent to the lower part of the leg portions and spaced therefrom.

---

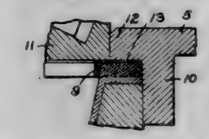
1,565,792. WASHING MACHINE. BENJAMIN DAY CHAMBERLIN, Rochester, N. Y. Filed Sept. 8, 1922. Serial No. 586,893. 8 Claims. (Cl. 68—18.)



1. In a washing machine adapted to be mounted on a stationary tub, the combination of a frame adapted to support a drum, raised portions on the frame to engage the edges of the stationary tub thus suspending the frame beneath the top of the tub, a second frame section, a motor drive mounted on the second frame section, a hinge connecting the two sections, and means adapted to hold the two sections together.

---

1,565,793. PROTECTIVE CASING FOR GASKETS. HORACE CHRISMAN, Edgewood, Pa., assignor to Pittsburgh Meter Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1921. Serial No. 511,484. 1 Claim. (Cl. 288—1.)

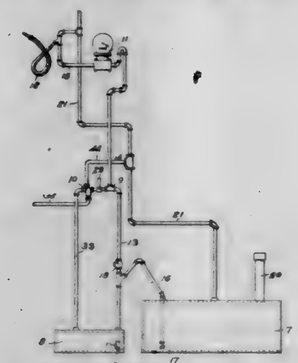


In combination with a gasket, a meter body having an opening surrounded by an annular face against which said gasket is forced and an annular wall surrounding said gasket, a paper strip L-shaped in cross-section lying between said gasket and said annular face and between said gasket and said annular wall whereby sticking of the gasket to said face and wall is prevented,

a cover for said opening movable directly toward said gasket, and bolts for securing said cover in place and whereby said gasket and strip are forced in packing engagement with said annular face.

---

1,565,794. FLUID-DISTRIBUTING SYSTEM. THOMAS C. CLIFFORD, Pittsburgh, Pa. Filed July 1, 1922. Serial No. 572,268. 12 Claims. (Cl. 221—74.)

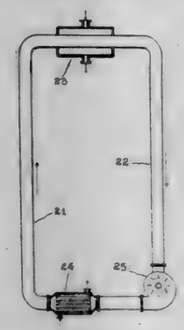


1. In a liquid dispensing system, a liquid supply tank, a valve for controlling delivery of liquid from said tank, a valve for controlling delivery of fluid under pressure to said tank, and means responsive to fluid pressure delivered through said last mentioned valve for moving both of said valves.

12. In combination in a fluid dispensing system, a sleeve valve for controlling the delivery of liquid from the system, a sleeve valve for controlling the delivery of fluid under pressure to the system, manually operated means for controlling both of said valves, and automatic means for venting the system and for actuating the fluid control valve to shut off the supply of fluid under pressure to the system.

---

1,565,795. ART OF REFRIGERATION. BARTON H. COFFEY, New York, N. Y. Filed Aug. 9, 1920. Serial No. 402,304. 4 Claims. (Cl. 62—178.)



1. The process of refrigeration which consists in gradually reducing the pressure on a liquid refrigerant, vaporizing a part of the liquid refrigerant during the reduction of pressure substantially without heat exchange, vaporizing a further part of the liquid refrigerant at low pressure and temperature to produce the refrigerating effect, gradually increasing the pressure on the resulting mixture of liquid and vapor, thus condensing part of the vapor, substantially without heat exchange, and condensing the remaining vapor at the higher pressure and at a higher temperature.

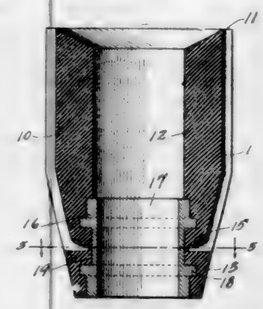
---

1,565,796. METHOD OF MANUFACTURING A PERFUME SMELLING LIKE AMBER. ARNOLD CORTI, Winterthur, Switzerland, assignor to Chemical Works Flora, Dubendorf, near Zurich, Switzerland. Filed Jan. 26, 1923. Serial No. 615,144. 1 Claim. (Cl. 260—142.)

A new perfume and perfume base, comprising nitrodibrom-butyl-metacresol-methyl-ether having a smell of musk and a true smell of amber, melting at 100° C.

---

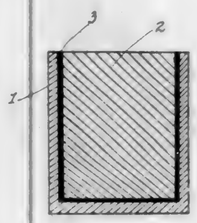
1,565,797. SWAB CUP. CHARLES S. CRICKMER, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Feb. 28, 1925. Serial No. 12,268. 7 Claims. (Cl. 74—109.)



1. A swab cup comprising a flexible cup body provided with an axial opening having a seat, and a metallic reinforcing bushing engaged in the seat of the opening of the body and held against longitudinal displacement therein.

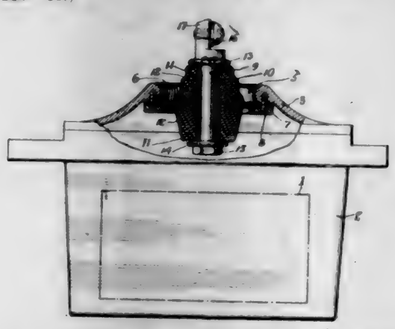
---

1,565,798. PROCESS OF PACKING ASPHALT. EDWARD R. DILLEHAY and ALAN R. LUKENS, Wyoming, Ohio, assignors to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Oct. 9, 1924. Serial No. 742,704. 7 Claims. (Cl. 23—242.)



1. A process of preparing asphalt for shipment which consists in forming a coating in a carton having a body of finely divided mineral matter of dusty nature held in pasty form by suitable additions, and flowing the asphalt directly into the carton, whereby the carton acts as a mold and a shipping case, and the coating will prevent the paper of the carton from adhering to the asphalt.

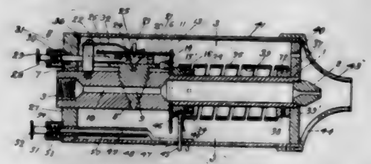
1,565,799. INSULATING STRUCTURE FOR HIGH-POTENTIAL CONDENSERS. WILLIAM DUBILIER, New Rochelle, N. Y., assignor to Dubilier Condenser & Radio Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Feb. 18, 1921, Serial No. 445,948. Divided and this application filed Aug. 8, 1925. Serial No. 49,063. 9 Claims. (Cl. 250—41.)



1. A condenser comprising a condenser unit enclosed in a container, one wall of said container having a relatively large opening therein, a sheet mica diaphragm disposed across said opening, a terminal for said condenser unit extending through said diaphragm, said diaphragm being of sufficient extent to provide a relatively large distance between said terminal and the periphery of the opening, and laminated sheet mica blocks surrounding said terminal and disposed on opposite sides of said diaphragm, said blocks being of such thickness as to provide a relatively large spacing between exposed portions of the terminal and the metallic wall of the container, the edges of the mica sheets forming the side walls of the blocks.

---

1,565,800. AUTOMATIC GAS CUT-OFF. FRANK DZIERŻENGA, New York, N. Y. Filed Jan. 6, 1925. Serial No. 903. 3 Claims. (Cl. 67—116.)

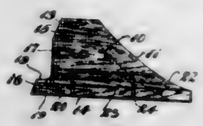


1. In an automatic gas stopper, the combination with a burner, a valve in a cooperative relation with said burner, a spring consisting of two metals with different temperature coefficient and placed concentrically with said burner, an operative connection between said spring and said valve, a locking link operatively connected with said valve and said spring, a shell around said burner, a slot in said shell for said link, said slot being arranged in the line of movement of said link under action of said spring, a locking pocket connected with said slot, said link being adapted to be placed in said locking pocket when said valve is opened, means to release said link from said pocket when said spring becomes hot.

---

1,565,801. CHOCK BLOCK. FRANK G. HEWLETT, Bellamy, Ala., assignor to Allison Lumber Company, Inc., Bellamy, Ala., a Corporation. Filed May 12, 1924. Serial No. 712,878. 1 Claim. (Cl. 188—32.)

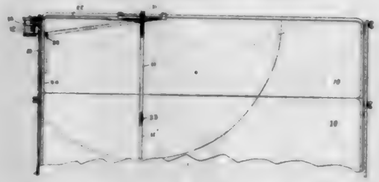
A chock comprising a wooden block having a wheel engaging face and oppositely inclined rear faces disposed in a single plane and formed with an intermediate recessed portion having walls at a right angle to each other and joined at their angle by a curved face provided for the introduction of a fastening device, and



grooves at the opposite side faces of said block forming flanges having an inclined face provided with an aperture to receive a fastening device.

---

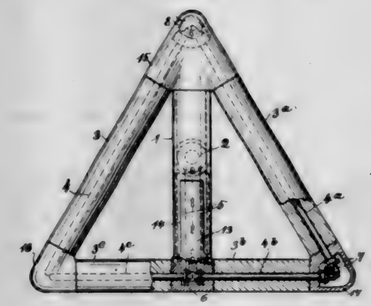
1,565,802. WINDSHIELD CLEANER. VALENTINE G. HUSH, New York, and THOMAS A. HILL, Brooklyn, N. Y.; said Hill assignor to said Hush. Filed Nov. 22, 1920. Serial No. 425,595. 1 Claim. (Cl. 15—253.)



A windshield cleaner comprising a wiper arm, means for swingingly mounting the wiper arm on the windshield with the wiper arm in contact with the windshield glass, and means for actuating said wiper arm, said wiper arm including an inner section adapted to be swingingly mounted on the windshield, and an outer section hinged to the free end of the inner section, resilient means cooperating with said sections to retain them normally in alignment.

---

1,565,803. STEERING WHEEL FOR AUTOMOBILES AND THE LIKE. PETER MARTIN JENSEN, Copenhagen, Denmark. Filed June 21, 1923. Serial No. 646,886. 6 Claims. (Cl. 74—33.)



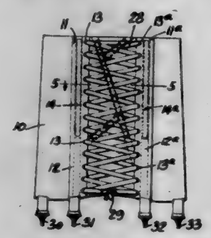
1. A polygonal steering wheel comprising rim members connected together at the angles of the wheel for rotation.

---

1,565,804. CORSET. AUGUSTA S. JOHNSON, Brooklyn, N. Y. Filed Aug. 2, 1924. Serial No. 729,741. 5 Claims. (Cl. 2—38.)

1. In a corset comprising a separated body portion, having eyelets along its vertical ends, a single tongue overlapping the said ends at the inside of the corset, having

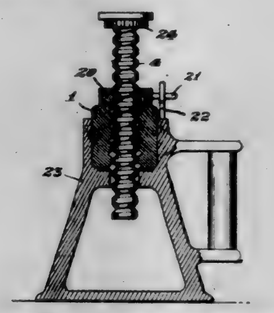
eyelets along both its vertical edges, each of the said edges containing the eyelets being turned over between the tongue and the ends of the said body portion, and



lacing through the eyelets of, respectively, the said body portion and the said tongue for adjustably connecting the body portion and securing the tongue.

---

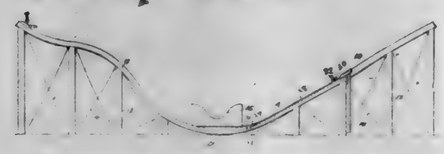
1,565,805. SCREW JACK. HARRY HERBERT JONES, Santa Barbara, Calif., assignor of one-third to Yee Yuen and one-third to Ernest K. Sen, both of Santa Barbara, Calif. Filed Jan. 9, 1925. Serial No. 1,467. 5 Claims. (Cl. 254—98.)



3. In a jack, a screw and nut having complementary spiral V-shaped recesses, balls operating in the recesses, the balls being spaced from the edges of the recesses and engaged with the walls thereof, the ends and periphery of the nut having grooves coacting with the complementary V-shaped recesses to complete the runway for the balls, plates secured to the nut and covering the grooves to prevent loss of the balls, and deflectors for facilitating the passages of the balls from the recesses to the grooves and from the grooves to the recesses.

---

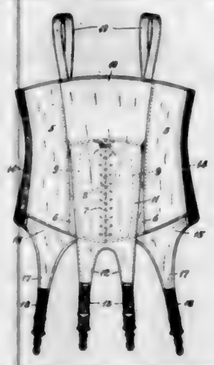
1,565,806. AMUSEMENT DEVICE. JAMES P. LADEN, Louisville, Ky. Filed Apr. 10, 1925. Serial No. 22,218. 7 Claims. (Cl. 104—162.)



2. An amusement device comprising an elevated structure having its intermediate portion lowermost and its ends inclined, a track mounted upon said structure, a car movable backward and forward over the track, fluid operated means including a substantially L-shaped pivotally mounted dog located in the path of the car to carry said car an appreciable distance up one incline, means at the bottom of said incline and operated by the car to render the fluid operated means active, means located in the path of the dog to cause the latter to engage the car at the beginning of the operation of the fluid operated means and means spaced from the bottom of the incline to render said fluid operated means inactive.

---

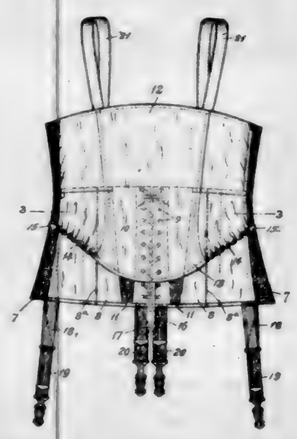
1,565,807. BRASSIÈRE. LEO E. LEVY, New York, N. Y., assignor to Model Brassiere Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 18, 1922. Serial No. 555,443. 1 Claim. (Cl. 2—42.)



In a corset-brassière, the combination of front sections spaced apart, upper and lower fabric sections connected respectively with the upper and lower portions of said front sections and spanning the space therebetween in independent, vertical relation to each other to complete the front of the corset brassière, said lower section comprising an abdominal section adapted to lie over the abdomen of the wearer, means whereby said abdominal section may be adjusted, a loose flap depending from said upper fabric section and adapted to be worn either inside or outside of said abdominal section, garters depending from said flap and means for detachably securing said corset-brassière upon the wearer.

---

1,565,808. MATERNITY GARMENT. LEO E. LEVY, New York, N. Y., assignor to Model Brassiere Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 26, 1922. Serial No. 590,646. 1 Claim. (Cl. 2—27.)

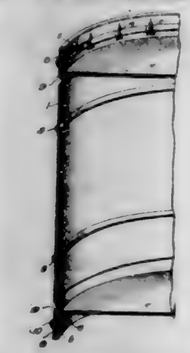


A corset-brassière comprising a body portion, an adjustable abdominal section at the front thereof, an abdominal pouch suspended on said body from above,

over said abdominal section and having its side and lower edges free from said abdominal section, the lower edge of said pouch being substantially inelastic at its central portion and elastic upon opposite sides of said central portion, tie strings connected with the lower edge at the terminals of the elastic portion thereof for adjustably securing said lower edge in place and means for detachably securing said corset-brassière upon the wearer.

---

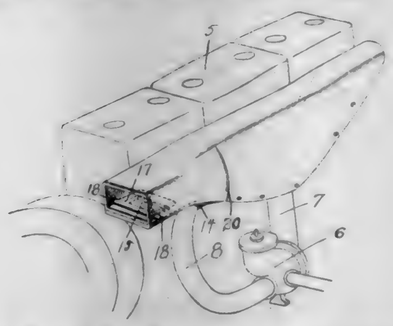
1,565,809. SHIPPING DRUM. HAROLD E. MCCREERY and ALBERT E. JESSER, Philadelphia, Pa., assignors to Sanitary Collapsible Barrel Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Nov. 20, 1922. Serial No. 602,095. 2 Claims. (Cl. 220—67.)



1. A knock down drum comprising a substantially cylindrical sheet metal body portion having its end turned over to receive a head, said turned over portion being provided at points spaced from its edge with alined cut out portions to permit it to be compressed, and a head having a peripheral flange, said flange being adapted to be received between the end of the body portion and the turned-over portion, said flange, said turned over portion and said body portion adjacent said flange, being rolled in alinement with said cut out portions to form an outstanding annular bead.

---

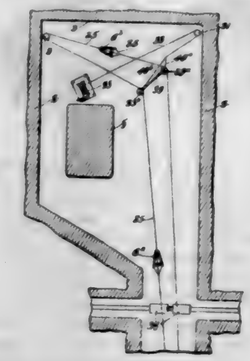
1,565,810. HEATER FOR AUTOMOBILES. PALMER O MELAAS, Fergus Falls, Minn. Filed July 29, 1922. Serial No. 578,400. 1 Claim. (Cl. 257—241.)



A heater for automobiles comprising a body formed of a sigle sheet of metal folded to provide a top wall and spaced depending inner and outer side walls of substantially the same size and shape to receive the branches of exhaust manifold of an internal combustion engine, the inner wall being provided with openings to receive the branches of the manifold, means for holding the body on the manifold, inwardly directed overlapping flanges formed on the side walls of the body at the rear end of the body, said side walls being provided with alined openings and means cooperating with said openings for permitting the control of the flow of heat and air through said body.

---

1,565,811. LOADING APPARATUS. JOE WOOD MORRISON, Akron, Ohio, assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 4, 1919. Serial No. 315,313. 19 Claims. (Cl. 37—115.)



1. In a drag line scraper apparatus for use in removing material from a face extending in a direction transverse to the path of a scraper during its movement when loaded to a point of discharge, a scraper, flexible means for operating the same, guiding means for said operating means adjacent the end of the face remote from the point of discharge, a guiding member adjacent the other end of said face, and means including a flexible member and means for adjusting its free length for supporting said guiding member in a plurality of positions to cause said scraper to travel in a plurality of substantially predetermined paths one of which is a continuation of the other substantially along the face to allow said scraper to recede therefrom when the same is loaded, said guiding member, flexible member and adjusting means therefor constituting the sole means for influencing the path of movement of said scraper while the latter is being moved in either direction along the face by said flexible means.

3. In a loading apparatus, in combination, a plurality of scrapers, a drag line to which said scrapers are secured, a plurality of guide blocks for said drag line, a bar by which said guide blocks are carried, and a line connected with said bar for moving the same.

5. In a loading apparatus, in combination, a scraper, a drag line, a line connecting said scraper and drag line, and a block having separated portions adapted to guide said drag line but to permit passage between them of said connecting line.

6. In a loading apparatus, a scraper, a drag line therefor, and means connecting said drag line and scraper for varying the capacity of said scraper.

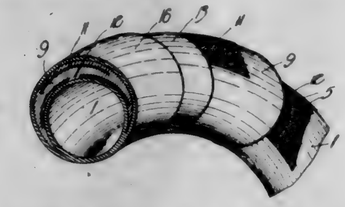
17. In a loading apparatus, in combination, a scraper, a drag line having a forward and rearward portion, and means to adjust said portions operative to change their relative positions, said means including only a single connection to said drag line.

---

1,565,812. PROCESS FOR THE VULCANIZATION OF CAOUTCHOUC. HERMANN OEHME, Kalk, near Cologne, Germany, assignor to Chemische Fabrik Kalk Ges. mit beschränkter Haftung, Cologne-on-the-Rhine, Germany. Filed July 13, 1925. Serial No. 43,402. 2 Claims. (Cl. 18—53.)

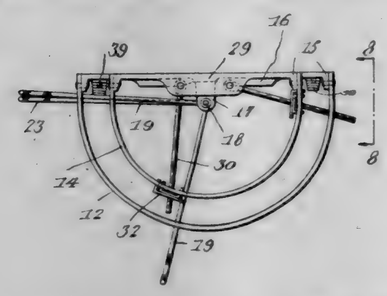
1. A process for the vulcanization of caoutchouc consisting in using zinc hydroxide for the combination of sulphur with the caoutchouc substance.

1,565,813. PNEUMATIC RESILIENT TUBE, PLASTIC COMPOSITION COMBINED THEREWITH, AND PROCESS OF MANUFACTURE. ANDERS JOHN OSTBERG, East St. Kilda, near Melbourne, Victoria, Australia. Filed May 12, 1922. Serial No. 560,423. 3 Claims. (Cl. 154—15.)



1. A method of manufacture of pneumatic tubes consisting in first forming a layer of semi-cured rubber on a mandrel forming a layer of plastic adhesive composition thereon arranging a layer of spaced peripheral fabric strips on said layer forming a further layer of composition with a space between the ends, arranging a further layer of spaced peripheral fabric strips on the last said layer the fabric strips being so disposed that they cover the spaces between and overlap the edges of the inner layer of fabric strips, the ends of the outer layer of fabric strips being tied back to allow of finishing, forming a further plastic composition layer and then an outer rubber layer with a space between the ends to allow of the completion of the ends of the inner plastic layers and the outer fabric layer, overlapping the ends of the outer fabric strips, completing the outer plastic layer and then the outer rubber layer and subjecting the formed tube to vulcanization.

1,565,814. MUSIC-LEAF TURNER. JOSEPH PIERRE PLAMONDON, St. Roch, Quebec, Canada. Filed May 7, 1923. Serial No. 637,401. 3 Claims. (Cl. 84—504.)

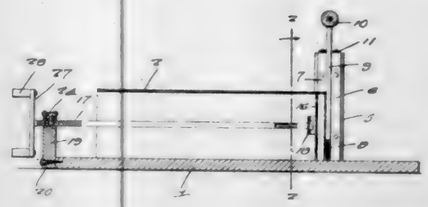


2. A music leaf turner comprising a body and a back, spaced guide members secured thereto and forming two guide-ways, a slotted carriage movable in one of said guideways, a leaf carrier movable in the other guideway, a lock for holding the carrier in proximity to the back, a dog pivoted to the carriage beneath the slot and adapted to release the carrier, an upright spindle journalled in the body, an arm secured to said spindle, the free end of said arm being received in the slot of the carriage and engaging the dog, and means for turning the spindle and the arm.

1,565,815. PRODUCTION OF CELLULOID PRINTING PLATES FOR USE IN THE BICHROMATE PRINTING PROCESS. HEINRICH RENCK, Hamburg, Germany. Filed Nov. 4, 1924. Serial No. 747,868. 3 Claims. (Cl. 95—5.6.)

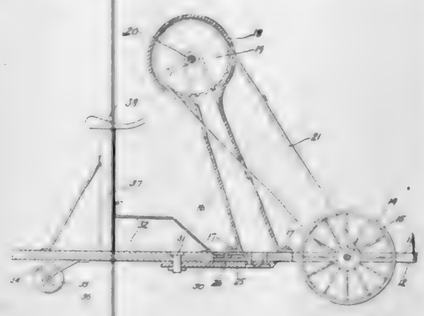
1. The art of making celluloid printing plates, which comprises softening the surface of a celluloid plate by a suitable solvent, coating the softened surface with an aqueous solution of gelatine containing a softening medium for celluloid, bichromating the gelatine coating and exposing and developing the plate so made.

1,565,816. CHEESE CUTTER. GEORGE DEWEY RITCHIE, Madison, W. Va. Filed July 7, 1925. Serial No. 41,983. 1 Claim. (Cl. 31—24.)



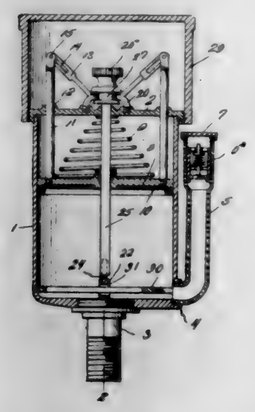
In a cheese cutter comprising a base, a casing secured thereon and open at its respective ends, a pair of vertical standards arranged on the base adjacent the respective sides of the casing adjacent the forward end thereof, a vertically reciprocating knife operable between said standards, guide means therefor, a carrier for the knife, a top plate extending across the upper end of said standards, said plate being slotted longitudinally from one end to a point adjacent the other end thereof to permit the sliding movement of the aforementioned carrier, means for feeding a block of cheese in the casing to said knife; the combination of a removable strip for closing the slotted end of the top plate.

1,565,817. VELOCIPEDE. PAUL SCHIMMEL, New York, N. Y. Filed Jan. 9, 1925. Serial No. 1,357. 5 Claims. (Cl. 208—113.)



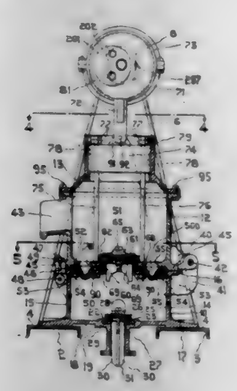
1. A vehicle comprising an articulated body, a pedestal on said body, a driving wheel on the front of said body, hand propelled means mounted in said pedestal for rotating the driving wheel, and a seat on the rear of said body behind the pedestal.

1,565,818. EVEN FEED GREASE RESERVOIR. LOUIS R. SIROIS, Portland, Me. Filed Mar. 13, 1925. Serial No. 15,277. 3 Claims. (Cl. 184—45.)



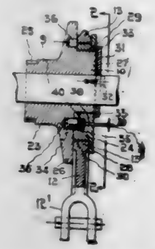
1. In a grease reservoir, a spring actuated discharge follower, a valve, a stem for operation of the valve having an annular groove at its top and passing through the follower, a cam rotatable in the groove for lifting the stem and opening the valve, and means operatively connected to said follower, and to said cam whereby the follower will control the valve so that said valve will be open to a greater extent as the spring loses its tension.

1,565,819. PUMP. MALCOLM B. SAUNDERS, Owen Sound, Ontario, Canada, assignor to The Iron Works Limited, Owen Sound, Ontario, Canada, a Corporation of Canada. Filed June 29, 1922. Serial No. 571,644. 8 Claims. (Cl. 103—151.)



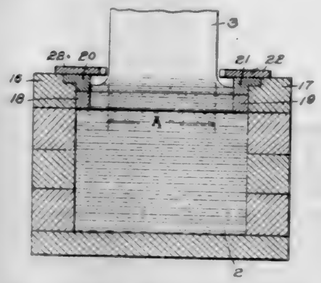
1. In a diaphragm pump a casing divided into a pair of sections hingedly connected together, said sections having abutting edges, means for clamping the said sections together with their edges directly abutting each other; a diaphragm disposed across the casing adjacent the plane of said division with the circumferential edge of the diaphragm located within the inside diameter of the casing, and means for securing the diaphragm upon one of said sections independently of said abutting edges.

1,565,820. TRANSMISSION OF POWER. MALCOLM B. SAUNDERS, Owen Sound, Ontario, Canada, assignor to The Iron Works Limited, Owen Sound, Ontario, Canada. Original application filed June 29, 1922, Serial No. 571,644. Divided and this application filed July 28, 1923. Serial No. 654,429. 4 Claims. (Cl. 74—1.)



1. The combination with a rotary element and a reciprocatory element, of adjustable means effecting an operative connection therebetween, said means including a plurality of eccentrics adjustable relatively to each other, one of said eccentrics having a series of sockets and the other having a movable pin adapted to enter each of said sockets, the axial line of each socket and the pin being disposed parallel to the axis of the rotary element, and means for yieldingly maintaining the pin in position projecting into one of the sockets when the eccentrics are in adjusted position.

1,565,821. APPARATUS FOR DRAWING SHEET GLASS. HARRY G. SLINGLUFF, Mount Vernon, Ohio, assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Nov. 8, 1921, Serial No. 513,677. Renewed Oct. 16, 1925. 6 Claims. (Cl. 49—17.)

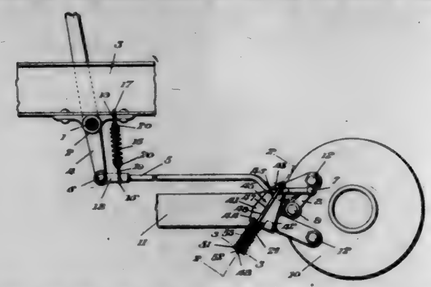


6. In combination in glass drawing apparatus, a drawing tank or receptacle for containing a molten bath of glass, means for drawing a glass sheet transversely with respect to the tank with the loci of generation of the edges of the sheets adjacent the sides of the tank, and slotted adjustable shields mounted at the sides of the tank above the surface of the glass and projecting out over the glass at the said loci of generation for regulating the temperature of the glass at such edges.

1,565,822. ANTIRATTLER. BYRON G. SMITH, Avilla, Ind. Filed Mar. 26, 1921. Serial No. 455,811. 10 Claims. (Cl. 267—1.)

1. A device of the character described comprising a clip having means adapted to move into engagement with a supporting member so as to attach the clip to said member, and spring means engaging said clip and adapted to engage a member movable relatively to the supporting

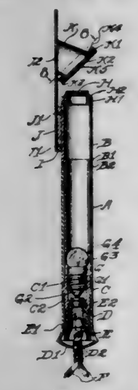
member, said spring means being so arranged with reference to said means of the clip so that the strain exerted by the spring means on the clip will have a tend-



ency to move said clip on the supporting member in a direction to hold said means of the clip tightly against the supporting member.

---

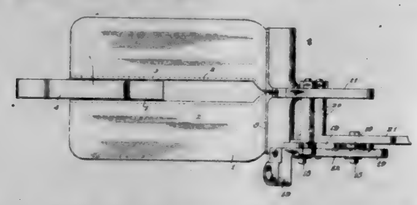
1,565,823. OPTICAL INSTRUMENT. DARWIN STALEY, Memphis, Tenn. Filed Dec. 18, 1924. Serial No. 756,824. 5 Claims. (Cl. 88—20.



1. In an instrument of the kind described, the combination of a tubular body, an oblique mirror supported above the upper end of said body and provided with a sight aperture, a low power lens in the upper end of said body, and an electric lamp in said body spaced from the lens a distance which is long relative to the distance between the lamp and the lens usually found in this art, substantially as described.

---

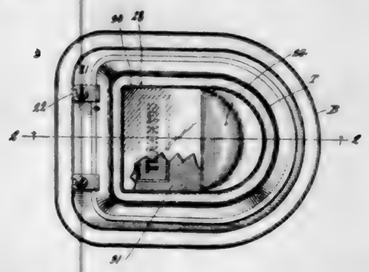
1,565,824. SUPPORT FOR OXY-ACETYLENE TORCHES. JOHN H. STEVENS and NELSON CORY, San Antonio, Tex. Filed June 19, 1924. Serial No. 721,099. 3 Claims. (Cl. 266—23.)



1. A device for the purpose set forth comprising a base plate, means for clamping work thereto, a guide plate secured rigidly upon the base plate, a carrier disposed at one side of the guide plate and parallel therewith, a handle disposed at the opposite side of the guide plate and parallel therewith, and means for rigidly connecting the handle and the carrier, said means being operatively engaged with and extending through the guide plate whereby to impart to the carrier movement along a line corresponding to the contour of the work.

---

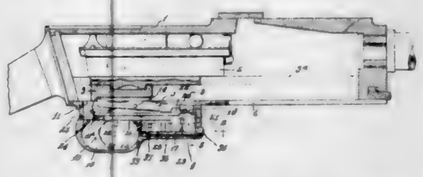
1,565,825. CHANGE TRAY. HOWARD STOKES, Trenton, N. J., assignor to Advertisers Products Corporation, a Corporation of New Jersey. Filed Dec. 30, 1924. Serial No. 758,964. 5 Claims. (Cl. 40—130.)



4. A change tray of the class described including in combination a base, a pair of screws rising from the base at one end thereof, a top in the form of a tray proper having notched lugs extending from one end to engage the screws so that said top will be pivotally mounted on the base, the top having a transparent panel carrying advertising matter, a circuit closer on the base normally holding the free end of the top a slight distance from the adjacent end of the base, a source of illumination on the base for said panel, and a circuit including said source of illumination and the circuit closer.

---

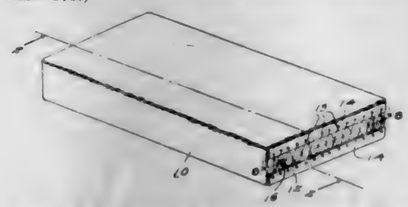
1,565,826. FIREARM. CARL G. SWEBILIUS, New Haven, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Original application filed May 15, 1919, Serial No. 927,201. Divided and this application filed Oct. 6, 1920, Serial No. 415,040. Renewed Oct. 7, 1925. 21 Claims. (Cl. 42—69.)



1. In a firearm, a trigger capable of reciprocation only, a sear pivotally mounted adjacent said trigger, means for normally maintaining said sear and trigger in a predetermined relation to each other, and members on each of said elements having faces substantially oblique and perpendicular to the path of reciprocation of said trigger, the said oblique faces being opposed to each other in the normal position of the sear and trigger.

18. In an automatic firearm, a trigger, means to differently limit the operation of said trigger whereby the firearm is adapted for volley firing, single-shot firing or locked condition, and means for setting said limiting means, said means being characterized by the fact that the change from volley to single-shot firing, from single-shot to volley, or from locked condition to either volley or single-shot may be made merely by pressure applied solely to said slide, but that the change from volley or single-shot firing can be made only after a positive and intentional operation of said setting means.

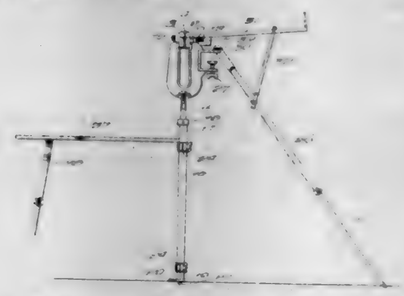
1,565,827. PNEUMATIC AUTOMOBILE SEAT OR CUSHION. WILLIAM C. SWEENEY, Pueblo, Colo. Filed Apr. 14, 1925. Serial No. 23,013. 1 Claim. (Cl. 155—179.)



A seat of the character described comprising a casing, rectangular frames within the casing adjacent the top and bottom, a sheet covering said frame at top and bottom and at the sides, a partition midway of the ends of said sheet and secured thereto, the side walls of said sheet and said partition being double ply, reinforcing elements located between the said plies, pneumatic cushions disposed within the sheet in abutment with said partition, the ends of said casing constituting closures and comprising flaps, said flaps having eyelets, laces coacting with said eyelets, and chafing flaps inwardly of said flaps, said chafing flaps having openings to facilitate access to the valve means of said cushions.

---

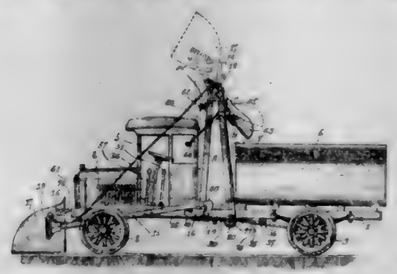
1,565,828. SAW-FILING CLAMP. JOHN SEAKO, New York, N. Y. Filed July 2, 1924. Serial No. 723,844. 7 Claims. (Cl. 76—78.)



4. In combination, a saw clamp, supporting legs for the clamp, a pair of braces interconnecting said legs, the upper brace having spaced apertures, a seat, and projections carried by said seat adapted to engage said apertures.

---

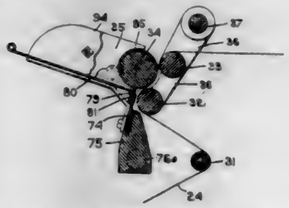
1,565,829. LOADING MACHINE. PAUL THIBAUDEAU, Quebec, Canada, assignor of thirty per cent to Alexander John Welch, Quebec, Canada. Filed Apr. 29, 1925. Serial No. 26,757. 1 Claim. (Cl. 214—78.)



A loading machine comprising in combination with a vehicle, a main shaft journaled on said vehicle, a pair of arms secured to said shaft, a bucket carried by said arms, a power shaft for actuating said arms, a clutch mounted in the power shaft, a rod journaled in parallel relation to said main shaft, a lever secured to said rod and adapted to actuate said clutch, a cam carried by the main shaft and adapted to engage said lever, and a linkage is secured to the rod for independently actuating the lever.

---

1,565,830. SPREADER. ANDREW THOMA, Cambridge, Mass., assignor to Abraham Sydeman, Boston, Mass. Filed July 15, 1918, Serial No. 244,849. Renewed Apr. 29, 1924. 15 Claims. (Cl. 91—49.)



1. A spreader, having, in combination, a two-point support for a web, a coating device operating upon the web between and out of web-nipping contact with the points of support, and a carrier for the support movable to bring the web into and out of engagement with the coating device.

11. A spreader, having, in combination, a receptacle for coating material, a spreading roll for applying the coating material to a web, and a gate arranged normal to the bottom of the receptacle for determining the thickness of the coating applied to the web by the roll.

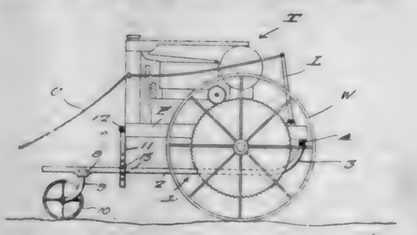
---

1,565,831. CABLE SPLICE. CHARLES VIGNOS, Canton, Ohio, assignor to The American Mine Door Co., Canton, Ohio, a Corporation of Ohio. Filed May 14, 1923. Serial No. 638,848. 1 Claim. (Cl. 173—263.)

A cable splicing sleeve of bendable metal having relatively inclined opposed side edges adapted to ride upon and past each other circumferentially of the sleeve in the act of compression, said edges each having stop shoulders formed therein at right angles thereto and inclined surfaces connecting said stop shoulders whereby the opposed shoulders are adapted to abut and prevent expansion of the sleeve.

---

1,565,832. TRACTOR DRAWBAR STRUCTURE. ELMER E. WATERMAN, Remus, Mich. Filed July 31, 1924. Serial No. 729,325. 2 Claims. (Cl. 280—33.44.)

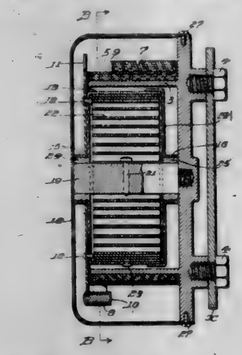


1. A draw bar structure comprising a frame having the side bars of its forward end upturned and adapted to be pivotally connected with the frame of the tractor, independently movable casters carried by the rear ends

of the side bars of the frame, and means for adjustably connecting the rear end portion of the frame to the corresponding end of the tractor.

---

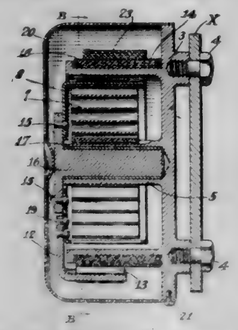
1,565,833. MOTION-CONTROLLING MECHANISM. JOHN WARREN WATSON, Wayne, Pa. Filed Aug. 7, 1919. Serial No. 315,794. 62 Claims. (Cl. 267—10.)



1. In mechanism adapted for use in connection with two relatively movable elements for checking their relative motion in one direction, a drum adapted to be secured to one of said elements, a friction member, in the form of a split ring, in contact with said drum, a power transmitting member secured to said friction member, and adapted to be secured to said other element, a spring connected to said drum and to said friction member and tending to rotate said friction member with relation to said drum and also tending to wind said power transmitting member upon said friction member, said power transmitting member being attached to said friction member at a point thereon which makes it possible for the device to operate throughout its working range without necessitating that said power transmitting member be wound upon said friction member beyond the gap in said friction member.

---

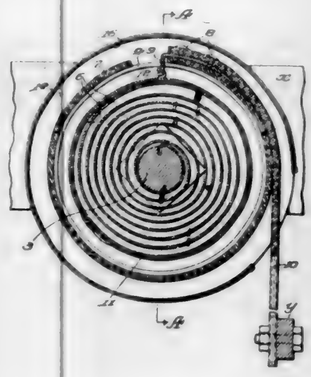
1,565,834. MOTION-CONTROLLING MECHANISM. JOHN WARREN WATSON, Wayne, Pa. Filed Mar. 30, 1920. Serial No. 369,870. 17 Claims. (Cl. 267—10.)



1. In mechanism for retarding motion between two relatively movable elements, a drum adapted to be secured to one of said elements, a friction member in contact with said drum and adapted to be connected with said other element, a spring so associated with said drum and said friction member as to tend to relatively move them in one direction, a retainer for said spring and a bearing for said retainer, said bearing being supported by the inside of a hollow member located within the inner convolution of the spring.

---

1,565,835. MOTION-CONTROLLING MECHANISM. JOHN WARREN WATSON, Wayne, Pa. Filed Apr. 19, 1920. Serial No. 374,806. 33 Claims. (Cl. 267—10.)



1. In mechanism for retarding motion in one direction between two relatively movable elements, a plurality of coaxially arranged drums adapted to be secured to one of said elements, a friction member in contact with said drums and adapted to be secured to said other element, and a spring so associated with one of said drums and said friction member as to tend to relatively move them in one direction.

---

1,565,836. AMMUNITION SUPPLY APPARATUS FOR GUN TURRETS IN WHICH TWO OR MORE GUNS ARE MOUNTED. THOMAS HERBERT WEBSTER, London, England. Filed Sept. 14, 1925. Serial No. 56,324. 4 Claims. (Cl. 89—45.)

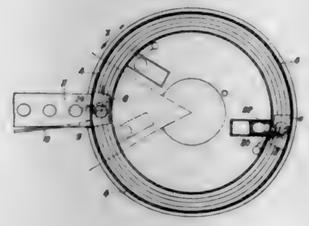
1. In ammunition supply apparatus for a multiple-gun turret, in combination with the turret trunk, a plurality of hatches in said trunk at different levels, distinct and separate paths for projectiles encircling said trunk at the levels of said hatches and of a number equal to the number of guns, and independent means for delivering projectiles to said paths, whereby separate and non-intersecting streams may pass to the several hatches.

---

1,565,837. AMMUNITION SUPPLY APPARATUS FOR GUN TURRETS. THOMAS HERBERT WEBSTER, London, England. Filed Sept. 14, 1925. Serial No. 56,325. 10 Claims. (Cl. 89—45.)

2. In ammunition supply apparatus for gun turrets, in combination with a turret trunk having a hatch, a track surrounding the turret trunk and passing the

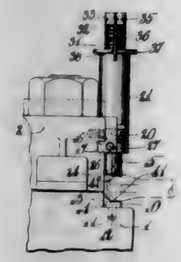
hatch, a stationary platform adjacent to the track, at least two trolleys arranged to travel in the same direc-



tion on the track, and automatic means for stopping and restarting each trolley at the platform and hatch, and means for preventing collision between two trolleys.

---

1,565,838. GAUGING DEVICE. WADE H. WISEMAN, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 13, 1920, Serial No. 395,950. Renewed May 27, 1924. 40 Claims. (Cl. 76—5.)



40. A gauging mechanism comprising means presenting a supporting surface, a gauging die, and means for holding said die against horizontal movement on said surface, said means being vertically movable to allow removal of said die.

---

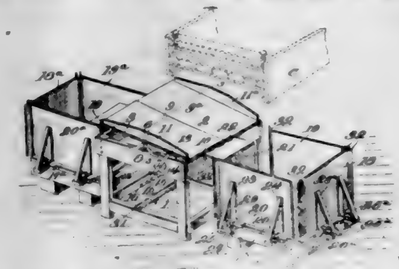
1,565,839. TREATMENT OF CEMENTITIOUS MATERIAL. KASPAR WINKLER, Allstetten, Switzerland. Filed Dec. 14, 1920. Serial No. 430,692. 2 Claims. (Cl. 106—27.)

1. A process of treating cementitious material, comprising the step of gaging the material with a solution of calcium chloride of about 23° Bé., to which a quantity of a finely-pulverized oxide of manganese not exceeding 3% has been added, instead of with water.

---

1,565,840. TIN-PLATE-PILING APPARATUS. STANLEY C. WISE, Canonsburg, Pa., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed May 26, 1924. Serial No. 715,960. 8 Claims. (Cl. 214—6.)

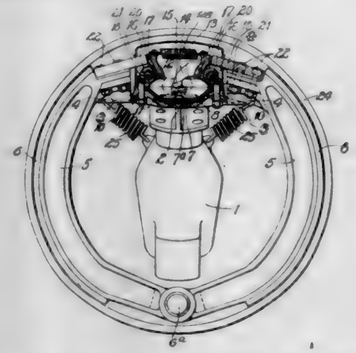
1. A sheet piling apparatus for a tin plate cleaning machine comprising a receiving table on to which the sheets are discharged in succession from the cleaning machine, a piling skid at each side of the table, means for including the table so that the sheets received thereby



will slide either to one side or the other on to a piling skid, and means associated with each piling skid for evenly piling the sheets thereon.

---

1,565,841. AIR BRAKE FOR AUTOMOBILES. HERBERT W. ALDEN, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed May 3, 1924. Serial No. 710,763. 7 Claims. (Cl. 188—152.)



6. In an automobile brake mechanism, brake shoes, contact plates secured to the end of each brake shoe, bell crank levers with their fixed fulcrum points near the middle thereof and each engaging one of said contact plates to operate a brake shoe, and a spring secured to said bell crank levers and tending to pull them away from said contact plates.

---

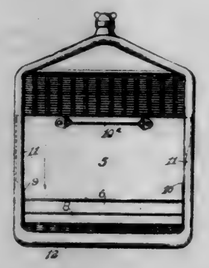
1,565,842. GRINDER ROLL. OTTO ARAM, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 4, 1922. Serial No. 549,492. 13 Claims. (Cl. 83—12.)

1. In the art of constructing grinder rolls for stoker furnaces in which the rolls comprise a cylindrical member provided with projecting teeth, the method of construction such rolls of varying lengths which consists

in preparing a plurality of semi-cylindrical castings of a unit length, preparing a plurality similar castings of twice the unit length, all said castings having identically disposed openings for the reception of teeth and bolts, preparing a plurality of teeth of a single size and pattern, then assembling the teeth in a number of castings requisite to form when assembled a roll of the length required and securing the semi-cylindrical castings to each other in overlapping relation about a square shaft with the teeth abutting said shaft cut to a requisite length to form the desired toothed cylindrical grinder roll.

---

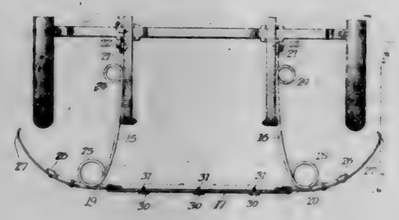
1,565,843. AUTOMOBILE RADIATOR SHIELD. EMILE J. BARNES, Salina, Kans. Filed July 21, 1922. Serial No. 576,538. 2 Claims. (Cl. 257—132.)



2. An air shield for automobile radiators comprising a metal sheet having its upper portion of a length greater than the width between the vertical sides of a radiator case and having its lower corner portions cut-away, the lower portion of said sheet being doubled to produce an overhanging flange forming a groove for the reception of the lower cross portion of the radiator case.

---

1,565,844. AUTOMOBILE BUMPER. HELGE A. BORRESEN, Chicago, Ill. Filed May 26, 1923. Serial No. 641,643. 14 Claims. (Cl. 293—55.)

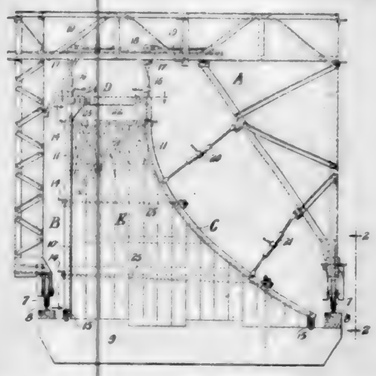


14. In an automobile bumper the combination of supports coiled intermediate their ends and cables extending from one support to the other, said cables being maintained in extended condition by means of said coiled supports.

---

1,565,845. METHOD OF AND APPARATUS FOR CONSTRUCTING WALLS. CHRISTIAN BRYNOLDT, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Apr. 13, 1920. Serial No. 373,531. 12 Claims. (Cl. 25—131.)

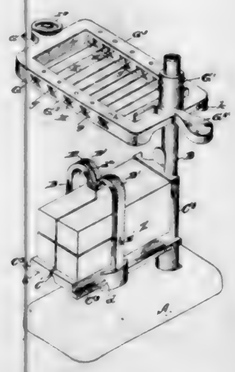
1. The herein described process of constructing sea walls and the like from plastic material such as concrete which consists in casting a section with a form, in removing the bulkhead of the form and laterally exposing the end of the cast section while the concrete is still



green, in setting up a new form overlapping the portion of the cast section exposed as aforesaid with the old form in place, and in casting the contiguous section.

---

1,565,846. BUTTER CUTTER. JOSEPH A. CANTEY, Detroit, Mich. Filed Nov. 17, 1924. Serial No. 750,265. 4 Claims. (Cl. 31—23.)



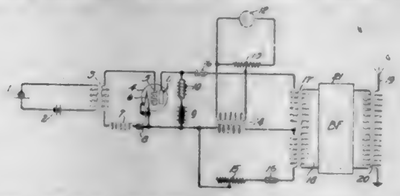
1. In a device of the class described having a butter brick supporting platform, the combination of a slidable frame adapted to receive a single continuous strand of wire having a plurality of return bends and bridging the fraime, means movably mounted on the frame at the said return bends of the wire and supporting the latter and movable with the wire when the same is stretched, means engaging said strand of wire whereby its return bends may be severally and uniformly brought under tension and means for securing the wire against release when under tension.

---

1,565,847. CIRCUITS FOR THE PRODUCTION OF PURE MODULATED CARRIER WAVES. ROY E. CORAM, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,334. 6 Claims. (Cl. 179—171.)

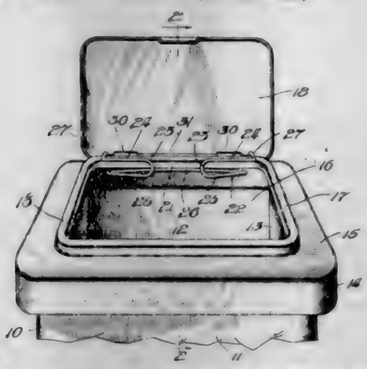
1. In combination, a source of alternating current, a variable electric discharge impedance element, a constant impedance of substantially equivalent magnitude, and

two circuits differentially connecting said source to said work circuit and including respectively said variable electric discharge impedance and said constant impedance, whereby alternating current is supplied to said work circuit only during and in proportion to variations in said impedance.



---

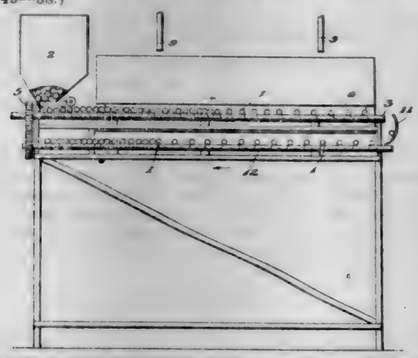
1,565,848. HINGE. TULLY DE STEFANI, Chicago, Ill., assignor to Liquid Carbonic Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1922. Serial No. 540,637. 7 Claims. (Cl. 215—63.)



1. In combination, a vessel having an opening bounded by an inwardly directed flange, a cover mounted over said opening and a resilient member pivoted on said cover and located entirely beneath said cover with parts thereof gripping the upper and lower sides of said flange.

---

1,565,849. MACHINE FOR MAKING AND FINISHING GLASS BARS, RODS, TUBES, BOTTLE NECKS, AND THE LIKE. VICTOR DURAND, Jr., Vineland, N. J. Filed Sept. 5, 1925. Serial No. 54,786. 5 Claims. (Cl. 49—58.)



1. Means of the character described including feed screws of vaying pitch turning in opposite directions to carry articles placed thereon uniformly lengthwise thereof and to separate them at predetermined points in their travel from one another.

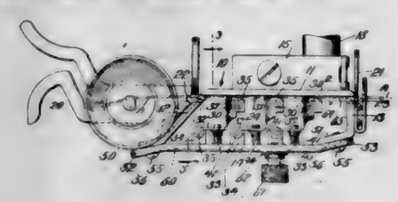
---

1,565,850. YARN CLEANER. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira Heights, N. Y., a Corporation of New York. Filed Aug. 17, 1922. Serial No. 582,884. 20 Claims. (Cl. 28—70.)

1. A yarn cleaner comprising a member providing a plurality of cleaning edges located at one side of the yarn, and a member having a smooth surface opposite said edges at the other side of the yarn, said members being held against relative movement during the operation of the cleaner and positioned so close to each other that the edges contact with one side of the yarn and scrape impurities therefrom while the smooth surface contacts with the other side of the yarn and prevents fibrous matter scraped from the yarn by the edges from entwining about the yarn.

---

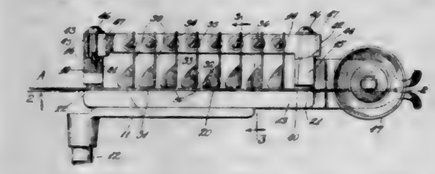
1,565,851. SLUB CATCHER AND YARN CLEANER. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira Heights, N. Y., a Corporation of New York. Filed Oct. 30, 1923. Serial No. 671,745. 11 Claims. (Cl. 28—64.)



1. A device of the class described, comprising means providing a flat surface along which a yarn is drawn, a plurality of blades transverse to said flat surface and having edges opposed thereto, a mounting for each blade permitting its edge to move toward and away from said flat surface, and a separate spring arranged to urge each blade toward the flat surface.

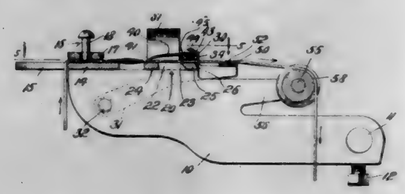
---

1,565,852. YARN CLEANER. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira Heights, N. Y., a Corporation of New York. Filed Oct. 30, 1923. Serial No. 671,746. 13 Claims. (Cl. 28—66.)



1. A yarn cleaner for removing particles from a traveling yarn, comprising a transverse blade having an operative edge at one side of the yarn, means at the other side of the yarn providing a substantially flat smooth surface lying opposite said edge and extending in front of said edge by a distance as great as several times the diameter of the yarn, and means for retaining said surface spaced at a distance from said edge which is less that the normal diameter of the yarn so that the surface lies in contact with the yarn and prevents fibrous matter removed from the yarn by said blade from encircling the yarn.

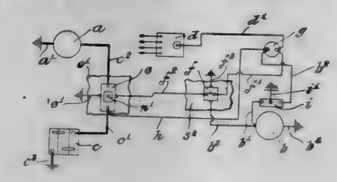
1,565,853. DEVICE FOR OPERATING ON TRAVELING YARNS. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira Heights, N. Y., a Corporation of New York. Filed Oct. 30, 1923. Serial No. 671,747. 28 Claims. (Cl. 28—64.)



1. A self-adjusting device for operating on a traveling yarn, comprising two separable controlling members which are gently urged together and have opposed surfaces between which the yarn passes, and opposed operative elements positioned to act on the yarn at a distance from said controlling members and so connected to said members respectively that when the distance between the controlling members is increased by the use of a larger yarn or decreased by the use of a smaller yarn the distance between the operative elements is correspondingly increased or decreased so that they are spaced from each other by a distance which is determined by the extent to which the surfaces of the controlling members are separated by the yarn.

---

1,565,854. STARTER FOR INTERNAL-COMBUSTION ENGINES. JOHN HASSELBRING, Jr., Farmingdale, N. Y. Filed Nov. 29, 1921. Serial No. 518,542. 8 Claims. (Cl. 290—37.)



2. A starter for internal combustion engines embodying therein a motor adapted to be operatively connected with an engine shaft, a generator driven from the engine, an electric battery, electrical connections whereby said battery may be placed in circuit with said motor, a normally open make and break mechanism in said circuit, a primary controller operative upon said make and break mechanism, consisting of a magnet, electrical connections whereby said magnet is placed in circuit with said battery, and a normally closed make and break mechanism arranged in said circuit, a secondary circuit controller consisting of an electromagnet operative upon said last named make and break mechanism, and electrical connections whereby said magnet is placed in circuit with said generator, a manually operative switch mechanism adapted to simultaneously close the circuit to the ignition system of an engine and to said primary controller, whereby the closing of said manually operative switch will energize said primary controller to cause the closing of the circuit to said starting motor, and when the engine is operating under its own power, said generator will energize the magnet of said secondary controller to interrupt the circuit to the magnet of said primary controller, and cause the circuit to said motor to be interrupted, and manually operative means whereby the make and break mechanism arranged in the circuit to the magnet of said primary controller may be actuated independently of the secondary controller magnet to interrupt the circuit to said primary controller magnet.

1,565,855. VACUUM TUBE. JOHN B. JOHNSON, Elmhurst, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1920. Serial No. 426,505. 28 Claims. (Cl. 171—95.)

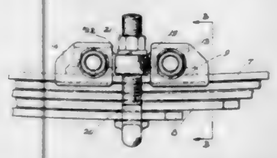
5. A vacuum tube comprising an evacuated vessel, a cathode, an anode, a press, and a tubular member of insulating material mounted upon said press and supporting said anode, said cathode being located within said tubular member.

21. A vacuum tube comprising an evacuated vessel containing a stem, a cathode, an anode supported by said stem, and a plurality of parallel plates supported by said stem.

28. A vacuum tube comprising a cathode, an anode, a screen for intercepting a beam of rays from said cathode, means for deflecting said beams, and means comprising an electrode remote from said first means and adjacent said screen for reducing the space charge in said tube.

---

1,565,856. CLAMP FOR VEHICLE LEAF SPRINGS. ALEXANDER F. KAPTULLER, Chicago, Ill. Filed July 8, 1922. Serial No. 573,617. 12 Claims. (Cl. 267—53.)

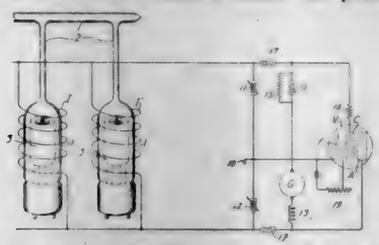


1. A clamp for vehicle leaf springs comprising a base adapted to be positioned against the face of one of the outer leaves of the spring, self positioning members associated with the respective sides of said base and adapted to bear against the opposite edges of one of said leaves, and means to secure said members in binding engagement with said leaf.

---

1,565,857. VACUUM-TUBE MANUFACTURE. MERVIN J. KELLY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1921. Serial No. 481,610. 6 Claims. (Cl. 250—27.)

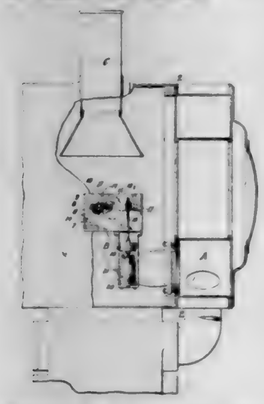
1. A method of exhausting a vacuum tube having an anode by the use of a thermionic oscillator having an inductive element which comprises surrounding said vacuum tube to said inductive element and producing



a high frequency electromagnetic field in said inductive element to directly heat the anode of said vacuum tube.

---

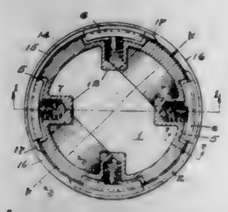
1,565,858. METHOD OF AND APPARATUS FOR CONTROLLING BACK PRESSURE AND DRAFT IN LOCOMOTIVES. DAVID MILLER LEWIS, Milwaukee, Wis., assignor to Lewis Draft Appliance Company, a Corporation of Illinois. Filed Apr. 15, 1920. Serial No. 374,019. 26 Claims. (Cl. 162—8.)



1. The combination in a locomotive drafted by its exhaust steam, of means operating to change the intermittent exhaust from the cylinders into a substantially continuous draft blast, and a governor for regulating the draft blast.

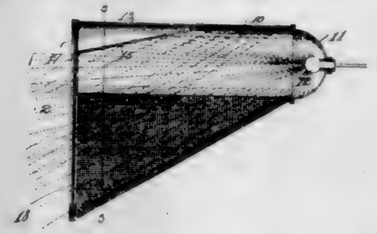
---

1,565,859. PISTON AND PISTON RING. FREDERICK A. LITTER, Columbus, Ohio, assignor, by mesne assignments, to The Litter Piston Mfg. Company, Charleston, W. Va., a Corporation of West Virginia. Filed Dec. 4, 1922. Serial No. 604,671. 10 Claims. (Cl. 74—109.)



1. Piston construction comprising a groove having parallel sides positioned in single planes, split rings for said groove having a portion of their adjacent surfaces chamfered and part of their length of rectangular cross-section, and means for maintaining the rectangular section of one ring opposite the joint of the other ring.

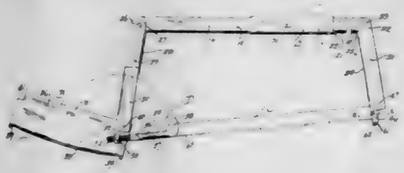
1,565,860. AUTOMOBILE HEADLIGHT. EDGAR H. LUKENBILL, Lincoln, Ill. Filed Oct. 16, 1924. Serial No. 743,994. 1 Claim. (Cl. 240—41.)



An automobile headlight including a forwardly flared casing the lower portion of the interior of which is nonreflective, a source of light and a reflector in the smaller end of the casing, an opaque shield covering the upper portion of the lens of the lamp casing, and an inclined flat reflector extending from the lower portion of said shield upwardly and rearwardly to a point intermediate the length of the top of the casing.

---

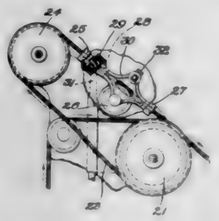
1,565,861. COLLAPSIBLE HACK SAW. ERASTUS WILLIAM MCINTIRE, Price, Utah. Filed May 6, 1921. Serial No. 467,255. 8 Claims. (Cl. 145—35.)



2. A saw, comprising in combination a frame, a lever pivotally connected to one end of said frame, a nut oscillatively carried by said lever adjacent the pivot connection of said lever with said frame, a bolt adjustably disposed in said nut, and a blade adapted for connection to said bolt and to an end of said frame whereby upon rocking of said lever said blade will be tensioned between its supporting points to place the same in operating position.

---

1,565,862. STRAND-TWISTING MECHANISM. HENRY ROGERS MASSINGHAM, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 16, 1924. Serial No. 693,211. 1 Claim. (Cl. 117—18.)

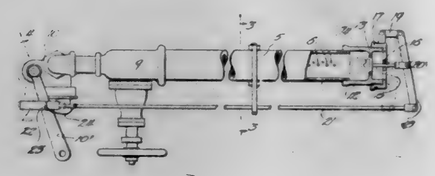


In a twisting machine, means for twisting strands together, a device for drawing twisted strands from the twisting means, means for guiding the twisted strands back to the drawing device, and means interposed between said guiding means and said drawing means for giving the strands two twists in opposite directions as they pass from said guiding means to said drawing means, said

means comprising a single pulley having its periphery in line with the normal path of the strands between the drawing means and guiding means and adapted to receive one complete turn of the strand thereabout, said pulley rotatable about its axis in the direction of movement of the twisted strands and rotatable bodily at right angles to its direction of rotation around its axis.

---

1,565,863. SHOWER PIPE. JAMES T. MURPHY, Chicago, Ill., assignor of one-half to James L. Carey, Chicago, Ill. Filed Oct. 23, 1922. Serial No. 596,271. 5 Claims. (Cl. 92—50.)



1. A shower pipe for paper machinery comprising, a pipe having an inlet and an outlet end, said outlet end having a valve seat formed therein, a valve for coacting with said seat, said pipe having a plurality of longitudinally spaced openings formed therein, a water pipe and a steam pipe connected with the inlet end of said shower pipe, said pipes being provided with valves for controlling the flow to said shower pipe, and a link detachably connecting said first-named valve and the valve in said steam pipe.

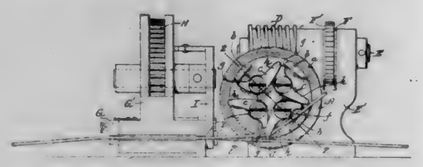
---

1,565,864. METHOD OF CONVERTING VEGETABLE FIBER TO PULVERIZED FORM. EARL B. PUTT, New York, N. Y., assignor of one-third to Herman Theaman and one-third to Maurice Bluhm, both of New York, N. Y. Filed July 15, 1925. Serial No. 43,885. 6 Claims. (Cl. 92—9.)

1. The process of converting a vegetable fiber to a pulverized, structural form which consists in immersing a quantity of said fiber in a dilute acid, heating the mixture until the fiber settles, filtering the fiber from the acid, washing and then drying the filtered mass and then pulverizing the product.

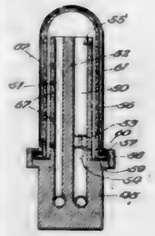
---

1,565,865. PACKAGE-BINDING IMPLEMENT. VINCENT RAGONA, Brooklyn, N. Y., assignor to Cary Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 5, 1922. Serial No. 592,493. 9 Claims. (Cl. 254—161.)



1. In a device of the class described, a rotatable head provided with an abutment, and a double ended gripper both ends of which are engageable with a wire, said gripper being rotatable with said head and positioned for one of said gripper ends to co-operate with said abutment in retaining the wire in a non-slipping relation to the head.

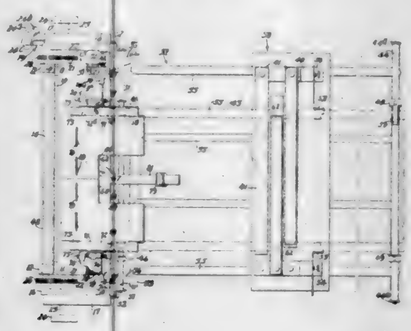
1,565,866. FLOW METER. RUDOLPH W. SCHROEDER, Chicago, Ill. Filed Feb. 16, 1921. Serial No. 445,508. 7 Claims. (Cl. 73—167.)



1. In a device of the character described, a standpipe with parallel chambers therein, one for the inlet of liquid and the other for the outlet of liquid, a transparent casing providing a chamber surrounding said standpipe, a longitudinal slot in the wall of said inlet chamber communicating with the chamber surrounding said standpipe, and a piston movable in the inlet chamber and having a pointer thereon projecting through said slot for indicating the instantaneous flow of fluid through said device.

---

1,565,867. TYPEWRITING MACHINE. JESSE A. B. SMITH Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1922. Serial No. 596,323. 23 Claims. (Cl. 197—126.)

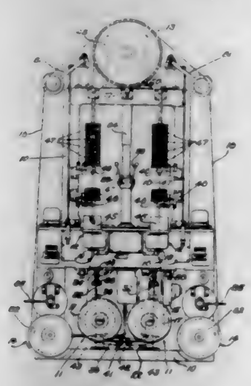


1. In a front-strike typewriting machine, in combination, a cylindrical platen, a collating table at the delivery side thereof to receive a continuous web and a narrower work-sheet positioned between the web and the platen, said table having a chute of suitable width to receive and side guide the work-sheet, and gripping means at both sides of said collating table beyond the bounds of said chute to detain the web while the work-sheet is advanced in the chute to effect a spacing of the lines typed on the work-sheet greater than that of the lines typed on the web.

---

1,565,868. STRAND OR CORD WORKING MACHINE. CLARENCE GRIFFITH STOLL, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1923. Serial No. 683,623. 9 Claims. (Cl. 117—34.)

1. In a strand working apparatus, two spools of strand material, a mechanism for binding said strand material together, said mechanism having a serving device and guide associated therewith, a rotatable member for rotatably supporting each of said spools at an angle and



with their heads adjacent whereby the feed of the strand material therefrom is focused on said guide, and means for locking said member against rotation.

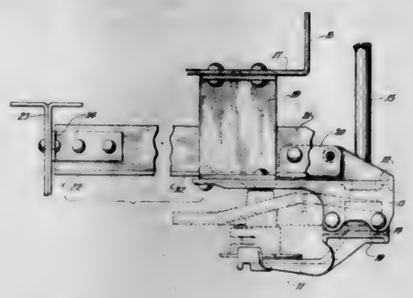
---

1,565,869. ETCHING. WALTER ADDISON STRAW, Wheaton, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1923. Serial No. 681,823. 7 Claims. (Cl. 41—42.)

1. A method of etching, which consists in applying an agent directly to the material to be etched, which agent alone will not cause etching, and then immersing the object to be etched into an acid which will not alone cause etching, the mixture of the two agents forming a compound which will cause etching.

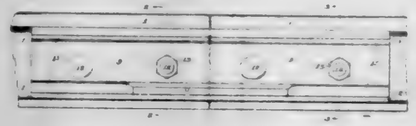
---

1,565,870. MOUNTING FOR BRAKE GEARS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Aug. 5, 1925. Serial No. 48,428. 5 Claims. (Cl. 74—121.)



1. A mounting for a brake gear for railway cars comprising top and bottom castings united in spaced relation and between which the gear-elements are journaled, spaced straps secured pendently to the car and connected to and supporting said top and bottom castings, and a brace bar connected at one end to the aforesaid structure and extending longitudinally of the car and secured at its opposite end to a cross member of the car.

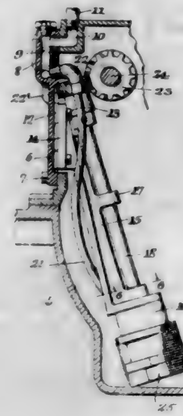
1,565,871. RAILWAY-RAIL JOINT. ROBERT A. THOMANN and JACOB A. HYLE, St. Louis, Mo.; said Hyle assignor to said Thomann. Filed Jan. 9, 1925. Serial No. 1,383. 9 Claims. (Cl. 238—244.)



1. A rail joint of the character described, comprising track rails, a splice bar formed with a reinforced upper end portion and of uniform thickness throughout its remaining portion, and an elongated slot cut therethrough above its longitudinal centre, and means adapted to be gradually adjusted within and through said slot for causing the reinforced end of the splice bar to be flexed tightly against the lower surface of the rail tread.

---

1,565,872. OIL PUMP. JOHN R. TRAUTNER, Red Wing, Minn. Filed July 25, 1925. Serial No. 46,061. 5 Claims. (Cl. 103—218.)



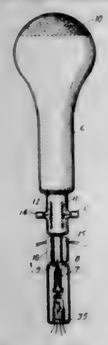
1. In a device of the character described, a supporting plate, a pump bracket formed integral with the plate and disposed at an oblique angle with respect thereto, bearings forming a part of the bracket, a pump shaft supported within the bearings and carrying a pump element at its lower end, said bracket and pump shaft adapted to be moved bodily with the plate, and a pipe extending from the pump adjacent to the plate, to deliver fluid therethrough.

---

1,565,873. VACUUM TUBE AND METHOD OF OPERATING THE SAME. HENDRIK J. VAN DER BIJL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 10, 1920. Serial No. 402,527. 11 Claims. (Cl. 250—27.)

1. In combination, a gas tight enclosure containing means including an electron emitting cathode for producing independent of gas ionization a narrow beam of

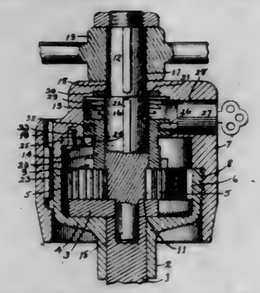
cathode rays, a screen for receiving said rays and an atmosphere of gas incapable of producing rapid deterioration of the cathode in said enclosure at such a pressure



as to substantially prevent diffusion of said beam, said enclosure being substantially free of gas capable of producing rapid deterioration of the cathode.

---

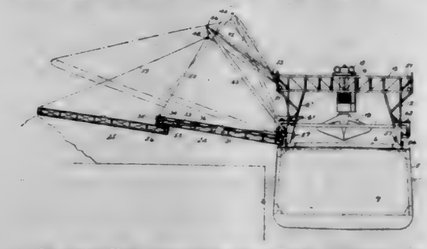
1,565,874. MOTOR VEHICLE LOCK. LOUIS C. VANDERLIP, Elkhart, Ind. Filed June 4, 1923. Serial No. 643,158. 12 Claims. (Cl. 70—129.)



2. In an automobile steering gear lock, the combination with steering gear including a rotary steering post, a housing, a cover for said housing, and planetary gears within said housing for steering post actuation, of a steering wheel mount provided with a sun-gear which is in constant mesh with said planetary gears, and clutch means splined to said wheel mount within said housing and movable axially thereof for locking said wheel mount to said housing cover to prevent rotation of said wheel mount.

---

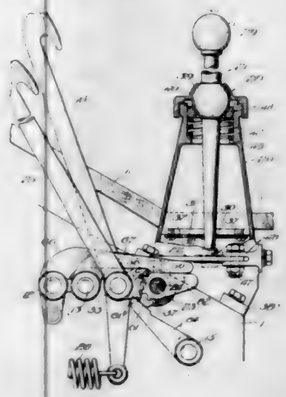
1,565,875. UNLOADING APPARATUS FOR VESSELS. GEORGE VON HAASE, Detroit, Mich. Filed July 28, 1923. Serial No. 654,330. 7 Claims. (Cl. 214—12.)



1. In unloading apparatus for vessels, a gantry crane mounted for movement longitudinally of the vessel, a trolley movable transversely of the vessel on the crane, a bucket suspended from the trolley for vertical movement, a hopper demountably secured upon the sides of the crane, and a series of conveyors nested between the sides of the crane when not in use and laterally movable beyond the sides of the crane to varying distances.

---

1,565,876. OPERATING MEANS FOR AUTOMOBILE TRANSMISSION GEARING. FREDERICK G. WACKER, Chicago, Ill. Filed Nov. 27, 1922. Serial No. 603,661. 12 Claims. (Cl. 74—89.)



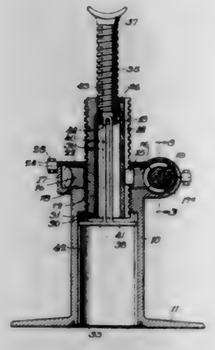
1. A gear-shifting mechanism comprising, in combination with a plurality of parts to be moved, a controlling element bodily movable to selective positions for respective co-action with said parts to be moved and movable angularly to actuate the selected part, a hand-operable, universally-movable, vertically-arranged control lever operatively connected with the said controlling element to bodily move it to selective position, and a pedal for moving said controlling element angularly to actuate the selected part.

---

1,565,877. JORDAN SHELL LINER. WALTER WERNER, Hoosick Falls, N. Y., assignor to The Noble & Wood Machine Co., Hoosick Falls, N. Y., a Corporation of New York. Continuation of application Serial No. 667,738, filed Oct. 10, 1923. This application filed June 4, 1925. Serial No. 34,906. 5 Claims. (Cl. 92—27.)

1. In a lining unit for a Jordan shell, a liner frame comprising a plurality of metal split rings; end pieces securely attached to the ends of said rings so as to hold said rings in spaced relation to each other; a bar, with bolt holes therein, secured to said rings at points intermediate the ends thereof; a plurality of knife bars with undercut notches in the back thereof; and a plurality of spacers with undercut notches in the back thereof; said knife bars and said spacers slidable on said split rings.

1,565,878. LIFTING JACK. JOHN M. WHITE, Evanston, Ill., assignor to William E. Pratt, Chicago, Ill. Filed June 13, 1924. Serial No. 719,735. 2 Claims. (Cl. 254—102.)



1. A lifting jack comprising a standard, a supporting member having a threaded engagement with said standard and provided with a longitudinal keyway, said standard being provided in its upper part with a housing, a worm wheel mounted in said housing and having a key engaging said keyway, a worm mounted in said housing and meshing with said worm wheel, means for operating said worm, a second supporting member having a threaded engagement with said first-named supporting member, said second supporting member being hollow, a controlling member having a stem adapted to extend into said hollow supporting member, said stem being slotted, a pin fixed in said second supporting member and engaging said slotted controlling member, and a transverse member formed on said controlling member beneath said first-named supporting member, said first-named supporting member being provided on opposite sides thereof with keyways adapted to be engaged by the ends of said transverse member.

---

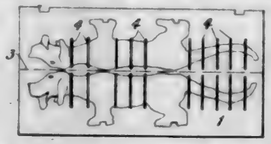
1,565,879. BUILT-UP TRUSS. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 17, 1925. Serial No. 23,857. 5 Claims. (Cl. 20—37.)

1. An end connection for the chords of a truss, comprising a web of substantially the depth of the truss, the upper and lower marginal edges of the web being thickened, and an extension from one side edge providing a flanged seat.

---

1,565,880. PROCESS OF MAKING FLEXIBLE ARTICLES. ALLEN B. WILDER, St. Louis, Mo., assignor to Wilder Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 8, 1923. Serial No. 673,485. 6 Claims. (Cl. 46—37.)

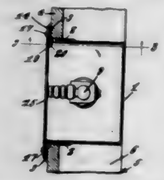
1. The improvement in the process of making flexible articles, which consists in cutting parallel slots in a sheet, said slots terminating short of the margins of said sheet, securing a strip of flexible material to said sheet



crosswise of said slots and cutting out of the slotted portion of said sheet an article of the desired form and whose outline crosses such slots.

---

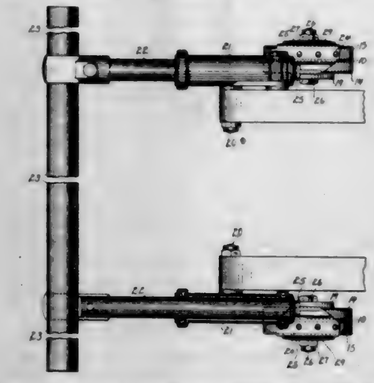
1,565,881. GAS APPLIANCE. JOSEPH EUGENE WILLIS, Los Angeles, Calif. Filed Oct. 10, 1923. Serial No. 667,776. 1 Claim. (Cl. 137—13.)



A device of the class described, comprising a box-like casing open at its forward end, brackets on two opposite walls of the casing at the forward end thereof, a face plate cooperating with the forward end of the casing, the face plate and the brackets having openings, sockets on the face plate and located outside of the casing, the sockets being spaced apart at such a distance that two other opposite walls of the casing will fit closely between the sockets, thereby to aline the openings of the face plate with the openings of the brackets, securing elements mounted in the openings, a closure for the forward end of the casing, a hinge pin carried by the closure, the ends of the hinge pin projecting beyond said two other opposite walls of the casing and being received in the sockets, and a cock located in the casing and located behind the closure.

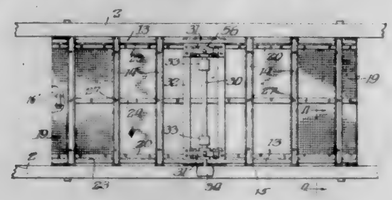
---

1,565,882. AUTOMOBILE BUMPER. WALTER LAWSON ADAMS, New Haven, Conn. Filed Sept. 14, 1925. Serial No. 56,192. 3 Claims. (Cl. 293—55.)



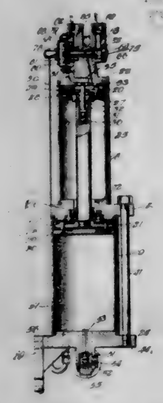
1. A bumper for automobiles, comprising a rubber block formed on opposite sides with ribs and grooves, a fixed member on one side of the block and a movable member on the other, the said members having ribs and grooves to engage with the ribs and grooves in the block, and a bumper-bar having parts arranged in line with and adapted to turn the movable members.

1,565,883. SCREEN. ALFRED L. ADRIANSON and AXEL L. BENGTSON, Racine, Wis. Filed May 25, 1923. Serial No. 641,327. 11 Claims. (Cl. 209—326.)



1. In a device of the class described, the combination of a shaker section comprising a pair of elongated laterally spaced side walls having a screen stretched therebetween, a plurality of rigid cross members connecting the side walls and spaced from the screen, rigid reinforcing means carried by the cross members and extending lengthwise of the shaker section and secured to the screen intermediate of the side walls, a supporting frame, springs at the end of the shaker section whereby the shaker section is resiliently mounted on the supporting frame, and means for bodily reciprocating the shaker section and screen substantially perpendicular to the screen surface.

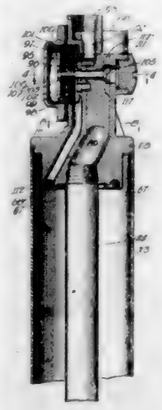
1,565,884. SUCTION PUMP. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 30, 1921. Serial No. 488,551. 88 Claims. (Cl. 103—48.)



1. In a pump, a pump barrel having a water inlet and outlet, valve means therefor, a water piston for inducing and expelling water to and from the pump barrel, an air piston for operating said first piston, admission and exhaust valves for the air piston, fluid pressure actuated motor means for operating said valves, and means controlled by said pistons governing the operation of said motor means for operating said valves.

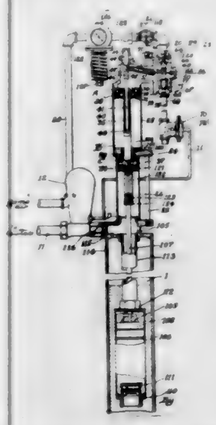
1,565,885. PNEUMATIC PUMP. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 10, 1921. Serial No. 499,816. 62 Claims. (Cl. 103—246.)

1. In a pump, a pump chamber, liquid valves for the pump chamber, a source of motive fluid, a main valve mechanism for the admission and exhaust of the motive fluid, a main motor member for the main valve mechanism, said motor member being subjected on one side to pressure of the liquid which is being discharged from the pump, and on the other side to the pressure of motive fluid employed to expel the liquid from the pump valve, and a relief valve having a motor member independent of said



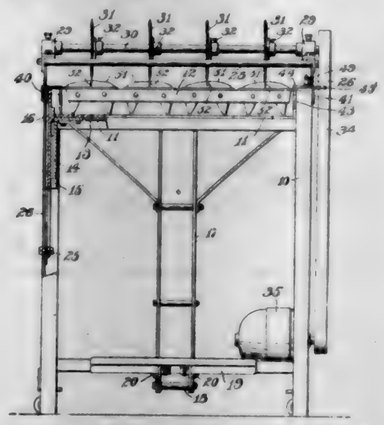
first motor member operated when the pump has completed the discharge stroke for depleting the pressure upon the liquid side of said main motor member to permit said main motor member to shift the main valve mechanism.

1,565,886. PUMP AND PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake and Electric Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 17, 1922. Serial No. 582,421. 36 Claims. (Cl. 103—46.)



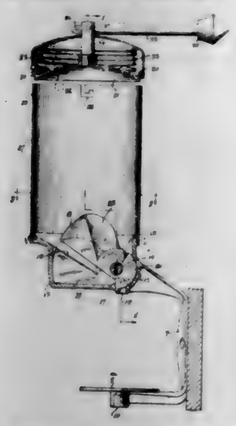
1. A faucet controlled fresh water supply system comprising a pump having a double acting motor cylinder and piston at the head of the well, and a single acting pumping cylinder and piston submerged in the water of the well, said motor cylinder having a reversible valve member comprising a poppet admission valve and a poppet exhaust valve for controlling said double acting motor piston, said valve member comprising a stem mounted parallel to the axis of the piston and means operated by said motor piston for imparting a snap action to the throw of said valve member.

1,565,887. DOUGH-LOAF SLASHER. SAMUEL ANDRUS, Terre Haute, Ind., assignor to Jerry Fitzgerald, Terre Haute, Ind. Filed Mar. 30, 1925. Serial No. 19,301. 4 Claims. (Cl. 107—8.)



1. A dough slashing machine comprising a main supporting frame, a pan platform supported thereby, a disc cutter mounted over said platform, a support on said frame for said cutter by which the cutter may be moved back and forth over the platform, and means by which the distance between the platform and cutter may be alternately diminished and increased.

1,565,888. SOAP DISPENSER. CHARLES AUSSENHOFER, South Norwalk, Conn. Filed May 4, 1923. Serial No. 636,518. 12 Claims. (Cl. 221—102.)

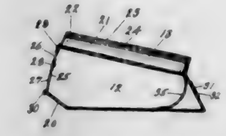


1. A soap dispenser comprising a container, a soap discharge device arranged therein to deliver soap to the user, a pressure feed piston adapted to feed soap under pressure to the discharge device, a piston rod fixed on the piston and projecting from the container and acting as a gage, and a cover disposed over the container and carrying the piston and projecting gage, a spring disposed between the cover and piston, said piston rod formed in two sections, a slot and pin joint pivotally joining the said sections and providing a lock to secure the piston up in the cover.

2. A soap dispenser comprising a soap tank, a discharge plunger arranged therein, and a mounting bracket embodying a horizontal and vertical arm adapted to mount the dispenser upon a horizontal or vertical support.

3. A soap dispenser comprising a soap tank, a removable cap on one end of the tank, a base fixed in the other end of the tank, said base provided with a downwardly sloping bottom, a discharge pocket joining with the sloping bottom, said pocket provided with a discharge orifice, a plunger pivoted in the pocket, a hub made integral with the base, a shaft journaled in the hub and fixed to the plunger, a spring to rotate the shaft to lift the plunger and seal the orifice, and a handle on the shaft to actuate the plunger.

1,565,889. DISPLAY RACK AND CONTAINER. EDWARD H. BAKER, Jamestown, N. Y. Filed June 21, 1923. Serial No. 646,970. 2 Claims. (Cl. 211—9.)



1. A container for merchandise having an upper and a lower compartment, the said lower compartment being adapted to hold the main supply of merchandise, the bottom of said lower compartment being inclined rearwardly and upwardly adjacent its rear end and the rear wall thereof consisting of two hinged sections and having means to engage the upper rear edge of said upwardly inclined end, and the front of said container being rearwardly and upwardly inclined, whereby the said container may be interlocked with a receptacle in a show or other case and fixed in a predetermined position within the latter.

1,565,890. LENS-RETAINING MEMBER. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 30, 1924. Serial No. 729,071. 2 Claims. (Cl. 88—41.)

1. In a device of the character described, an annular eye cup having bayonet joint connections at one end thereof, a split elastic ring having a lens groove, and bayonet joint connections, fitted into the eye cup whereby the bayonet joint connections of the two members engage to hold the ring in the eye cup, and whereby the ring is compressed to retain a lens in the lens groove thereof.

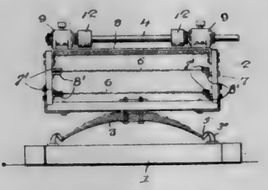
1,565,891. PRODUCTION OF ACRIDINIUM COMPOUNDS. LOUIS BENDA, Mainkur, near Frankfort-on-the-Main, and OTTO SIEVERS, Fechenheim-on-the-Main, Germany, assignors to Leopold Cassella & Co. Gesellschaft mit beschränkter Haftung, a Corporation of Germany. Filed Dec. 22, 1923. Serial No. 682,305. 2 Claims. (Cl. 260—86.)

1. As new substances alkoxy-alkylacridinium compounds.

1,565,892. SCREEN. ALFRED L. ADRIANSON and AXEL L. BENGTSON, Racine, Wis., assignors of one-third to George W. Lenzie, Lemont, Ill. Filed June 6, 1921. Serial No. 475,366. Renewed May 18, 1925. 5 Claims. (Cl. 209—326.)

1. In a device for the purpose set forth, the combination of a screen carrying frame and revoluble weighted

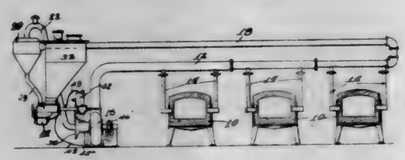
means thereon for imparting a longitudinal vibratory movement to the screens, a support secured to the ends of the frame, comprising arched resilient members cen-



trally attached to the frame, a base to which the ends of said members are secured, and whereby the frame will be afforded a lateral tilting movement in both directions when the weighted means is revolved.

---

1,565,893. PULVERIZED-FUEL-FEED SYSTEM. LARS H. BERGMAN, Chicago, Ill., assignor, by mesne assignments, to Raymond Bros. Engineering Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 27, 1920. Serial No. 433,326. 7 Claims. (Cl. 302—22.)



1. A fuel supply system comprising a source of fuel supply, means for mixing fuel with air, means for introducing fuel from said source to said mixing means, a main supply line adapted to receive the resultant mixture, a separator distinct from said source of fuel supply, means for returning the unused mixture from said supply line to said separator, and means for delivering the separated fuel to said introducing means separately from the delivery of fuel from said source of fuel supply.

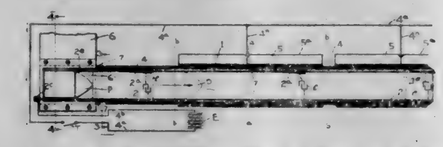
---

1,565,894. METHOD OF MANUFACTURING HYDROGEN SULPHIDE GAS. EMILE BINDSCHEDLER, Lansdowne, Pa., and EDWARD W. RUGELEY, Hopewell, Va., assignors of their entire right to Tubize Artificial Silk Company of America, a Corporation of Delaware. Filed Apr. 15, 1924. Serial No. 706,716. 8 Claims. (Cl. 23—181.)

1. The method of manufacturing hydrogen sulphide gas which consists in heating a mixture of hydrocarbon oils and sulphur and purifying the hydrogen sulphide gas evolved by this treatment by passing it through a material of high absorptive capacity.

---

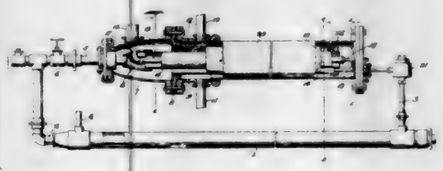
1,565,895. ELECTROMAGNETIC GUN. ABE B. BLAUSTEIN, Butte, Mont., assignor, by direct and mesne assignments, to Electrical Development Corporation, Butte, Mont. Filed Oct. 22, 1921. Serial No. 509,618. 2 Claims. (Cl. 172—285.)



1. In an electro-magnetic gun, a series of primary solenoids arranged end to end along the barrel, means for successively electrically energizing the primary coils as the projectile traverses the barrel, and a series of short circuited secondary solenoids alternating with the primary solenoids and adapted to be energized by induction from the primary solenoids when the circuits in the primary solenoids are broken.

---

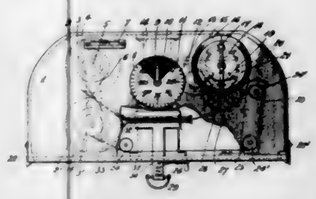
1,565,896. STEAM WATER HEATER. AMZY L. BOLINGER, North Manchester, Ind. Filed Oct. 3, 1924. Serial No. 741,501. 1 Claim (Cl. 257—237.)



A water heater comprising a line pipe, a head connected with said pipe, a steam inlet pipe communicating with the interior of said head, a flange connected with the head, a second head located interiorly of the first-mentioned head and provided with a duct, a pipe connected with the second mentioned head, a pipe connected with the duct and located within the last-mentioned pipe, a fitting connected with the flange, a steam cylinder located in the fitting and receiving both of the pipes which are connected with the second mentioned head, a closed end casing surrounding the steam cylinder, means extending through the casing for conducting condensation from the pipe which is connected with the duct of the second mentioned head and from the interior of the steam cylinder, a water outlet connected with said fitting and means for separating the steam and water compartments.

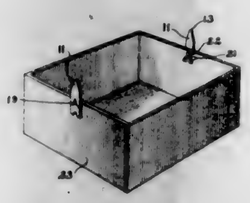
---

1,565,897. CAMERA AND FILM INDICATOR. CHARLES BOUIN, Boston, Mass. Filed Nov. 6, 1923. Serial No. 673,158. 3 Claims. (Cl. 88—17.)



1. A camera of the kind described comprising means for holding a film strip having opaque end portions, a film gate for guiding the strip, means for receiving the film after exposure, a shutter for periodically exposing the film, means for driving said shutter, means for intermittently advancing the film, having two indicators, one indicator comprising a ring on topmost masing having a shaded and unshaded section and a pointer indicating the opaque end portions of the film and the sensitized portion of the film when in film gate aperture by means of a pointer revolving over the shaded and unshaded sections of ring, numerals on said unshaded section of ring indicating number of exposures made by means of said pointer, letters on said shaded section of ring indicating points of start, exposure, end and stop and a second indicator on outside casing of camera, said indicator having a shaded and unshaded section over which a pointer revolves indicating when film is moving and shutter is closed and when film is at rest and shutter is open.

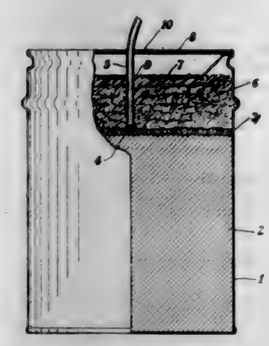
1,565,898. FASTENING DEVICE. WILLIAM H. BOUTELLE, Sturbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 25, 1924. Serial No. 739,956. 4 Claims. (Cl. 292—253.)



1. A fastening clip of the character described, comprising a body portion, a pair of pointed prongs extending from one edge thereof, a curved tongue extending from the opposite edge of the body portion, and an offset prong extending from one surface of the body portion.

---

1,565,899. COMPOSITION FOR PRODUCING LACHRYMATING GASES. DONALD B. BRADNER, Philadelphia, Pa. Filed May 3, 1924. Serial No. 710,736. 14 Claims. (Cl. 167—12.)



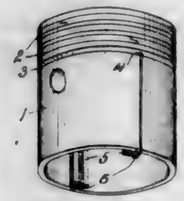
1. A composition for producing an effective concentration of a lachrymating gas in non-persistent form, a lachrymating organic compound not readily volatile at ordinary temperatures which lachrymates at a concentration below 0.01 milligram per liter in three minutes and having intimately distributed therethru a fuel which burns at a temperature sufficient to volatilize said lachrymator but below that at which the lachrymator will decompose within the time required for said volatilization.

6. A composition for producing an effective concentration of a lachrymating gas in non-persistent form, chloracetophenone having intimately distributed therethru a fuel comprising nitrocellulose.

---

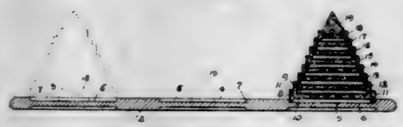
1,565,900. PISTON. THOMAS E. BRALEY, Wichita, Kans., assignor of one-half to Joel E. Davis, Wichita, Kans. Filed Aug. 6, 1925. Serial No. 48,539. 2 Claims. (Cl. 74—108.)

1. A hollow piston having on its inner periphery a longitudinal rib V-shaped in cross section extending to one end of the piston, the arms of the rib being flexible and diverging inwardly, the rib having in it a longitudinal V-shaped groove the apex of which terminates at the outer periphery of the piston and the arms of which respectively extend into said arms of said rib.



---

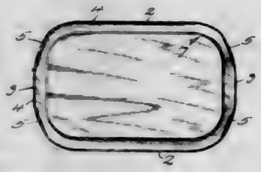
1,565,901. PYRAMID PUZZLE. FRANK W. BRANDT, Cleveland, Ohio. Filed Sept. 8, 1925. Serial No. 54,984. 6 Claims. (Cl. 273—132.)



2. A game or puzzle, comprising a base, member having a plural number of places thereon adapted to seat a series of building elements, in combination with a set of building elements of graduated sizes constructed to be nested within and interlocked with each other and adapted to form a sectional pyramid.

---

1,565,902. COVER FOR CONTAINERS. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Sept. 22, 1923. Serial No. 664,142. 1 Claim. (Cl. 220—97.)



A non-circular cover for containers comprising: a blank of sheet material having a plurality of sides at an angle to each other provided with a pendent surrounding flange having downwardly and inwardly bent tabs at the junction of the angular sides.

---

1,565,903. RAILROAD-RAIL JOINT. SAMUEL ELMER BROWN, Frederick, Md. Filed Nov. 22, 1924. Serial No. 751,624. 2 Claims. (Cl. 238—218.)

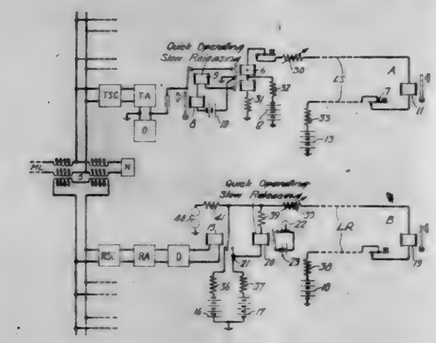
1. A rail joint comprising a pair of fish plates provided with rail-engaging surfaces and longitudinal stiffening and rail engaging webs one of said plates having

rail-head embracing surfaces, the top of said plate also provided with a wheel-raising hump, said fish plates

provided with alternate elongated and circular bolt holes placed in staggered relation to each other, and a bottom studded base plate to engage said fish plate.

---

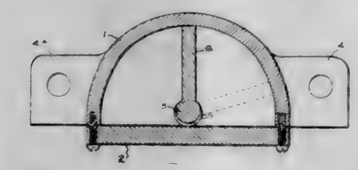
1,565,904. SIGNALING SYSTEM. JOHN C. BURKHOLDER, Jr., West End, N. C., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1922. Serial No. 554,054. 10 Claims. (Cl. 178—71.)



1. In a telegraph system, means to transmit continuous waves and interrupted waves alternatively, a medium over which said waves are transmitted, a receiving device responsive to said waves, and means actuated in response to the received waves and having a predetermined time delay action for giving an indication when waves fail to be received from the transmitting means for such predetermined time.

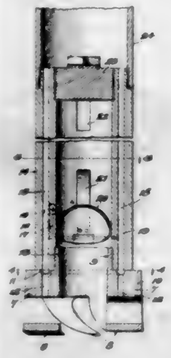
---

1,565,905. SHOCK ABSORBER. LYNN W. CALLENDER, Wichita Falls, Tex. Filed Nov. 19, 1923. Serial No. 675,717. 1 Claim. (Cl. 188—89.)



A shock absorber comprising a half round housing adapted to hold fluid, a shaft extending through said housing and pivotally mounted so as to turn therein, a paddle attached to said shaft and extending radially thereof to the outer wall of the housing, a groove in said shaft opposite said paddle extending about a portion of the circumference of the shaft, and a pair of arms pivoted together and rigidly connected to said shaft whereby, the movement of the paddle in the oil in the housing serves to resist the movement of the arms.

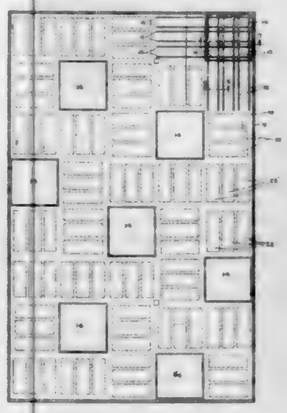
1,565,906. WELL DRILL. LOUIS BURL CLINTON, Durant, Okla. Filed May 2, 1925. Serial No. 27,486. 1 Claim. (Cl. 255—72.)



A well-drill device comprising the combination of a drill-bit having teeth extending downwardly from its body, a vertical central passage, an annular water channel in its top, water-passages leading from said channel to spaces between said teeth, and an upwardly-extending nipple inside of said channel; a barrel abutting against the top of said drill-bit, connected thereto by said nipple, containing longitudinal water-passages leading to said channel, and having a vent extending from the interior to the exterior of its upper portion; a removable plug above said vent; an upwardly-opening valve in the lower portion of said barrel arranged when open to lie closely against its wall; and means whereby a hollow drill-stem is secured to the upper portion of said barrel in communication with the water-passages therein.

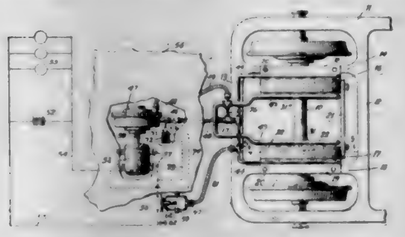
---

1,565,907. GARAGE. WILLIAM F. COMB, Minneapolis, Minn. Filed Nov. 20, 1923. Serial No. 675,859. 5 Claims. (Cl. 214—16.)



1. A garage comprising a building, an elevator in said building, two sets of tracks arranged in pairs supported upon the floor of said elevator, said sets of tracks crossing each other at right angles, and pairs of floor tracks adapted to aline with one or the other of said elevator tracks.

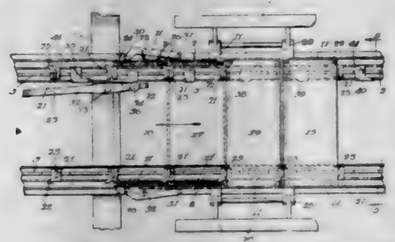
1,565,908. CAR-LIGHTING SYSTEM. WALTER L. CONWELL, Montclair, N. J., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Oct. 8, 1921. Serial No. 506,268. 4 Claims. (Cl. 290—8.)



1. In apparatus of the general nature of that herein described, in combination, a car axle, an electric generator, a fluid motor for driving said electric generator, a fluid pump associated with said car axle and including a cylinder and a piston operating therein adapted to drive said fluid motor, a cam mounted upon said car axle adapted to move said piston throughout its suction stroke, and means associated with said piston for storing a predetermined amount of energy from said cam during its operation of said piston throughout its suction stroke and adapted to operate said piston during its pumping stroke, whereby the pressure of the fluid supplied to said motor is maintained substantially constant.

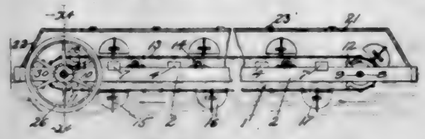
---

1,565,909. MACHINERY AND METHOD FOR MAKING BOX BLANKS. EDWARD CRAIG, St. Joseph, Mich., assignor to Saranac Automatic Machine Corporation, Benton Harbor, Mich., a Corporation of Delaware. Filed Aug. 3, 1925. Serial No. 47,746. 8 Claims. (Cl. 1—8.2.)



1. In apparatus for making wire bound box blanks from separate side sheets and cleats therefor, each cleat having a lateral shoulder on the inner side thereof, disposed a distance forward from the rear end thereof, the combination of guides for the cleats, work feeding instrumentalities having motion in one direction only, and having rigid cleat pushers disposed in position to engage said shoulders, whereby said feeding instrumentalities having lateral engagement with the shoulder on the inner side of each and every cleat of the blank, thereby to push the cleats along said guideways and to prevent any portion of the work feeding means from projecting in between the adjacent ends of the cleats, so that the cleat-shoulders will dimension all four sides of the ultimate box, and to prevent engagement with the extreme rear end of any cleat, sheet spacers rigid with said pushers on said work feeding instrumentalities in position out of line transversely with said pushers, to space the sheets apart upon and in proper relation to said cleats, and devices for operating said instrumentalities to cause said pushers and spacers to move in unison to feed the cleats and sheets forward.

1,565,910. DEVICE FOR UTILIZING THE POWER OF FLOWING WATER. WILLIAM EDGAR DAMON, Inglewood, Calif. Filed May 4, 1921, Serial No. 466,661. Renewed July 21, 1925. 3 Claims. (Cl. 170—185.)



1. A device for utilizing power of flowing water, comprising an endless chain trained about spaced pulleys mounted on a float, one stretch of said chain being above and the other stretch below the surface of the water, certain of the links of said chain having lateral projections, on opposite sides of said chain, propellers pivotally secured to said projections, and means to limit the pivotal movement of said propellers.

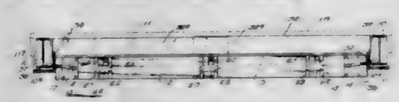
---

1,565,911. ACTIVATING DECOLORIZING CHAR FOR USE IN REFINING SUGAR AND FOR ANALOGOUS PURPOSES. CHARLES B. DAVIS, New York, N. Y. Filed Oct. 10, 1923. Serial No. 667,629. 7 Claims. (Cl. 252—3.)

1. The process of activating bone char herein set forth, consisting essentially in adding thereto a carbon-forming distillate of coal, which is non-volatile at ordinary temperatures, passing the same through a kiln out of contact with air at a red heat, under 1000° C., cooling the resultant out of contact with air, washing the same with hot water, and then drying and kilning out of contact with air prior to use, substantially in the manner and for the purpose set forth.

---

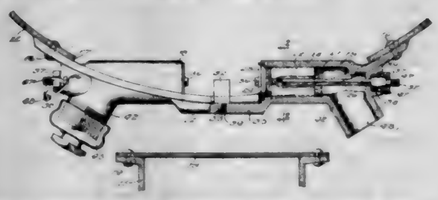
1,565,912. CENTERING FORM APPARATUS FOR CONCRETE FLOOR CONSTRUCTION. EDWARD E. DAVIS, Chicago, Ill. Filed Apr. 23, 1925. Serial No. 25,330. 14 Claims. (Cl. 25—131.5.)



1. In apparatus of the character described; a plurality of joists; means for supporting the joists by their ends between parallel steel girders; a plurality of spreaders adapted to be supported between each pair of joists; and a pan adapted to be placed between each pair of joists resting on said spreaders, said pan comprising four sheet metal sections each having a vertical side face, a vertical end face, and a horizontal top face, the four sections adapted to be placed together with their faces overlapping to form a pan having a top face, two side faces, and two end faces, and an open bottom.

---

1,565,918. TANK-CAR VALVE. CORNELIUS DE RONDE DOEKER, Chicago, Ill. Filed Nov. 12, 1921. Serial No. 514,572. 13 Claims. (Cl. 137—21.)



1. A valve for tank cars and the like, comprising a mounting secured in the bottom of a car and having a laterally extending outlet aperture, a valve member hav-

ing screw threaded engagement in the aperture of said mounting, and being horizontally operable therein, and stop means positioned inwardly from said valve and limiting inward movement thereof.

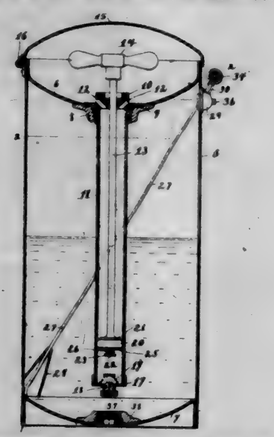
---

1,565,914. FASTENING MEANS FOR COLLARS. JAMES B. DRIVER, Delaware, Ohio. Filed Oct. 31, 1924. Serial No. 746,957. 2 Claims. (Cl. 2—127.)

1. A garment comprising a multi-ply collar band having at least one ply cut away at the rear of the band to reduce the thickness of the band at that point, and a tab extending from the lower edge of the band and adapted to be turned up into registry with the portion of reduced thickness and carrying a button whereby a collar may be attached.

---

1,565,915. PRESSURE FUEL TANK. WILLIAM H. DUNKERLEY, Paterson, N. J. Filed Sept. 22, 1924. Serial No. 739,050. 1 Claim. (Cl. 221—77.)

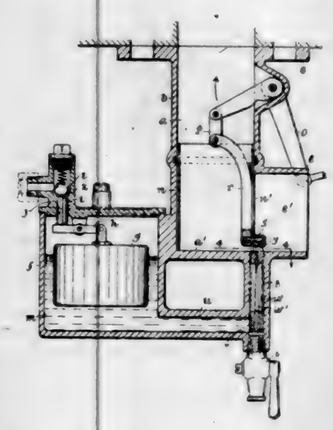


The tank described comprising a body having a closed bottom and a depressed upper head, a collar on said head, a screw plug in said collar, a cylinder depending from said plug interiorly of said body, passages in said plug leading from the upper face of said head to the interior of said cylinder and constituting the only means of flow of the fuel into the tank, a self-closing downwardly opening valve at the lower end of said cylinder, a cup-leather plunger in the latter, a plunger rod extending from said plunger through and guided by said plug, a handle on the upper end of said rod, a cover arranged to close the upper end of said body and enclose said head and handle, and a delivery pipe extending from a low point in the interior of said body through the wall thereof.

---

1,565,916. CARBURETOR. FRANK DURANTE, Paterson, N. J. Filed Aug. 18, 1923. Serial No. 658,038. 2 Claims. (Cl. 261—50.)

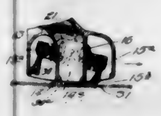
1. A carburetor having a mixing passage formed with a laterally extending air-intake portion and having an outlet for the mixture of air and fuel, a sleeve-valve slidable in and lengthwise of the passage and having a portion thereof forming a thin-walled gate movable across said intake portion, the carburetor having a bottom wall forming the lower side of said intake portion toward and close to which the valve moves to restrict the flow through said intake portion and said bottom wall having a fuel inlet to said mixing passage arranged



relatively exterior of the valve and in close proximity to the plane of movement of the gate, and a fuel-flow-controlling valve movable in said fuel inlet and attached to the sleeve-valve to move therewith, said sleeve-valve affording communication through itself from the intake-portion to the mixture outlet.

---

1,565,917. VACUUM CLEANER. FREDERICK A. ENGLISH and EDWARD W. WIEHLE, Chicago, Ill., assignors to Birtman Electric Company, a Corporation of Illinois. Filed Feb. 14, 1923. Serial No. 618,935. 6 Claims. (Cl. 15—158.)



1. In combination with a vacuum cleaner having an elongated suction nozzle, a pair of long brushes, one arranged in front of, and one behind said suction nozzle, said brushes being joined at their ends to form a rigid double brush, said double brush being pivotally supported on the cleaner.

---

1,565,918. GASKET. PATRICK J. FITZGERALD, Torrington, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Nov. 4, 1922. Serial No. 599,102. 1 Claim. (Cl. 288—1.)

A gasket for manifolds comprising superimposed apertured metal plates, an intermediate layer of apertured packing material, and one-piece thimbles for securing the plates of the gasket against the packing material, each thimble having at one end thereof a flange overlying the edge of the plate around the aperture in which the thimble is inserted, said thimble being of considerably greater length than the thickness of the packing and plates so as to project from the face of the gasket for centering the same in the ports when applied to an engine, said thimble intermediate its end and said flange being bent so as to form a projecting flange which is substantially parallel with the flange on the end of the thimble, and so disposed as to clamp the opposite face of the gasket from that engaged by said flange on the end.

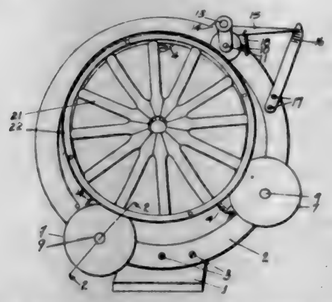
---

1,565,919. LOADING APPARATUS. GEORGE A. FLEBOTTE, Indian Orchard, Mass. Filed Sept. 27, 1924. Serial No. 740,393. 11 Claims. (Cl. 37—192.)

1. An excavating and loading apparatus comprising, in combination, a supporting platform, motive power thereon, an endless material receiving and delivery conveyor, a frame pivotally supported on the platform for supporting the said conveyor, a pair of up-rights pivotally and directly attached to one end of said frame, an endless chain supporting frame which is pivotally attached to the pair of up-rights, a windlass secured to the pair of up-rights for raising and lowering the said chain supporting frame, scraper blades secured to the endless chain for transferring the scraped material directly onto the said endless conveyor, and means for operating the said endless conveyor and chain from the motive power on the platform.

---

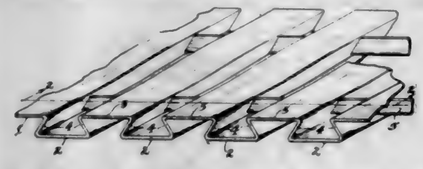
1,565,920. TESTING MACHINE FOR WHEELS. HENRY FLICK, Jackson, Mich., assignor to Hayes Wheel Company, Jackson, Mich. Filed Oct. 4, 1921. Serial No. 505,245. 2 Claims. (Cl. 33—148.)



1. The combination of an inclined annular frame with a suitable support, with supporting rollers having their axes radially disposed on said support and radial pivots for said rollers disposed within the inner margin of the frame, a pair of revoluble testing disks disposed on the lower part of the frame parallel to the front face thereof, and supporting pins at right angles to the front face of said frame for said disks, a movable rotary disk supported on the upper part of the frame in the same plane as said pair of disks, a swinging arm on said frame carrying the said movable disk, an indicator pointer connected to the said arm, and a tension spring between the said finger and frame for forcing the disk yieldingly into contact with any wheel being tested, coacting as specified.

---

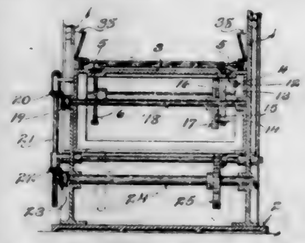
1,565,921. LATH BOARD. SILAS M. FORD, St. Paul, Minn.; Clara P. Ford, executrix of said Silas M. Ford, deceased, assignor to Clara P. Ford, St. Paul, Minn. Filed Nov. 23, 1920, Serial No. 426,020. Renewed July 24, 1925. 2 Claims. (Cl. 72—116.)



2. In a lath board the combination of a sheet of suitable material corrugated into a dove tail sheet formation having alternating lathlike faces and depressions on each side thereof, webs connecting said alternating lathlike faces, and a flat wire piercing said webs and of such a width and so positioned that said wire lies against and supports the inside surface of each of said lathlike faces.

---

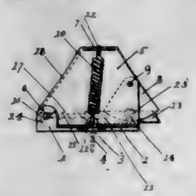
1,565,922. CONVEYER. GEORGE A. FULLIPS, Milwaukee, Wis. Filed Oct. 9, 1924. Serial No. 742,621. 8 Claims. (Cl. 198—181.)



8. In a machine for handling containers, the combination of a table mounted for vertical adjustment, a conveyer for advancing said containers across said table and having adjustable container engaging means controlled by the vertical adjustment of said table.

---

1,565,923. DOORCHECK. HARRY E. GIFFORD, Medford, Mass. Filed Oct. 8, 1924. Serial No. 742,475. 3 Claims. (Cl. 292—78.)



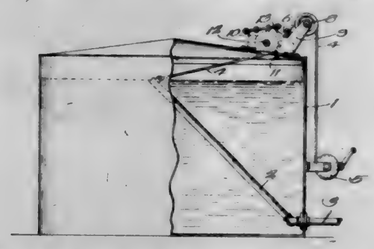
1. A door check comprising a base-plate, a casing member pivoted thereon, a strong spring secured to the base-plate and casing member for closing said casing, a latch-bolt with a light spring within said casing, and a striking plate.

---

1,565,924. TANK. PHILIP S. GRAVER, Chicago, Ill. Filed May 26, 1924. Serial No. 715,924. 1 Claim. (Cl. 220—85.)

The combination with a tank having a roof; of a housing added to the tank and supported upon its roof, there being an opening in the roof of the tank beneath the roof of the housing; a pipe mounted to swing up and down within the tank; a cable connected with said

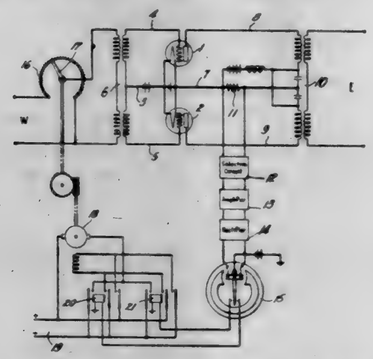
pipe to swing it and passing through said opening in the tank roof; a stuffing box carried upon the roof of the housing, said cable passing through said stuffing box to the exterior of the housing; a sheave receiving said cable after passing from the stuffing box; and another sheave mounted upon and within the housing over the aforesaid



opening in the tank roof and receiving the cable in passing to the stuffing box, said opening being of such a size that the latter sheave will not pass therethrough when dismounted, the housing having a displaceable section affording access to its interior and of a size, when displaced, to permit the second sheave to be admitted to the housing.

---

1,565,925. TRANSMISSION REGULATION. CHARLES W. GREEN, Millburn, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Jan. 31, 1925. Serial No. 5,969. 12 Claims. (Cl. 179—171.)

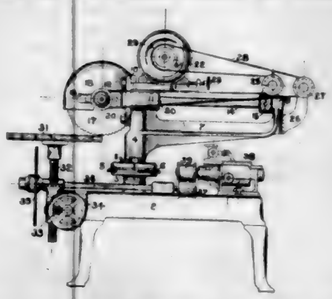


1. The method of transmission regulation which comprises transmitting a wave over a variable transmission medium, producing a harmonic of said wave, and utilizing said harmonic to control the transmission efficiency of said medium.

---

1,565,926. WOODWORKING MACHINE. SAMUEL W. GREEN, Philadelphia, Pa. Filed July 23, 1923. Serial No. 653,080. 3 Claims. (Cl. 143—6.)

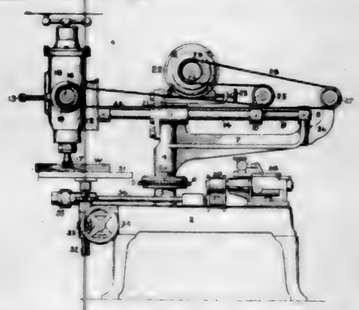
1. A woodworking machine of the class described, wherein there is a main frame having a vertically adjustable table for the material to be operated upon, an adjustable frame movable as a unit independent of the table and journaled upon the main frame so as to be at all times horizontally movable about a vertical axis, and a horizontally reciprocable carriage at all times supported by and movable on the adjustable frame at right angles to the vertical axis thereof, said carriage having a saw and mandrel journaled thereon and driven by a motor forming a part of the machine, said motor arranged upon the upper portion of the adjustable frame adjacent to the vertical axis thereof and movable with said frame, and a compensating power transmitting means between the motor and saw mandrel, whereby the carriage may



be freely reciprocated horizontally upon the adjustable frame, while maintaining the power transmitting connection between the saw mandrel and the motor.

---

1,565,927. WOODWORKING TOOL AND OPERATING MEANS THEREFOR. SAMUEL W. GREEN, Glenside, Pa. Filed Aug. 18, 1925. Serial No. 50,899. 14 Claims. (Cl. 144—3.)



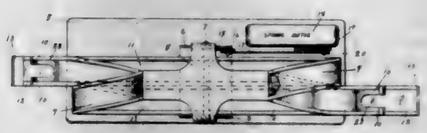
1. In a woodworking machine, the combination of the main frame and a support for the material to be cut, with an adjustable frame supported by the main frame and adjustable about a vertical axis with respect to the main frame, a sliding carriage guided upon the adjustable frame whereby it may be reciprocated thereon, a molding cutter rotating upon a vertical axis having a horizontal driving shaft therefor all journaled in the forward end of the sliding carriage, said driving shaft provided with a belt wheel, guide pulleys respectively secured to the rear end of the carriage and to the adjustable frame, a motor supported by the adjustable frame independently of the sliding carriage and operating a driving pulley, and a belt having one end looped about the driving pulley of the motor and the other end looped about the pulley on the driving shaft of the molding cutter and the intermediate parts of the belt respectively looped about a pulley at the rear of the carriage and a pulley upon the adjustable frame, whereby the carriage and its cutter may be freely moved relatively to the adjustable frame while maintaining a constant power transmitting connection between the driving pulley and the pulley on the molding cutter.

---

1,565,928. ZINC CONDENSER. HARRY A. GRINE, Clarksburg, W. Va., assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 3, 1924. Serial No. 703,979. 4 Claims. (Cl. 106—10.)

1. A composition for zinc condensers comprising broken zinc condenser, zinc ore and a refractory bonding material.

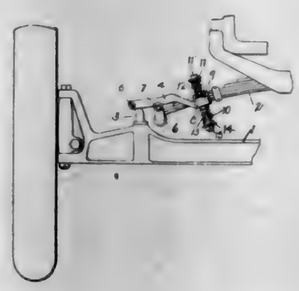
1,565,929. MECHANICAL TOY. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed Apr. 13, 1925. Serial No. 22,916. 8 Claims. (Cl. 104—79.)



1. A toy comprising a pair of tracks, a loop on one end of each track said loops being on reverse ends of said tracks, a bracket connecting said loops and pivotally supported therebetween, means for swinging the track to alternately elevate the ends, and an object adapted to travel in the tracks and loops by gravity, the arrangement being such that the swinging motion of the tracks in one direction serves to elevate said object to a higher level from whence it rolls to the opposite end of the tracks, the swing motion in a reverse direction serves to return the object along the opposite track to its initial position.

---

1,565,930. VEHICLE SPRING. LEO C. HALDER, Ceresco, Mich., assignor of one-third to Andrew Watson Lockton, sr., Battle Creek, Mich. Filed May 16, 1925. Serial No. 30,808. 2 Claims. (Cl. 267—17.)

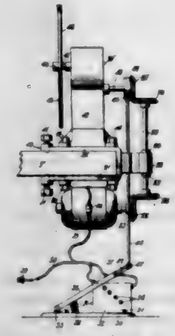


1. In a structure of the class described, the combination with the axle, of a perch carried thereby, a leaf body spring, a lever bifurcated at its inner end and pivoted at its outer end on the said perch and extending laterally at its inner end to each side of said body spring, vertical bolts disposed through the ends of the bifurcations, a yoke connecting the bolts together, offset to engage the top of said body spring, coiled springs disposed both above and below the said bifurcated arms on said bolts, a tie bar for the upper ends of said bolts, and a shackle connecting an intermediate part of the said arm to the end of said body spring, conecting as specified.

---

1,565,931. WINDING APPARATUS. RICHARD A. HALEY, Hollywood, Calif. Filed July 7, 1925. Serial No. 42,018. 2 Claims. (Cl. 242—57.)

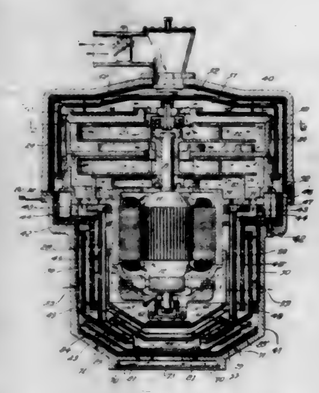
1. A winding apparatus comprising a winding mechanism, an electric motor below the same, an attaching bracket for said mechanism and motor, a treadle switch for and below the motor, a driving connection from said motor to said mechanism and supported on said bracket, a



drum forming a part of said connection, and a brake rod movable with said treadle switch disposed relatively close to said connection and engageable with said drum.

---

1,565,932. MEANS FOR ACTUATING PLAYER PIANOS. CLINTON H. HANSON, Chicago, Ill., assignor to Motor Player Corporation, a Corporation of Illinois. Filed May 24, 1921. Serial No. 472,040. 29 Claims. (Cl. 230—11.)



1. In a suction device for operating the pneumatics of a player piano, the combination with a container having two compartments therein, of an electric motor mounted in the container, and means operable by the motor for circulating air in said compartments, each compartment being arranged to circulate air independently of the other compartment.

---

1,565,933. GASEOUS FUEL. JOHN HARRIS, Cleveland, Ohio. Filed Dec. 6, 1923. Serial No. 678,807. 2 Claims. (Cl. 48—196.)

2. A cutting gas consisting essentially of natural gas having mixed therewith vapor of ether, said vapor constituting not materially less than 2½% by volume of the mixture and the natural gas constituting not materially more than 97½% by volume of the mixture.

1,565,934. GASEOUS FUEL. JOHN HARRIS, Cleveland, Ohio. Filed Dec. 6, 1923. Serial No. 678,809. 2 Claims. (Cl. 48—85.)

2. A cutting gas consisting essentially of carbon monoxide having mixed therewith vapor of ether, the ether vapor constituting not materially less than 2½% by volume of the mixture and the carbon monoxide constituting not materially more than 97½% by volume of the mixture.

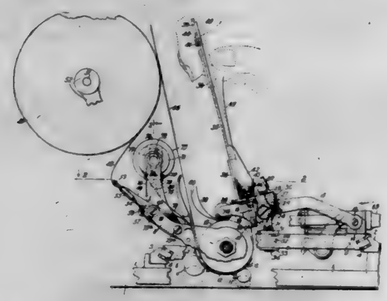
---

1,565,935. GASEOUS FUEL. JOHN HARRIS, Cleveland, Ohio. Filed Feb. 16, 1924. Serial No. 693,384. 2 Claims. (Cl. 48—196.)

2. A gaseous fuel particularly useful for the cutting of metal and consisting essentially of a mixture of casing head gas with the vapor of ether, the ether vapor constituting approximately 5% by volume of the said mixture.

---

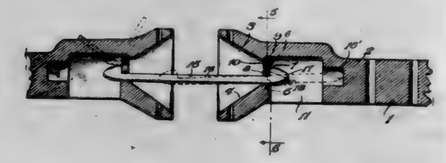
1,565,936. TYPEWRITING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Apr. 30, 1924. Serial No. 710,040. 21 Claims. (Cl. 197—127.)



1. In a typewriting machine, the combination of a platen, line spacing devices therefor, paper feeding devices co-operative with said platen to advance a work sheet step-by-step when said line spacing devices are actuated, and means for controlling the feeding of a second work sheet over the platen under the grasp of the operator applied directly to said second work sheet and to said means itself.

---

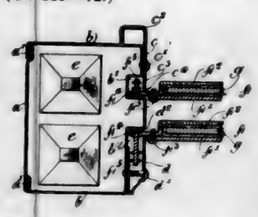
1,565,937. CAR COUPLER. WILLIAM A. HASSELL, JR., Dolomite, Ala. Filed Aug. 4, 1923. Serial No. 655,708. 1 Claim. (Cl. 213—176.)



A car coupler comprising a head having a chamber formed therein and having a throat leading from its outer end, said throat being tapered inwardly and at its reduced inner end communicating with said chamber intermediate the width thereof, an inwardly opening latch gate pivotally mounted in said chamber adjacent the outer end wall thereof and adapted to contact with the outer end wall at opposite sides of the inner end of said throat when closed, said head having a reduced pocket leading from the inner end wall of said chamber in alinement with the inner end of said throat, and a coupling bar formed with a head at its end of a size to fit loosely into said pocket when the headed end of the coupling bar is thrust inwardly through the throat and chamber and cause the coupling bar to be temporarily supported in substantially axial relation to the coupling head and said coupling bar head when engaged with the inner face of said gate latch having free play in said chamber in all directions to permit the coupling bar to have universal swinging movement.

---

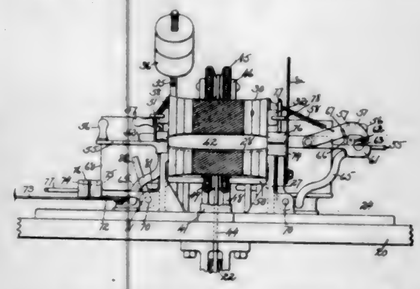
1,565,938. METAL WINDOW. BERNARD HAUSMAN, New York, N. Y., assignor to C. I. Gundlach, New York, N. Y. Filed Sept. 16, 1921. Serial No. 501,059. 4 Claims. (Cl. 189—72.)



1. In a metal window, the combination of a hollow vertical frame member having its side adjacent to the sash inperforate and formed with a recess and a combined staff and stop bead secured to the frame and overlapping the recess to form a guideway for the sash and a channel for the sash chain.

---

1,565,939. CIGAR-WRAPPING MACHINE. FLORENCE L. HERRINGTON, Hartford, Conn., assignor of fifty-one one-hundredths to Charles Eden, Hartford, Conn. Filed July 30, 1919. Serial No. 314,287. Renewed May 2, 1925. 21 Claims. (Cl. 131—45.)



21. A cigar wrapping machine comprising a rest and a presser roll shaped to receive a cigar bunch between them, a reciprocating knife for operating upon a cigar bunch at one end of said rolls, a receptacle to receive an adhesive, a conduit extending from said receptacle and opening in proximity to said knife, a gate extending across the fluid passage in said conduit and having a port to register with said passage, and a connection between the knife and said gate whereby the latter is moved to position its port out of registry with said passage when the knife is raised.

---

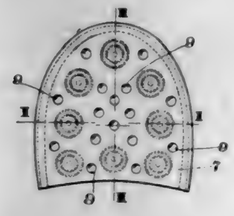
1,565,940. SAW SWAGE. JOHN E. HILL, Potter, Ark. Filed Jan. 27, 1925. Serial No. 5,102. 1 Claim. (Cl. 76—56.)

A tool of the class described comprising a solid wedge-shaped body, the smaller end thereof providing a striking head, a substantially V-shaped portion formed on the larger end of the body, a substantially fan-shaped portion formed on the apex of the V-shaped portion and being slit longitudinally for its entire length so that the

intermediate portion of the apex of the V-shaped portion is disposed in said slit to provide a pair of swaging faces, the same being adapted for engagement with the adjacent faces of a pair of raker teeth of a saw blade.

---

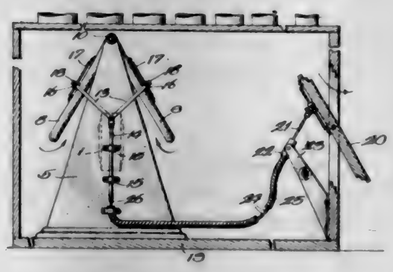
1,565,941. HEEL. WILLIAM W. HUNT, Bexley, Ohio, assignor, by mesne assignments, to William W. Hunt, Frederick A. Miller, Edward E. Lerch, John E. Lerch, and Orr H. Williams, all of Columbus, Ohio. Filed Aug. 31, 1923. Serial No. 660,302. 2 Claims. (Cl. 36—35.)



1. A heel comprising, in combination, a resilient tread portion of soft rubber and a base therefor of hard rubber formed with closed nail-stopping projections extending into the resilient portion and vulcanized thereto.

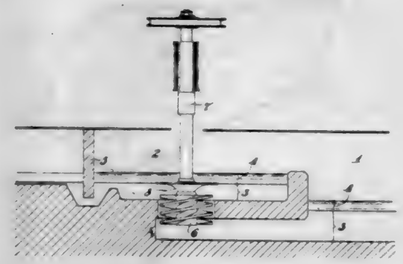
---

1,565,942. SOUND-PROPAGATING APPARATUS. JOHN ELLIOTT JENKINS, Chicago, Ill., assignor, by mesne assignments, of one-half to Zenith Radio Corporation, a Corporation of Illinois. Filed Oct. 29, 1924. Serial No. 746,493. 11 Claims. (Cl. 181—5.)



1. A telephonic transmitter included in a telephonic circuit in combination with a container enclosing it formed with converging sides each having a sound passage and valves for said passages coupled to have simultaneous opening and simultaneous closing movements.

1,565,943. PROCESS FOR THE ELECTROLYSIS OF ALKALI CHLORIDES. HEINRICH KLOPSTOCK, Aussig, Czechoslovakia. Filed May 25, 1925. Serial No. 32,778. 5 Claims. (Cl. 204—58.)



1. In processes for the electrolysis of alkali chlorides by the so-called quicksilver process involving a transfer of the quicksilver from the amalgam decomposition cell to the amalgam-formation cell by a fluid propelling device, the step which consists in protecting the quicksilver throughout its transfer by means of an air-excluding fluid.

---

1,565,944. CONVEYER. WILLIAM J. KNOLL, Chicago, Ill., assignor to H. B. Rouse & Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 31, 1924. Serial No. 747,024. 8 Claims. (Cl. 198—87.)

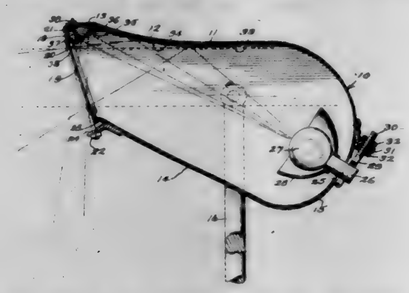
1. A conveyer including two endless belts, one arranged to deliver objects to the other, in combination with a support formed in sections placed end to end, one section carrying one belt and the other section the other belt, one of said support sections being separable from the other at their adjacent ends to enable one section to overlie the other; and linkage for assembling the outer end of the separable support section with the other support section, said linkage also constituting a supporting leg structure for the outer end of the separable support section when the conveyer is adjusted to function.

---

1,565,945. SLED. RALPH A. LESLIE, South Portland, Me. Filed Mar. 17, 1924. Serial No. 699,687. 3 Claims. (Cl. 280—22.)

1. A laterally flexible sled having runners comprising an upper and a lower strip secured together edgewise, the upper strip being stiffer than the lower strip; a cross bar connecting the runners near their rear ends and another cross bar connecting them midway of their ends to provide a long laterally flexible portion forward of the midway cross bar; a seat mounted on said cross bars; a steering foot lever at the forward portion of the sled for flexing the runners; and shoes on said runners secured thereto at the ends.

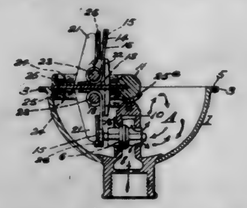
**1,565,946. HEADLIGHT.** JOHN M. B. LEWIS, Lynchburg, Va. Filed Nov. 3, 1922. Serial No. 598,793. 3 Claims. (Cl. 240—41.)



1. A device of the character described comprising a casing having an opening in its forward end, an approximately horizontally arranged reflector disposed in the upper portion of said casing wholly above the upper line of said opening, the forward portion of said reflector being curved upwardly, and a lighting unit arranged in the lower portion of said casing rearwardly of said reflector and wholly below the lower line of said opening.

---

**1,565,947. WASHING-MACHINE MOTOR.** ROBERT RAIMON MASTERSON, Cincinnati, Ohio. Filed Apr. 15, 1922. Serial No. 553,223. 1 Claim. (Cl. 121—97.)

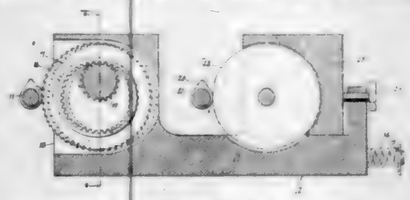


In a water-motor of the class described, a two-part hollow spherical shell or casing, a single oscillatory valve-actuating radial piston-member, a vertical rock-shaft adapted to carry the said single valve-actuating piston-member in circular path in said shell, a sliding inlet-valve, a sliding outlet-valve, a valve partition or head provided in one of the hemispherical shell-members and adapted to house both of the said sliding valves, a set of three differential spiral springs each arranged in series with light springs at either side an intermediate heavy spring mounted on the opposite faces of the said single radial piston-member, vertical presser and spring-connecting plates mounted on and uniting the opposite end pairs of light springs of each of the said sets of differential springs auxiliary high-pressure levers or lagging-extensions provided on the said intermediate heavy springs of the said sets of springs, lateral shoulders on the spring supports for the normal resting of the said high-pressure levers and the latter being adapted to meet and compensate for the high pressure on the sliding inlet-valve in the twin reacting or quick throw-over movement of both valves in unison in the same direction in the said valve partition or head, substantially as shown and described.

---

**1,565,948. MILLING MACHINE.** HERMAN W. MELLING, Jackson, Mich. Filed Feb. 4, 1924. Serial No. 690,500. 15 Claims. (Cl. 90—13.4.)

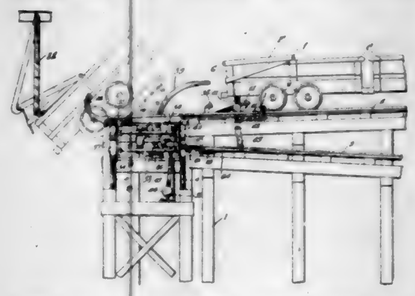
1. In a machine for milling cam shafts, the combination of a work carriage, a plurality of cutter carriages independently movable laterally of said work carriage, annular cutters provided with internal gears carried by said cutter carriages, a driving gear disposed through said cutters to coact with their said internal gears, said internal gears being of such diameter and mesh as to permit reciprocating movement of the carriages, a shaft provided with a plurality of master cams corresponding



to the shape of the cams to be cut, abutment rollers of a diameter corresponding to the diameter of the cutters mounted on said cutter carriages to coact with said master cams, and means for driving the work and the master cam shaft at the same speed.

---

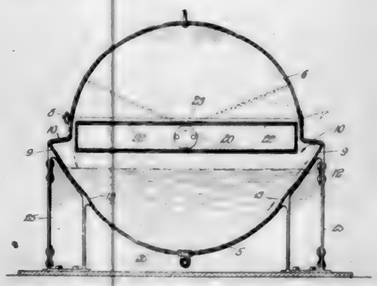
**1,565,949. TIPPLE.** JERRY MORROW, Wellston, Ohio. Filed June 29, 1923. Serial No. 648,535. 11 Claims. (Cl. 214—50.)



1. The combination with an inclined track and a transfer carriage mounted to travel thereon along, of a supply track inclined downwardly toward the point of transfer, a delivery track inclined downwardly away from the point of transfer, a tiltable car receiving track upon the carriage, and means for automatically tilting said track relative to the carriage to aline it with either the supply track or the delivery track when the carriage is at the respective limits of its movement.

---

**1,565,950. LAUNDRY MACHINE.** NELSON I. PERRY, Chicago, Ill. Filed Oct. 23, 1924. Serial No. 745,320. 2 Claims. (Cl. 68—18.)

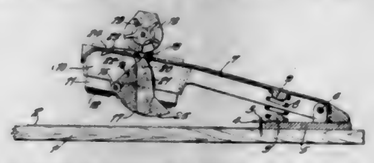


1. In a washing and drying machine, a substantially cylindrical casing having two lateral horizontal enlargements in a plane below its axis terminating in shoulders

facing downwardly in direction and a gradually inclined connecting surface, and a rotatable, reticular and rectangular clothes-holding basket journaled at the axis of said casing and means to rotate the basket.

---

**1,565,951. ACCOUNTING SYSTEM.** WILLIAM G. PETERS, Peoria, Ill., assignor to Charles A. Bergsten, Peoria, Ill., and B. E. Bramble, Chicago, Ill. Filed June 12, 1925. Serial No. 36,600. 13 Claims. (Cl. 101—405.)



1. A device for stamping a sheet, comprising, a stamp, a guide adapted to position said stamp clear of the sheet and to guide the same to stamp the sheet, a register on said stamp, means for operating said stamp to stamp the sheet, and means for operating said register upon stamping the sheet.

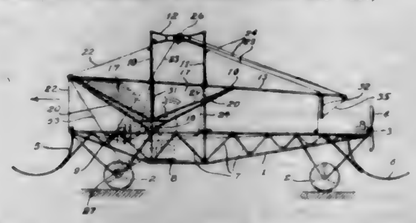
---

**1,565,952. ICE-CREAM-CONE SERVER.** ALVA M. PHILLIPS, Byesville, Ohio. Filed June 11, 1925. Serial No. 36,480. 2 Claims. (Cl. 224—48.)

1. An ice cream cone server comprising a tray having a plurality of cone receiving openings arranged therein, a handle therefor, means for supporting the tray comprising a pair of elongated strands of wires, the intermediate portions thereof extending along the bottom of the frame adjacent the respectively longitudinal side edges thereof, the end portions of the strands of wire being bent downwardly, and laterally, and then upwardly, the free ends of each strand of wire being bent laterally and forming loop portions, and fastening screws extending through said loop portions into the bottom of the frame.

---

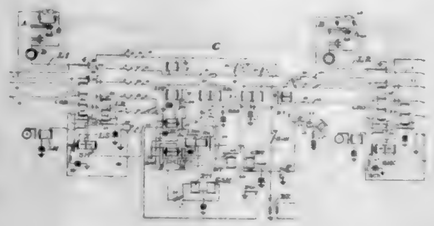
**1,565,953. GLIDER AEROPLANE.** JEAN PONSOLLE and MARCEL VERGNOU, New York, N. Y. Filed Nov. 1, 1923. Serial No. 672,033. 3 Claims. (Cl. 244—29.)



1. In an aeroplane of the type described, the combination with a fuselage having an engine located at the rear end thereof, a flexible plane located above the fuselage, one or more masts erected upon the fuselage, and extending upwardly through the flexible plane, said flexible plane being provided with a longitudinally extending centrally located flexible strip, and a plurality of means for bending various parts of said strips in an upward direction under the control of the operator.

---

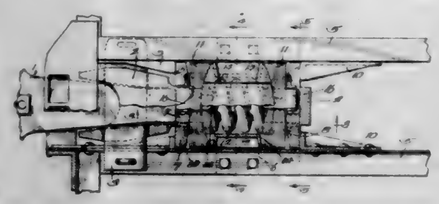
**1,565,954. TELEPHONE-EXCHANGE SYSTEM.** WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 12, 1918. Serial No. 253,696. 24 Claims. (Cl. 179—18.)



1. In a telephone system, the combination with a telephone line, a line switch for the said line having active and passive contacts, a line relay for the said line, a cut-off relay for the said line, a pair of normally open contacts of the said cut-off relay serially connected between a pair of the said active contacts and the talking strands of the line, separate holding and operating windings for the said cut-off relay, the said holding winding being normally short-circuited by normal contacts of the said relay, a stepping magnet adapted to step the said active contacts over successive sets of passive contacts to which are connected the terminals of trunk lines, a circuit for the said stepping magnet including a source of current and normally open contacts of the said line relay, a circuit for the said operating winding of the said cut-off relay including one of the said active contacts of the said switch and a passive contact of an idle trunk line connected thereto, the said circuit being completed when the said active contact engages the said passage contact of the idle trunk line, and a holding circuit for maintaining the energization of the said cut-off relay after the said cut-off relay has been initially energized by current through the said operating winding, the said holding circuit including a source of current and the holding winding of the said relay.

---

**1,565,955. DRAFT GEAR.** HERMAN C. PRIESE, Blue Island, Ill. Filed Apr. 30, 1924. Serial No. 710,084. 6 Claims. (Cl. 213—23.)

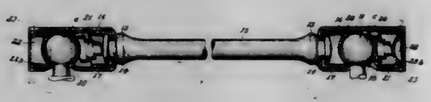


1. A draft gear including a coupler yoke; followers, one at each end of the yoke, these followers having opposed convex faces; spring plates engaged by the convex faces of said followers; a spacer between said plates and hollow longitudinally of the yoke; and a coiled spring within said spacer of greater extent longitudinally of the

gear, than the spacer, said spring engaging the plates that are at said followers and said spacer having concave flanges at its ends into which the spring plates thereat may be bowed.

---

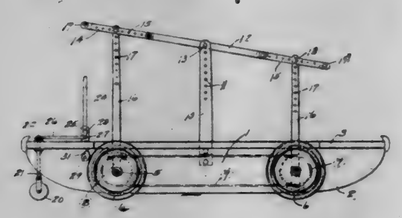
1,565,956. AUTOMOBILE STEERING CONNECTION. FRANK P. PRINDLE and RALPH H. BOARDMAN, New Britain, Conn., assignors to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 7, 1920. Serial No. 371,862. 6 Claims. (Cl. 287—90.)



1. In a ball and socket connection, socket member, a reinforcing cup therein, a bearing member for said ball seated upon the end of said cup, a bearing member to the other side of said ball, a spring for retaining said second bearing member against the ball and a nut closing the outer end of the socket member.

---

1,565,957. TOY HAND CAR. JOHN N. PRISK, Johnstown, Pa. Filed Apr. 4, 1925. Serial No. 20,592. 1 Claim. (Cl. 208—34.)



A device of the kind described, comprising a sled-like body portion having slots cut at the ends of the top thereof; crank shafts journaled through the body below the slots; wheels detachably mounted at the ends of the crank shafts; aligned sprockets on the crank shafts at the sides of the cranks; a sprocket chain connecting the said sprocket wheels; spaced uprights at the center of the top, the same having transversely aligned bolt holes; a walking beam pivotally and adjustably mounted between the said uprights by means of a bolt passed through the center of the beam and through a pair of the bolt holes of the uprights, the said walking beam being slotted at the ends and having transversely aligned bolt holes through these ends; connecting bars having a plurality of bolt holes cut therein, the said bars being passed through the body slots and journaled at their lower ends to the cranks of the crank shafts and being pivotally and adjustably secured in the slotted ends of the walking beam by means of bolts passed through the bolt holes of the connecting bars and of the ends of the walking beam.

---

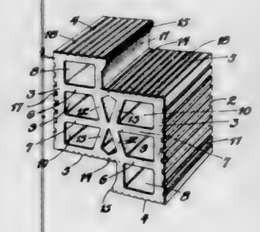
1,565,958. CRANK-SHAFT POLISHER. LEO RENO, Flint, Mich. Filed Mar. 8, 1924. Serial No. 697,697. 4 Claims. (Cl. 51—185.)

1. A crankshaft polisher comprising a carrying arm; a polishing member associated with said arm adjacent one end thereof and adapted for mounting on a crank to be polished; and a bearing member associated with said

arm adjacent the opposite end thereof adapted for mounting on a member movable in harmony with the crankshaft to be polished.

---

1,565,959. HOLLOW TILE. RICHARD S. REQUA, San Diego, Calif., assignor to Union Trust Company of San Diego, San Diego, Calif., a Corporation of California. Filed Aug. 26, 1921. Serial No. 495,452. 5 Claims. (Cl. 72—41.)



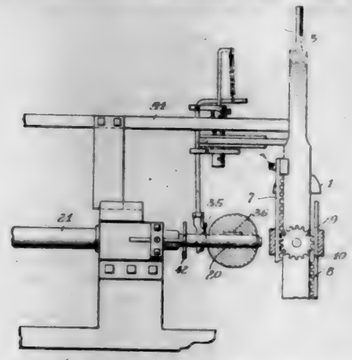
1. A hollow tile having outer walls and interior webs alining with certain of the said walls, and internal webs joining the upper outer wall at points intermediate the side walls and converging towards the center of tile and similar internal webs joining the bottom outer wall at points intermediate the side walls and converging towards the center of the block.

---

1,565,960. APPLE CORING AND PARING MACHINE. FRANK A. REYNOLDS, Geneva, N. Y., assignor to Reynolds Manufacturing Corporation, Geneva, N. Y., a Corporation of New York. Filed Aug. 14, 1925. Serial No. 50,235. 23 Claims. (Cl. 146—39.)

1. The combination with a pair of apple gripping members, of a coring knife movable endwise therebetween to

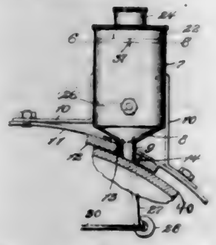
enter an apple while held by the gripping members, and means for automatically separating the gripping mem-



bers after the coring knife enters the apple and thereafter withdrawing the coring knife with the apple supported thereon.

---

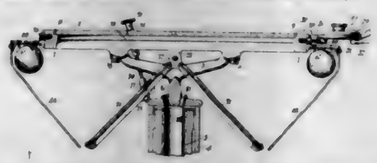
1,565,961. DEVICE FOR FEEDING NONSLIP MATERIALS TO BRAKE LININGS. LAWRENCE J. ROSE, St. Louis, Mo. Filed Oct. 29, 1924. Serial No. 746,512. 3 Claims. (Cl. 188—264.)



3. In a device of the class described, a container mounted upon a brake band; a nozzle therefor extending through the brake band to the brake lining; a tubular rod valve having a lower terminal nipple extending into the interior of the said nozzle; and a pin mounted in said tubular rod valve and projecting to the mouth of said nozzle.

---

1,565,962. REGISTERING AND SQUARING MACHINE. VERNON ROYLE, Paterson, N. J. Filed June 28, 1922. Serial No. 571,398. 8 Claims. (Cl. 35—12.)

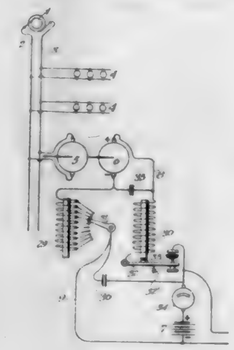


1. A registering and squaring machine comprising, a translucent table for holding the work, lighting means beneath the table, and a pair of adjustable hinged reflectors.

---

1,565,963. CURRENT-SUPPLY SYSTEM. HARRY O. RUGH, Chicago, Ill., assignor of one-half to Richard Calvert Hawa, Chicago, Ill. Filed Mar. 22, 1923. Serial No. 626,771. 2 Claims. (Cl. 171—314.)

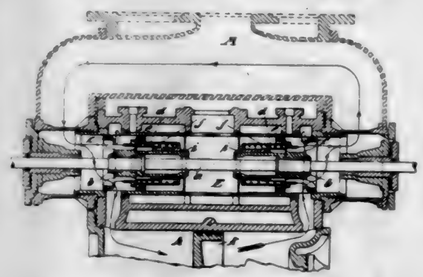
1. In a current supply system, the combination with a direct current generator; of a storage battery, similar poles of said battery and generator being connected; a circuit including said generator; a switch between the storage battery and the generator; an electro-magnet receiving current from said generator and related to said switch to hold it closed, said switch opening when said magnet releases it; and two condensers in shunt of said generator and in parallel with each other, said electro-magnet being included between said condensers.



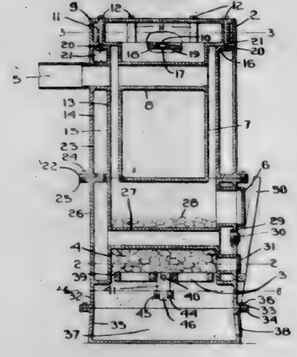
2. In a current supply system, the combination with a direct current generator; of a storage battery, similar poles of said battery and generator being connected; a circuit including said generator; an impedance device in each side of the generator circuit; and a rheostat having the winding of one of said impedance devices for its adjustable resistance.

---

1,565,964. PISTON VALVE. KARL SCHULZ, Konigsberg, Germany, assignor to Union-Giesserei, Contienen, near Konigsberg, Prussia, Germany. Filed May 29, 1924. Serial No. 716,706. 2 Claims. (Cl. 121—134.)



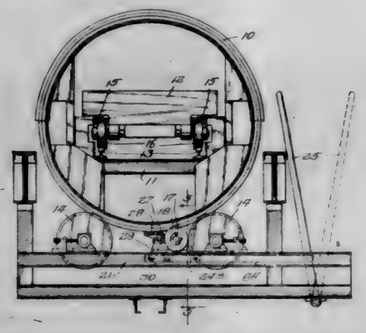
1. In a steam engine a valve casing communicating with the discharge space at its ends and having an inlet chamber, a piston valve having two spaced valve bodies, each valve body comprising a relatively stationary section provided with a tubular shaft fixed upon the valve-stem and a movable section slidably mounted upon the tubular shaft of the stationary section, both sections being held normally in contact to operate as one valve, the said stationary section having passages establishing communication between the discharge space and the cylinder spaces on both sides of the steam-piston at the cutting off of the steam, and a stop fixed upon the tubular shaft of the stationary section limiting the displacement of the movable section and thus preventing communication of the inlet chamber with the discharge space at any position of the piston valve.



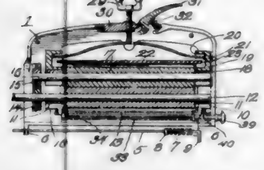
A heater comprising a body portion provided with double walls forming between them a water leg, the lower portion of the body constituting a fire-box, said body having a fire-door opening into the fire-box, a single water tube extending centrally across the fire-box below the fire-door and communicating at each end with the water leg, said walls of the body at their upper ends being connected by a web, a hollow head resting on and secured to said web and closing the upper part of the body, said head having integral therewith a drum which depends into the body portion to about the top of the fire-door, said web and the portion of the head resting thereon having aligned apertures therethrough to provide for circulation, said body having a flue opening in one wall near the top, and a flue extending through the drum in line with said opening.

---

1,565,966. CAR DUMPER. GEORGE N. SIMPSON, Chicago, Ill. Filed Aug. 16, 1924. Serial No. 732,464. 3 Claims. (Cl. 192—4.)



1. In combination with a cylindrical rotatable cage having ring rails mounted on supporting rollers; a driving wheel arranged adjacent one of the ring rails, said driving wheel being carried by a shaft mounted in an eccentric bearing; a brake shoe adjacent one of the ring rails and mounted on a shaft rotatably supported parallel to the shaft carrying the driving wheel; and means for simultaneously rotating the eccentric bearing to bring the driving wheel into contact with the ring rail and rocking the shaft carrying the brake shoe to move said brake shoe out of contact with the ring rail; and vice versa.

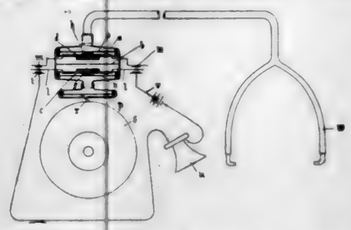


1. In a clothes wringer, a frame, a roller mounted in said frame, a pair of vertically sliding blocks in said frame above said roller and formed with bearings and above the latter with vertical notches, a second roller mounted for rotation in the bearings of said sliding blocks, a guard resting on said second roller and having its ends received within said notches of the blocks.

4. In a clothes wringer the combination of a frame having upright spaced channelled sides, bearings in the channelled sides, having inwardly-projecting lugs, a drain table extending through the frame and partially supported thereby when in operative position and provided with side channels engaged by said lugs, and at one side with depending teeth adjacent the ends of one of the channels, and spring-actuated means for engaging either of said teeth to cooperate with the said lugs and frame in holding the table at the desired point of adjustment and in tilted position.

---

1,565,968. ARRANGEMENT ON TALKING APPARATUS FOR THE RECEPTION AND REPRODUCTION OF RECORDS. KRISTIAN HARALD SMITH, Copenhagen, Denmark. Filed June 16, 1921. Serial No. 478,135. 4 Claims. (Cl. 179—100.1.)



1. The combination of a diaphragm, a second diaphragm, mechanical means for transmitting the vibrations of said first-named diaphragm to said second-named diaphragm, a magnet electro-magnetically coacting with said second-named diaphragm, a third diaphragm, a magnet co-operating with said third-named diaphragm, an electrical circuit interconnecting said magnets, a microphone and switching means for connecting said microphone with said first-named magnet while disconnecting said first-named magnet out of circuit with said second-named magnet.

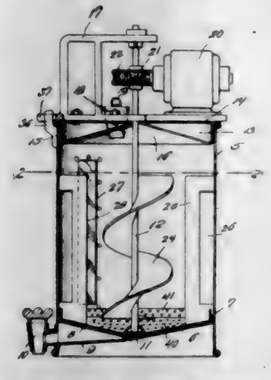
---

1,565,969. COOLING DEVICE FOR X-RAY TUBES. HARRY SPIRO, San Francisco, Calif. Filed Mar. 26, 1924. Serial No. 702,015. 1 Claim. (Cl. 250—84.)

In combination with an X-ray tube fitted with heat radiating fins disposed in spaced relation to each other on the projecting end of one of the electrodes, a plurality

---

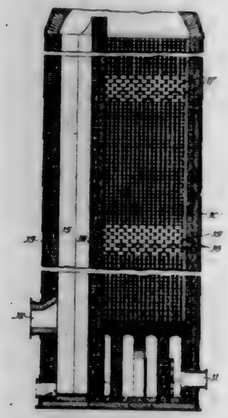
1,565,970. CHURN. VICTOR STANZEL, Schulenburg, Tex. Filed Aug 10, 1925. Serial No. 49,412. 1 Claim. (Cl. 31—34.)



In a churn structure, a vessel, stationary agitators on the inside wall of the vessel, a bottom in the vessel, a movable agitator in the vessel, a cover, a funnel piercing the cover, a stopper for said funnel, and operating mechanism mounted on said cover and associated with the movable agitating means, the combination of a collector sieve having radially extending slots for receiving the stationary agitators and adapted to seat on the bottom of the vessel.

---

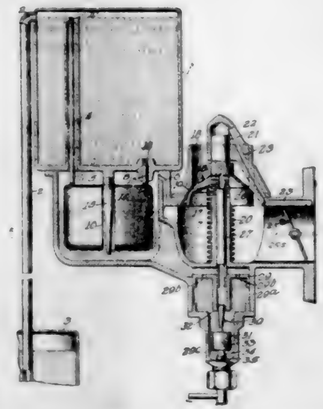
1,565,971. HOT-BLAST STOVE. GEORGE E. STEUDEL, Milwaukee, Wis. Filed July 21, 1924. Serial No. 727,203. 6 Claims. (Cl. 72—15.5.)



1. Checker work for hot blast stoves, comprising in combination horizontal courses of brick extending at right angles to each other and in vertical alignment with each other, whereby flues are formed through said checker work, the said checker work having bricks of unequal height placed therein, whereby communicating passages are formed between the said flues in said checker work.

---

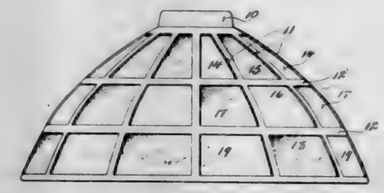
261—66.)



In a carburetor, the combination of a carbureting chamber, a fuel inlet to said chamber, an air inlet to said chamber, an element movable to different positions under different conditions of operation, a hollow stem movable by said element and adapted to supply fuel to said fuel inlet, a restricting orifice associated with said hollow stem, a tapered metering pin cooperating with said restricting orifice, and an adjustable pointed supporting member engaging in a recess in said metering pin for permitting lateral movement of said pin on said supporting member.

---

1,565,973. SHADE. MATHEW O. SUTTER, Milwaukee, Wis. Filed Apr. 16, 1923. Serial No. 632,385. 1 Claim. (Cl. 240—108.)



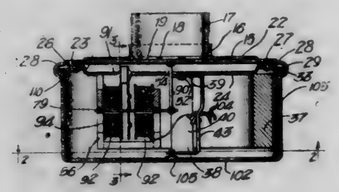
A lamp shade comprising a frame made up of rings and intersecting radial ribs, and a plurality of minor panels and translucent panels carried between said ribs and rings and arranged in a checkerboard manner with the mirror panels both circumferentially and radially alternating with the translucent panels, said mirror panels having their reflecting sides directed inwardly of the shade.

---

1,565,974. JUNIOR LOUD SPEAKER. DELMAR A. WHITSON, Los Angeles, Calif., assignor to Stentorphone Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 20, 1923. Serial No. 675,804. 29 Claims. (Cl. 179—119.)

4. In a loud speaker, the combination of: means for producing a pair of uni-directional parallel magnetic fields; an armature extending between said magnetic fields and with the ends thereof in said magnetic fields;

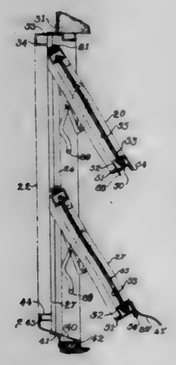
means for polarizing said armature; a diaphragm; means for transmitting the movement of said armature to said diaphragm; and a supporting plate, said plate having a centrally disposed flexure area confined by a frame structure and provided with an elongated opening through which said armature extends, said armature being rigidly secured to one longitudinal edge of said opening so that the movement of said armature is resisted by compound flexure in the flexure area of said plate.



16. In telephonic apparatus: a plate for supporting an armature, said plate having a flexure area confined by a frame structure.

---

1,565,975. WINDOW CONSTRUCTION. HARRISON D. WILSON, Chicago, Ill. Filed Feb. 15, 1923. Serial No. 619,106. 8 Claims. (Cl. 189—67.)

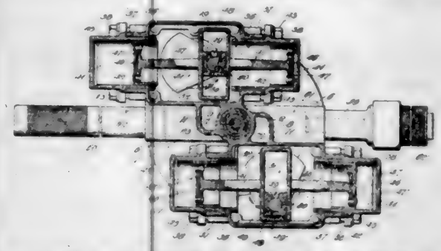


1. In a weather strip support, a flat metallic member provided with a row of perforations, a resilient metallic weather strip member surrounding the edge of said flat member and extending along each face thereof, said resilient metallic member having dents entering said perforations whereby said resilient member is secured to said flat member.

---

1,565,976. PORTABLE MOTOR. NORMAN E. WOODS, Paterson, N. J.; Leila P. Woods administratrix of said Norman E. Woods, deceased. Filed Sept. 21, 1923. Serial No. 664,122. 19 Claims. (Cl. 121—33.)

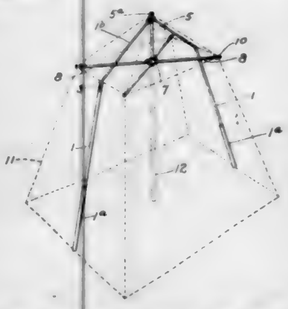
1. In a motor, the combination of a central driven shaft or spindle, four cylinders arranged in pairs disposed on opposite sides of said shaft or spindle, the cylinders of each pair being spaced with relation to each other and the axes of the respective pairs being in parallel relation to each other, pistons operating in the cylinders, the pistons of each pair being coupled for movement in unison in the same direction but free from connection with the other pair, transmission shafts arranged on opposite sides of and parallel with the central shaft or spindle and in gear therewith, each transmission shaft being disposed in alinement with the space between opposed cylinders and extending into said space, and



connections in the spaces between the cylinders of the pairs forming a driving couple between each pair of pistons and the associated transmission shaft.

---

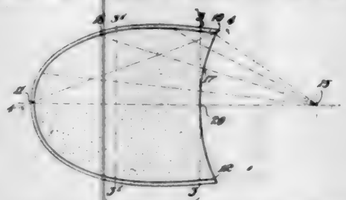
1,565,977. TENT SUPPORT. FLETCHER AMES, Berkeley, Calif. Filed Jan. 8, 1925. Serial No. 1,200. 7 Claims. (Cl. 135—2.)



1. A tent support comprising the combination of a plurality of relatively long supporting rods pivotally connected together at their upper ends and in use diverging from each other, the lower ends thereof being adapted to rest on the ground, a rod carried by and extending downwardly from the junction of the said rods, and a plurality of tent spacing bars having the inner ends movable connected to the rod and the outer ends free and adapted to engage and hold a tent in spread condition.

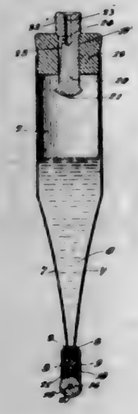
---

1,565,978. RUBBER HEEL. JOHN W. AYMAR, Jr., New York, N. Y. Filed Sept. 27, 1921, Serial No. 503,604. Renewed Feb. 28, 1923. 6 Claims. (Cl. 36—35.)



1. A resilient heel lift of the concavo-convex type having a concave attaching face, every transverse cross-sectional element of which in planes perpendicular to the marginal edge of the lift is a continuous unbroken arc, said arcs progressively increasing in radii from the breast edge to the rear end of the lift and all parts of said concave attaching face being completely developable into a plane surface.

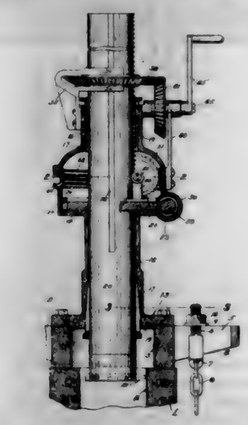
1,565,979. MOISTENER. JOSEPH BACHRACH, New York, N. Y. Filed Mar. 19, 1925. Serial No. 16,625. 2 Claims. (Cl. 91—49.)



1. A moistener comprising a water container having a constricted end portion terminating in a pocket of greater cross sectional area than the adjacent constricted portion and providing shoulders in the opposite side walls of the container, said pocket having unobstructed communication with the interior of the container and being open at its lower side, an absorbent material in said pocket, and a detachably mounted water distributing roller directly engaging said absorbent material at the open side of the pocket and constituting means for removably retaining the same therein in contacting engagement against said shoulders.

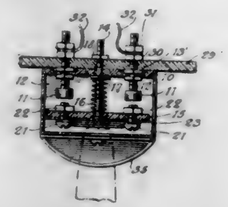
---

1,565,980. CYLINDER-BORING TOOL. GEORGE W. HUGHSON and ARTHUR STANLEY BACON, Oakland, Calif. Filed June 12, 1920. Serial No. 388,609. 23 Claims. (Cl. 77—2.)



1. In a cylinder boring tool, a housing, a boring bar mounted in the housing, a gear on the bar and splined thereto, means for rotating the gear and bar, and means for transmitting a longitudinal movement to the bar during rotation of the bar, including a device carried by said gear and coacting with the interior wall of said housing.

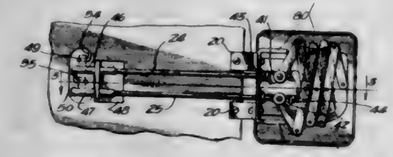
1,565,981. CIGAR AND CIGARETTE LIGHTER. CHARLES BAIA, Palisade, and ALFRED ADERENTE, Jersey City, N. J., assignors to Slip-On Cigar Lighter Company, Incorporated, New York, N. Y., a Corporation of New Jersey. Filed Apr. 10, 1924. Serial No. 705,475. 4 Claims. (Cl. 219—32.)



2. In a cigar or cigarette lighter a base, terminals for an electric circuit mounted on said base, an electrical resistance unit, a resilient support for said unit adapted normally to hold the unit out of contact with said terminals, but permitting the unit to be pressed into electrical contact with the terminals, and means for adjusting the gap normally separating said unit from said terminals.

---

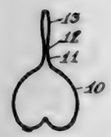
1,565,982. SHAFT-ACTION-SIGNAL DEVICE. FREDERICK M. BALDWIN, Los Angeles, and GALUSHA A. BURGESS, Long Beach, Calif. Filed Sept. 10, 1923. Serial No. 661,905. 5 Claims. (Cl. 116—40.)



1. In an auto signal, the combination of: an extensible member comprised of lazy tongs extensible in a number of signalling positions; means for extending said lazy tongs; levers operatively connected to said extending means; and frictional means for retaining said levers in the positions into which they are moved for the purpose of operating said extending means; and means for swinging said levers back into their original positions.

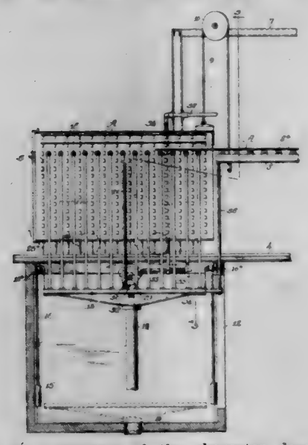
---

1,565,983. PERFUME HOLDER. GEORGE BORNEMAN, Millville, N. J., assignor to L. G. Nester Company, Inc., Millville, N. J., a Corporation of New Jersey. Filed Dec. 7, 1922. Serial No. 605,365. 3 Claims. (Cl. 215—1.)



1. A flat dispensing container for perfume having a single capillary tube outlet adapted to be severed, the thickness of the walls of the container and the size thereof being such that when said container is placed adjacent the warm skin of the human body, the heat therefrom serves as a dispensing agent for the perfume by means of evaporation.

1,565,984. PLASTER-BOARD-DRYING APPARATUS. HUGH B. BROCKENBROUGH, Fort Dodge, Iowa, assignor to Plymouth Gypsum Company, Fort Dodge, Iowa, a Corporation of Iowa. Filed July 7, 1922. Serial No. 573,352. 23 Claims. (Cl. 214—41.)

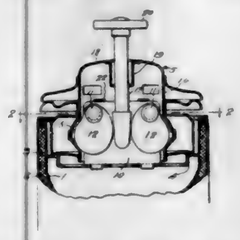


1. In an apparatus of the character described, the combination of an elevator, means for delivering boards onto said elevator, means permitting said elevator to descend by the weight of a board delivered thereon, a tier of board supporting members located adjacent the path of said elevator, and means for bringing said elevator to rest in unloading positions opposite successive supporting members of said tier.

1,565,985. BACKPLATE FOR LOOSE-LEAF BINDERS. EDWARD W. CARPENTER, Fairfield, Conn., assignor to E. W. Carpenter Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 10, 1925. Serial No. 55,474. 4 Claims. (Cl. 129—24.)

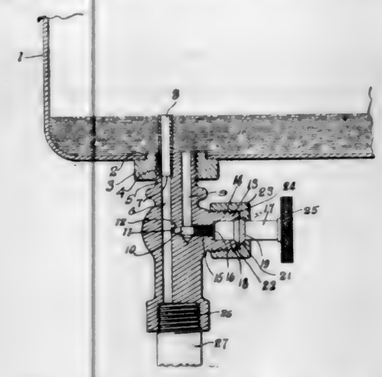
1. In a loose leaf binder, a resilient back member substantially U-shape in cross section to provide side portions, said back member being made in one continuous piece of sheet metal with the ends thereof rounded in a direction longitudinally of the member so that the free edges of the member are substantially in the same plane, a pair of rods pivotally mounted between and engaged by said side portions and provided with oppositely disposed complementary arched arms, and toggle connections between said rods adjacent the opposite ends thereof.

1,565,986. LATCH FOR FLAME SPREADERS OF OIL BURNERS. LEE S. CHADWICK, Shaker Heights, and MARC RESEK, Cleveland Heights, Ohio, assignors to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 12, 1922. Serial No. 528,833. 21 Claims. (Cl. 158—94.)



12. In combination with a burner of the character set forth, a flame spreader adapted to be inserted within the upper end of the burner and comprising a sleeve having an annular recess, the burner having an element which extends into said sleeve when the spreader is in place within the burner, pendants pivotally supported by the aforesaid element and having parts arranged to occupy the annular recess of the spreader, and a member slidable within the spreader and having a part adapted to repose between the pendants for holding them outwardly with their aforesaid parts within the recess of the spreader sleeve, the member serving as a lifter for the spreader and retractable from between the pendants when the spreader is lifted thereby.

1,565,987. VALVE. CHARLES JAMES COIL, Dayton, Ohio. Filed Mar. 15, 1923. Serial No. 625,401. 1 Claim. (Cl. 251—43.)

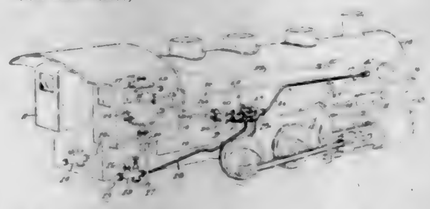


A reserve valve for gasoline tanks, comprising a casing provided with a passageway, said casing having an exteriorly threaded projecting portion provided with an enlarged recess having a tapered mouth formed at the outer end of said projecting portion, said casing and projecting portion having a recess smaller in diameter than the enlarged recess, extending from the enlarged recess to the passageway and having a threaded wall, a hand operated threaded stem adapted to close said passageway and having an enlarged portion provided with a collar having tapered faces, said enlarged portion and collar extending respectively into the enlarged recess and tapered mouth, the threads on the stem engaging the threads of the small recess and a cap nut engaging the threads of said projecting portion and having a tapered recess engaging a portion of the tapered surface of the collar.

1,565,988. FILTER. WILLIAM P. COTTRELL, Los Angeles, Calif. Filed Oct. 28, 1924. Serial No. 746,825. 3 Claims. (Cl. 210—154.)

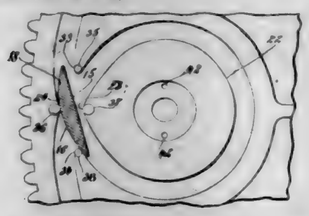
1. A filter comprising spaced walls of impermeable material with perforations for fluid, the perforations being out of registration with one another so that fluids passing through said walls must travel therebetween for a substantial distance, a compressible filtering medium packed therebetween, and means to adjust the compression of said walls upon said medium.

1,565,989. FEED-WATER APPARATUS FOR STEAM BOILERS. MICHAEL M. CROWLEY, Sioux City, Iowa. Filed Jan. 22, 1925. Serial No. 3,935. 9 Claims. (Cl. 122—397.)



1. In combination with a locomotive having a boiler, an injector and a fire box, an injecting tube, a return tube, a preheating tube extending through the fire box and communicating at one end with the injecting tube for conducting feed water to the boiler, a valve connecting the other end of the preheating tube to the injector and to the return tube and adapted to automatically establish communication between the injector and preheating tube when the injector is in action, and between the return tube and preheating tube when the injector is not in action.

1,565,990. BRAIDING MACHINE AND METHOD. EDWARD C. DANDY and WILLIAM TUCWELL, Baltimore, Md. Filed May 20, 1925. Serial No. 31,489. 6 Claims. (Cl. 96—4.)

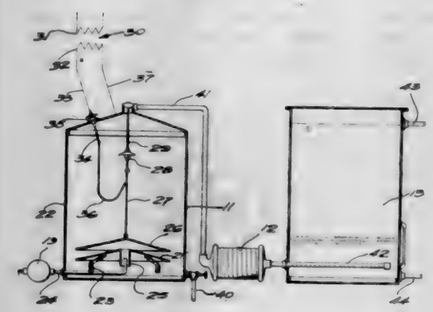


1. In a braider having a centre plate with a main track and a loop track intersecting the main track, so that the operative surfaces of the track meet in points at the intersection, means for arming said points comprising hard metal pins seated in the centre plate, the surfaces of the pins forming part of the operative surface at the points of intersection and resisting the friction and shock of the followers in passing from the circular track to the loop track and vice versa and preventing wear at this point.

1,565,991. RELEASE MECHANISM FOR AWNING-TYPE WINDOWS. JOHN J. DONOVAN, Oakland, Calif. Filed June 22, 1925. Serial No. 38,642. 6 Claims. (Cl. 20—42.)

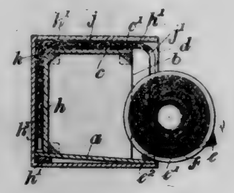
1. An operating mechanism for awning type windows of the type referred to, said operating mechanism comprising operating means arranged exteriorly of the window stop and rotatable in a plane parallel to the surface of said stop, and connecting means underlying the stop and operatively connected to the travelling bar of the window, said connecting means operatively connected to said operating means whereby rotation of the operating means will actuate the connecting means to operate the travelling bar.

1,565,992. DEHYDRATION PROCESS. HAROLD C. EDDY, Los Angeles, Calif., assignor to Petroleum Rectifying Company of California, a Corporation of California. Filed Sept. 8, 1924. Serial No. 736,508. 3 Claims. (Cl. 204—24.)



1. A process of dehydrating emulsions containing solid material in suspension which comprises: subjecting the emulsion to the action of an electric field for the purpose of agglomerating and precipitating the water and solids in suspension; removing the material so precipitated; and filtering the residue to agglomerate the water remaining in the residue.

1,565,993. DISK-RECORD CONTAINER OR CABINET. HUGH D. FITZPATRICK, Glasgow, Scotland, assignor to Ernest Hayward Fairbanks, Philadelphia, Pa. Filed Feb. 15, 1922. Serial No. 536,657. 1 Claim. (Cl. 211—16.)



In a device of the character stated, the combination of a cabinet, a plurality of superimposed compartments therein, a plurality of cells in said compartments, each of said cells having inner and outer portions and vertically arranged partitions, a flexible roll top cover positioned in the space between said portions, a pivotally mounted transverse bar for limiting the outer movement of the records, a fixed forwardly inclined floor for each cell and means for locking said bar in closed position.

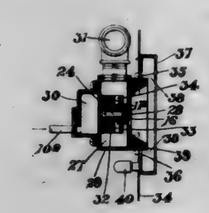
1,565,994. NONCORROSIVE COMPOSITION FOR TERMINAL BATTERIES. GEORGE K. FRANKLIN, Swedesboro, N. J. Filed Apr. 7, 1925. Serial No. 21,318. 3 Claims. (Cl. 134—1.)

1. A composition resulting from the combination of two mixtures, one of said mixtures including baking soda and graphite and the other mixture including ammonia, carbonic acid, lubricating oil and alcohol.

1,565,995. RUBBER COMPOUND AND METHOD OF MANUFACTURE. ABRAHAM L. FREEDLANDER and WILLIAM G. GOODWIN, Dayton, Ohio, assignors to The Rubber Development Company, Dayton, Ohio, a Trust Estate. Filed Dec. 26, 1922. Serial No. 608,978. 5 Claims. (Cl. 18—53.)

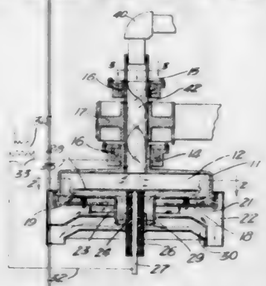
2. In combination, rubber, rosin oil, sulphur, ammonium bicarbonate, lime, ethylidene-aniline, and gas black.

1,565,996. OIL BURNER. LAURENCE E. FRENCH, Sebastopol, Calif. Filed June 16, 1923. Serial No. 645,825. 11 Claims. (Cl. 158—76.)



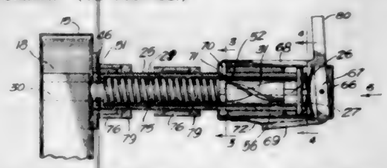
1. In a liquid fuel nozzle to which air and a liquid fuel may be delivered under pressure, means therein for dividing the air passing therethrough into substantially three concentric columns, to the intermediate one of which said liquid fuel is delivered, and means for thereafter co-mingling the air streams in said columns to create atomization of the liquid fuel.

1,565,997. CENTRIFUGAL DEHYDRATOR. CHARLES W. GIRVIN, Buena Park, Calif., assignor to Petroleum Rectifying Company of California, San Francisco, Calif., a Corporation of California. Filed Apr. 3, 1923. Serial No. 629,604. 8 Claims. (Cl. 204—25.)



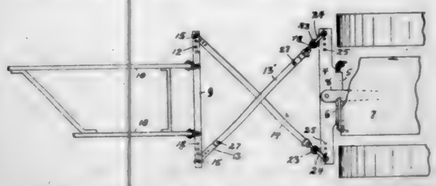
1. In a dehydrator for treating an emulson of oil and water: means for subjecting the emulsion to an electric field to coalesce particles of water; and centrifuging means for separating the oil from the water.

1,565,998. AUTO SIGNAL. CLIFFORD H. GLAZE, Long Beach, Calif. Filed Nov. 20, 1923. Serial No. 675,823. 6 Claims. (Cl. 116—52.)



1. In a signaling device of the class described, the combination of: a rotatable shaft; a signaling arm secured to said rotatable shaft; means on said shaft for rotating same; a spring for actuating said rotating means; a barrel enclosing said actuating spring and said rotating means and having a housing for enclosing said signal arm secured thereto; a sleeve cam slidably mounted on said barrel for limiting the activity of said rotating means and likewise the extended position of said signaling; and clamp means secured to said barrel for mounting said device on a vehicle.

1,565,999. TRACTOR HITCH. CHARLES H. HALT, Ossian, Ind., assignor of one-fourth to Charles A. Hoffmann, Fort Wayne, Ind., and sixty one-hundredths to Embra W. Kinsey, Claypool, Ind., and Harry Kinsey, North Manchester, Ind. Filed May 26, 1924. Serial No. 715,788. 3 Claims. (Cl. 280—33.44.)



1. In combination with the tractor and a plow, a transverse beam rigidly fixed on the tractor at the rear end thereof; a second transverse beam rigidly fixed on the plow beam at the front end thereof, both of said transverse beams having adjacent each of their ends a series of spaced bolt holes; and a pair of cross-bars oppositely positioned, each having means at its ends for connection selectively in the corresponding series of bolt holes in said beams, so that either the connections between the forward ends of the cross-arms with the tractor beam, or the connections at the rear end of the cross-bars with said beam on the plow may be spaced at relatively greater or lesser distances apart.

1,566,000. PROCESS OF MANUFACTURING LUBRICATING OILS. RICHARD W. HANNA, Piedmont, and ORVILLE ELLSWORTH CUSHMAN and THEODORE WILLIAM DOELL, Berkeley, Calif., assignors to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed Apr. 28, 1924. Serial No. 709,681. 10 Claims. (Cl. 196—151.)

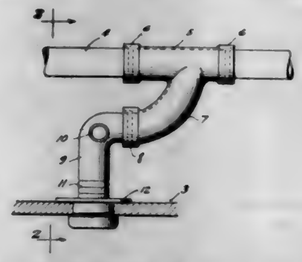
1. The process of manufacturing a lubricating oil of green fluorescence from a petroleum oil normally yielding an oil of different fluorescence, which includes combining with such oil, oil from the residuum of a cracking process wherein a petroleum oil has been subjected to the requisite temperature and pressure to decompose part of the oil into relatively lower boiling point oil and to stabilize the residuum.

10. A lubricating oil possessing a green fluorescence comprising a combination of lubricating oil from the residue of a cracking process wherein the requisite temperature and pressure have been maintained to produce a polymerized and stabilized viscous oil stock, and lubricating oil obtained from petroleum by operations carried out below such stabilizing conditions of temperature and pressure.

1,566,001. LACING HOOK. FRANK A. HERRICK, Toledo, Ohio. Filed July 18, 1924. Serial No. 726,653. 1 Claim. (Cl. 24—146.)

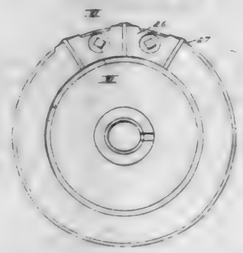
A lacing hook having a body plate, securing spurs projecting from the front and rear edges of the plate with the rear spurs laterally spaced and adapted to lap the engaged material at opposite sides of the front spur, a lace engaging tongue projecting from the rear edge of the plate between the spurs at such edge and forming a loop over the plate with the free end portion of the tongue extending into the loop toward the rear edge of the plate and in spaced relation to the plate to form a lace entrance opening and also to form a lace engaging hook at the entrance side of the tongue loop.

1,566,002. DRAINAGE CONNECTION FOR CLOSET BOWLS. ARTHUR HESS, Los Angeles, Calif., assignor of one-half to Samuel L. Marsh, Los Angeles, Calif. Filed Mar. 30, 1925. Serial No. 19,296. 2 Claims. (Cl. 285—4.)



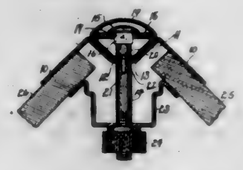
1. The combination with an inclined horizontal waste line of a Y-fitting having a run connected thereto so as to be rotatably adjustable and interposed in said line, the lateral arm having an opening with its axis parallel to said line, an elbow connected to said lateral arm so as to be rotatably adjustable, and a carrier engaging the forward arm of said elbow and serving as a support.

1,566,003. LENS BLOCK. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 12, 1921. Serial No. 468,877. 5 Claims. (Cl. 51—217.)



1. In a device of the character described, a wheel having a peripheral groove and peripheral jaw clamps, means for drawing the parts separated by the peripheral groove toward each other, and resilient means on the drawing means reacting against the tendency of the separated parts to separate.

1,566,004. STORE-FRONT CONSTRUCTION. FRED HIMMEL and ISIDORE HIMMEL, New Haven, Conn. Filed May 29, 1925. Serial No. 33,821. 1 Claim. (Cl. 20—56.3.)

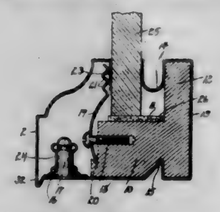


A store-front construction, comprising an outer strip formed with a channel, including a base having perforations at intervals, a channel-strip located in said channel, an angular washer in said channel-strip, said washer having an angular opening, a bolt having an angular portion to enter the angular hole in the washer, said bolt formed with a transverse slot, said base formed with longitudinal depression adjacent the said perforations, and a key extending through the slot in the bolt and located in said depression.

1,566,005. STORE-FRONT CONSTRUCTION. FRED HIMMEL and ISIDORE HIMMEL, New Haven, Conn. Filed Feb. 12, 1925. Serial No. 8,634. 1 Claim. (Cl. 20—56.4.)

A store-front construction, comprising an inner, sash-holding strip, a series of supporting-blocks arranged at intervals within said strip, said blocks each having a supporting shoulder, an upwardly-projecting arm over which the upper edge of the inner strip is folded, said blocks also formed in their lower faces with notches into which the inner strip is bent, said inner strip projecting beyond the said blocks and provided with posts, a ten-

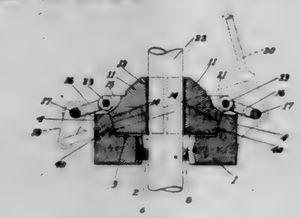
sion-strip secured to the outer face of said blocks and projecting upwardly therefrom and corrugated at their upper edges, an outer strip having its upper edge turned



downward inside the edge of the tension-strip and provided at its lower edge with a socket-member adapted to set over and interlock with said post.

---

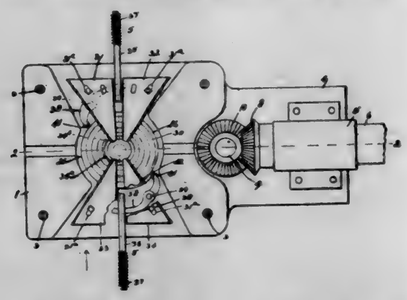
1,566,006. PIPE SPIDER. BENJAMIN F. HINIKER, Taft, Calif. Filed Aug. 25, 1923. Serial No. 659,293. 6 Claims. (Cl. 24—263.)



3. A pipe holding spider comprising a base having a vertical cavity therethrough, opposed pipe engaging jaw blocks mounted in the cavity, a single lever for moving the blocks, connecting means between said lever and the blocks to cause both blocks to move together with a movement of the lever, and means included with said connecting means whereby with such lever movement the blocks will be moved from their pipe engaging position both horizontally and vertically for a certain distance and then horizontally only.

---

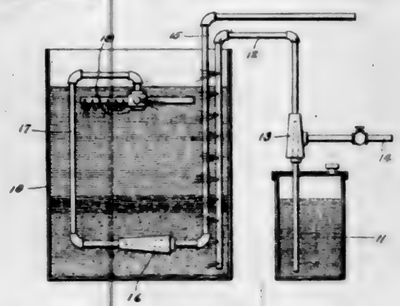
1,566,007. MACHINE FOR ROLLING METAL BALLS. JOHN R. HINNEGAN, Philadelphia, Pa. Filed Feb. 10, 1925. Serial No. 8,130. 3 Claims. (Cl. 80—21.)



2. A machine of the character described comprising a lower plate, a bushing threaded into said plate, a trunnion journalled in the bushing, a disc carried by the trunnion, a circular die secured upon the disc, a tapered spiral groove formed in the upper surface of said die, a gear wheel secured to the trunnion, a pinion with which said gear wheel meshes, a short shaft upon which the pinion is secured, said short shaft being journalled in a portion of the machine, a bevel gear carried by the upper end of the short shaft, a second bevel gear meshing with the first named bevel gear, means for rotating the last named gear, a top die having a tapered groove in the lower surface thereof, said groove being spiralled in the opposite direction from the groove in the bottom die, a disc to which the upper die is secured, a trunnion formed with the upper disc, a gear wheel secured to the last named trunnion, a pinion meshing with said gear, a short shaft upon which said last named pinion is secured, a bevel gear secured to the lower end of said short shaft, the latter meshing with the power bevel gear, means for feeding slugs to the spiral grooves, and means for giving said slugs a positive initial rotary movement.

---

1,566,008. METHOD OF TREATING CRUDE OIL OR PETROLEUM. CARL G. HINRICHS, St. Louis, Mo. Filed Nov. 23, 1918. Serial No. 263,806. 6 Claims. (Cl. 196—4.)



3. The hereindescribed process of treating natural petroleum emulsions which consists in thoroughly mixing therewith a chlorine addition product of a liquid fatty acid in sufficient quantity to effect a separation of the oil from the brine and foreign matter of the emulsion.

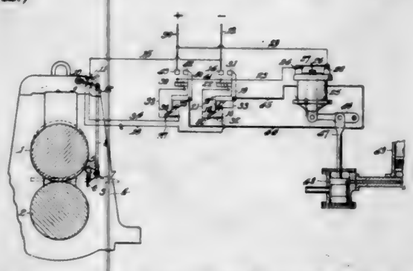
---

1,566,009. PROCESS OF TREATING PETROLEUM. CARL G. HINRICHS, St. Louis, Mo. Filed Nov. 3, 1923. Serial No. 672,680. 7 Claims. (Cl. 196—4.)

1. The method of treating an aqueous emulsion in hydrocarbon oil which includes the mixing of a water soluble sulpho-cyanide therewith.

---

1,566,010. AUTOMATIC ELECTRICAL ACTUATING DEVICE. OSBIAN HIVELY, Alliance, Ohio. Filed Feb. 14, 1924. Serial No. 692,928. 12 Claims. (Cl. 80—42.)

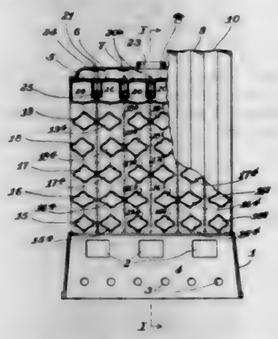


1. In apparatus of the character described, the combination with an element to be actuated, of a solenoid having its armature operatively connected to said element, a switch controlled electric circuit including a pivoted member overhanging said armature, a switch arm for closing said circuit normally disposed out of and shiftable into closing relation to said circuit, a normally open

contactor switch having a magnet coil located in and energizable through closing of said circuit, said contactor switch being adapted to be actuated by energizing of said magnet coil for closing a shunt circuit therethrough, a second normally open contactor switch having a magnet coil located in and energizable through the closing of a second shunt circuit effected by the return of said switch arm to normal position, said second contactor switch being adapted to be actuated by the energizing of its magnet coil to close a main circuit which includes said solenoid and the therewith associated pivoted member, whereby the armature of said solenoid is attracted for actuating the thereto connected element and also for moving said pivoted member to circuit breaking position.

---

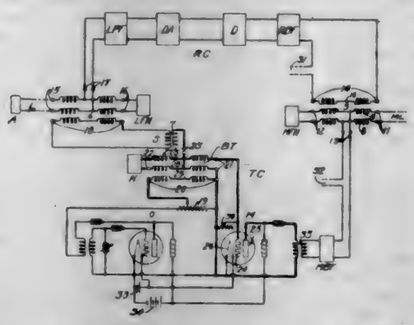
1,566,011. BOILER. CHARLES HOWARD HOOK, Pittsburgh, Pa. Filed Jan. 31, 1924. Serial No. 689,652. 3 Claims. (Cl. 122—223.)



2. In a water heater comprising a plurality of clamped together hollow sections adapted to contain water and comprising top and side compartments and similar transverse horizontally connecting tubes of greater width than height in cross section and of lesser width than the side compartments, the tubes of each section being alternately offset on opposite sides of the middle plane of the section, and tubes at the same level of each two adjacent sections being arranged to be alternately spaced near together and materially apart in ascending order above the lowermost tubes in each section.

---

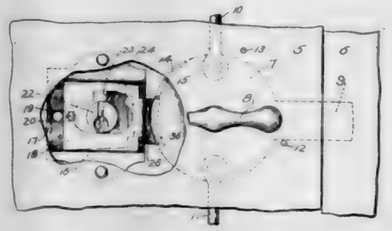
1,566,012. CARRIER-WAVE SIGNALING SYSTEM. JOSEPH W. HORTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,647. 14 Claims. (Cl. 179—171.)



1. In a modulating system having a modulator with a single pair of input terminals and a source of carrier waves and a source of telephone current both connected thereto impress current thereupon, the method of preventing reaction between said sources which comprises impressing the current from each of said sources upon said modulator conjugately with respect to the other of said sources.

---

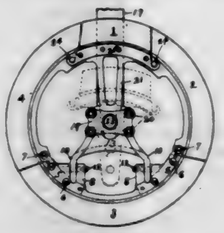
1,566,013. LOCK. NORMAN B. HUBD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 26, 1924. Serial No. 701,981. 15 Claims. (Cl. 70—46.)



1. In a lock for a locker door or the like, a locking plate controlling a dead bolt, a lock casing carrying a cylinder plug, a locking bolt pivotally and slidably supported by said lock casing, said cylinder plug having means for retracting said locking bolt, said locking bolt and lock casing having coacting means for latching the locking bolt in retracted position, and a spring for biasing said locking bolt so as to cause the same to engage said lock casing to hold the locking bolt in retracted position, said locking plate having means for disengaging said locking bolt from said retracted latched position, said locking bolt when in the forward position engaging behind a shoulder on the locking plate for holding the same and the dead bolt controlled thereby in locked position.

---

1,566,014. COLLAPSIBLE-TIRE CORE. FRANK L. JOHNSON, Akron, Ohio. Filed July 28, 1920. Serial No. 399,493. 25 Claims. (Cl. 154—9.)



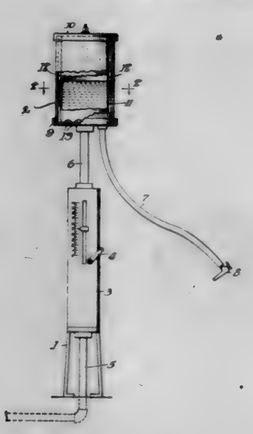
8. In a collapsible core construction, a core body composed of a plurality of sections, one of said sections being tapered outwardly of the core, means to support the core in a vertical plane, the tapered section being movable toward and from the center of the core, and a horizontal pivot for the remaining sections whereby they may be rocked as a group out of the plane of the first named section.

---

1,566,015. METHOD OF AND MEANS FOR DISPLAYING LIQUIDS. LORENZO RALPH JOHNSON, Chicago Heights, Ill. Filed Oct. 25, 1920. Serial No. 419,174. 11 Claims. (Cl. 220—82.)

2. In a liquid dispensing device, the combination of a receptacle having a transparent wall, means in the form of a reflector in the receptacle, adjacent said wall, forming a separate annular compartment in the receptacle

for separating a thin layer of the liquid in the receptacle from the remainder of the liquid, so that the layer of liquid is visible through the transparent wall and the remainder concealed behind said means, said annular



compartment communicating at the top and bottom thereof with the main chamber of the receptacle, a supply duct for introducing liquid into the receptacle and an exhaust duct for withdrawing the liquid therefrom.

---

1,566,016. SUSPENDER STRAP AND BELT SUPPORT. PER GUST JOHNSON, Kansas City, Kans., and CARL WILHELM MALMSTROM, Kansas City, Mo. Filed May 8, 1924. Serial No. 711,797. 1 Claim. (Cl. 241—11.)

As an article of manufacture, a suspender strap and belt support, comprising a substantially U-shaped member, the legs of which are connected by a curved portion having outwardly and upwardly flaring side extensions, one leg only having perforations for attachment to a garment, the other leg being crimped intermediate its ends to form a narrow passage to a button hole tab receiving space above said crimp, and a second crimp near the outer extremity of said leg, substantially contacting with the other leg, to form a belt receiving space between said legs and said crimps.

---

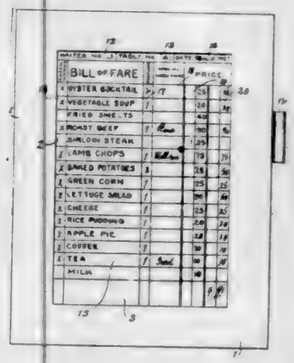
1,566,017. WHEEL. ARTHUR WILLIAM JONES, Birmingham, England, assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Original application filed Jan. 16, 1925, Serial No. 2,920. Divided and this application filed Sept. 12, 1925. Serial No. 55,990. 1 Claim. (Cl. 301—63.)

A wheel of the type described comprising in combination a separately formed rim which in cross section has a depressed central portion and outwardly extending horizontal edge portions, each of said edge portions terminating in a peripheral bead bent inwardly and downwardly and terminating substantially in contact with the outer surface of the horizontal portion, and two separately formed side plates integrally united one with another in the median plane of the wheel from the hub to

the felloe, said felloe shaped to engage the sides of the depressed portion of the ring and having outwardly extending horizontal portions adapted to engage the edge portions of the rim.

---

1,566,018. REGISTERING DEVICE. ERWIN JOSEPHY, New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,385. 1 Claim. (Cl. 40—159.)



A frame for holding register sheets and the like comprising a face member provided with an opening therethrough, a back secured to the rear of said face member, said back having open ends and closed sides, a clamping bar having its ends hingedly secured to said face member, said bar projecting beyond the open end of said back to engage a menu and hold it against the rear of the face member, and spring means secured to said face member and said bar ends to press the bar against the menu as aforesaid.

---

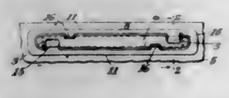
1,566,019. COMBINED MENU CARD AND BILL. ERWIN JOSEPHY, New York, N. Y. Original application filed Apr. 29, 1921, Serial No. 465,385. Divided and this application filed Mar. 13, 1923. Serial No. 624,803. 2 Claims. (Cl. 283—60.)

1. In a combined menu card and bill, a blank having a series of separate spaces containing indicia pertaining to articles which may be ordered, a series of charge figures adjacent said indicia and registering in a common line therewith, a series of separate spaces each of which registers in a common line with each of the aforesaid indicia, said spaces being appropriately designed to receive an indicator mark against such of said articles as are to be ordered, a secondary series of separate ruled spaces each of which registers in line with one of said

indicia and wherein said charge figures may be arranged for totaling and an appropriately designated totaling space arranged below and vertically in alignment with said secondary series of spaces upon said blank.

---

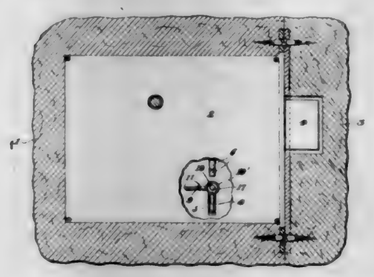
1,566,020. PAPER FASTENER. CHARLES D. KING, Rutherford, N. J. Filed Aug. 28, 1925. Serial No. 53,014. 7 Claims. (Cl. 24—153.)



1. A paper fastener embodying spaced apart tongues to be pushed through papers and the projecting portions bent down on the same, a member to be placed over and cover said bent down tongue portions, and means to secure said covering member to said bent down tongue portions which include two elements to be moved under them in relatively opposite directions.

---

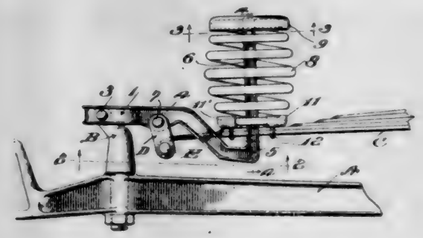
1,566,021. SAFETY DEVICE FOR LOCKS. GEORGE KOMARCSEVITS and FRANK G. NUNN, Cleveland, Ohio. Filed Jan. 13, 1925. Serial No. 2,101. 2 Claims. (Cl. 70—8.)



1. A safety device for locks comprising in combination with a lock having opposite unobstructed key receiving slots therethrough, a safety device embodying a shank having one end supported in a slot at one side of the lock, a ward carried by the shank, a plate rotatably supported on the shank and projecting laterally therefrom, a pin projecting from the shank adjacent the plate, a positioning key for the safety device having a tubular shank and bayonet slot in its side wall to receive the pin and rotate the shank to position the plate in a horizontal plane and the ward vertically, and means for retaining the plate in position on the shank including an annular shoulder on the shank, a portion of the plate bearing being cut away with one edge of the plate bearing engaging the shoulder and a pin carried by the shank within the cut away portion and engaging one side thereof to hold the plate bearing in engagement with the annular shoulder.

---

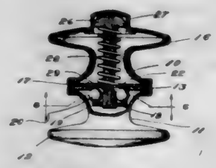
1,566,022. SHOCK-ABSORBING ATTACHMENT FOR FORD AUTOMOBILES AND THE LIKE. JOSEPH L. KOST, Houston, Tex. Filed Apr. 19, 1924. Serial No. 707,685. 4 Claims. (Cl. 267—17.)



1. A shock absorbing attachment for a Ford automobile or the like comprising a lever formed by shaping a single piece of material and bending it substantially at the middle of its length to bring the two halves into spaced parallel relation and having a connection at one end for pivotal attachment to the perch of a Ford automobile and provided with an intermediate connection for the hanger which is connected to the leaf spring, said lever having its other end bent downwardly so as to lie below the leaf spring when assembled thereto, and thence vertically upwardly to a point above said leaf spring, and a coiled spring mounted on said vertical portion of the lever and provided with a coupling for attachment to the leaf spring, said coupling and mounting for said coiled spring being constructed and arranged to maintain said coiled spring in a vertically compressible position between the upper end of said lever and said leaf spring.

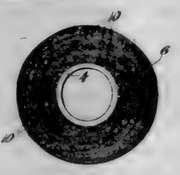
---

1,566,023. SEPARABLE CUFF BUTTON. CHARLES P. KUEHNER, North Providence, R. I. Filed Apr. 23, 1925. Serial No. 25,406. 6 Claims. (Cl. 24—110.)



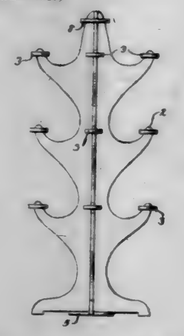
1. A separable cuff button comprising stud and socket members, said stud member having a sheet metal inner head plate with an integral hollow projection to extend into said socket member, socket gripping elements operatively mounted in and projecting from said hollow projection and an axially movable spring pressed pin for moving and holding said elements in expanded position and having a recess therein for permitting said gripping elements to move to released position.

1,566,024. CORE. HORACE Z. LANDON, Newtonville, Mass. Filed Nov. 8, 1923. Serial No. 673,611. 8 Claims. (Cl. 206—46.)



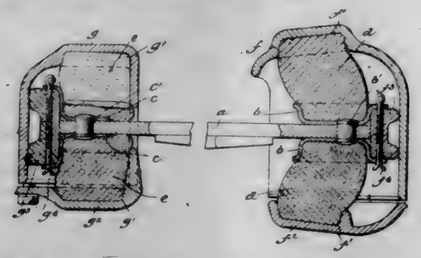
2. A package comprising a roll of material having a flat surface capable of being marred during the process of cutting said roll and a paper core, said core having been treated with an agent in such manner that flaking of the core is prevented when said core is cut to length.

1,566,025. DISPLAY TREE. PETER L. LAZARUS, Wichita, Kans. Filed Sept. 22, 1924. Serial No. 739,185. 1 Claim. (Cl. 211—24.)



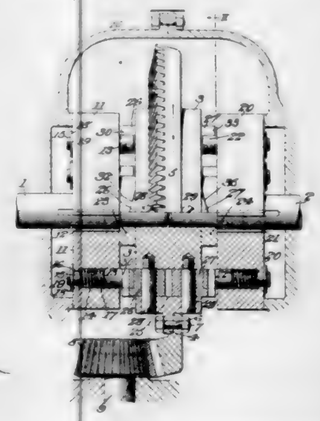
In a display tree, a plurality of similar wings, each having a straight vertical inner edge and an outer edge forming a series of alternate horn shaped arms and recesses, the vertical edges of said wings being hingedly connected, the bottom edge of each wing being cut at right angles to the vertical edge, and each said lower edge having cut therein, a recess forming a shoulder adjacent the inner corner, in combination with a small fastening member having radial slots to receive the respective lower inner ends of the wings with the outer faces of said shoulders in contact with the ends of said slots a slotted member connecting the upper ends of said wings, and supporting members detachably connected to the outer ends of said horns.

1,566,026. CUSHION CONNECTION FOR VEHICLE CONSTRUCTION. AUGUST H. LEIPERT, College Point, and JOHN GOLDSMITH, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 5, 1924. Serial No. 736,020. 4 Claims. (Cl. 267—30.)



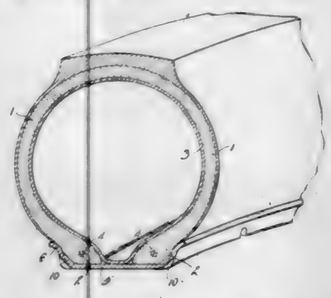
1. In combination with the spring of a vehicle, nonmetallic yielding means to support it and connect it to the chassis frame, and independent non-metallic yielding means operatively engagenble by the end of the spring to resist yieldingly elongating movements thereof.

1,566,027. POWER-TRANSMITTING MECHANISM. WILLIAM J. LUTTON, Paterson, N. J. Filed Sept. 7, 1923. Serial No. 661,446. 3 Claims. (Cl. 74—7.)



1. A power transmitting mechanism comprising, alined shaft sections, members thereon, yielding reciprocating devices in said members, a driven element, and inter-engaging means mounted to oscillate in said element and arranged to coact with said devices for rotating said shaft sections.

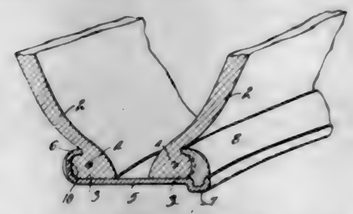
1,566,028. TIRE AND RIM CONSTRUCTION. JUSTIN W. MACKLIN, Lakewood, Ohio, assignor to Jackson D. Comstock, Chester, W. Va. Filed Dec. 15, 1923. Serial No. 680,838. 2 Claims. (Cl. 152—20.)



1. A tire casing having bead portions of thickened fabric and rubber formed to fit straight side rims, and a rim provided with inwardly extending projections presenting an edge diagonally across the inner corner between the flange and base and adapted to form a depression in the outer lower corner of the bead consequent upon inflation.

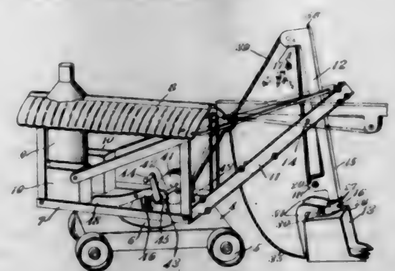
1,566,029. TIRE AND RIM CONSTRUCTION. JUSTIN W. MACKLIN, Lakewood, Ohio, assignor to Jackson D. Comstock, Chester, W. Va. Filed Dec. 15, 1923. Serial No. 680,839. 1 Claim. (Cl. 152—20.)

The combination with a clincher tire casing and a clincher rim, of means for preventing creeping and consequent rim cutting, said means consisting of inwardly projecting ridges on the inner side of the flange above the base and opposite the convex portion of the bead and



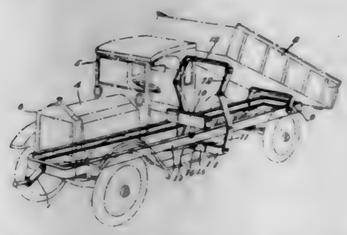
adapted to form a cavity in the bead as the bead is forced toward the flange by the internal pressure within the casing.

1,566,030. POWER-SHOVEL CONSTRUCTION. ISIDORE MARKS, Dorchester, Mass., assignor to Keystone Mfg. Co., South Boston, Mass., a Corporation of Massachusetts. Filed Apr. 13, 1925. Serial No. 22,568. 6 Claims. (Cl. 24—135.)



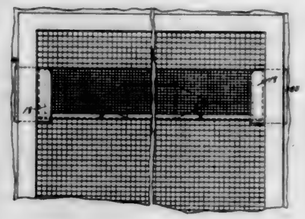
1. A power shovel construction having, in combination, a shovel, a boom, a pair of arms forming a telescopic shovel arm pivoted on the boom, a spring for normally holding the arms telescoped when the shovel is in a position ready for digging, means for operating the shovel to swing it on its pivot to dig and then upward to a dumping level and for relatively moving the arms to locate the shovel over the place of deposit whereby said spring is extended, and means for holding the arms extended that is releasable for returning the shovel arms to their normal position under the influence of said spring.

1,566,031. DUMP-BODY TRUCK. ISIDORE MARKS, Dorchester, Mass., assignor to Keystone Mfg. Co., South Boston, Mass., a Corporation of Massachusetts. Filed Apr. 13, 1925. Serial No. 22,569. 6 Claims. (Cl. 298—19.)



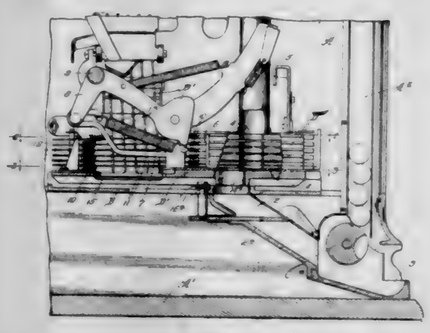
1. A dump body truck construction having its body pivotally connected at its rear end to the frame, means at the forward end of the body operable to raise the body to dumping position, a hand crank depending from the frame at the front side of its forward end, and direct connections between said crank and body raising means for operating the latter when the crank is rotated.

1,566,032. SCREEN-DOOR FLYTRAP. HUGH E. MARTIN, Madison, Wis. Filed Feb. 11, 1924. Serial No. 692,175. 1 Claim. (Cl. 43—119.)



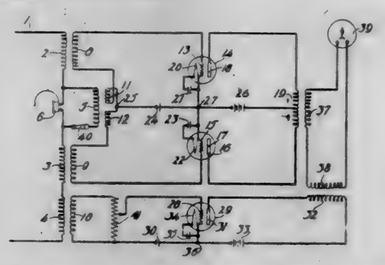
In a fly trap removably located in brackets which are secured to the outside of a screen door by a portion of the brackets being forced between the screen and the binding molding of the door, the combination with the screen of the door of a metal bottom plate with portions removed from the edge abutting the door screen, rectangular frames secured to the ends of the bottom plate with light admitting closures for the frames, truncated tapering partitions located a distance inward from the ends and extending from the plate upward to a wire screen ceiling the width of the bottom plate, and extending from one tapered partition to the other, covered partitions secured longitudinally of the bottom plate terminating at the tapered partitions, a central strip of metal extending from the bottom plate to the ceiling wall, with an opening in same through which flies may pass from the inside of the door to the inside of the trap, wire screen covering the front, top, and back of the trap, excepting that portion of the back between the bottom plate, screen ceiling, and the tapered partitions.

1,566,033. FRAUD-PREVENTING DEVICE. FRED L. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1925. Serial No. 5,508. 4 Claims. (Cl. 211—8.)



1. In a machine of the character set forth, the combination of a coupon magazine and pay-out mechanism associated therewith, of a fraud-preventing device comprising a member set normally to permit the pay-out mechanism, when operated, to effect discharge of coupons, and means for throwing said member to an obstructing position to prevent such discharge when the machine is subjected to a jarring action.

1,566,034. THERMIONIC METER. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1920. Serial No. 408,870. 5 Claims. (Cl. 171—34.)

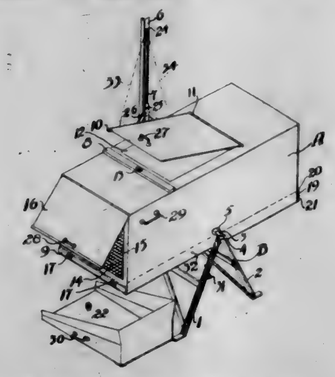


4. In combination, an oscillatory current circuit, a balanced vacuum tube circuit having input and output circuits, a single vacuum tube having an adjustable input circuit and an output circuit, inductive connections between said oscillatory current circuit and each of said input circuits, and a recording circuit inductively connected to each of said output circuits.

1,566,035. MOTOR VEHICLE REGISTRATION PLATE. THOMAS J. MOONEY, New York, N. Y., assignor to WALTER P. CHRYSLER, New York, N. Y. Filed Feb. 5, 1924. Serial No. 690,780. 5 Claims. (Cl. 283—18.)

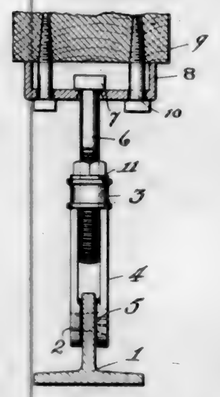
1. A registration plate comprising a designation, the component elements of which are disaligned.

1,566,036. ASH SIFTER. PETER S. NACHTSHEIM, St. Paul, Minn. Filed Jan. 26, 1924. Serial No. 688,864. 2 Claims. (Cl. 209—348.)



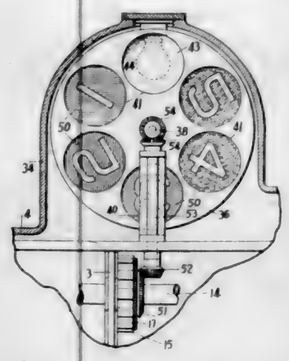
1. An ash sifter comprising a pivoted container, a door in the top thereof for inserting ashes in the container, a screen positioned transversely of the container, in spaced relation from the bottom thereof, a weighted door pivotally mounted in a wall of the container below the transversely positioned screen, handle means to impart a reciprocal tilting motion to the container, and resilient means for returning the container to a neutral condition after each reciprocation thereof.

1,566,037. MONORAIL TRACK SUSPENSION. RUSSELL E. NELLES, Reading, Pa., assignor to Reading Chain and Block Corporation, Reading, Pa., a Corporation of Pennsylvania. Filed July 30, 1925. Serial No. 46,992. 3 Claims. (Cl. 104—111.)



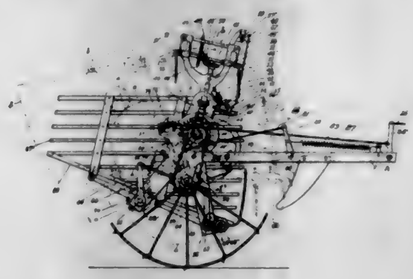
1. In a monorail track suspension, a supporting member, means for securing it to an overhead structure, a threaded, supporting rod depending therefrom and rockably held therein, a clevis vertically adjustable on the rod, said clevis having a bifurcated lower portion formed with perforations, a T-bar having a series of perforations, and a clevis pin securing the bifurcated end of the clevis to the T-bar in pivotal conection.

1,566,038. INDICATING DEVICE FOR TAXIMETERS AND THE LIKE. WILLIAM G. ORTH and GEORGE H. DARST, Dayton, Ohio, assignors to Ohmer Fare Register Company, Dayton, Ohio. Filed Feb. 11, 1924. Serial No. 691,970. 12 Claims. (Cl. 235—30.)



12. In a taximeter, a registering device, actuating means therefor, a flag to control the operation of said registering device, a movable indicating member having a plurality of designations which are movable successively into indicating position, an operative connection between said movable member and said registering device, and means controlled by said flag for illuminating the designation which is in indicating position.

1,566,039. GRAIN SHOCKER. HENRY C. OTTESON, St. Paul, Minn. Filed Mar. 5, 1923. Serial No. 622,857. 7 Claims. (Cl. 56—424.)

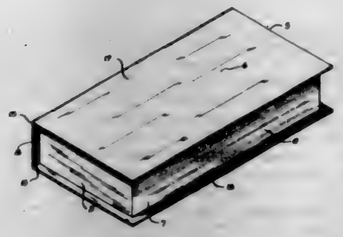


1. A grain shocking machine comprising a main frame, a wheel support therefor, a second frame pivotally connected to the main frame, means for intermittently rotating the second frame, a sheave receiving basket connected to, and relatively movable with respect to said second frame, a gear pivotally mounted on the pivotal connection between the basket and said second frame, oscillating means connected to said gear, a toothed device in mesh with said gear, and means controlled by an action of said gear to relatively move the basket with respect to the second frame to deposit sheaves in the basket in the form of a shock when said second frame is rotated.

1,566,040. METHOD OF PRODUCING CHLORINE. EDWIN M. PARTRIDGE, Lansing, and ELWOOD W. SCARRITT, Oak Park, Ill. Filed May 11, 1925. Serial No. 29,562. 5 Claims. (Cl. 23—219.)

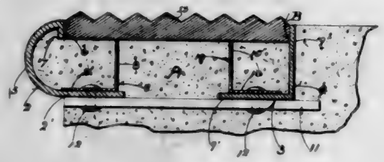
1. The method of producing chlorine comprising admixing a pyrosulfate, a chloride and a permanganate in the presence of moisture.

1,566,041. FOLDING BOX. IRVING PETER SCHAUS, Milwaukee, Wis. Filed Aug. 11, 1924. Serial No. 731,417. 2 Claims. (Cl. 229—6.)



2. As a new article of manufacture, a completely collapsible two-part box, comprising a folding inner box member having four sides, a top, and a bottom, attaching slits being formed in the bottom, and a folding outer retaining member having the inner box member bottom directly resting thereon and covering only the top, bottom and one side of the inner box member, said outer member being provided with tongues for engagement with said slits.

1,566,042. SAFETY TREAD. FRANK A. SCHMIDT, Los Angeles, Calif. Filed Dec. 17, 1924. Serial No. 756,562. 6 Claims. (Cl. 72—96.)

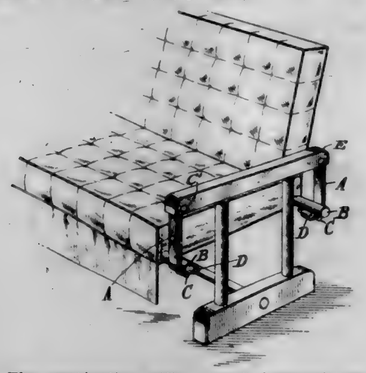


1. A stair tread structure as set forth, comprising a plate having a nosing terminating in substantially a vertical downwardly extended wall which defines the depth of a trend insert, and guide means on said plate and co-operating with said wall to gauge the level of the cementitious filling in which the structure is to be embedded.

1,566,043. PRESSING-IRON SUPPORT. EDWARD N. SIMMONS, Chicago, Ill. Filed May 8, 1924. Serial No. 710,716. 1 Claim. (Cl. 68—9.)

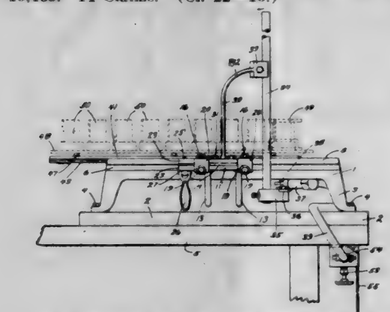
In an ironing machine, a vertical standard, a support revolubly mounted on said standard, a hanger carrying a pair of oppositely spaced grooved rollers engaging said support, said hanger consisting of a pair of parallel spaced strips united at their lower ends by a transverse member, a guide within said strips, said guide and transverse member having registering apertures, a reciprocable rod passing through said apertures, a collar on said rod, a spring between said collar and said transverse member, and means on the end of said rod for supporting a sadiron.

1,566,044. COUCH HAMMOCK. GEORGE F. SISBOWER, Flushing, and LOUIS E. PITTONI, New York, N. Y., assignors to Manhattan-Rome Company, Branch of Rome Metallic Bedstead Co., Long Island City, N. Y., a Corporation of New York. Filed Dec. 22, 1921. Serial No. 524,258. 5 Claims. (Cl. 5—129.)



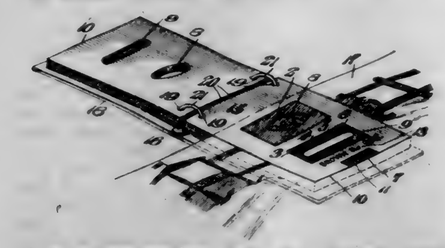
1. The combination with a couch hammock seat provided with a rigidly disposed member located at a fixed point, of an elastic flexible supporting link having a looped end secured to said member with both sides of the loop wrapped over said member on the same side thereof.

1,566,045. CORE-MAKING MACHINE. OLOF SKEPPSTEDT, Moline, Ill. Filed Mar. 30, 1925. Serial No. 19,469. 14 Claims. (Cl. 22—10.)



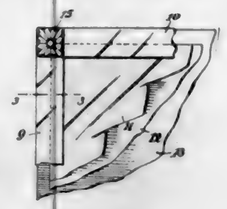
1. In a machine of the class described, a suitably mounted frame; and a carriage slidable thereon, and provided with yieldable members on its upper face for the support of a core-plate.

1,566,046. COLOR-MATCHING DEVICE. ROLAND E. SLEIGHT, Philadelphia, Pa. Filed May 13 1925. Serial No. 29,893. 6 Claims. (Cl. 88—14.)



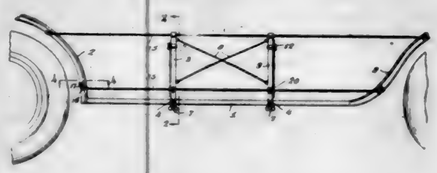
1. In a color matching device of a character stated, a sheet having on one portion thereof a "solid" color, and on another portion thereof a series of "intermediate" shades of said solid color, adapted for comparison with a given colored surface of a desired shade of ink printed from a plate of less than full strength, an edge of said sheet having a colored index area thereon.

1,566,047. TRAY STRUCTURE. MORRIS B. SOLOMON, Brooklyn, N. Y. Filed June 11, 1924. Serial No. 719,276. 2 Claims. (Cl. 65—53.)



1. A tray structure comprising a frame consisting of members adapted to be arranged in angular relation to each other with the ends of one abutting the sides of the other adjacent to its end and each having a rabbet in its inner face provided with an undercut wall, a sheet metal covering for each of said frame members having an angularly disposed flange at one edge engaged upon said undercut wall of the rabbet, the metal covering sheet of one frame member having an end portion extending longitudinally beyond the end of the frame member for engagement in an overlapping relation with a part of the metal covering sheet of the adjacent angularly extending frame member, a tray bottom having its marginal edges engaged in said rabbets and seated upon the flanges on said metal covering sheets, a retaining plate for said tray bottom engaged upon the lower edges of the frame members, and means for securing said covering sheets and the retaining plate to the frame members.

1,566,048. LUGGAGE GUARD. RUDOLPH C. G. STAATS-OELS, Brooklyn, N. Y. Filed July 11, 1924. Serial No. 725,410. 2 Claims. (Cl. 224—29.)

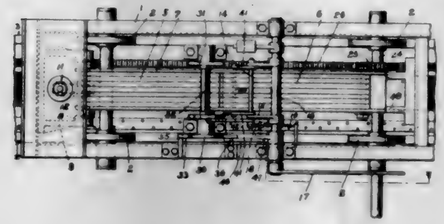


1. A luggage guard including standards, means to which said standards are pivotally connected capable of attachment to the running board of a vehicle to permit said standards to be swung to a position on top of said board, pivots carried by said standards, braces each having a longitudinal slot adjacent one end for receiving one of said pivots to permit of said brace being adjusted to a diagonal position relative to its associated standard with its free end in engagement with said running board adjacent the inner edge thereof, and also permit of said brace being moved to an inoperative position substantially parallel to said standard, and means for securing said brace in its adjusted positions.

1,566,049. SPACING MACHINE. GEORGE P. THOMAS, Glenshaw, Pa. Filed Mar. 6, 1924. Serial No. 697,298. 15 Claims. (Cl. 164—117.)

1. In a spacing machine for perforating metal, the combination of a work carriage, and stopping mechanism

therefor comprising a series of stops, a movable stop-engager, and means for causing the stop-engager to



move into engagement with a stop in proportion to the rate of movement of the carriage.

1,566,050. NEUTRALIZING SET. EDGAR D. TILLYER and HARRY W. HILL, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 27, 1921. Serial No. 524,999. 2 Claims. (Cl. 88—56.)

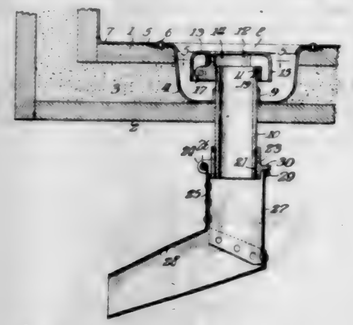
2. A device of the character described comprising a test lens determined for neutralization at a desired separation from a lens to be tested and a member projecting from the test lens adapted to engage the lens to be tested whereby the two lenses are held at the required separation.

1,566,051. PROCESS OF MAKING LENSES. HARRY W. HILL and EDGAR D. TILLYER, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 2, 1922. Serial No. 579,192. 3 Claims. (Cl. 51—278.)

1. A process of the class described including the drilling of spaced recesses in one face of a lens blank and then grinding the lenses to remove the surface of the same to the inner ends of the recesses.

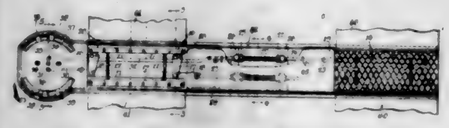
1,566,052. TRAP AND DRAIN. LOTHAR VON DANOWSKI, Chicago, Ill. Filed Feb. 27, 1924. Serial No. 695,409. 5 Claims. (Cl. 182—8.)

1. In a refrigerator drain, the combination of a bowl having a central bottom opening with an upturned flange, a drain pipe extending upwardly through the bottom of the bowl and anchored to the flange, a cap having an annular flange extending downwardly in the bowl around and spaced from the upper end of the pipe, and an annular collar secured around the upper end of the pipe with its lower edge spaced from the bottom of the bowl and having the cap hinged thereto, said collar being provided with spaced lugs at its upper end with intermediate openings for holding the cap at an elevation



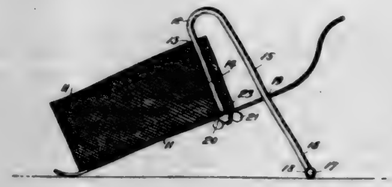
above the upper end of the pipe to afford a circulation space between the upper end of the pipe and the top wall of the cap.

1,566,053. BRAKE-TESTING APPLIANCE. IRA A. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed May 16, 1925. Serial No. 30,706. 10 Claims. (Cl. 73—51.)



1. In a brake testing appliance for vehicles, the combination of a plate adapted to be overrun by a wheel and shifted by the drag of said wheel thereon, an indicator, connections from said plate to said indicator transmitting movement of the former to the latter, and a spring opposing the wheel-actuated movement of said plate.

1,566,054. STAND FOR PAD CALENDARS. FRANK A. WEEKS, Plainfield, N. J. Filed Aug. 21, 1923. Serial No. 658,482. 2 Claims. (Cl. 40—120.)

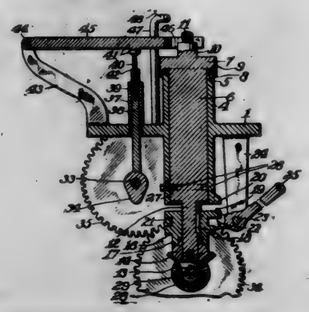


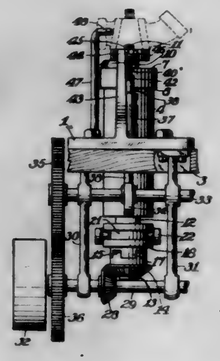
2. A stand for pad-calendars having holes punched through them near one end, said stand comprising an inclined supporting base adapted at its forward end to rest upon a desk or the like and in its rear portion being formed with parallel transverse slots, a pair of parallel wire loops of inverted U-shape on which the slips of the pad are strung and which permit the slips to be turned over from the front to the rear members thereof, said front and rear members being inserted through said slots respectively and being adjustable therein to vary the space between them to accord with the spacing between the holes in the pad, and means

for detachably securing the lower ends of the front members to said base, said rear members being extended downwardly below the base to form supporting legs and at their lower ends being bent toward each other to form spaced-apart arms and having a tubular member bridging the space between said arms.

---

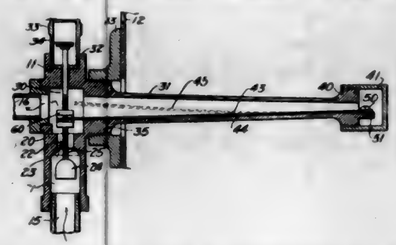
1,566,055. VALVE-GRINDING MACHINE. HARRY C. WENGEL, Birmingham, and JOHN B. MICHAEL, Selma, Ala. Filed Dec. 31, 1924. Serial No. 759,165. 4 Claims. (Cl. 51—28.)





1. A valve-grinding machine unit comprising a hollow cylindrical housing vertically arranged and having a horizontal frame plate rigidly connected thereto for support, the frame plate being provided with frame members, a spindle rotatably mounted in the housing and having a device on its top to rotatably carry a plug-valve, the spindle having a shaft portion on its lower end that projects beyond the housing, a bevel pinion rotatably connected with said shaft portion and having clutch members thereon, a clutch sleeve slidably splined on said shaft portion between the housing and said pinion to engage said clutch members, means to control the sleeve, a drive shaft rotatably supported by the frame members and extending under said pinion, a bevel drive wheel secured to the drive shaft in mesh with said pinion, a tripper shaft rotatably supported in the frame members and geared to the drive shaft, a cam secured to the tripper shaft, a frame arm and a vertical guide supported by said frame plate, a tripper rod arranged in said guide to be operated by said cam, and a forked tripper arm pivoted to said frame arm and engaged by said tripper rod to intermittently lift a valve body from contact with the plug-valve.

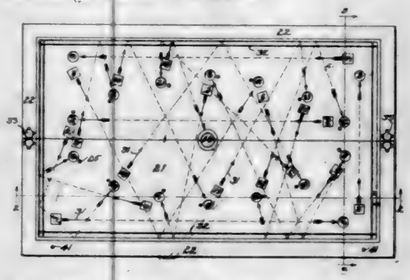
1,566,056. ADJUSTABLE THERMOSTAT VALVE. WILLIAM WESTERFIELD, Pasadena, Calif. Filed May 31, 1921. Serial No. 473,620. 8 Claims. (Cl. 236—33.)



1. In a thermostat valve, the combination of: a body providing a passage; a hollow arm extending from said body; a throat forming a valve seat in said passage; a closure means receivable by said seat; a threaded stem to support said closure means; a thermostat in said hollow arm; a nut threaded upon said stem, said nut receiving the movable end of said thermostat; and means whereby said stem may be turned in said nut to adjust said closure means, and a cap to enclose the projecting end of said stem to prevent leakage therearound.

---

1,566,057. TABLE GAME. EDWIN F. WILKINSON, Los Angeles, Calif. Filed Oct. 21, 1924. Serial No. 744,889. 16 Claims. (Cl. 273—87.)



1. In a game suitable to be played on a surface of the billiard table type and by means of slidable discs manipulable by cues; a substantially flat field provided with starting greens consecutively designated and with holes similarly designated, and with hazards in the form of pins comprising cushions secured by screws in proximity to some of said holes.

---

1,566,058. NOZZLE FOR FILTERS. JAMES E. WILLIAMSON, South Orange, N. J. Filed July 28, 1925. Serial No. 46,532. 2 Claims. (Cl. 210—171.)

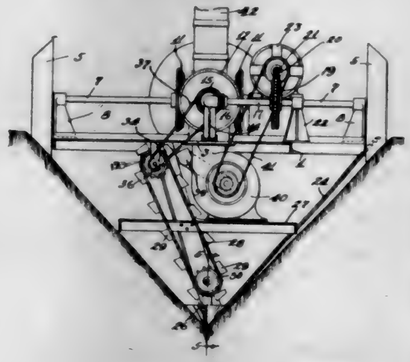
1. A nozzle for filters comprising a stem having inlet and outlet openings, a cup-like member surrounding and supported by the stem, the member having a series of narrow slits extending around its sides, and a cover detachably secured on the top of the stem and extending beyond the cup-like member, the outlet of the stem being situated so as to deliver fluid in the space between the cup-like member and the cover.

1,566,059. TROLLING SPOON. FREDERIC S. WILLSON, Seattle, Wash. Filed Dec. 10, 1924. Serial No. 755,045. 8 Claims. (Cl. 43—45.)

1. A trolling spoon twisted about a longitudinal axis, and having a rear portion at one side of said axis following the general twist of the spoon, the rear portion at the opposite side of the axis being reversely bent to modify the action of the twisted portion upon the water.

---

1,566,060. EARTH DRILLING OR EXCAVATING MACHINE. GEORGE S. WRIGHT, Ulysses, Kans. Filed Aug. 28, 1922. Serial No. 584,638. 10 Claims. (Cl. 262—7.)

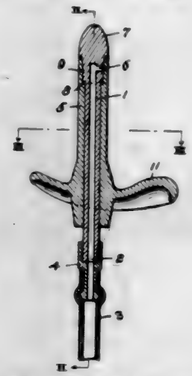


1. In a machine of the class described, a rotary support, converging earth cutting elements secured to said support and extending from the extremities of said support to its center, conveying and exhausting mechanism rotatable with said support and means carried entirely by said support for rotating the same and simultaneously operating said conveying and exhausting mechanism.

---

1,566,061. IRRIGATOR. CHARLES E. ZIEGLER, Pittsburgh, Pa., assignor of one-half to William C. Arthur, Pittsburgh, Pa. Filed Feb. 27, 1925. Serial No. 11,988. 3 Claims. (Cl. 128—245.)

1. An irrigator for the purpose described, comprising a nozzle formed of a sleeve closed throughout its longitudinal extent and open at its ends, and a tubular stem mounted for longitudinal movement with relation to said sleeve and provided at its outer end with an inlet opening and having its side walls provided with an outlet port, the inner end of said stem being closed and being



provided beyond said outlet port with an offset valve head cooperating with the inner end of said sleeve to control flow of irrigating fluid through the nozzle.

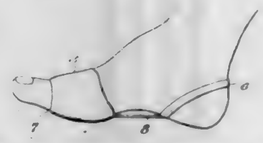
---

1,566,062. FLEXIBLE HANDLE FOR CONTAINERS. EDWARD M. ATKINSON, Portland, Oreg. Filed Feb. 18, 1925. Serial No. 10,053. 2 Claims. (Cl. 215—100.)

1. A flexible handle for containers and made of two pieces of small size iron wire, one about three-quarters the length of the other and terminating in coils, which wire is encircled at a depression midway of the coiled ends by the coiled end of the longer wire, which also has a second coil, but formed distant enough from its tip to allow this wire end to pass through it after going through coils at the ends of the shorter wire, and drawn taut so as to have about the shape of an equilateral triangle.

---

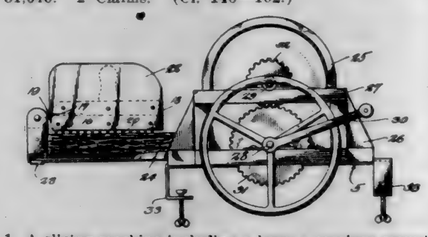
1,566,063. FOOT CORRECTOR. WALTER M. BARRY, New York, N. Y. Filed Nov. 10, 1922. Serial No. 600,063. 1 Claim. (Cl. 128—80.)



In a foot corrector device, a flexible loop adapted to embrace the front part of the foot and extend around the ball of the same and back part of the foot adjacent to the toes, a second loop adapted to embrace the heel of the foot and extending diagonally across the sides of the

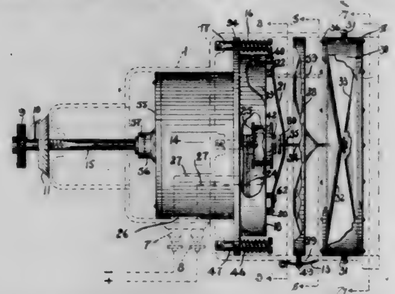
heel, an elastic web member connected with the first mentioned loop and the terminals of the second mentioned loop adapted to bridge the space below the arch of the foot.

1,566,064. BACON SLICER. ALBERT C. BASSE, San Antonio, Tex. Filed May 18, 1925. Serial No. 31,040. 2 Claims. (Cl. 146—102.)



1. A slicing machine including a base, a carriage mounted for sliding movement on the base, a rotary knife operating adjacent to one edge of the carriage, a trough disposed adjacent to the knife and adapted to receive material cut by the knife, and a laterally extended finger operating adjacent to the trough for moving material through the trough.

1,566,065. LOUD-SPEAKING RECEIVER. WILLIAM J. BEACH, Toronto, Ontario, Canada. Filed Mar. 30, 1925. Serial No. 19,299. 9 Claims. (Cl. 179—108.)

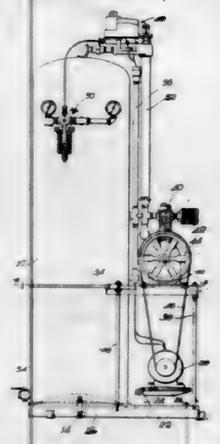


1. In a loud speaking receiver, an electro-magnetic system, an armature operated thereby, a diaphragm operated by said armature, a sound deflector disposed between said electro-magnetic system and said diaphragm, and sound ports near the outer periphery of said diaphragm to permit egress of sound reflected from said sound deflector.

1,566,066. PROCESS FOR DYEING FUR AND PRODUCT THEREOF. HAROLD M. BECHER, Brooklyn, N. Y. Filed Aug. 10, 1925. Serial No. 49,202. 7 Claims. (Cl. 41—29.)

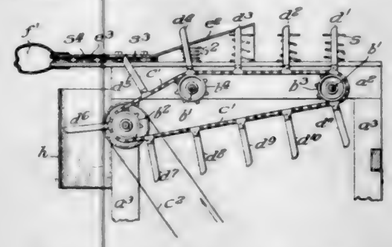
1. A process whereby a dressed or tanned straight-haired pelt may be dyed to imitate a pelt of a fur-bearing animal which has, in its natural state, a stripe or grotzen running down the center of the back and a color tone shading off to a lighter color, or to white, on the balance of the skin, comprising placing a plurality of stencils on the pelt to be treated in sequence and applying the desired dye to the skin through the openings in the stencils, the openings in the succeeding stencils decreasing in size.

1,566,067. COMPRESSOR UNIT. LAURENCE J. BERKELEY, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 17, 1923. Serial No. 625,734. 10 Claims. (Cl. 230—27.)



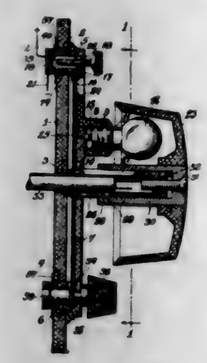
1. In combination, an elongated storage receptacle supported on end, a base for supporting the receptacle and having means of connection therewith, a horizontal support having mounting means embracing the receptacle spaced above the bottom thereof, a pump mounted on said support for filling said receptacle and a prime mover mounted on the base beneath the support for driving the pump.

1,566,068. APPARATUS FOR COMPRESSING AND ASSEMBLING COIL SPRINGS. LESLIE R. BRUNDAGE, Chicago, Ill. Filed Dec. 5, 1924. Serial No. 754,159. 4 Claims. (Cl. 226—18.)



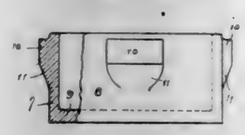
1. An apparatus of the character described comprising a plurality of pegs for carrying the coil springs, a conveyor on which the pegs are mounted, a supporting member, means for driving the conveyor, an inclined guide for compressing the spring coils while same are being moved forward on the pegs, a spout into which the compressed coils are forced for feeding into the spring containing pockets, and the conveyor so arranged in the line of travel that the pegs carried thereby are withdrawn after the spring coils are compressed and passed into the spout.

1,566,069. ILLUMINATED DIAL. WILLIAM C. BUCHHOLZ and FRANK BUCHHOLZ, Brooklyn, N. Y. Filed May 19, 1925. Serial No. 31,368. 5 Claims. (Cl. 240—2.)



1. An illuminated dial, comprising a plate, means for mounting the plate, a rotatable disk formed with graduations acting as a dial member, said plate being formed with a window for exposing to view part of said plate and the graduations thereon, a lamp carried by said plate for illuminating said window and the surrounding parts, and a knob extending through said plate carrying said disk, said knob being substantially hollow and open on one face, the knob being so positioned as to act as a hood for said lamp.

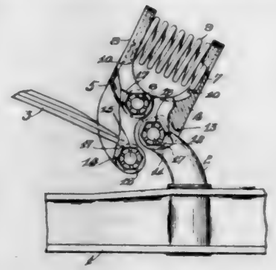
1,566,070. SAGGER. LORENZO C. BUCKLEY, Lisbon, Ohio, assignor to The R. Thomas & Sons Company, East Liverpool, Ohio, a Corporation of Ohio. Filed Mar. 27, 1925. Serial No. 18,891. 3 Claims. (Cl. 25—153.)



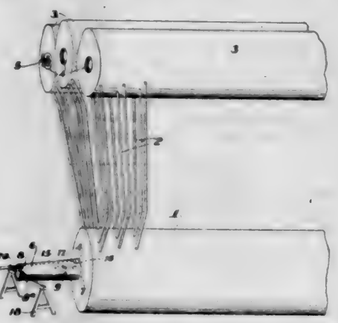
1. A one-piece sagger having circumferentially-extending integral bosses spaced at intervals around the side walls of the sagger, and having a vertical extent substantially less than the depth of the sagger, said bosses serving as spacers between the saggers of adjacent bungs to insure both vertical and horizontal circulation channels for kiln gases during firing.

1,566,071. FLEXIBLE SHACKLE. CHARLES E. BURNETT, Canandaigua, N. Y.; The Citizens Banking and Trust Co., administrator of said Charles E. Burnett, deceased, assignor of one-half to George C. Saylor and one-half to Charles B. O'Brien, both of Conneaut, Ohio. Filed June 22, 1922. Serial No. 570,214. 10 Claims. (Cl. 267—17.)

1. In a device of the character described, the combination with two relatively movable members one of which is a vehicle body spring, of a balanced flexible shackle formed of two upwardly extending levers having a common fulcrum intermediate their ends, the inner arms of said levers being pivotally connected one with one member and one with the other member, a compression spring engaging between the outer arms of said levers, both arms at all times being independent of direct bearing against either of said members, and a stop on one lever adapted on the rebound of the body spring to engage the member to which such lever is pivoted.

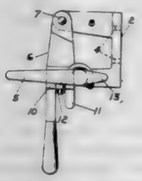


1,566,072. BOILER-COOLING DEVICE. ALBERT L. CALLOUGH, Tuscumbia, Ala. Filed Jan. 3, 1925. Serial No. 437. 3 Claims. (Cl. 122—4.)



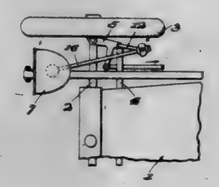
1. A device for cooling steam boilers, comprising a tubular flue open at each end, and adapted to have one end partially inserted into the open man-hole of a steam drum, a fluid pressure pipe extending from a source of supply into the open, outer end of said flue, and having a return bend at the inner end of the flue terminating in an outwardly directed nozzle located in alinement with the longitudinal axis of said flue.

1,566,073. CLAMP. WILLIAM F. CONKLIN, Tarentum, Pa. Filed June 5, 1924. Serial No. 718,005. 4 Claims. (Cl. 24—132.)



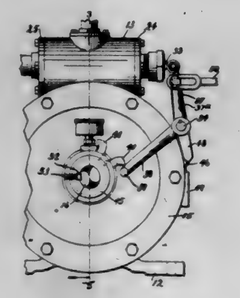
1. A clamp comprising a base provided with a pair of outwardly diverging horns, a movable wedge member between the horns, and guiding devices for maintaining the article to be clamped between the horns and the wedge member.

1,566,074. OPERATING MECHANISM FOR DIRIGIBLE HEADLIGHTS. GUSTAVE COOK, Gillett, Wis. Filed June 15, 1925. Serial No. 37,288. 2 Claims. (Cl. 240—62.)



1. Operating mechanism adapted to swing dirigible headlights from the swinging arms of the steering gear of automobiles and comprising an inclined rod, a ball and socket joint between the rear end of the rod and a swinging arm of the steering gear, said headlight having a vertical shaft, and means for transmitting the horizontal swinging movement of the rod to the shaft while absorbing the up and down and back and forth movement and comprising a casing having a socket and a vertical slot, a ball fixed on the forward end of the rod and fitted in the socket, the rod having a squared portion fitted in the slot, a pivot arm fixed to the casing and having a transverse bearing at its upper end, a yoke fixed to the shaft of the head light and a horizontal pivot bolt between the arms of the yoke and the bearing.

1,566,075. STEAM ENGINE. WALTER H. COTTON, Chicago, Ill., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Apr. 16, 1920. Serial No. 374,445. 3 Claims. (Cl. 121—99.)



3. In a fluid-driven motor, the combination of a cylinder, an oscillating piston therein, a valve for directing the driving fluid alternately to opposite sides of the piston, a movable element for shifting the valve, an oscillating shaft actuated by the piston, a pair of rings circumferentially adjustable upon the shaft, a tappet carried by each ring for moving the valve-shifting element, and means for securing the rings in adjusted positions.

1,566,076. EYELET. WILLIAM H. CUSTER, Toronto, Ohio. Filed Dec. 26, 1924. Serial No. 758,238. 3 Claims. (Cl. 24—202.)

1. An eyelet comprising a base plate having a centrally located opening therein, prongs extending around the outer edges of the plate, a clamping plate having a central and spaced openings therein to receive the prongs whereby the latter may be bent downward upon the outer face of the clamping plate and a flange extending around the central opening of one plate and entering the central opening of the other plate.

1,566,077. CARTON. BRUCE J. DAVIDSON, Marseilles, Ill., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 14, 1921. Serial No. 461,311. 3 Claims. (Cl. 229—5.5.)

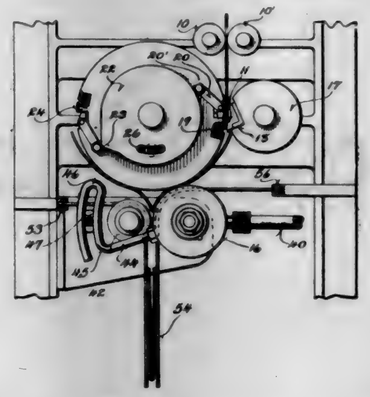
1. A tubular carton, comprising an outer wall, a liner having its end edges terminating short of the adjacent ends of said outer wall, inwardly extending flaps at the ends of said liner, heads applied against said flaps for closing the ends of the carton, and means for holding said heads against said flaps, the latter being long enough to project beyond the ends of said outer wall to facilitate grasping when setting up the carton.

1,566,078. REFINING LEAD. PHILIP W. DAVIS, Cambridge, Mass. Filed May 14, 1925. Serial No. 30,854. 6 Claims. (Cl. 75—15.)

1. The method of refining lead which consists in exposing lead alloys in molten condition to the action of molten litharge by causing the two materials to be exposed to each other in bodies of small dimensions.

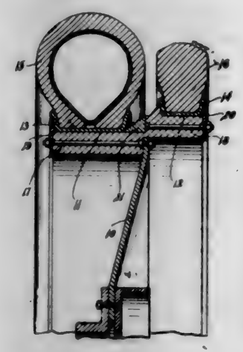
1,566,079. ROTARY SHEET FOLDER. PETER J. CHRISTMAN, Jr., and JAMES DE LOYE, Green Bay, Wis., assignors, by direct and mesne assignments, to Paper Converting Machine Company, Green Bay, Wis., a Corporation. Filed Nov. 9, 1922. Serial No. 599,823. 4 Claims. (Cl. 270—69.)

1. In a device of the class described, the combination of a carrier cylinder, means cooperating therewith for cutting a web of paper into sheets, a suction roll for drawing said sheets from the carrier roll, said carrier



cylinder and said suction roll receiving the paper between them, and a folding roll cooperating with said suction roll to fold said sheets.

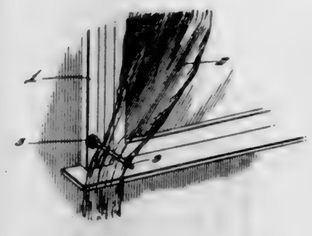
1,566,080. WHEEL. WESLEY A. DILLARD, Pine Bluff, Ark. Filed June 26, 1925. Serial No. 39,817. 1 Claim. (Cl. 30—39.)



In a wheel, a felly having spaced tire receiving channels therein, said channels being of different widths, an automobile rim for each channel, means including circumferentially spaced bolts for removably securing the rims in place, a transversely wedge shaped annular member located within one of the channels and bearing against the inner ends of the spaced bolts of the other channel and providing an inclined side wall for the first mentioned channel and a tire mounted upon each rim.

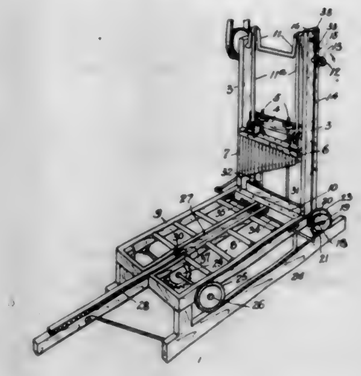
1,566,081. CURTAIN HOLDER. GEORGE W. DOVER, Longmeadow, R. I., assignor of one-half to John Montgomery, Woonsocket, R. I. Filed July 14, 1924. Serial No. 725,895. 8 Claims. (Cl. 156—33.)

4. In a curtain holder, a base member, a pair of resilient opposed arms extending outwardly from said base member adapted to resiliently engage a member interposed therebetween, an elongated member having a portion thereof located between said resilient arms and pivotally supported thereby the portions of said resilient arms engaging said elongated member being shaped



to fit closely against the sides of said elongated member to form a channel for said member whereby the elongated member is resiliently held against movement.

1,566,082. MACHINE FOR CUTTING METAL STRIPS. WILLIAM FRANCIS DUGINS, Melbourne, Victoria, Australia. Filed Feb. 27, 1924. Serial No. 695,545. 4 Claims. (Cl. 164—50.)

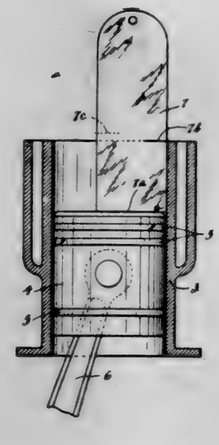


1. In a machine for cutting metal sheets into strips, a corrugated shear, means for reciprocating the same, a fixed shear plate on the machine table, and a gauge plate pivotally mounted in the machine frame at one end and hung on the shear frame at the other.

1,566,083. ENGINE-VALVE-SEATING GAUGE. HARRY E. FORSLUND, Minneapolis, Minn. Filed Jan. 5, 1925. Serial No. 551. 1 Claim. (Cl. 33—180.)

A device for determining the setting of the intake and exhaust valves of an internal combustion engine, comprising a member adapted to be placed in a cylinder of said engine and having a straight bottom portion adapted to engage the top of the piston, said member having straight comparatively long side portions extending at right angles to said bottom portion and respectively having at each side shoulder portions extending at right angles to said side portions, said shoulder portions being disposed at different distances from said bottom portion, said shoulders being adapted to engage the top of the cylinder block when the said bottom portion is in engage-

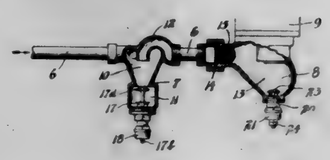
ment with the top of the piston for respectively determining the closing position of the intake valve and the opening position of the exhaust valve, and the portions



of said side portions at each side of said shoulders being respectively adapted to engage the top of the cylinder and the top of the piston when the intake and exhaust valves are respectively in opening and closing positions.

---

1,566,084. AIR-BRAKE DRAIN DEVICE. DANIEL H. GARDNER and GEORGE BAKER, Minneapolis, Minn. Filed Oct. 6, 1924. Serial No. 741,858. 2 Claims. (Cl. 303—88.)

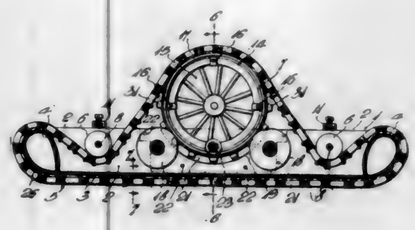


1. The combination with a chamber adapted to receive air under pressure, said chamber having an opening in its bottom, a casing secured in said opening having a passage therethrough with a valve seat formed therein, a valve disposed above said casing having a stem passing through said passage, an open bottom member threaded on the bottom of said casing through which said stem projects, a spring surrounding said stem between said last mentioned member and valve, and means limiting the upward movement of said valve whereby the tension of said spring can be varied.

---

1,566,085. RUNNER ATTACHMENT FOR AUTOMOBILES. FRANK GENUDREAU, Newport, Wash., assignor to Genudreau and Thompson, a Firm or Partnership composed of Frank Genudreau and Charles Carrol Thompson, Newport, Wash. Filed Mar. 17, 1924. Serial No. 699,931. 7 Claims. (Cl. 305—3.)

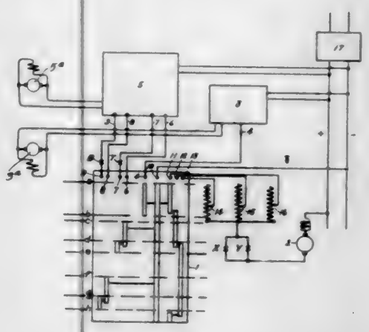
4. An attachment for an automobile, comprising a runner, a laterally flanged rim applicable to an automobile wheel felly in place of the usual demountable rim, said rim being disposed over said runner, and rollers



mounted on said runner and co-operating with the lateral flanges of said rim to rotatably mount the latter and hold said rim and runner in fixed relation.

---

1,566,086. ELECTRIC-MOTOR-CONTROL SYSTEM. RALPH DAVID GIVEN, Leamington, and HUGH WILLIAM CONWAY LIDDIARD, Rugby, England, assignors to General Electric Company, a Corporation of New York. Filed Sept. 5, 1923. Serial No. 661,006. 3 Claims. (Cl. 172—240.)

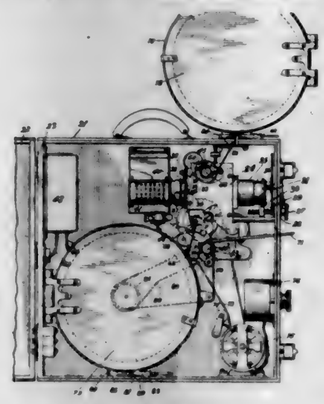


1. An electric control system for a predetermined cycle of operations, comprising a plurality of separate operating motors, a master controller for the said motors, a pilot motor for operating the said controller, a plurality of limit switches for governing the said pilot motor and said operating motors depending on the operation of a portion of the operating motors, and electrical connections between the said motors and said controller through which the said motors are selectively controlled by the said controller and said limit switches to effect automatic repetition of a predetermined cycle of operations by operation of the said portion of the operating motors on a space basis and operation of another portion of the operating motors on a time basis.

---

1,566,087. MOTION-PICTURE MACHINE. ANDREW GORRETTA, Cleveland, Ohio, assignor to The Worldseye Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 7, 1923. Serial No. 637,112. 12 Claims. (Cl. 88—17.)

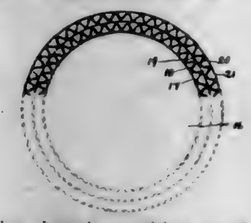
1. In a portable motion picture machine, a case for said machine, a pair of reel supports, means adapted to mount said supports on said case with said reels in side by side relation and to permit lateral movement of one of said supports while retaining it mounted, means adapted to mount the other of said supports on said case in a second position, and means for operating the reel



carried by said one support operatively connected to said reel in the various lateral positions of said one support.

---

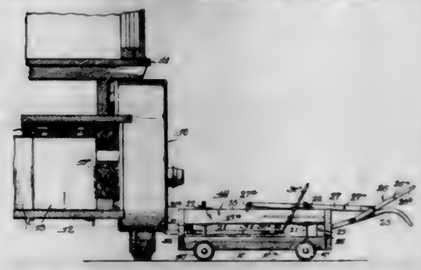
1,566,088. DUST-CLEANING ELEMENT. OSCAR V. GREENE, Cleveland, Ohio. Filed Jan. 26, 1924. Serial No. 688,715. 22 Claims. (Cl. 183—51.)



1. A cleaning element comprising spaced foraminous collecting sheets, and other foraminous sheets arranged in consecutive open folds interposed in immediate sequence between said first-named sheets, the adjacent sides of said folded sheets being disposed at approximately sixty degrees to each other.

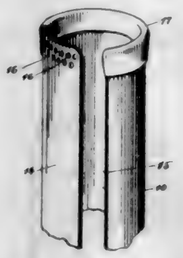
---

1,566,089. DEVICE FOR PULLING OUT BATTERIES. EDWARD HARDING, Chicago, Ill. Filed May 2, 1925. Serial No. 27,447. 17 Claims. (Cl. 104—34.)



1. Apparatus of the class described comprising a body, rollers carried thereby, said body being provided with slots in the lower portion thereof, wheels upon which said apparatus is mounted, said wheels having axles passing into said slots, and means co-acting with said axles for adjusting said body with reference to said axles.

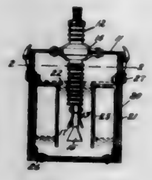
1,566,090. TUBE-SPLICING DEVICE. RAY W. HARTY, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1920. Serial No. 429,905. 3 Claims. (Cl. 18—45.)



1. A sleeve for splicing tubes comprising a metallic body member of generally cylindrical form with a longitudinal cut through one side thereof and an end member of soft rubber secured to said body member.

---

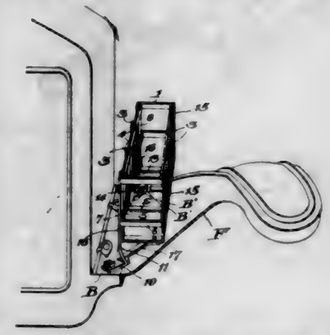
1,566,091. ELECTRICAL APPARATUS. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 5, 1922. Serial No. 565,937. 4 Claims. (Cl. 200—150.)



4. An attachment for an electric switch of the fluid break type for increasing the circuit interrupting capacity of the switch comprising an open vessel adapted to be immersed in an inverted position in the fluid of of the switch, and means for securing it to the side of the switch tank.

---

1,566,092. LUGGAGE CARRIER FOR AUTOMOBILES. ALBERT R. HYATT, Beresford, S. Dak. Filed Aug. 7, 1924. Serial No. 730,616. 4 Claims. (Cl. 224—29.)

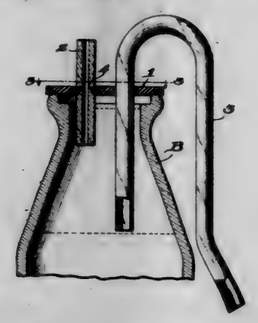


4. An automobile luggage carrier including a body formed to be disposed in the space between a side of the hood and the adjacent fender and having a bottom with the outer side of the latter formed to seat on the fender, supports connected to the body and projecting below

the bottom thereof to hold the inner side of the bottom, and means to secure the supports in position, said supports and the inner side of the body being disposed in such spaced relation to said side of the hood to permit the latter to be opened and closed without disturbing the carrier.

---

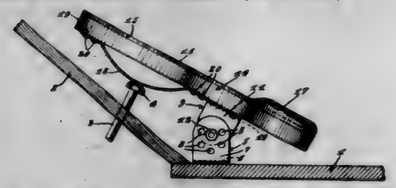
1,566,093. CREAM SEPARATOR. ROY S. INNES, Madison, S. Dak. Filed Dec. 16, 1924. Serial No. 756,227. 1 Claim. (Cl. 137—20.)



In a cream separator, a flexible disk formed for seating on the mouth of a bottle and having a pair of spaced openings therein, an inverted substantially J-shaped siphon tube removably and frictionally secured in one of the openings, and a combined air inlet tube and disk depressor formed independent of the siphon tube and being removably and frictionally secured in the other opening at a distance from the siphon tube and having a circular groove cut into its periphery into which the wall resultant from the said other opening extends whereby to resist axial movement of the air inlet tube relative to the disk, said air inlet tube being spaced from the siphon tube and having its upper end disposed in such relation to the siphon tube so as to permit the operator to seat his hand on the curved part of the siphon tube and to place a finger thereof on said upper end of the air inlet tube and by pressing down on the latter depress the disk.

---

1,566,094. ACCELERATOR PEDAL. FREDERICK W. IVES, North Tonawanda, N. Y. Filed Sept. 1, 1925. Serial No. 53,932. 2 Claims. (Cl. 74—81.)

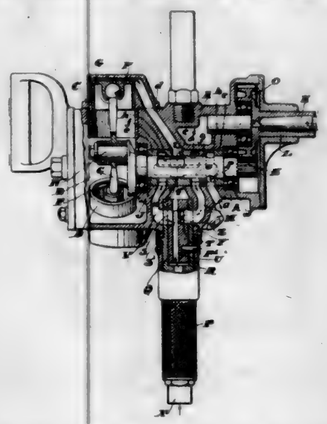


1. An automobile accelerator pedal of the character set forth, comprising a pedal body, means for pivotally supporting the same, and a flat resilient arcuate member extending longitudinally of the underside of said body and secured at the ends thereto and designed to have its face bear and move upon the head of an accelerator rod to actuate the same.

---

1,566,095. FLUID-ACTUATED ROTARY MACHINE. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 9, 1925. Serial No. 29,061. 3 Claims. (Cl. 121—33.)

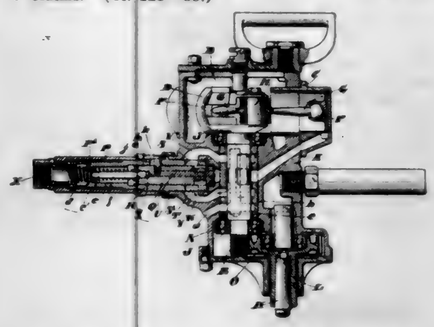
3. In a fluid actuated rotary machine, the combination of a case, a reversible fluid actuated motor having a plurality of radially arranged cylinders in said case, a longitudinally extending crank shaft connected to be driven by said motor, main and auxiliary exhaust ports in said case, a reversing throttle controlling the supply of pressure fluid and the said auxiliary exhaust of the machine, distribution passages in the case for the



cylinders, and ports and passages in the crank shaft cooperating with the main pressure fluid supply, the cylinder distribution ports, and the main and auxiliary exhaust ports, whereby pressure fluid is supplied to the cylinders and also exhausted therefrom through both the main and auxiliary exhaust ports.

---

1,566,096. REVERSIBLE THROTTLE HANDLE. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 12, 1925. Serial No. 29,683. 6 Claims. (Cl. 121—35.)

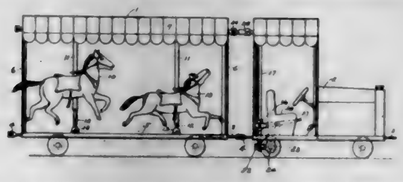


2. In a fluid actuated rotary tool, the combination of a case and motor, a handle body, a rotatable handle sleeve, a spring pressed throttle valve and a reversing valve in the handle body, operative connections between the sleeve and the reversing valve, and a cam for causing longitudinal movement of the reversing valve as it is rotated, and thereby actuating the throttle valve.

---

1,566,097. AMUSEMENT VEHICLE. ELLA V. JOHNSON, Whitehouse, Fla. Filed Mar. 26, 1925. Serial No. 18,394. 2 Claims. (Cl. 104—82.)

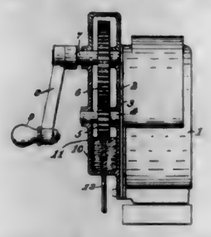
1. In amusement vehicles of the class described; an automotive vehicle; one or more passenger vehicles; means for coupling said passenger vehicles to each other and to the automotive vehicle; a plurality of movable passenger carrying elements mounted in said passenger vehicles; and means for actuating all of said passenger carrying elements in all of said passenger vehicles by



power transmitted from the automotive vehicle through a suitable transmission contained in and extending through all of said passenger vehicles.

---

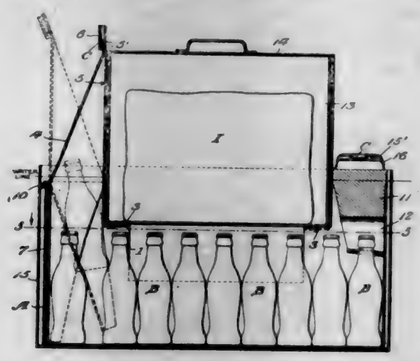
1,566,098. OIL-SALVAGE DEVICE. WILLIS H. JOHNSON, Waterloo, Iowa, assignor to Hawkeye-Dart Truck Company, Waterloo, Iowa. Filed Sept. 5, 1924. Serial No. 736,141. 1 Claim. (Cl. 103—202.)



The combination with a liquid container having a side wall bearing and a rotatable shaft projecting through said bearing, of an outer wall cup integral with the side wall and inclosing said bearing to a level thereabove, and a removable closure cap for said cup, and a conduit communicating with the cup below the level of the bearing to drain the contents of the cup at that level.

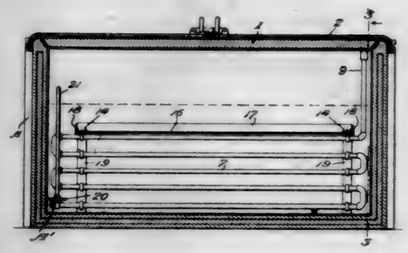
---

1,566,099. COOLER FOR BOTTLED GOODS. SAMUEL KAYE, Columbus, Miss. Filed May 25, 1922. Serial No. 563,527. 9 Claims. (Cl. 211—8.)



1. A cooler for bottled goods including a channel for containing a row of articles side by side in contact therein, and a movable filling chute for receiving articles and normally directing them into the channel, said chute being adapted to be moved out of normal position to engage an article in the channel to move the articles therein forward.

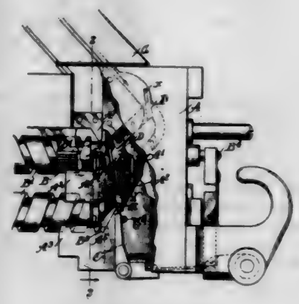
1,566,100. COOLING CHEST. SAMEL KAYE, Columbus, Miss. Filed Jan. 15, 1923. Serial No. 612,744. 4 Claims. (Cl. 62—75.)



2. A cooling-chest including a body and cover, the body adapted to be partly filled with water and ice, a tray for holding down the ice below the water level, and for maintaining the articles to be cooled partially submerged, ice-water coils arranged vertically at opposite sides of the chest and forming a support for the tray, and supports for the coils having inturned projections at their upper ends for holding the tray down when in position on the coils.

---

1,566,101. TYPOGRAPHICAL DISTRIBUTING MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Feb. 2, 1925. Serial No. 6,171. 14 Claims. (Cl. 199—42.)



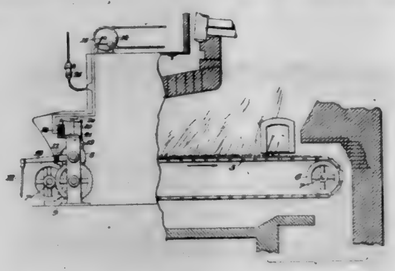
1. In a typographical distributing mechanism, comprising a distributor bar and a set of matrix conveying screws, the combination of a distributor box through which the matrices pass facewise by gravity, means for arresting the matrices at a forward inclination within the box, and means for releasing the arrested matrices one at a time to permit their escape by gravity into position to be picked up by the screws.

---

1,566,102. MECHANICAL-STOKER REGULATOR. CLAUDE G. KING and EARL TUBBS, Cedar Rapids, Iowa. Filed Jan. 12, 1923. Serial No. 612,196. 7 Claims. (Cl. 236—25.)

1. In combination with a chain-grate stoker for a steam-generating furnace having a limited back-lash.

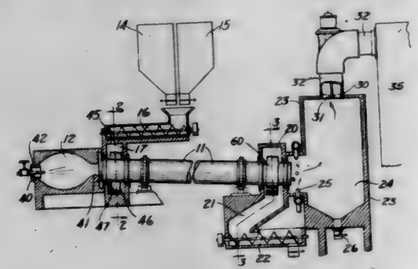
means including a ratchet and pawl and actuating mechanism, to advance the grate, a detent pawl to prevent back-lash, a steam-flow meter having a movable member,



and means connecting the same operatively with the detent pawl to disengage it according to fluctuations in the steam flow.

---

1,566,103. APPARATUS FOR PRODUCING ZINC OXIDE. MORRIS P. KIRK, Harbor City, Calif., assignor to Kirk Simon Smelting Co., Mina, Nev., a Corporation of Nevada. Filed Mar. 28, 1921. Serial No. 456,256. 4 Claims. (Cl. 266—18.)



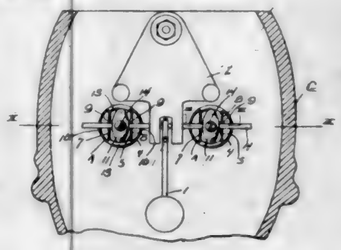
1. An apparatus for producing zinc oxide from zinc compounds which comprises; an inclined rotary kiln; means for mixing the zinc compound with carbonaceous material and feeding it into the upper end of said kiln; means for passing hot reducing gases through said kiln in the same direction that said zinc compound travels; means for discharging solid material from the lower end of said kiln; a zinc combustion chamber into which the zinc fumes from said kiln are passed; means for passing air into said zinc combustion chamber; and means for withdrawing the zinc oxide fumes from said zinc combustion chamber.

---

1,566,104. BELT BUCKLE. FRANK F. KNOTHE, Ridgewood, N. J. Filed May 9, 1924. Serial No. 711,990. 3 Claims. (Cl. 24—163.)

1. A belt buckle comprising a member having spaced sides, and webs located along said sides, said webs having recesses, a bar extending across the member and having its ends located in said recesses, said bar being provided with a projection extending laterally from the member and means for attaching the buckle to a belt.

1,566,105. ADJUSTABLE MOUNTING FOR ARTIFICIAL EYES. ALEXANDER KONOFF, New York, N. Y. Filed Mar. 19, 1924. Serial No. 700,371. 8 Claims. (Cl. 46—40.)



1. An adjustable mounting for a doll's eyeball comprising parts providing a plurality of separate pivots by which the eyeball is supported and upon which the eyeball is adjustable about the spherical center of the eyeball and about axes which are at an angle to each other, and manually operable means to hold the eyeball in any position to which it is adjusted about said pivots.

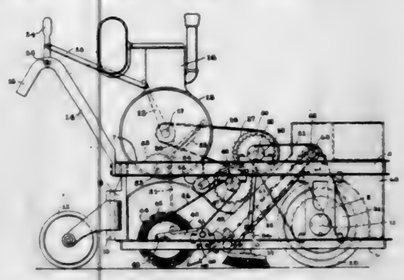
---

1,566,106. HEEL PROTECTOR. LEONARD S. LAMB, Seattle, Wash. Filed June 22, 1925. Serial No. 38,706. 2 Claims. (Cl. 36—37.)

1. A heel protector, embodying a metal plate, and a pad of protective material secured at one point to said plate and arranged to be turned up to allow said plate to be tacked within the heel portion of a shoe.

---

1,566,107. STREET-SWEEPING MECHANISM. ELBERT C. LEACH and EDGAR M. PLETT, Oshkosh, Wis., assignors to Oshkosh Manufacturing Co., Oshkosh, Wis., a Corporation of Wisconsin. Filed July 14, 1922. Serial No. 574,945. 2 Claims. (Cl. 15—84.)

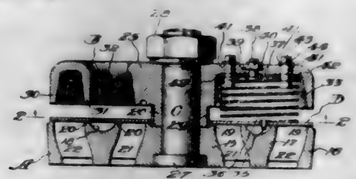


1. An apparatus of the class described comprising upper and lower spaced frame members; guiding handles carried by said upper frame member; bearing blocks secured to and spacing said frame members at one end; a drive shaft carrying a driving wheel journalled in said blocks; an upright spacing member secured to and spacing said frame members at their other ends; caster wheels

carried by said upright member; a prime mover carried by said upper frame member; a countershaft journalled on said upper frame member; chain and sprocket driving connections between said prime mover and countershaft, and between said countershaft and driving shaft; a horizontal rotatable brush pivotally carried by said lower frame member; means including a lever and sector carried by said upper frame member and a connecting link, for raising and lowering said horizontal brush about its pivot; vertically mounted rotatable brushes disposed at the sides of said frame members, adapted to sweep refuse into the path of said horizontal brush; driving connections between said countershaft and said brushes; means carried by said upper frame member for maintaining the driving connections to said horizontal brush operative in all positions; a receptacle carried by the forward end of said frame members; and a conveyer arranged to receive refuse from said horizontal brush and to convey it to said receptacle.

---

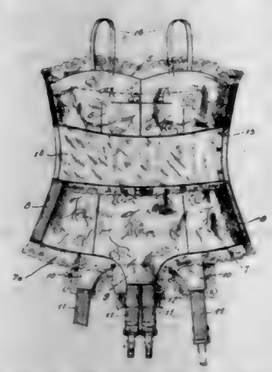
1,566,108. VALVE FOR COMPRESSORS. CHARLES H. LEINERT, Chicago, Ill., assignor to Leinert Valve Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1924. Serial No. 728,569. 11 Claims. (Cl. 251—119.)



10. In a valve of the kind described, the combination of a seat, a disk, a plurality of springs, and a stop plate, assembled in the order named, and means operable from the outer stop plate side adapted to shift the positions of the springs on the opposite side thereof, substantially as described.

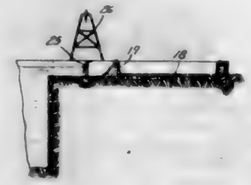
---

1,566,109. GARMENT. ELVIRA CAMPA MCKEEFREY, Brooklyn, N. Y., assignor to Model Brassiere Co., Inc., New York, N. Y., a Corporation of New York. Filed July 6, 1925. Serial No. 41,525. 2 Claims. (Cl. 2—30.)



1. A combination undergarment comprising an upper section constituting a bandeau, a lower section constituting a form-shaping girdle, an intermediate section of stretchable, flexible material interposed between and connected with the upper and lower sections and adapted to constitute an undervest, and a flap extending between the middle portion of the front and rear faces at the lower edge of the garment and adapted to extend between the legs of the wearer.

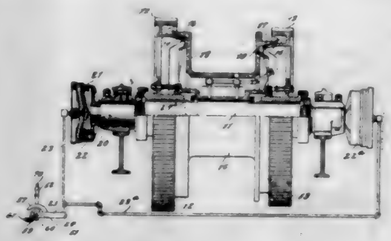
1,566,110. METHOD OF CONSTRUCTING OIL STORAGE. ELLIS MALLERY, Los Angeles, Calif. Filed May 9, 1923. Serial No. 637,701. 5 Claims. (Cl. 72—13.)



1. The method of covering a reservoir, which comprises: forming a buoyant cover in a dock outside said reservoir; and floating said cover into place in said reservoir.

---

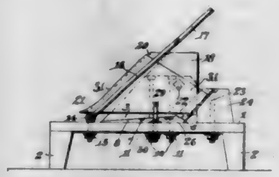
1,566,111. FLUID-PRESSURE-OPERATED DEVICE AND CONTROL THEREFOR. THOMAS SPENCER MILLER, South Orange, N. J. Filed Oct. 23, 1923. Serial No. 670,235. 10 Claims. (Cl. 303—6.)



1. In combination, two fluid pressure operated devices, a source of fluid under pressure, two valve members controlling the flow of fluid under pressure to the respective devices, and each constructed and arranged to maintain a predetermined pressure in the associated fluid pressure operating device, and a single means for simultaneously operating both of said valves.

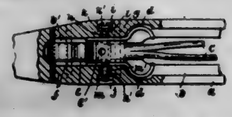
---

1,566,112. FORMING AND SHAPING MACHINE. JAMES HENRY NUNNEY, Headland, Ala. Filed May 26, 1925. Serial No. 32,965. 5 Claims. (Cl. 153—15.)



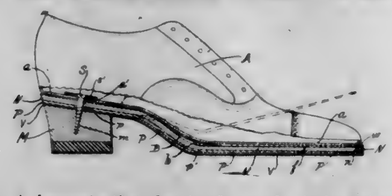
1. In a sweep forming machine of the character set forth, a base, a shiftable block thereon, means for adjusting said shiftable block, a removable sweep forming block carried upon said adjustable block, a swinging presser means adapted to form a body about said sweep block, means for supporting the ends of said body while being formed, and shiftable retaining pins projecting from said base forwardly of said supporting means adapted to engage the lower edge of the body being formed by the machine.

1,566,113. SHUTTLE. HECTOR PAVIA, Allentown, Pa. Filed Dec. 12, 1924. Serial No. 755,410. 2 Claims. (Cl. 139—208.)



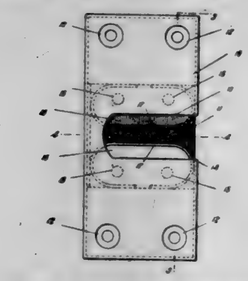
1. In combination, a shuttle body having a cavity for the wound package formed with an extension, the part of the body containing said extension having a hole penetrating said body and traversing said extension transversely thereof and formed at one end with a countersink, a pivoted spindle having its butt in the extension, a metal piece arranged between the spindle-butt and that side of said extension which adjoins the countersink, a metal screw-hold device driven into the countersink with a driven fit and thereby held by the body against turning, a sleeve in said hold spacing said device and piece and abutting the latter, a screw penetrating said hole and the spindle-butt and sleeve and fomring the pivot for the spindle and having one end threaded and screwed into said device and its other end within the hole, and means to hold the screw against turning.

1,566,114. EXHIBITION SHOE. DAVID PERKINS, Brockton, Mass., assignor to Geo. E. Keith Company, Brockton, Mass., a Corporation of Massachusetts. Filed Nov. 1, 1923. Serial No. 672,179. 4 Claims. (Cl. 36—1.)



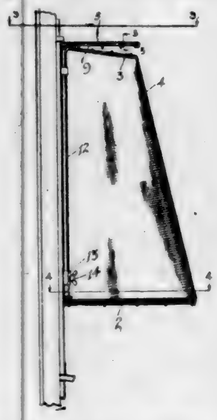
1. A demonstration shoe, made up of a body and inner sole part; a heel and outer sole part; and a single member connecting the two parts, to permit relative movement of the two parts about the single member as a pivot.

1,566,115. CLOSURE FASTENER. FREDERICK W. PLOSS, Philadelphia, Pa. Filed Feb. 28, 1925. Serial No. 12,316. 2 Claims. (Cl. 16—86.)



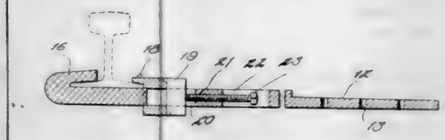
2. In a closure fastener the combination of a casing consisting of a box having an outwardly extending rim; a cover plate having an opening therein, said plate being adapted to engage said extending rim; two cushions positioned in said box; means in the bottom of said box adapted to engage said cushions; and two springs adapted to virtually enclose respectively said cushions, the ends of each spring being adapted to virtually meet, said meeting ends of each spring being adapted to abut the same side respectively of the box.

1,566,116. AWNING. EILER POULSEN, Chicago, Ill. Filed May 16, 1924. Serial No. 713,814. 3 Claims. (Cl. 156—15.)



2. An awning of the type described comprising a flexible awning sheet, means for supporting said awning in a substantially upright position, manually operated means for moving said awning laterally on its support and for collapsing parts of said awning at will, and a collapsible top awning member for cooperating with said upright awning.

1,566,117. TRACK FASTENER. HERMAN W. RARDAIN, Granville, Ohio. Filed Feb. 20, 1925. Serial No. 10,620. 2 Claims. (Cl. 238—51.)

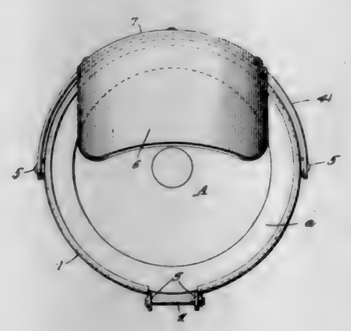


1. A tie rod for the rails of a track comprising two substantially identically constructed sections having their adjacent ends reduced and overlaped, means adjustably connecting said ends whereby the length of said rod can be varied, a fixed clamping member carried by the outer end of each section and designed to embrace the base of the rail, a cooperating movable clamping member embracing said section for sliding movement thereon, said section having a slot, a web carried by the movable clamping member and operating in said slot, and means carried by said section and engaging said web for adjusting the movable clamping member in one direction and holding it in clamping relation with the rails.

1,566,118. METHOD FOR THE PREVENTION OF CORROSION IN STEEL DIGESTERS. FRANCIS GEORGE RAWLING, Madison, Wis., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed Mar. 21, 1925. Serial No. 17,370. 3 Claims. (Cl. 92—11.) (Granted under the act of Mar. 3, 1883; 22 Stat. L. 625.)

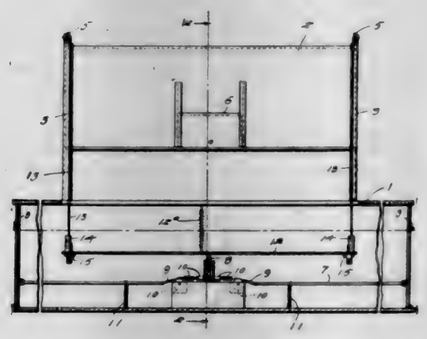
1. The process of adding the sodium salt of a weakly ionized polybasic acid to an aqueous solution of sodium sulphite to be used for the pulping of wood, in a steel vessel, with the subsequent addition of a solution of caustic soda to the contents of the steel vessel during the period of cooking, for the purpose of preventing corrosion of the said vessel.

1,566,119. LIGHT DEFLECTOR. ISAAC M. REED, Bastrop, La. Filed Feb. 25, 1925. Serial No. 11,567. 1 Claim. (Cl. 240—48.4.)



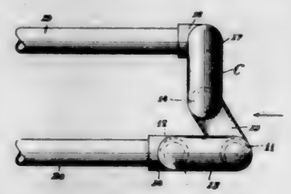
A deflector shield for a head lamp comprising a split ring adapted to encircle the front part of the lamp, means for holding the ring in position, a half ring pivoted to the first ring at diametrically opposite points and extending over the upper portion thereof and a deflector plate connected with the upper portion of the half ring and extending downwardly and forwardly in front of the lamp said plate being of curved shape and of considerably less width than the length of the half ring so that light rays can pass upwardly beyond each side edge of the plate.

1,566,120. BANK PROTECTOR. JOHN F. REEDER, Shelbyville, Ill. Filed Feb. 14, 1924. Serial No. 692,823. 3 Claims. (Cl. 268—2.)



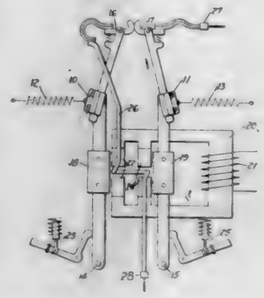
1. Protective means for a bank counter or the like consisting of spaced guides of channel form having their channels facing each other, a screen intermediate the guides, said screen having rollers mounted therefrom on opposite sides thereof and adapted to travel on the inner surfaces of the flanges of the guides and within the channels, catches pivoted to said guides and extending into the channels engaging the screen to normally hold it elevated, a vertically movable trip rod, connections between said catches and trip rod adjacent the guides, and trip means to operate the device including a trigger normally engaged with said trip rod and maintaining it elevated.

1,566,121. WATER HEATER. ARTHUR NELSON ROBERTS, Chicago, Ill. Filed Oct. 23, 1920. Serial No. 418,975. 2 Claims. (Cl. 137—75.)



1. In a water heating unit the combination of a single loop disposed in a horizontal plane comprising long and short spaced parallel legs connected by a U-shaped coupling, a second loop disposed in a vertical plane immediately above the space between the legs of the first mentioned loop and comprising long and short legs, means connecting the end of the longer legs of the first and second mentioned loops opposite to the ends to which the shorter legs thereof are respectively connected, and inlet and outlet conduits respectively connected at the free ends of the shorter legs of the first and second mentioned loops and extending transversely of the parallel disposition of the legs of said loops.

1,566,122. CIRCUIT-CONTROLLING DEVICE. FRANK ROBINSON, Gary, Ind., assignor to General Electric Company, a Corporation of New York. Filed May 16, 1925. Serial No. 30,738. 7 Claims. (Cl. 200—94.)

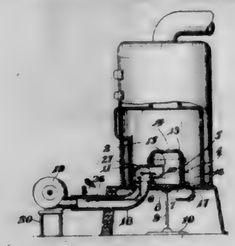


1. A high speed circuit interrupter comprising a pair of cooperating independently movable circuit controlling contacts each biased to a position to interrupt the circuit jointly controlled thereby, an electromagnet having a magnetic movable member for controlling each of said contacts, the said electromagnet having a separate flux path for magnetically holding each of said members in the circuit closing position, and means responsive to the current in the circuit controlled by the interrupter for simultaneously controlling the flux in said paths to release the said members.

1,566,123. AUTOMATIC CONTROLLED LIQUID-FUEL BURNER MECHANISM. ARTHUR ROBITAILLE, Putnam, Conn. Filed Sept. 16, 1925. Serial No. 56,735. 1 Claim. (Cl. 158—28.)

In a liquid fuel burner mechanism an open top receptacle including a body portion and a bottom forming a combustion chamber, said body portion at one side thereof formed with an opening near said bottom, said bottom having one side thereof provided with a depending portion for direction liquid fuel to said opening for the discharge of such fuel, a casting forming an inlet

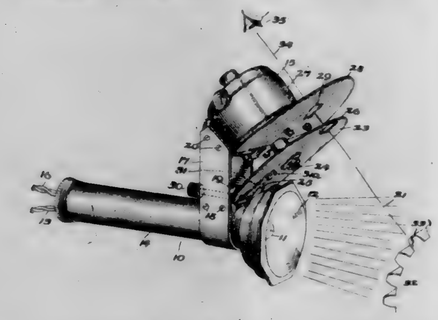
for said chamber common to liquid fuel and a blast of air and formed of a pair of arms, one of the arms of said casting integral with and extending through the other side of said body portion and into said chamber, the inner end of such arm having its lower portion offset to provide a depending liquid fuel collecting cup, the



other arm of said casting integral with said body portion, a closure for the top of said body portion and formed with a central opening, and a liquid fuel feed pipe extending through said last mentioned arm and partly through the first mentioned arm, that part of the feed pipe in said horizontal arm extending partly across said cup.

---

1,566,124. MEANS FOR EXAMINING RAPIDLY-MOVING OBJECTS. ROBERT H. ROGERS, Alplaus, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 24, 1924. Serial No. 708,786. 4 Claims. (Cl. 88—14.)



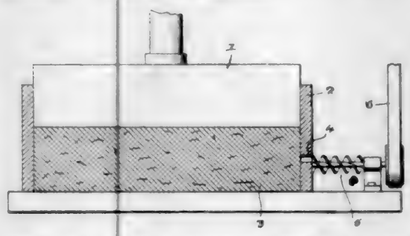
1. A portable device for examining rapidly moving objects comprising the combination in a unitary structure of a handle member, a source of light on said handle member, a dial provided with an aperture, means on said handle for rotating said dial, and means for regulating the speed of said dial.

---

1,566,125. SHEET-METAL-SEAMING TOOL. HEYMAN ROSENBERG, New York, N. Y. Filed Aug. 23, 1923. Serial No. 658,932. 10 Claims. (Cl. 113—16.)

1. A sheet metal seaming tool comprising a mandrel having a flat working surface and beveled edges bounding the working surface, the beveled edges being rounded at one place and squared at another, a holder for the mandrel, and means of adjustable engagement between the mandrel and holder.

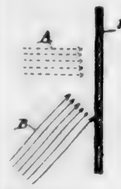
1,566,126. BRICKMAKING MEANS. REUBEN F. ROSS, Olive Hill, Ky. Filed Sept. 5, 1924. Serial No. 736,144. 1 Claim. (Cl. 25—83.)



Brick making means comprising a press box adapted to receive clay or other stock and pressure exerting means and having a vent for surplus clay or other stock, in combination with cut-off means exterior of the box and arranged adjacent to the said vent and adapted to operate on stock that exudes through the vent; the said cut off means being in the form of an auger and being provided with a driving connection whereby it is adapted to convey stock away from the vent.

---

1,566,127. GLASS LENS AND METHOD OF TREATING THE SAME. WILLIAM RUNDQUIST, Elgin, Ill. Filed Nov. 3, 1924. Serial No. 747,591. 7 Claims. (Cl. 41—39.)



3. The method of treating lenses which consists in projecting a slanting stream of coarse particles of silica with a great amount of force, upon the surface of the lens, to form substantially uniform crystallized surfaces within the texture of the lens by breaking up the globules of the glass.

---

1,566,128. INTERNAL-COMBUSTION ENGINE FOR KEROSENE AND CRUDE OIL. KAMAKICHI TAKATA, Kanda-Ku, Tokyo, and PAUL A. RITTER, Kojimachi-Ku, Tokyo, Japan. Filed July 12, 1922. Serial No. 574,560. 1 Claim. (Cl. 123—32.)

In a four stroke cycle internal combustion engine a cylinder having a tapered inner end, a piston therein also having a tapered inner end, so that a restricted passage is formed in said inner end of the cylinder when the piston is in instroke position, a combustion chamber having an air intake valve and also communicating with the cylinder through said restricted passage, means to supply fuel under pressure to said restricted passage and including a needle valve and means to operate the needle valve, and an exhaust valve opening into the cylinder, so that said restricted passage is between the air intake valve and the exhaust valve, so that the igniter and the injection valve needle are protected against the flow of the exhaust gas and the combustion chamber becomes filled with pure air after the combustion of each charge and together with the igniter is cleaned thereby and the compressed hot air in the combustion chamber becomes mixed with and vaporizes the fuel supplied to said restricted passage.

---

1,566,129. HEEL FOR BOOTS AND SHOES. EDLE-KRISTINE THORDARSON, Aarhus, Denmark. Filed Sept. 11, 1922. Serial No. 587,461. 4 Claims. (Cl. 36—59.)

1. A heel for boots and shoes comprising a metal plate having pointed projections thereon and a channel slot therein; and a cover plate having a spring extension thereon adapted to be removably inserted in said slot of the metal plate to thus cover the pointed projections.

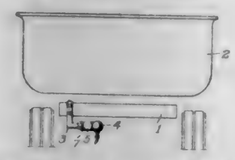
---

1,566,130. X-RAY FILTER. FREDERICK TICHY, Astoria, and ARTHUR CHARLES KOENITS, New York, N. Y., assignors to Wappler Electric Company, Inc., a Corporation of New York. Filed Oct. 31, 1923. Serial No. 671,842. 5 Claims. (Cl. 250—84.)

1. As an article of manufacture, an X-ray filter having the general form of a grid and comprising a board provided with slots, and a number of spacing bars and metallic strips fitted into said slots.

---

1,566,131. SUPPORT FOR TAIL LAMPS ON MOTOR VEHICLES. HARTWELL . TUCKER, Prince Georges County, Md. Filed July 31, 1923. Serial No. 654,912. 1 Claim. (Cl. 248—30.)

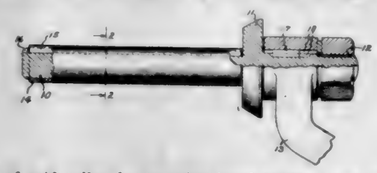


Supporting means for the tail lamp of a motor vehicle comprising a rigid support and a single flexible shock absorbing element of fibrous material interposed between the rigid support and the lamp, said flexible element constituting the sole connection between the rigid support and the lamp, the said flexible element having greater length than width and provided with means to permit attaching of the lamp at one end and means for securing the element to the rigid support at its opposite end, the said flexible element constituting a yielding cantilever supporting arm for the lamp with its major axis of flexure in a vertical plane.

---

1,566,132. INSULATING STUD. LOUIS E. UNDERWOOD, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 11, 1924. Serial No. 725,495. 3 Claims. (Cl. 171—324.)

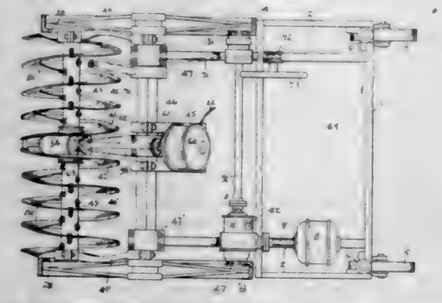
1. In a support for brush-holders, the combination of an insulating stud having a leakage collar formed integrally therewith intermediate its ends, means on one side of said collar for securing said stud to a support, a metallic sleeve surrounding said stud on the other



side of said collar for carrying brush-holders, and means on said sleeve cooperating with said stud for preventing said sleeve turning thereon.

---

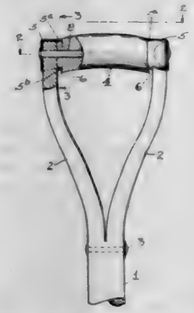
1,566,133. SAND-MIXING APPARATUS. HOWARD L. WADSWORTH, Cleveland, Ohio, assignor to Horace B. Fay, Cleveland, Ohio. Filed May 12, 1923. Serial No. 638,498. 9 Claims. (Cl. 259—144.)



1. In a sand cutter, the combination of a frame, wheels supporting the same, a sand cutting cylinder rotatably mounted in said frame, said cylinder having two series of blades, each terminating closely adjacent to the center of said cylinder, and driving means including a shaft operatively connected to the center of said cylinder between said two series of blades.

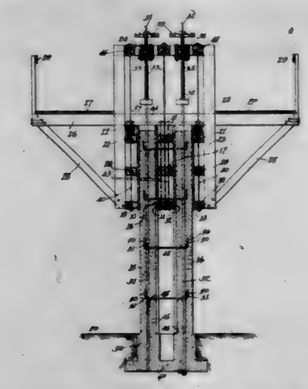
---

1,566,134. REENFORCED SPLIT D HANDLE. CHESTER J. WELSH, Conneaut, Ohio, assignor to The Conneaut Shovel Company, Conneaut, Ohio, a Corporation of Ohio. Filed Aug. 26, 1924. Serial No. 734,157. 2 Claims. (Cl. 294—57.)



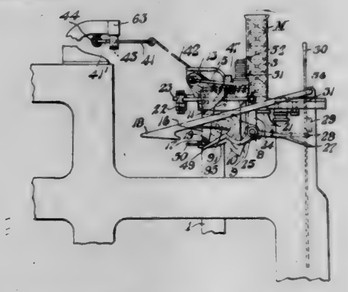
1. In a handle of the type described, the combination with a shaft bifurcated at its upper end to form diverging arms; a grip bar inserted between such arms; and a reenforcing member for each of the latter comprising a cap encasing the upper end of the arm and a portion surrounding the adjacent end of said grip bar, such surrounding portion and grip bar end having registering non-circular parts, whereby said bar is locked against rotation.

1,566,135. WALL-BONDING DEVICE. JAMES H. WAUGH, Los Angeles, Calif.; Clara Y. Waugh administratrix of said James H. Waugh, deceased. Filed Aug. 13, 1923. Serial No. 657,116. 4 Claims. (Cl. 25—131.)



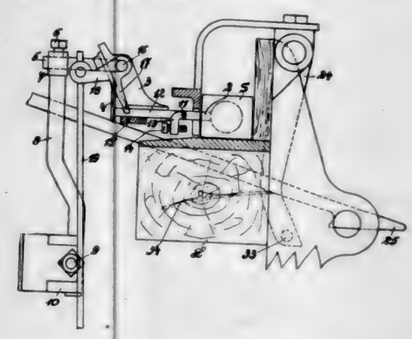
1. In a bonding device for hollow concrete walls, a plurality of vertically disposed wooden strips arranged in oppositely disposed pairs and spaced apart, and a plurality of bonding rods connected to each pair of said wooden strips, the ends of said rods projecting beyond the outer faces of said strips, the pairs of wooden strips being removable from the bending rods after the formation of the hollow wall members.

1,566,136. SHUTTLE-CHANGING MECHANISM FOR LOOMS. MAX AUERBACH, The Hague, Netherlands. Filed Mar. 26, 1923. Serial No. 627,839. 11 Claims. (Cl. 139—237.)



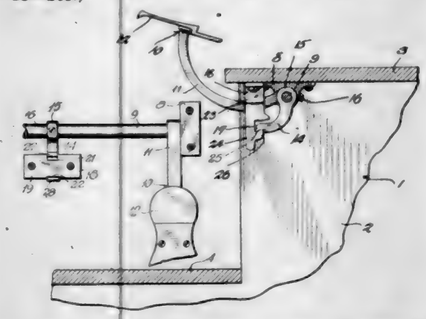
1. Shuttle-changing mechanism for looms, comprising in combination with mechanism for initiating the shuttle-changing operation on the weft failing, a shuttle-box having a rear wall capable of swinging inwards for ejecting the spent shuttle and a front wall intended to be raised for allowing a full shuttle to enter the shuttle-box, a spring for moving said rear wall inwards, a spring for maintaining said front wall in its closed position, means including a driving lever connected to the front wall of the shuttle-box, for raising said front wall during the rearward movement of the lay immediately before the change of shuttles takes place, a locking member intended to engage said driving lever for preventing said rear wall from swinging inwards until said front wall is completely raised and for maintaining said front wall in its raised position while the rear wall is swung inwards and a stationary stop member provided on the loom frame for swinging the rear wall outwardly again at the end of the beat after the shuttle has been changed.

1,566,137. FEELER MECHANISM. MAX AUERBACH, The Hague, Netherlands. Original application filed Mar. 26, 1923, Serial No. 627,839. Divided and this application filed Mar. 6, 1925. Serial No. 13,584. 1 Claim. (Cl. 139—278.)



Feeler mechanism, including in combination, a hook pivoted on the loom frame, a driving lever engaged by the hook for actuating the hook, means including a latch for maintaining said hook out of engagement with the driving lever, a stop member provided on the loom frame for retaining said latch, means adjustably mounted on the loom frame for releasing said latch from said stop member on the weft failing, comprising a feeler intended to make contact with the weft in the shuttle during the forward movements of the lay, a cranked lever pivoted on the weft feeler, one arm of said lever being capable of actuating the latch for releasing it, while the other arm is intended to be struck by the shuttle when the weft is exhausted and means for raising the hook and re-engaging the latch with the stop member after the changing operation has been completed.

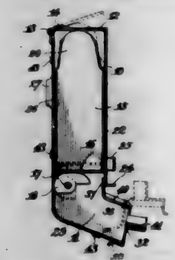
1,566,138. MOVABLE FOOT REST FOR BOOTBLACK STANDS. HENRY BORGMANN, Washington, D. C. Filed Apr. 19, 1925. Serial No. 24,157. 3 Claims. (Cl. 15—265.)



1. In a device of the class described, a shaft, means for mounting the shaft for rotation, a foot rest carried by the shaft, a keeper, means for mounting the keeper on the shaft for adjustment longitudinally of the shaft and circumferentially of the shaft, and a latch wherewith the keeper engages, to hold the foot rest in an operative position.

1,566,139. SMOKING SET. JOHN ANTHONY HONEGGER, New York, N. Y. Filed Aug. 8, 1924. Serial No. 730,958. 6 Claims. (Cl. 206—20.)

1. A smoking set comprising a receptacle body having superposed compartments for the reception of book matches, cigarettes and smoking refuse, the cigarette compartment having an open upper end, a vertically shiftable package carrier in said compartment, and means for manually shifting said carrier upwardly to facilitate the insertion or removal of the cigarette package or the withdrawal of the cigarettes therefrom, said

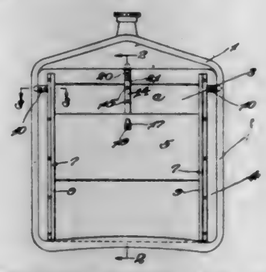


receptacle body having laterally projecting rearwardly offset slotted ears for removably attaching the device to suitable supporting elements in combination with a supporting stand including a vertical wall, a base at its lower end and side flanges on the base between which the lower end of the receptacle body is positioned.

1,566,140. KNIFE SHARPENER. GEORGE JONES, Philadelphia, Pa. Filed Apr. 4, 1925. Serial No. 20,785. 4 Claims. (Cl. 76—87.)

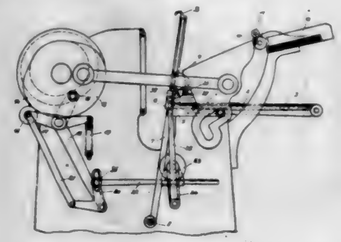
1. In a sharpener, a carrying plate, rotary sharpening discs, said discs provided with central openings, disc bearings struck from the carrying plate and engaging in said openings for rotatably supporting said discs and tongues connecting the disc bearings and carrying plate.

1,566,141. RADIATOR SHUTTER. ROBERT J. JONES, Chicago, Ill. Filed Oct. 15, 1923. Serial No. 668,685. 2 Claims. (Cl. 257—132.)



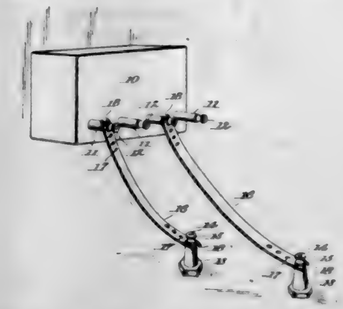
2. A radiator shutter including a body plate, having a portion thereof cut away within its outlines to form an opening through the body plate, the material from the cut away portion forming a movable closure plate, spaced guide members carried by the body plate for receiving the ends of the closure plate, a locking plate extending across the opening in the body plate, and means carried by the closure plate for engaging the locking plate to retain the closure plate in various adjusted positions with respect to the opening through the body plate.

1,566,142. FEEDING AND DELIVERING MECHANISM FOR PLATEN PRESSES. PAUL KAUFMANN, Dresden, Germany, assignor to Eugen Scheding, Heidelberg, Germany. Filed Jan. 26, 1924. Serial No. 688,784. 4 Claims. (Cl. 101—287.)



1. A feeding and delivering mechanism for platen presses in which the sheet is taken from the table situated below the platen and conveyed after the printing in upward direction to the delivering mechanism comprising in combination with the machine frame and with the platen, a gripper band designed to grip the sheet, two prism rods mounted on the base frame a base frame designed to guide said gripper band, and means on the platen for controlling said prism rods.

1,566,143. SPARK PLUG AND COIL CONNECTER. PAUL KOHLOFF, Mamaroneck, N. Y., assignor of one-half to George W. Gross, Mamaroneck, N. Y. Filed May 6, 1922. Serial No. 559,111. 1 Claim. (Cl. 173—324.)



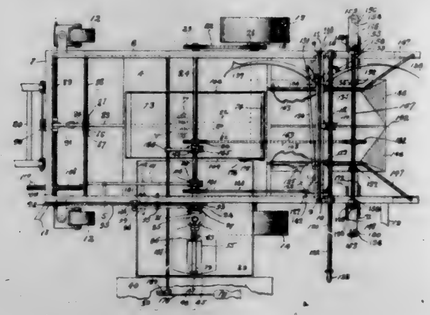
A device for connecting a terminal of a coil box with the respective terminals of a spark plug comprising a single piece of relatively springy metal strip having a plurality of apertures arranged near both ends thereof, jaws at the extreme ends of said metal strip and communicating with certain of said apertures, said metal strip adapted to be bowed in its connection with the respective terminals for constantly forcing the ends of the strip into engagement with the terminals.

1,566,144. GRAIN-STOOKING MACHINE. JOSHUA KENNEDY LAMBERT, Winnipeg, Manitoba, Canada. Filed Nov. 10, 1923. Serial No. 674,079. 20 Claims. (Cl. 56—404.)

1. The combination with a shaft and means to rotate the said shaft, of a receiver mounted on the shaft adapted to receive sheaves from a binder, and means operated by the weight of said sheaves to cause rotation of the receiver from the shaft in a horizontal plane to turn the sheaves end for end.

14. In a stooking machine, a stook former comprising a pair of horizontally suspended similar sections normally

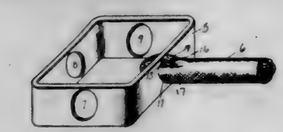
positioned with their floors substantially meeting to accommodate a plurality of sheaves in standing position, means to bind the sheaves together in stook form, toggles normally positioned to maintain the normal



position of the similar sections, and means to operate the toggles intermittently operated from a moving part of the mechanism to snap the sections apart to deposit the stook upon the ground.

---

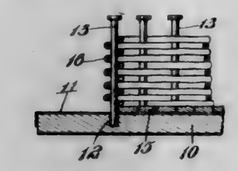
1,566,145. LOOM CLAMP. MARTIN LARSON, San Francisco, Calif. Filed Mar. 1, 1924. Serial No. 696,320. 1 Claim. (Cl. 247—25.)



In a device of the character described, a base, upturned sides secured to said base, said sides being formed upon an arc and tapered from one extremity toward the other extremity and comprising horns adapted to engage the sides of the loom, said sides having recesses formed substantially mid-way of their length.

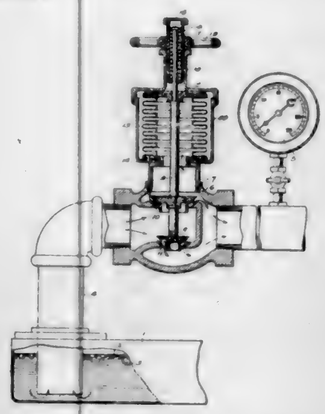
---

1,566,146. METHOD OF FORMING CANDY BASKETS. JAMES LAZARUS, Baltimore, Md., assignor of one-half to Hyland P. Stewart, Baltimore, Md. Filed Aug. 1, 1925. Serial No. 47,619. 7 Claims. (Cl. 107—54.)



1. A method for forming candy baskets which includes forming a basket bottom of candy and placing this upon a base carrying a series of removable pins disposed in plan in accordance with the plan of the basket, and interweaving a strip of candy having an initial temperature of between 335° F. and 350° F. alternately on the outside and inside of the pins until a wall of the proper height has been completed, removing the pins and replacing with stiff candy rods, and then finishing the basket.

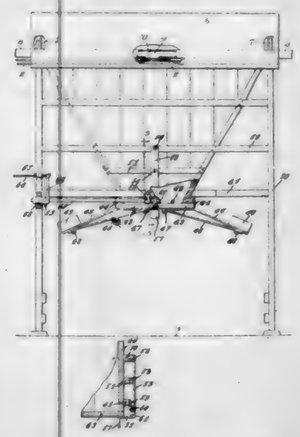
1,566,147. REGULATING VALVE FOR FLUID-PUMPING APPARATUS. CHARLES SIGFRID LENZ and GEORGE EDWARD JUPP, New York, N. Y., assignors, by mesne assignments, to American Marine Device Corporation, New York, N. Y., a Corporation of New York. Filed July 21, 1923. Serial No. 653,030. 2 Claims. (Cl. 137—78.)



1. The combination of a tank adapted to contain a mixture of liquid, a pipe line extending from the bottom of said tank to a source of suction, a valve disposed in said pipe line, a syiphon tube connected to and opening into the valve casing on the suction side of the valve, a connection between the sylphon tube and the valve stem whereby the variation of suction will cause a movement of the tube and thereby a movement of the valve.

---

1,566,148. COTTONSEED CHUTE. JAMES OTIS LINDSEY, Parkdale, Ark. Filed Mar. 8, 1924. Serial No. 697,826. 1 Claim. (Cl. 221—144.)

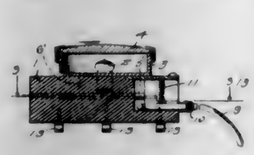


In a device of the class described, a frame, a hopper carried by the frame, hinged gates controlling the lower end of the hopper, shafts journaled on the frame, at opposite sides thereof, arms on the shafts, flexible elements connected to the arms, direction-changing idlers on the frame, the flexible elements being engaged with the idlers, releasing arms on the shafts, and latches located

at opposite sides of the frame and cooperating with the gates to hold them closed, the releasing arms coacting directly with the latches to disengage them from the gates.

---

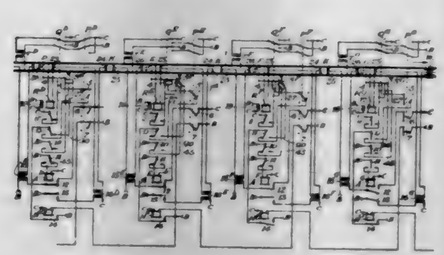
1,566,149. TRAFFIC SIGNAL. JOSEPH H. LYNCH, Brooklyn, N. Y. Filed Feb. 1, 1928. Serial No. 616,360. 1 Claim. (Cl. 177—329.)



A traffic signal comprising a casing, a signal element on said casing, conductors in insulated relation within said casing operatively associated with the signal member, a normally open switch lever having a portion within the casing adapted to bridge said conductors, said lever having a distal end portion extending outwardly through one end thereof and disposed adjacent the base of the index finger and opposite the thumb, and means offset from the said end of the casing pivotally mounting said lever.

---

1,566,150. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1923. Serial No. 674,057. 8 Claims. (Cl. 246—34.)

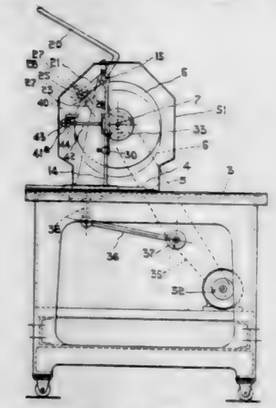


1. In combination, a plurality of successive sections of railway track, means for supplying alternating track circuit current of one relative polarity to the rails of the first and second sections in the rear of an occupied section and for supplying track circuit current of the other relative polarity to the rails of all other sections, and means for supplying an additional train controlling current to each section.

---

1,566,151. MANUFACTURE OF BREAD AND THE LIKE. JAMES FREDERICK MCDONOUGH, Montreal, Quebec, Canada, assignor to James M. Aird Limited, Montreal, Quebec, Canada. Filed Oct. 25, 1923. Serial No. 670,672. 5 Claims. (Cl. 107—8.)

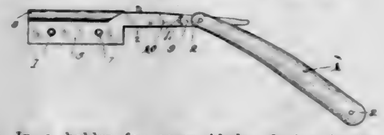
1. In a machine of the type described, a pair of spaced vertical standards, a collar encircling each standard and slidable vertically thereon, a shaft having its ends journalled in said collars, a plurality of circular knives rigidly mounted upon the shaft and rotatable thereon, means for rotating the shaft, a second shaft having its ends rotatably mounted in the standards, an arm rigidly mounted upon each end of the second shaft, links pivotally connected at their upper ends to the



arms and at their lower ends to the collars and means for rotating the second shaft for the purpose of lowering or raising the knives.

---

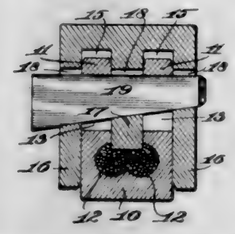
1,566,152. HONING AND STROPPING DEVICE FOR SAFETY-RAZOR BLADES. WALTER B. MCFARLANE, Niagara Falls, Ontario, Canada, assignor of one-fourth to Edwin Poole, St. Catharines. Filed Mar. 18, 1925. Serial No. 16,547. 5 Claims. (Cl. 30—25.)



1. In a holder for razor blades during honing and stropping, the combination of a pair of plates connected together at one end in a manner to prevent movement relative to one another in the plane of their adjacent surfaces, and between which a blade may be received, at least one of said plates being formed of resilient material, the free end of said last mentioned plate normally tending to occupy a position spaced from the other plate in a direction normal to their surfaces; and a shank integral with the free end of each plate, one of said shanks having a recess formed therein in which at least a portion on the other shank is adapted to be received when the plates are in blade holding position.

---

1,566,153. CABLE CLAMP. CHARLES A. MCMUNN, Anaheim, Calif. Filed Feb. 19, 1925. Serial No. 10,229. 3 Claims. (Cl. 24—126.)

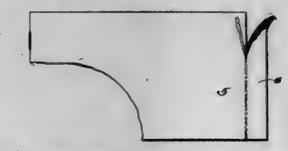


1. A cable clamp comprising a block having a pair of plates spaced apart to form a slot, there being a pair of cable-receiving grooves formed at the lower end of said

slot, a second block provided with a pair of slots that are adapted to receive the plates of the first mentioned block, the overlapping portions of the two blocks being provided with transversely aligned slots and a wedge key adapted to be driven through said aligned slots for drawing the blocks into clamping engagement with the cables that occupy said cable receiving grooves.

---

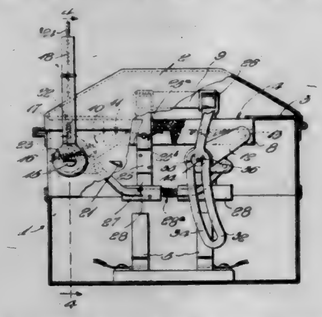
1,566,154. BOOKLET. GEORGE M. MARSHALL, Chicago, Ill. Filed May 10, 1924. Serial No. 712,379. 1 Claim. (Cl. 281—18.)



A booklet comprising a series of leaflets folded upon themselves, means permanently connecting the leaves at their folded portions and a row of stitching extended transversely across the leaves adjacent their normally free edges whereby to permit ready removal of the ends on the line of stitching.

---

1,566,155. MOTOR-STARTING SWITCH. RALPH K. MASON, Bantam, Conn., assignor of one-half to John H. Lancaster, Litchfield, Conn. Filed June 23, 1920. Serial No. 391,032. 5 Claims. (Cl. 200—3.)

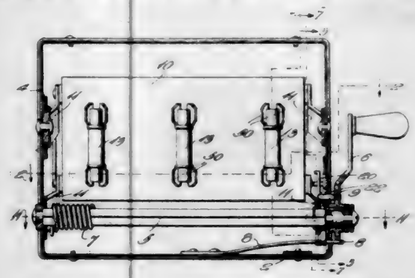


1. In a double break motor starting switch, paired contacts fixedly mounted, a carrier mounted for movement bodily toward said contacts, and a pair of spaced fusibly connected switch blades extending in the same direction from said carrier and adapted to engage said fixed contacts for runing; together with a non-fusible bridge spaced throughout its length from both switch blades and adapted to engage said contacts for motor starting, insulation connecting said non-fusible bridge with both of said switch blades and co-operating with the latter in forming the sole supporting means for said bridge, and means for moving said carrier in the same direction to two distinct positions to move said non-fusible bridge into engagement with said paired contacts and to then present said switch blades to said contacts.

---

1,566,156. MOTOR-STARTING SWITCH. RALPH K. MASON, Bantam, Conn., assignor of one-half to John H. Lancaster, Litchfield, Conn. Filed July 1, 1922. Serial No. 572,237. 10 Claims. (Cl. 74—39.)

1. Control means for a switch having starting and running positions, comprising a track, a track-engaging shoe, the one member being relatively stationary while the other member moves concurrently with the switch, yieldable means mounting said shoe and exerting a constant lateral stress thereon toward said track, a switch tongue associated with said track along which said shoe travels when the switch member is moved to starting position, whereby to shift said shoe laterally from said track until the end of said tongue is reached, and a stop opposite said track for temporarily arresting forward movement of said shoe when it leaves said switch tongue



until said shoe is retrogradely moved and disengaged from said stop, provision being made whereby said shoe and tongue may relatively yield transverse to the plane of movement of the movable member, permitting the shoe to pass the tongue without being shunted from the track when the switch member is moved to off position.

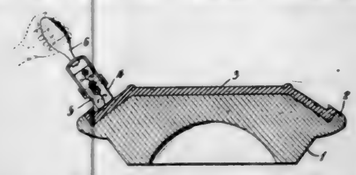
---

1,566,157. ROCKER ATTACHMENT. HILMAR MICHAELSON, Waukegan, Ill. Filed Aug. 18, 1924. Serial No. 732,855. 1 Claim. (Cl. 155—74.)

In combination with the legs of a chair, buttons carried by one of said legs having an annular groove, U-shaped clips attached to the lower end of the other leg, of a rocker, recesses in its forward end and a longitudinal groove intermediate its ends, a plate attached to the rocker and projecting over said recess, a notch formed in one end of the plate providing spaced arms above said recess and adapted to be fitted into the annular grooves of the button, said U-shaped clips fitting into the longitudinal groove for retaining the rocker against movement relative to the legs.

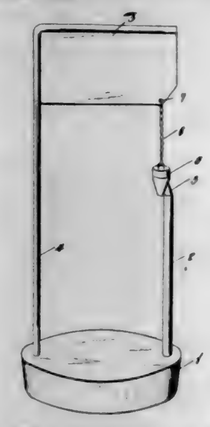
---

1,566,158. METHOD OF AND APPARATUS FOR DECORATING ARTICLES OF PLASTIC MATERIAL. JOHN EDWARD MILLER, Huntington, W. Va. Filed Mar. 28, 1925. Serial No. 19,118. 3 Claims. (Cl. 25—24.)



1. In the method of decorating articles made of plastic material, forming the article mold by providing a jigger-head with a layer of plastic material shaped to form the article, and then impressing a decoration into the surface of said plastic material.

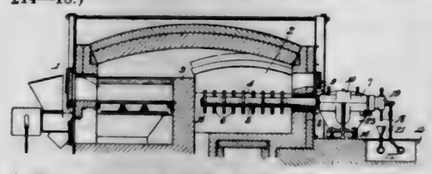
1,566,159. STICK FILE. JAMES H. MILLING, Dallas, Tex. Filed May 14, 1925. Serial No. 30,238. 2 Claims. (Cl. 129—23.)



1. In a stick file, a base member, an impaling pin secured to said base member and having a tapered upper end, a standard secured to said base member and having an offset portion, a flexible member connected to said offset, and a pendant supported by said flexible member and having its lower end tapered to conform to the taper on the pin.

---

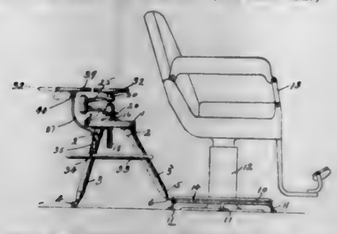
1,566,160. CONVEYER FOR ANNEALING FURNACES. JULIAN E. MONTGOMERY, Wheeling, W. Va. Filed Feb. 14, 1924. Serial No. 692,752. 8 Claims. (Cl. 214—18.)



1. The combination with the heating chamber of a continuous furnace, sheet conveying means operating within said chamber, said means comprising rotary shafts of tubular form disposed transversely of said chamber, sheet-carrying disks mounted on said shafts, bearings located exterior to the outer wall of said chamber constituting the sole means of support for said shafts, gearings for driving said shafts, and means for circulating a cooling fluid through said shaft.

---

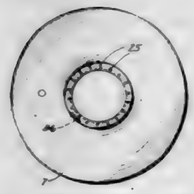
1,566,161. BARBER'S OR DENTIST'S STOOL. ULYSSIS RANDOLPH MOORE, Detroit, Mich. Filed Apr. 21, 1925. Serial No. 24,813. 4 Claims. (Cl. 155—81.)



1. A stool for barber's or dentist's use comprising a stool head having legs rigidly connected thereto, a tubular circular track having means for attachment to the floor in surrounding relation to the pedestal of a barber's or dentist's chair, the outer, peripheral wall of the tubular track having a continuous slot, a radially extending arm, carried by one of the stool legs to extend through the slot, the other legs being provided with casters to roll on the floor.

---

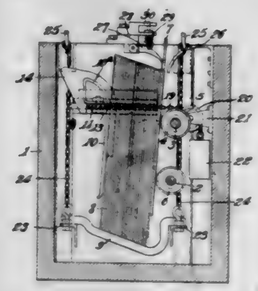
1,566,162. METHOD OF MAKING SUPPORTS FOR SOUND REPRODUCERS. DAVID H. MOSS, Newark, N. J., assignor, by mesne assignments, to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Original application filed Feb. 9, 1924, Serial No. 691,812. Divided and this application filed Mar. 4, 1925. Serial No. 13,009. 7 Claims. (Cl. 113—116.)



1. The method of manufacturing a support for an electromagnetic sound reproducer which consists in stamping an upper base member to substantially the contour of a finished base with a substantially flat central portion, punching out said central portion in a shape to provide a plurality of inwardly extending lips, pressing said lips vertically downward and simultaneously providing an entrance for a conductor into said base, enlarging said entrance and smoothing down the side walls thereof, and providing a plurality of apertures in the top of said base member for cooperation with a plurality of projections depending from a cap secured to the casing of an electromagnetic operating mechanism.

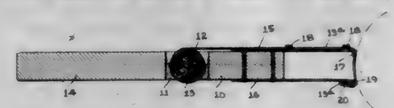
---

1,566,163. SHEET-FEEDING DEVICE. DANIEL NEIHART, Martins Ferry, Ohio. Filed Sept. 15, 1923. Serial No. 662,852. 3 Claims. (Cl. 271—39.)



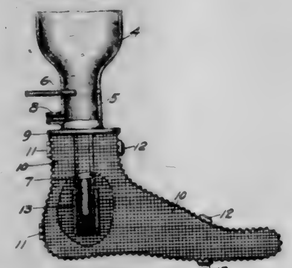
1. A metal-sheet feeding device comprising a fluid-containing tank, shafts journaled within said tank, a plurality of rollers carried by each of said shafts, a support upon which a pack of sheets seats in edgewise position, automatic pack advancing means whereby said pack is held in a forwardly thrust position on said support in which it rests closely against said rollers, said means including fingers having curved upper portions over which the pack is guided to position in introducing the latter means for rotating the uppermost of said shafts for frictionally elevating the foremost sheet of the pack, and means permitting elevation of but one sheet at a time.

1,566,164. GENERATOR-COMMUTATOR CLEANER. HERBERT P. NORTON, Pierpont, Ohio. Filed Apr. 4, 1925. Serial No. 20,708. 1 Claim. (Cl. 51—187.)



In a commutator cleaner, a frame formed at one end to provide a handle and having at its opposite sides thereof a pair of extended guide strips, the outer end of one of said guide strips being inbent, the outer end of the other guide strip being outwardly bent and reverted in closely spaced relation to the guide strip, the frame being formed intermediate the ends thereof with an opening housing a coil of stripped sandpaper, the end of the strip of sandpaper being passed about the ends of said supporting strips and engaged between said reverted portion and the strip to which it is attached, the first named supporting strip being provided at spaced points with guide loops through which the sandpaper strip is directed.

1,566,165. METHOD OF MAKING ARTICLES FROM RUBBERIZED-FIBER COMPOSITION. WILLIAM G. O'BRIEN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 31, 1922. Serial No. 578,743. 11 Claims. (Cl. 18—58.)

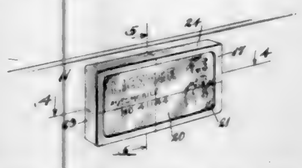


1. The method of treating fibers which comprises coating the fibers with rubber, depositing the coated fibers on a porous mold, and drying the product.

1,566,166. AUTOMATIC WAKE-UP DOLL. GEORGE H. PARSONS, New York, N. Y., assignor to Averill Mfg. Co., New York, N. Y., a Corporation of New York. Filed Dec. 10, 1924. Serial No. 75,004. 5 Claims. (Cl. 46—40.)

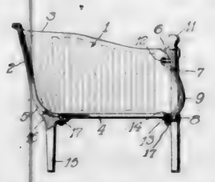
1. In combination with a toy having movable eyes and a sounding mechanism, of a pair of gravity operated bellows within the doll, one of said bellows operatively connected with the eyes and with the sounding mechanism, a tripping device for holding said eye controlling bellows in open position, and a releasing device on the other bellows to release the tripping device.

1,566,167. AUTOMOBILE LICENSE HOLDER. PETER F. PETERSEN and WILLIAM W. KATHAN, Tulsa, Okla., assignors of one-third to Francis S. Brooks, Tulsa, Okla. Filed Dec. 8, 1924. Serial No. 754,616. 6 Claims. (Cl. 40—10.)



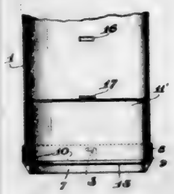
1. A license holder comprising a base plate provided with angularly disposed walls formed with an inwardly faced locking shoulder, and a cover member having angular walls adapted to embrace the walls of said base plate and provided upon their inner face with cooperating outwardly faced locking shoulders disposed to interlock with the face of the shoulder on the walls of the base plate when the cover completely encloses said plate.

1,566,168. PORTABLE FIRE BASKET. JOHN B. RATHMELL, Chattanooga, Tenn. Filed Nov. 12, 1923. Serial No. 674,346. Renewed Nov. 9, 1925. 5 Claims. (Cl. 126—165.)



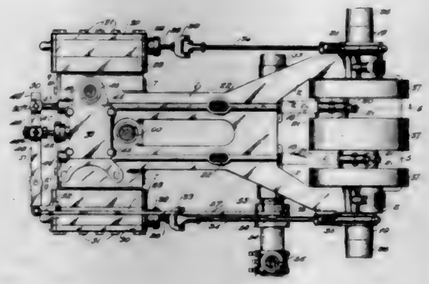
2. A portable fire basket comprising a basket proper having an open front, a wall for said open front, legs arranged upon the opposite ends of said wall, horizontally disposed apertured bracket plates supported by said legs, and downwardly disposed substantially right angularly formed fingers arranged upon the forward portions of the opposite side walls of said basket engageable in said bracket plates, as and for the purpose set forth.

1,566,169. DISPENSING DEVICE. DAVID H. SANKEY and HARRY BROOKS, Pittsburgh, Pa. Filed Sept. 19, 1925. Serial No. 57,471. 2 Claims. (Cl. 226—19.)



1. A dispensing device comprising a carton retaining body having one end fully open and cutting means removably engaged with said end, a handle connected to the opposite end of the body, said body having pairs of diametrically arranged openings formed in the side walls thereof spaced longitudinally throughout its length, and a stop bar removably receivable in said pairs of openings.

1,566,170. STEAM ENGINE. GEORGE W. SOULE, deceased, late of Meridian, Miss., by Constance G. Soule and Clyde W. Soule, executors, Meridian, Miss., and Clyde W. Soule, Meridian, Miss., assignors to Soule Steam Feed Works, a Corporation of Mississippi. Filed July 14, 1923. Serial No. 651,609. 1 Claim. (Cl. 121—138.)

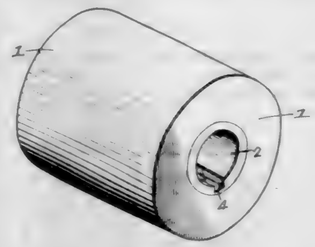


In a steam engine, means for reversing the directional rotation of the engine comprising a reversing valve for controlling two independent steam ports, a control lever mounted at a point remote from the reversing valve, means between the control lever and the reversing valve for moving the said valve by the control lever, said means including a lever of the first class connected to the reversing valve, said first class lever provided with means permitting the same to be changed into a lever of a different class to permit the reversing valve to be moved in an opposite direction having given movement of the control lever.

1,566,171. SCAFFOLD HORSE. WILLIAM J. SPUHR, Leonia, N. J. Filed Jan. 31, 1925. Serial No. 6,102. 3 Claims. (Cl. 304—6.)

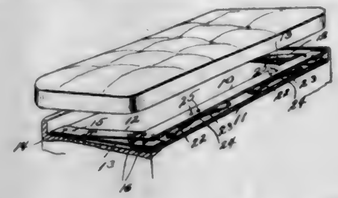
1. A scaffold horse comprising a cylindrical scaffold sustaining member, a pair of supporting plates for said member, each plate provided at its upper end with a curved flange adapted to bear against the side of the sustaining member, interlocking means on the lower ends of said plates whereby they interlockingly engage and are disposed in a divergent relation, said plates being apertured between the interlocking means and the flanges and a clamping bolt adapted to extend through said apertures to hold the plates in proper relation to each other and with the flanges against the sustaining member.

1,566,172. PULLEY. ROBERT J. STOKES, Princeton, N. J., assignor to Thermoid Rubber Company, Hamilton Township, N. J., a Corporation of New Jersey. Filed Nov. 23, 1922. Serial No. 602,833. 1 Claim. (Cl. 64—17.)



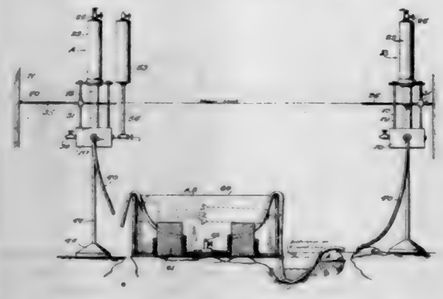
A pulley consisting of finely divided ground asbestos fibres, cotton fibres, fine wires, and a rubber binder, molded into shape and vulcanized under pressure.

1,566,173. SPRING. CHARLES A. STORCK, Buffalo, N. Y. Filed Oct. 25, 1923. Serial No. 670,757. 3 Claims. (Cl. 155—55.)



1. An auxiliary spring device for seat cushions comprising a frame including spaced front members, side members consisting of resilient metal strips secured together at one end and spaced at the other end to engage the spaced front members, said side members being secured angularly to said front members, and a leaf spring between said front members extending in a direction longitudinally thereof.

1,566,174. LEVELING APPARATUS. JAMES J. TYLER, New York, N. Y. Filed Sept. 1, 1923. Serial No. 660,605. 5 Claims. (Cl. 33—209.)

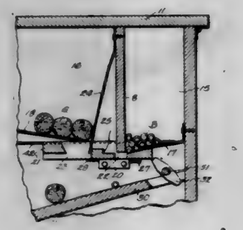


2. A leveling instrument comprising coacting reservoirs for liquid, suitable intercommunication between said reservoirs, an indicating tube mounted on each of said reservoirs and opening into the same, an index for

each of said tubes, means for supporting the indices, means for directly filling one of said reservoirs, a support for each of said reservoirs having slidably adjustable connection therewith, a vessel for each reservoir into the bottom of which said tube opens, and elements adapted to secure the reservoir tube and vessel together.

---

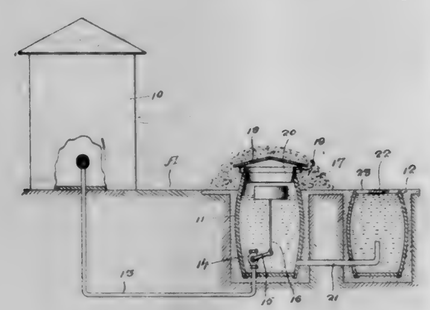
1,566,175. SMOKING SET. JOSEPH VAGHI, Bethel, Conn. Filed Dec. 7, 1923. Serial No. 679,142. 1 Claim. (Cl. 211—8.)



In a smoking set, a cabinet divided into two compartments, one of which constitutes a compartment for matches and the other a compartment for tobacco products, each of said compartments being provided with a discharge opening, a slide having openings therein, an inclined chute beneath said slide, said slide being normally disposed to bring the openings thereof respectively in registration with the discharge openings, members beneath said slide for respectively supporting the articles as they respectively drop into the openings therefor in the slide, means for moving the slide in one direction to cause the articles to fall clear of said members, and means for returning said slide to its normal position, said last means having a portion obstructing the discharge opening of one compartment to prevent the discharge of an article therefrom when said slide is in the discharging position.

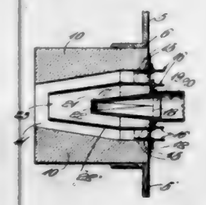
---

1,566,176. WATERER. JOSEPH WEBER, Grinnell, Iowa. Filed Dec. 27, 1924. Serial No. 758,418. 1 Claim. (Cl. 119—78.)



In a stock watering device, an auxiliary water supply tank having an open upper end provided with a beveled edge, a ventilating cover for the tank comprising an annulus having inwardly inclined walls of a size and shape to frictionally engage the beveled edge of the open upper end of the tank, a flange spaced horizontally from the annulus and a substantially cone shaped top supported by the flange.

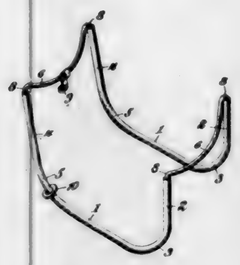
1,566,177. PULVERIZED-FUEL BURNER. WILLIAM H. WHITAKER, Shelbyville, Ill. Filed June 25, 1923, Serial No. 647,681. Renewed June 1, 1925. 4 Claims. (Cl. 110—104.)



1. A pulverized fuel burner comprising a fuel supply nozzle horizontally widened at its discharge end and adapted at its outer end for connection with a supply pipe for pulverized fuel and fluid under pressure, an air inlet pipe surrounding said nozzle in spaced relation therewith and projecting inwardly beyond said nozzle, said pipe being of greater width than height, the top, bottom and side walls of said pipe converging to the inner extremity of the latter and the outer end of said pipe being open to free air to admit the same, and an air inlet passage member surrounding said pipe in spaced relation therewith and projecting inwardly beyond said pipe, said passage member being of greater width than height, the top, bottom and side walls of said passage member converging to the inner extremity of the latter and the outer end of said passage member being open to free air to admit the same.

---

1,566,178. BARREL OR KEG STAND. ISAAC N. WILLIAMS, Foltz, Ind. Filed Oct. 25, 1924. Serial No. 745,874. 5 Claims. (Cl. 248—56.)



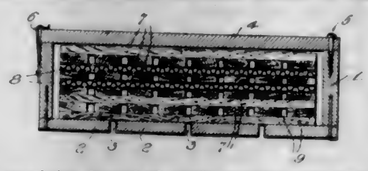
1. A barrel or keg stand, comprising a pair of separate spaced rockers provided with sockets, transverse supports having means for detachable connection with the sockets and adapted to hold the rockers together and to support a barrel or keg in elevated, horizontal position and to permit the same to be tilted, said supports serving as the sole connecting means for the rockers and when disconnected from the latter permitting the stand to be collapsed.

---

1,566,179. ANT TRAP. CHARLES G. WILMARTH, Salina, Kans. Filed July 23, 1925. Serial No. 45,670. 1 Claim. (Cl. 43—121.)

An ant trap comprising a box having a removable top and a slatted bottom, the slats of said bottom being

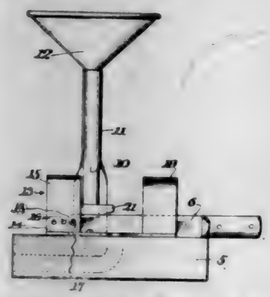
spaced apart to provide entrance slots, a honey comb core substantially filling the entire interior of the box,



said core being formed of woody material, said core being readily removable by inverting the box and being adapted to be used for one catch and then discarded.

---

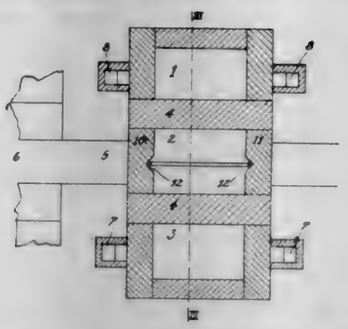
1,566,180. SHOT-CUTTING MACHINE. ELMER J. BARCLAY, Douglas, Ga. Filed Aug. 28, 1924. Serial No. 734,676. 3 Claims. (Cl. 29—1.)



3. A shot cutting machine including a base, a shot anvil mounted thereon and provided with a semi-spherical recess for the shot, a shot delivery tube also mounted on the base and having its opening adjacent the recess of the anvil, an adjustable plate mounted upon the anvil also adjacent the recess but opposed to the slot to regulate the distance therebetween to accommodate various sized shots, a spaced fulcruming member mounted upon the base and provided with a series of pairs of openings, a fulcrum mounted in said opening, a knife having one end connected to said fulcrum for movement diametrically across the shot receiving recess of the anvil, and a pair of plates attached to the base and spaced to provide a guide for the free end of the blade of the knife.

---

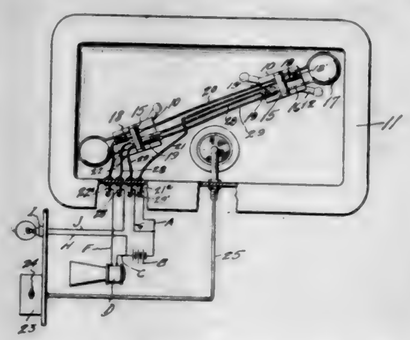
1,566,181. SHEET-GLASS-DRAWING FURNACE. GEORGES BRASSEUR and ARISTIDE ANDRIS, Charleroi, Belgium. Filed Aug. 15, 1923. Serial No. 657,565. 1 Claim. (Cl. 49—17.)



In a sheet glass drawing furnace, a molten glass compartment, a heating chamber at each of two opposing sides of said compartment, the remaining sides of said compartment being without direct heating, the non-heated sides of the compartment being formed with V-shaped grooves to receive a plate to start the glass drawing from the compartment in sheet form with the edges thereof in contact with the non-heated sides of the compartment.

---

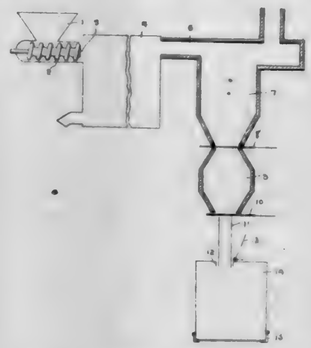
1,566,182. OIL-LEVEL-INDICATING DEVICE. JAMES F. CHAPPELL, Dallas, Tex., assignor, by direct and mesne assignments, to Automatic Oil Controller Company, Dallas, Tex., a Corporation of Delaware. Filed May 20, 1921. Serial No. 471,236. 3 Claims. (Cl. 177—311.)



1. In an oil level indicating device, a tank, a pair of floats, means for mounting said floats in said tank opposite each other and on opposite sides of the transverse and longitudinal axes of said tank, a maximum level electric signal, a minimum level electric signal, a circuit for said maximum signal including circuit closing means comprsing said floats for closing said circuit when either float is raised to a predetermined level, a circuit for said minimum level signal including circuit closing means comprising said floats for closing said circuit only when both of said floats are lowered to a predetermined level.

---

1,566,183. METHOD OF PRODUCING ZINC OR ZINC AND LEAD. CORNELIUS ERIK CORNELIUS, Stockholm, Sweden, assignor to Trollhättans Elektrothermiska Aktiebolag, Stockholm, Sweden. Filed July 27, 1921. Serial No. 487,990. 6 Claims. (Cl. 75—153.)

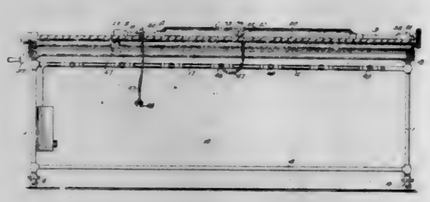


1. The method of producing volatile metals consisting in generating metal vapors by a reduction process, then conducting the vapors, without allowing their contact with the air and subjecting them to a temperature sufficiently low to convert substantially the whole bulk of

condensible vapors into a powdered state, then conducting said powder avoiding its contact with the air and subjecting the powder to a heating and mechanical action to convert the same into a liquid state.

---

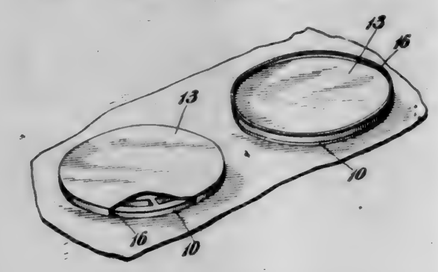
1,566,184. CUTTING MACHINE FOR PRINTING-PRESS ROLLERS. CLAUDE MILTON EARLEY, Brooklyn, N. Y. Filed Dec. 29, 1923. Serial No. 683,481. 4 Claims. (Cl. 82—2.)



1. A machine for trimming the ends and grooving the surface of printing press rollers, comprising means for supporting said rollers for rotation, a cutting tool, means for supporting the effective portion of the cutting tool in operative relation to the path of movement of the surface of the rollers to be cut, and means for heating the effective portion of the tool.

---

1,566,185. ATTACHMENT FOR THE HEATING COILS OF ELECTRICAL STOVES. WILLIAM T. ELMGREN, Vancouver, Wash. Filed Aug. 27, 1925. Serial No. 52,859. 2 Claims. (Cl. 219—37.)



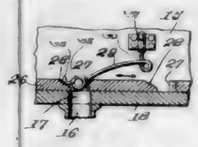
2. In combination with an electrical heating unit comprising a fire brick body having a substantially flat top provided with grooves and electrical resistance elements disposed within the grooves, a cover therefor loosely engaged with and fitting upon the top of the fire brick, said cover being of the same size and shape as the fire brick and having at its edges a rim flange loosely engageable about the side edges of the fire brick, said cover being reversibly engaged with the fire brick.

---

1,566,186. METHOD FOR MANUFACTURING GYPSUM FROM ANHYDRITE. MARIE FARNSWORTH, New Brunswick, N. J. Filed Mar. 11, 1925. Serial No. 14,835. 3 Claims. (Cl. 23—122.)

1. A method for forming gypsum from anhydrite which comprises grinding anhydrite to a size between the limits in which the largest particles do not exceed substantially 135 microns with an average size of 18 microns to that in which the largest particles do not exceed substantially 30 microns with an average size of substantially 7 microns and hydrating the ground anhydrite.

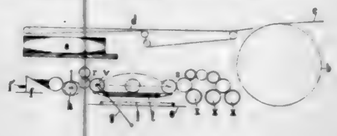
1,566,187. SEED PLANTER. JAMES L. FIFER, Vale, Oreg. Filed July 6, 1923. Serial No. 649,955. 1 Claim. (Cl. 221—125.)



The combination with a hopper having an outlet opening, of a disk rotatable in the hopper and having a plurality of radially disposed openings adapted to successively register with the outlet opening and having their edges beveled at one side, such bevel extending from the upper face of the disk to a point adjacent its lower face, a bracket secured to the hopper, and a resilient ejector supported in the bracket, the ejector including a resilient arm terminating in a coil adapted to successively move into and out of the openings to eject the contents of the hopper through the same, and a curved extension on the coil adapted to successively contact with the bevel edges of the openings.

---

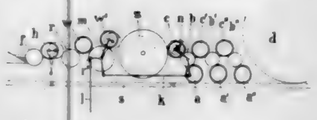
1,566,188. HIGH-SPEED CYLINDER PRINTING PRESS. OSKAR FINKHAUS, Wurzburg, Germany, assignor to Bohn & Herber, Maschinenfabrik und Eisengiesserei, Bavaria, Germany, a Kommanditgesellschaft of German Law. Filed Aug. 2, 1924. Serial No. 729,811. 4 Claims. (Cl. 101—356.)



1. In a one-color high speed cylinder printing press, the combination of a stationary printing cylinder always rotating in one direction, with a taking-off device directed towards the front of the machine, a delivery table near the front edge of the machine, an inking device in which all the movable and ink conducting surfaces are cylindrical and under the taking-off device, an ink duct, said duct mounted under the delivery table and close to the front edge of the machine and a reciprocating carriage coacting with said printing cylinder.

---

1,566,189. INKING MECHANISM OF PRINTING PRESSES. OSKAR FINKHAUS, Wurzburg, Germany, assignor to Bohn & Herber, Maschinenfabrik und Eisengiesserei, Wurzburg, Bavaria, Germany, a Kommanditgesellschaft of German Law. Filed Aug. 2, 1924. Serial No. 729,812. 3 Claims. (Cl. 101—350.)



1. A cylinder inking mechanism for printing presses comprising an ink trough at one end of said press and an impression cylinder at the other end of the press, a rotary ink transfer cylinder interposed between said ink trough and impression cylinder and rotating in one direction, a preliminary ink distributing mechanism interposed between said ink trough and ink transfer cylinder, a form inking mechanism interposed between the impression cylinder and the ink transfer cylinder, a type

form adapted to be brought in contact with said form inking mechanism and impression cylinder, said ink transfer cylinder having a circumference substantially equal to the greatest length of said type form, and means for alternately bringing the cylindrical surface of said ink transfer cylinder in contact with the preliminary ink distributing mechanism and the form inking mechanism.

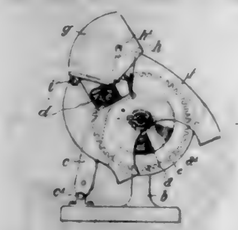
---

1,566,190. PNEUMATIC BUFFER. OSKAR FINKHAUS, Wurzburg, Germany, assignor to Bohn & Herber, Maschinenfabrik und Eisengiesserei, Wurzburg, Bavaria, Germany, a Kommanditgesellschaft of German Law. Filed Aug. 2, 1924. Serial No. 729,814. 4 Claims. (Cl. 188—96.)

1. A pneumatic buffer for absorbing mechanical shocks of a reciprocating body more particularly applicable to printing machines, consisting of a piston adapted to be connected with a reciprocating body and of a corresponding cylinder receiving said piston, one or more small openings being provided in the pressure chamber of the cylinder, said openings so constructed, arranged and adapted to produce a change of pressure in said cylinder on a variation of speed of the reciprocating body and retain said pressure in the cylinder sufficient to accelerate the return speed of the reciprocating body.

---

1,566,191. SAWING MACHINE. MARIE CHARLES LÉON GASTON FLEISCHEL and EMMANUEL LOUIS FRANCOIS MARIE PIRONNEAU, Paris, France. Filed Nov. 8, 1923. Serial No. 673,601. 8 Claims. (Cl. 143—58.)



1. In a sawing machine embodying a circular saw a fromework supporting such saw and an oscillating holder for presenting the log or the like to be sawn to the saw, a protective or guard system comprising a first element fixed to the framework and adapted to guard or shield a portion of the saw, a second element carried by the holder and so shaped as not to prevent the piece to be sawn from being brought into the proper position for sawing, and a third element hinged to one of said elements and so arranged as to be movable towards the piece to be sawn when in place said elements mutually engaging one another in such a way that during the whole period of oscillation, of the holder, the saw is in either direction completely enclosed by the said elements.

---

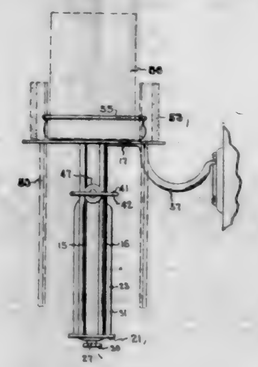
1,566,192. KEY HOLDER. ALBERT JOSEPH FORREST, Chicago, Ill. Filed Jan. 20, 1925. Serial No. 3,697. 2 Claims. (Cl. 224—5.)

2. A flexible, extensible holder consisting of a cylindrical coiled spring, rings associated with the ends thereof, a flexible inelastic limiting connection extending through the spring and connected to the ends thereof, and end caps loosely on the ends of the spring serving

to protect the ends of said connection, the said spring having end eyes and said end caps having inturned end flanges slotted to pass over the eyes.

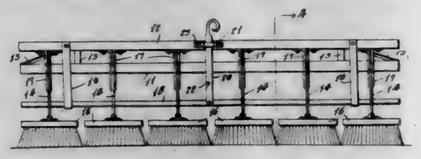
---

1,566,193. SANITARY PASTE-DISPENSING DEVICE. WILLIAM B. FOSTER, Norwood, and THOMAS E. MANNING, Cincinnati, Ohio. Filed June 19, 1925. Serial No. 38,364. 2 Claims. (Cl. 221—60.)



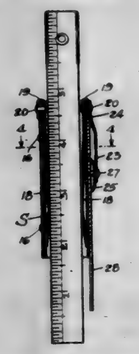
1. In a sanitary paste dispensing device, the combination of a pair of spaced-apart guideways having opposed guiding walls, rollers between said guiding walls, said rollers provided with openings in axial alinement, a support at the lower ends of said guideways for the dispensing end of a paste-tube, a rotary squeezer comprising a pair of shanks having a slot therebetween open at one end, and a handle at the other end of said shanks, said shanks at the open end of said slot arranged to be received endwise through said openings in said rollers and about the butt-end of the paste-tube whereby said butt-end is held between said shanks and arranged in rotative relation between said shanks and between said rollers, and whereby the rotation of said handle causes squeezing of said tube and movement of said rollers lengthwise of said guiding walls.

1,566,194. SWEEPING ATTACHMENT. JAMES M. FREEMAN, Elizabethtown, Pa. Filed Sept. 11, 1924. Serial No. 737,111. 1 Claim. (Cl. 15—78.)



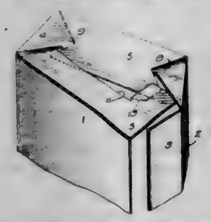
An attachment of the class described comprising an attaching bar, a bar spaced therefrom and rigid therewith and at a higher elevation, U-shaped guides depending from the second mentioned bar, arms passing through said guides and carrying brushes, said arms being pivoted to the first mentioned bar, a lifting bar disposed under said arms, guides for the lifting bar depending from the second mentioned bar and having their openings at a right angle to the openings of the first mentioned guides, and means to secure the lifting bar in elevated position to the second mentioned bar.

1,566,195. TOOL-HOLDING DEVICE. NOEL E. GRANDRAU, Watts, Calif. Filed Apr. 20, 1925. Serial No. 24,709. 7 Claims. (Cl. 24—3.)



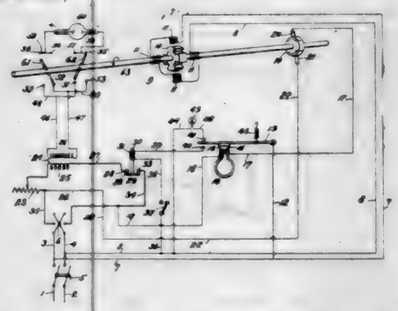
1. A tool holding device comprising a sleeve, a pair of resilient gripping members within the sleeve, and an attaching plate secured with said members to the sleeve by which the latter is attached to the outer wall of a pocket.

1,566,196. FOLDING CONTAINER. GONZALO ANCIRA GARCIA, San Antonio, Tex. Filed May 27, 1924. Serial No. 716,275. 3 Claims. (Cl. 229—39.)



1. A folding box formed of a blank comprising side and end walls, and flaps connected to said walls, each of the flaps having a recess forming a projecting tab, the tab of each flap being adapted to engage with the body portion of the adjacent flap and the tab of the flap which is located at one end of the blank being adapted to be inserted in folded position underneath the flap of the other end of the blank and to become unfolded inside of the box, and interlocking the intermediate flaps between them.

1,566,197. MEANS FOR PROTECTING X-RAY TUBES. HARRY D. GARRETSON, New York, N. Y. Filed Nov. 14, 1922. Serial No. 600,792. 3 Claims. (Cl. 250—34.)



2. In a system of the class described, an X-ray tube, a rectifying switch connected to said tube, a synchronous motor for driving said switch, a transformer having a secondary connected to said rectifying switch and a primary connected to a source of power through a circuit breaking switch and means connecting said circuit breaking switch and the synchronous motor so that all current will be cut off from the primary of said transformer whenever a current in the proper direction does not flow through said tube.

1,566,198. DENTAL X-RAY SYSTEM. HARRY D. GARRETSON, New York, N. Y. Filed Feb. 6, 1924. Serial No. 690,909. 4 Claims. (Cl. 250—34.)

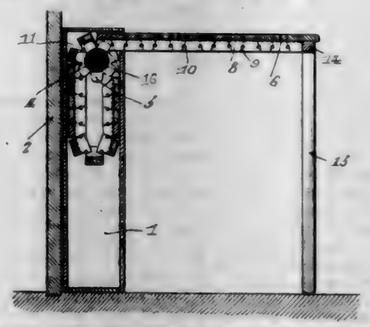
1. In an apparatus of the class described, a transformer, a flexible tube connected to said transformer, an X-ray tube connected to and carried by said flexible tube and means for supplying the X-ray tube with power through said flexible tube.

1,566,199. ROACH EXTERMINATOR. THOMAS GASKINS, Jr., Arcadia, Fla., assignor to De Soto Chemical Company, Arcadia, Fla. Filed May 18, 1925. Serial No. 30,039. 1 Claim. (Cl. 43—131.)

A roach or other insect exterminator, comprising a body of a comparatively short length of tubing, said body having diametrically opposed longitudinal openings in the sides thereof which terminate away from the open ends of the tube, adjacent to the bottom thereof,

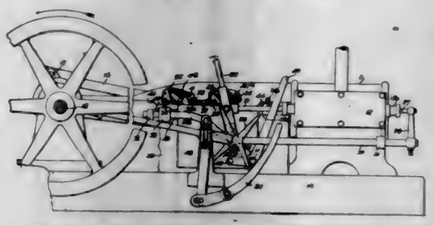
and having arranged therein a longitudinally extending cake of poisonous food, and by virtue of whose weight the body is at all times sustained in one position.

1,566,200. WALL TABLE. NAPOLEON GIARD, St. Michel de Rougemont, Quebec, Canada, assignor to Henry O. Girard, Nashau, N. H. Filed Oct. 11, 1924. Serial No. 743,128. 1 Claim. (Cl. 45—51.)



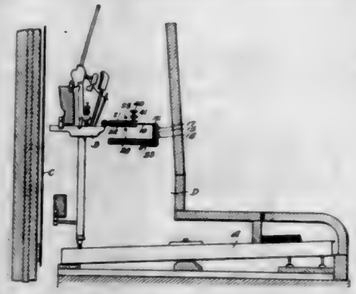
A wall table comprising a box having a slot cut through one of the walls thereof, a shaft journaled within the box, toothed wheels mounted on said shaft, a plurality of slats having brackets secured thereto, pivot pins joining said brackets and adapted for reception between the teeth of said wheels said slats forming an articulated table top adapted to pass through said slot.

1,566,201. STEAM ENGINE. CHARLES R. GIBSON, Cincinnati, Ohio, assignor of one-half to William H. Bruning, Evansville, Ind. Filed May 28, 1921. Serial No. 473,485. 5 Claims. (Cl. 121—146.)



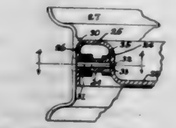
5. In an engine, cut-off valves, auxiliary to the main valve means, operating means for the cut-off valve including a trip element, and means associated with the cut-off valves adapted to be engaged by said trip element for actuating the cut-off valves and positioning them for return movements by the main valve means, a lateral pin on the engine cross head, carrying elements pivotally mounted on said pin, trip members on said carrying elements and adjustable longitudinally to vary the total effective length of the said trip members, cams adjacent to the trip members, members on said trip members adapted to engage said cams at each stroke of the cross head, and means for moving the cut-off valves in a direction opposite to the movement given by the trip member.

1,566,202. ILLUMINATING ATTACHMENT FOR MUSICAL INSTRUMENTS. HUGO A. GILLER, Elmhurst, N. Y. Filed Jan. 2, 1924. Serial No. 684,071. 4 Claims. (Cl. 84—464.)



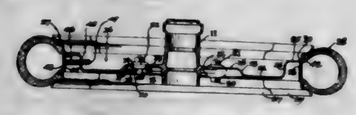
8. A rhythmic illuminating attachment for pianos, organs or similar musical instruments provided into actions for the notes, comprising a circuit including a plurality of lamps corresponding in number to the number of notes of the instrument and arranged in parallel in said circuit, independent circuit closing and breaking elements for each lamp opperable by the movement of the action of the corresponding note, said circuit breaking and closing elements each including a movable contact member and a pair of common fixed contact members, the latter being adjustable for respectively maintaining the circuit to all of the lamps in open condition whereby upon playing of the instrument the circuits to said lamps are broken or in closed condition, whereby upon playing of the instrument, said lamps circuits are closed.

1,566,203. WHEEL AND RIM. FRANK W. GILLMORE, Lorain, Ohio. Filed Aug. 9, 1924. Serial No. 731,108. 15 Claims. (Cl. 301—11.)



1. Means, for securing in position upon a wheel a plurality of rim sections assembled end to end to form a rim, comprising a plurality of members slidably carried by said wheel and each provided with two prongs adapted to engage, upon reciprocation of said member, within two apertures one within each of the abutting ends of two abutting sections, and non-reciprocating screws each adapted to advance and retract one of said members.

1,566,204. WHEEL AND RIM. FRANK W. GILLMORE, Lorain, Ohio. Filed May 28, 1925. Serial No. 33,443. 1 Claim. (Cl. 301—63.)

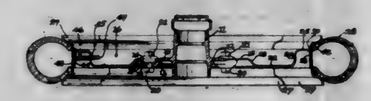


A disc wheel comprising a disc member and a hub member, one of said members being provided with a plurality of bosses arranged in an annulus about the axis of said wheel and the other of said members being provided with a plurality of recesses arranged in a corresponding annulus and each adapted to receive one of said bosses when said members are in assembled relation, and means for securing said members in assem-

bled relation with said bosses seated within said recesses comprising bolts extending through said members at said bosses and recesses and having their disc member engaging faces formed to closely follow the contour of said disc member.

---

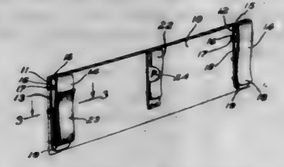
1,566,205. WHEEL AND RIM. FRANK W. GILLMORE, Lorain, Ohio. Filed May 28, 1925. Serial No. 33,444. 5 Claims. (Cl. 301—63.)



3. A disc wheel comprising an annular band substantially parallel to the median plane of the wheel and extending from a radius less than that of the tip of the valve stem of the tire to a radius greater than that of the tip of the valve stem of the tire and disposed rearwardly of the median plane of the tire, and a cylindrical rim supporting felloe portion integral with the disc body of the wheel and connected to said body portion by a portion substantially parallel to said body portion and a portion substantially parallel to said felloe portion.

---

1,566,206. GARMENT SUPPORTER. CHARLES A. GREENE, New York, N. Y. Filed Jan. 27, 1925. Serial No. 5,140. 2 Claims. (Cl. 241—9.)



1. As a new article of manufacture a supporting device for waistband and other garments comprising a strip of elastic contractile material, hooked elements at the opposite ends of said strip including pairs of spring fingers between which the waistband is adapted to be clamped, and a series of teeth outstruck from one finger of each hooked element for biting engagement with the garment waistband, whereby upon engaging the hooked elements with circumferentially spaced points of the garment waistband with the strip under tension, a circumferential contraction of the garment waistband is effected, and a slack produced between said hooked elements and means carried by the medial portion of the strip for engaging said slack to prevent bulging thereof, said means including another pair of spring fingers, one of which is toothed to bite into the slack portion of the waistband.

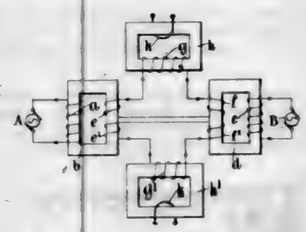
---

1,566,207. RADIUS-ROD ASSEMBLAGE. LEON HARVY GRIGGS, Punta Gorda, Fla. Filed May 29, 1923. Serial No. 642,336. 2 Claims. (Cl. 267—66.)

2. In a rod assemblage of the class described, a ball head provided with diverging screw-threaded arms, tubular radius rods having their ends internally threaded, one end of the rods screwing on the arms of the ball head, nuts on said arms and engaging the ends of the radius rods, and extension rods having their ends screw threaded, one end of each rod screwing into a radius rod and its other end provided with a nut.

---

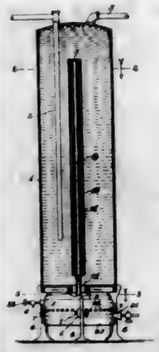
1,566,208. ELECTRIC RESISTANCE WELDING. CECIL ALLARTON HADLEY, Inverness, Scotland. Filed July 8, 1924. Serial No. 724,901. 4 Claims. (Cl. 219—4.)



2. An electric resistance welding system comprising a plurality of transformers, a plurality of primary windings, one on each of said transformers, and a plurality of sources of supply of alternating current connected one to each primary winding, a plurality of sets of secondary windings on the transformers with the windings of each set arranged in series, the winding of the respective sets on one transformer being in the relatively same direction and the winding of the respective sets on the other transformer being in the relatively opposite direction, and a plurality of welding means each including a winding, one set of such secondary windings being opposed to the second set of such secondary windings, whereby when one welding means is receiving maximum current the other is receiving minimum current.

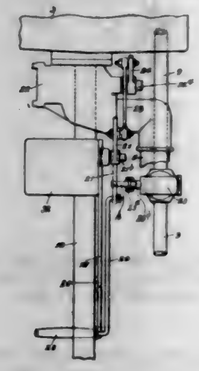
---

1,566,209. WATER HEATER. JOHN GEORGE HAUS, Weirton, W. Va. Filed Apr. 22, 1924. Serial No. 715,258. 1 Claim. (Cl. 122—18.)



A water heater, comprising upper and lower plates, a partition connecting said plates and forming a thin circuitous water chamber or passage having its inlet and outlet at its outer and central portions, said heater having a depending apron perforated adjacent the lower plate of the heater and adapted to receive a burner confined within the apron, said perforations constituting an outlet for air admitted through the bottom of the open apron, lugs projecting radially from the apron, and means for adjustably securing said lugs to the legs of a boiler.

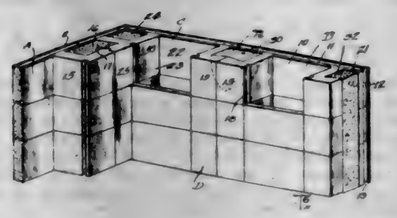
1,566,210. APPARATUS FOR DELIVERING MEASURED VOLUMES OF LIQUID. JOHN RAYMOND STUART HAWKER, ALEXANDER HENRY HAYES, HERBERT WILLIAM SMITH, RALPH VERNON SMITH, and ISAAC CLAUDE VICTOR SMITH, Nottingham, England. Filed Dec. 15, 1924. Serial No. 756,048. 2 Claims. (Cl. 221—100.)



1. In a liquid measuring and dispensing device, a chamber having liquid inlet and discharge conduits conducted therewith, vacuum producing means connected with said chamber, means to vent said chamber, a single valve controlling the inlet of liquid to and the outlet of liquid from said chamber, said valve normally establishing communication between said inlet conduit and said chamber and denying communication between said chamber and said outlet conduit, means automatically operating said valve to a position where it cuts off communication between said chamber and said inlet conduit while continuing to deny communication with said outlet conduit when a predetermined volume of liquid has entered said chamber, releasable means to hold said valve in such position, and means operating automatically upon release of said holding means to move said valve to establish communication between said chamber and said outlet conduit.

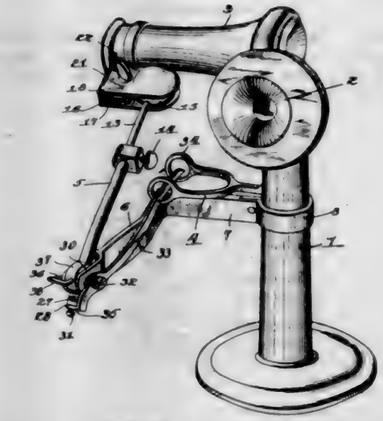
---

1,566,211. BLOCK AND WALL STRUCTURE. TASKER HENDERSON, Des Moines, Iowa. Filed Apr. 7, 1924. Serial No. 704,756. 2 Claims. (Cl. 72—29.)



1. A structure forming a thin wall with spaced pillars comprising courses of blocks each having at its ends lateral extensions provided in their upper parts with pockets tapered toward the ends of the block, the pockets of the successive blocks in each course being adjacent to each other and having a plastic binder and filler.

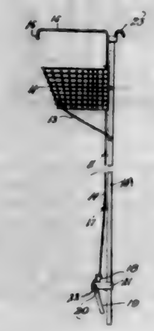
1,566,212. TELEPHONE ATTACHMENT. FAIRFIELD HOBAN, Brooklyn, N. Y., assignor to Hoban Receiver Holder Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1921. Serial No. 444,415. 2 Claims. (Cl. 179—149.)



1. In a telephone attachment, the combination with a bracket and means for holding it in forwardly extending, associated relation with a telephone instrument, of a receiver carrying arm pivoted on the front end of the bracket and swinging between a position upwardly and rearwardly of said bracket and a position forwardly and upwardly of said bracket, a lever fulcrumed on the front end of the bracket and extending rearwardly alongside the same in a position to engage the receiver hook of an instrument, and means carried by the lower end of the receiver carrying arm and operating on the front end of the lever for moving the lever.

---

1,566,213. LOWERING DEVICE. OSCAR T. HOBERG, McKeesport, Pa. Filed Feb. 9, 1923. Serial No. 618,091. 1 Claim. (Cl. 294—22.)

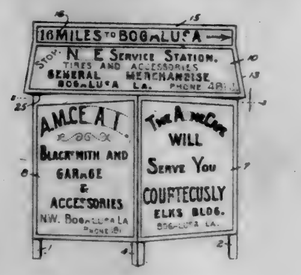


A device of the character described comprising a pole, a basket supported thereon at a point adjacent the upper end thereof, a rod mounted for longitudinal movement on the pole and including a right angularly disposed upper end portion arranged above the basket and projecting beyond the outer side thereof, the free end of said angular portion being down turned, a bracket secured to the pole adjacent the lower end thereof, a

bell crank lever pivoted on said bracket and having one end connected with the adjacent end of the rod, whereby the latter is elevated when the lever is depressed, and resilient means interposed between the pole and the lever to automatically return the latter to normal position.

---

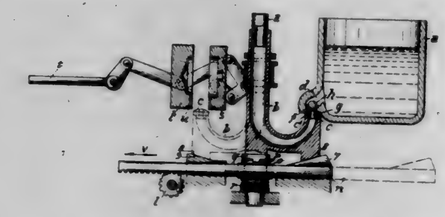
1,566,214. TWO-WAY ROAD SIGN. SAM LEE JONES, Covington, and SAMUEL LILLARD DENNISON, Mandeville, La. Filed Feb. 2, 1925. Serial No. 6,358. 3 Claims. (Cl. 40—125.)



1. A road sign comprising a plurality of walls; two oppositely disposed supports for the sides of said sign; two oppositely disposed supports for the ends of said sign said end supports extending higher than said side supports; and a roof comprising two surfaces intersecting substantially in the plane of the tops of said end supports, the lower edges of said roof lying substantially in the plane of the tops of said side supports and said walls, said roof overhanging said walls and fastened to said supports.

---

1,566,215. CASTING MACHINE. ALBERT KAUFMANN, Berlin, Germany. Filed June 9, 1924. Serial No. 718,926. 18 Claims. (Cl. 22—69.)



1. A casting machine comprising a mold, a crucible for fused metal having an outlet port, a casting reservoir arranged exteriorly of the crucible and movable relatively thereto and into register with said port to receive metal from below the surface of the metal in the crucible, said reservoir being also movable into contact with the mold, and means for acting on said reservoir with compressed gas to discharge the metal from the reservoir into the mold.

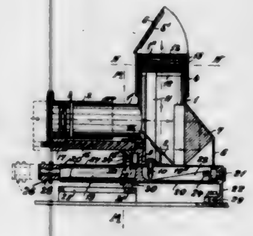
---

1,566,216. WINDSHIELD-CONTROL DEVICE. JOHN R. KING, Ruthven, Iowa. Filed Sept. 17, 1923. Serial No. 663,704. 3 Claims. (Cl. 296—94.)

1. In combination with a hinged windshield, a windshield control device comprising a dash plate having a pair of spaced flanges adapted to be secured to a dash of an automobile having a vertical slot therein, a connector member fixed to the windshield, a sliding plate mounted on said dash plate, a bolt extending through said sliding plate and received in said slot for locking said sliding plate relative to the dash plate, said bolt having its head received between said flanges, and a control bar hingedly connected at its ends to said connector member and to said sliding plate.

---

1,566,217. FOCUSING DEVICE FOR PHOTOGRAPHIC CAMERAS. JOHANNES KRONE, Vienna, Austria, assignor of one-half to Ernst Sander, Vienna, Austria. Filed Dec. 7, 1921. Serial No. 520,758. 12 Claims. (Cl. 95—44.)



1. A focusing device for photographic cameras, comprising in combination, an objective lens, a compartment containing an opal glass screen and surfaces for deflecting the rays of light onto the said screen, a screw rotatably secured to the said compartment and provided with a steep and a flat screw thread, the flat screw threaded part of the said screw being connected with the objective lens in order to adjust the latter, means for rotating the screw, the said means being disposed parallel to the said screw and being adapted to be connected to and adjusted by the adjustment of the objective lens of the photographic camera and further being connected with the said screw in order to rotate during its adjustment the latter and thereby adjust the objective lens of the focusing device, the pitches of the two screw threads being chosen in such a manner, that the adjustment of the objective lens of the focusing device is in proper relation to the adjustment of the objective lens of the photographic camera.

---

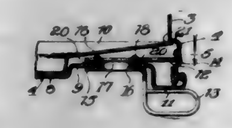
1,566,218. DENTIFRICE. JOHN T. LELAND, Herman, Minn. Filed Aug. 17, 1922, Serial No. 582,492. Renewed Oct. 21, 1925. 7 Claims. (Cl. 167—9.)

1. A dentifrice consisting of two separate compounds one containing iodine and the other containing a sodium compound, adapted to react on contact, to produce sodium iodide.

5. A dentifrice consisting of two separate compounds one containing iodine and prepared chalk, the other containing a sodium salt, starch and soap, adapted on contact to produce a compound containing sodium iodide and iodide of starch.

---

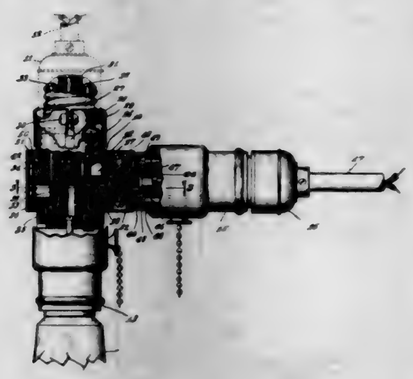
1,566,219. BIRDCAGE. LEWICKI J. LEON, Chicago, Ill. Filed Jan. 10, 1925. Serial No. 1,576. 11 Claims. (Cl. 119—17.)



6. In a bird cage base, the combination with a marginal wall and a separable bottom wall, of latch means for releasably connecting said walls together and comprising a latch member inside of the bottom wall, an actuating member on the outside of said bottom wall and having an upstanding flange extending through a hole in the bottom wall beneath the latch member, said actuating member having oppositely disposed tongues extending upwardly from said flange and into slots in the latch member for connecting the latch and actuating members together.

---

1,566,220. SWIVEL LAMP FIXTURE. GUSTAVUS LILLY, Indianapolis, Ind. Filed Oct. 30, 1922. Serial No. 597,796. 14 Claims. (Cl. 173—334.)



1. An electric-light fixture, comprising a member having a plurality of laterally spaced longitudinally extending electrical conductors therein, a plurality of longitudinally spaced outwardly spring-pressed contacts each of which is in contact with one of said longitudinal extending conductors but insulated from the other conductors and contacts, a second member rotatable on said first member, and a plurality of contacts which are carried by said second member and each of which slides on and is spring-pressed upon by one of the contacts of said first member as the second member is rotated.

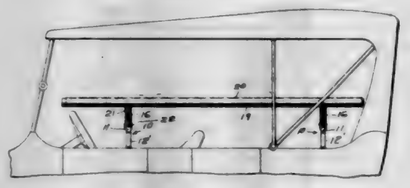
---

1,566,221. VACUUM-JACKETED METALLIC RECEPTACLE. FRANCIS LLOYD LINDEMUTH, Babylon, N. Y., assignor to Niagara Electrolytic Iron Company, Inc., a Corporation of New York. Filed June 4, 1925. Serial No. 34,778. 3 Claims. (Cl. 220—10.)

1. A vacuum-jacketed metallic receptacle having inner and outer metallic walls joined together to provide a space between them which is evacuated, the inner surface of the inner wall being plated with chromium to provide thereon a smooth, sanitary coating fully protecting the metal from which the wall is made against attack of a substance contained within the receptacle.

---

1,566,222. FOLDING BED OR COT. JOHN M. LINE, Springfield, Mo. Filed Sept. 17, 1924. Serial No. 738,177. 2 Claims. (Cl. 5—118.)



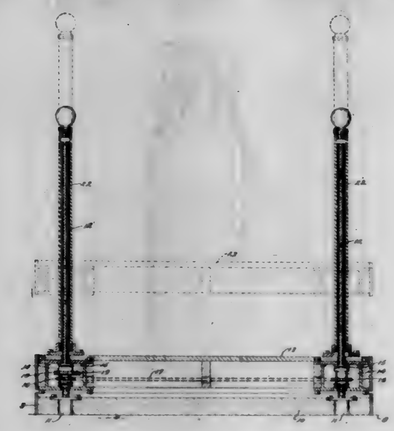
1. In a cot or bed for use in connection with an automobile comprising a pair of transverse bars to be supported above the upper edge of the body of the automobile, extension feet arranged beneath and adjacent to the ends of said bars, a pair of links pivotally connected with each of the extension feet and pivotally connected with the adjacent end of the transverse bar, said feet being movable from one position to another in facial abutment with the transverse bars and adapted, when projected, to extend beyond the outer terminals of the transverse members, legs carried by the transverse bars, and a bottom supported by said legs.

---

1,566,223. MUSICAL-INSTRUMENT ELEVATOR. FLORIAN F. MANOR, Oshkosh, Wis., assignor to Bartola Musical Instrument Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed May 10, 1924. Serial No. 712,312. 7 Claims. (Cl. 187—25.)

5. A musical instrument elevator, comprising upstanding threaded standards, a vertically movable musical instrument platform through the corner portions of which the standards extend, tubular posts mounted on

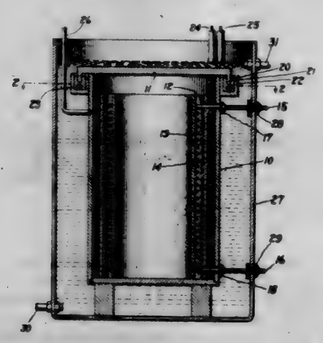
and moving with the platform and extending around and covering the standards, nuts threaded on the standards and journaled in said platform, said nuts pro-



vided with sprocket wheels, a sprocket chain engaging the sprocket wheels, and means carried by the platform for rotating the shafts to raise or lower the platform.

---

1,566,224. FURNACE. WESLEY F. MASSEY, Ballston Spa, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 12, 1924. Serial No. 719,688. 4 Claims. (Cl. 263—49.)

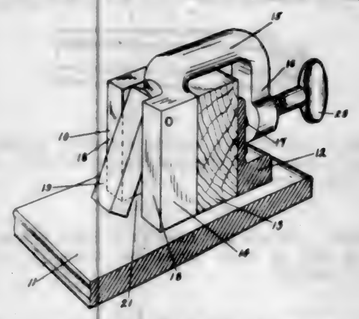


4. The combination with an electric furnace provided with a metallic casing, a cover for said casing, a mass of solder forming a sealed joint between said casing and cover, a receptacle for said solder, and a sheathed electric heating unit in said receptacle, whereby said solder may be melted to release said cover.

---

1,566,225. GAUGE. EMMETT L. MILLS, Jamestown, N. Y. Filed Mar. 24, 1923. Serial No. 627,260. 1 Claim. (Cl. 143—174.)

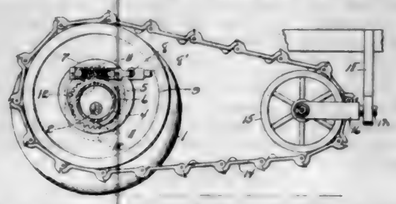
A gauge adapted to be mounted adjustably on a support having a fixed guide and a block in front of said guide, said gauge comprising a main portion which rests on said support in front of said block, an arm which extends over said block and guide, a wingbolt in said arm whereby said block and guide are clamped between said wing-bolt and the main portion of the gauge, said main portion having a pair of vertical uprights, a dog piv-



otally supported by and in the space between said uprights, and a spring normally acting to force the free end of said dog out of the space between said uprights.

---

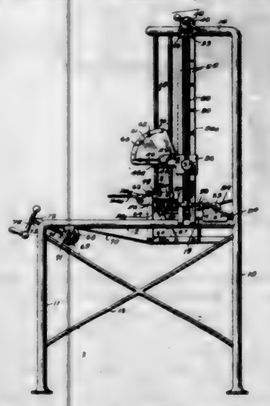
1,566,226. DUAL WHEEL. DABNEY P. OWENS, Lake Worth, Fla. Filed July 19, 1924, Serial No. 727,061. Renewed Nov. 9, 1925. 6 Claims. (Cl. 301—47.)



2. In a vehicle, a main wheel and an auxiliary wheel, means for moving the auxiliary wheel vertically to cause it to engage and disengage the ground, means for locking the auxiliary wheel to the main wheel when the auxiliary wheel is in lowered position and an endless tractor element passing over the auxiliary wheel and an idler for said element.

---

1,566,227. COIL SPREADER. JOHN WILLIAM PLEASANT, Valley Junction, Iowa. Filed Mar. 26, 1924. Serial No. 702,039. 17 Claims. (Cl. 153—16.)

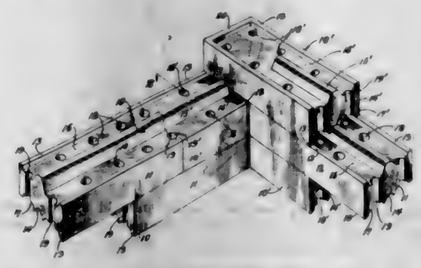


1. In a coil spreader, a frame, a pair of jaws mounted thereon for lateral adjustment, a rod, means for supporting and vertically adjusting said rod, comprising a

pair of upright spaced screw-threaded rods, internally screw-threaded brackets non-rotatably mounted on said screw-threaded rods, and guides for said brackets, said brackets supporting said first rod, and means for simultaneously rotating said screw-threaded rods, operatively connected with the upper ends of said screw-threaded rods, a second pair of jaws ajustably mounted on said first rod, and means for swinging the second pair of jaws.

---

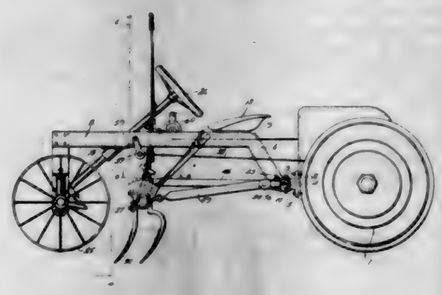
1,566,228. WALL CONSTRUCTION. JOHN F. RYAN, Woodbridge, N. J. Filed Aug. 1, 1924. Serial No. 729,590. 5 Claims. (Cl. 72—88.)



1. In a wall construction, a plurality of identical corner blocks disposed at right angle to each other, a seat provided on each of said blocks to receive an overlapping portion of the next adjacent block, runner blocks, and interlocking means between said corner blocks and said runner blocks.

---

1,566,229. TRACTOR-OPERATED CULTIVATOR. GEORGE H. SCANLAN, New York, N. Y.; Mary G. Scanlan administratrix of said George H. Scanlan, deceased. Filed Feb. 27, 1920. Serial No. 361,815. 5 Claims. (Cl. 97—47.)

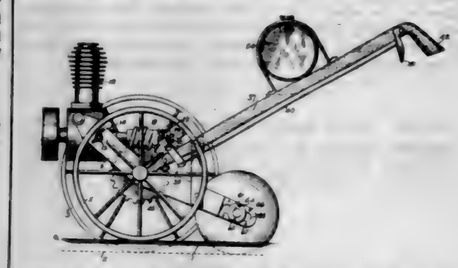


1. A cultivator adapted to be fastened to a tractor in advance of the same, comprising a frame, a transverse bar, a sleeve mounted on said bar, means for clamping implements to said sleeve, a foot operated member for shifting said sleeve longitudinally of the bar, said bar extending transversely of the frame and the line of movement of the cultivator, and a spring for automatically returning said sleeve when released, whereby the cultivator is pushed by said tractor.

---

1,566,230. TRACTOR. GEORGE H. SCANLAN, New York, N. Y.; Mary G. Scanlan administratrix of said George H. Scanlan, deceased. Filed Aug. 13, 1921. Serial No. 491,991. 1 Claim. (Cl. 180—19.)

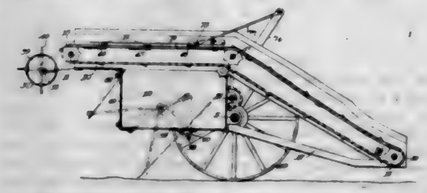
A tractor comprising an engine, a frame pivotally connected with the engine, a pair of traction wheels carried by said frame, a pair of guiding and balancing handles connected with said frame, driving means connected with said traction wheels, said driving means including a gear wheel, a worm meshing with said gear wheel, said



worm being slidably mounted on the crank shaft of said engine, a clutch at one end of said worm for connecting said worm with said crank shaft so as to be rotated thereby and manually actuated means for shifting said clutch.

---

1,566,231. ATTACHMENT FOR POTATO DIGGERS. DANIEL H. SCHLAEGEL, Compton Township, Ottertail County, Minn. Filed Sept. 27, 1921. Serial No. 503,565. 2 Claims. (Cl. 130—30.)



1. In a device of the class described, a framework, a receptacle mounted therein, a conveyor mounted in the framework, for discharging material into the receptacle, vine removing devices extending across the conveyor, and independently movable bars extending parallel with and close to the conveyor, said bars each being pivotally mounted at one end and freely movable at the other end.

---

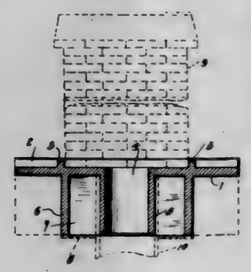
1,566,232. NOZZLE JACK. THIELO B. SCHREITER, San Bernardino, Calif. Filed May 1, 1922. Serial No. 557,584. 1 Claim. (Cl. 248—29.)

A device of the class described comprising a standard formed of sheet metal curved to form a tubular member open at one side and pointed at one end, the opposite end being provided with a pair of ears extending beyond the

tubular portion, a split sleeve pivotally mounted between said ears, means for clamping said sleeve upon a hose, said sleeve being adapted to be swung in a position in axial alignment with said tubular standard and the edges of the open side of said standard being provided with outwardly flared ears to facilitate entry of the hose in said standard when said sleeve is brought into axial alignment therewith, substantially as described.

---

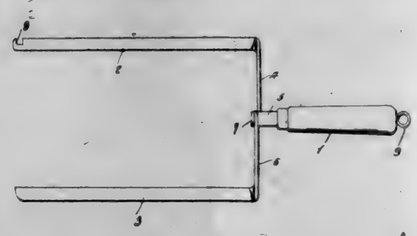
1,566,233. FLUE BASE AND HANGER. WILLIS D. SEPARK, Durham, N. C., assignor to Annie G. Separk, Durham, N. C. Filed July 14, 1923. Serial No. 651,515. 1 Claim. (Cl. 72—95.)



A flue base and hanger comprising an elongated plate having a central opening, longitudinal ribs located at the side edges of and extending throughout the entire length of the plate, transverse ribs spaced inwardly from the ends of the plate and connected to the longitudinal ribs, a collar depending from the bottom side of the plate about the opening therein, and a polygonal rim depending from the bottom side of the plate in substantially vertical alinement with the ribs.

---

1,566,234. HOT-TIN LIFTER. FRANK A. SEWARD, Bantam, Conn. Filed Feb. 21, 1925. Serial No. 10,869. 1 Claim. (Cl. 294—30.)



A pan lifter comprising two bars, each bar having angularly disposed end portions, one of said end portions being pivoted to the other end portion, the latter end portion being extended rearwardly to constitute a handle shank, and the remainder of the bars extending forwardly to provide arms to engage a pan.

---

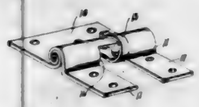
1,566,235. TOURNIQUET. JOHN HENRY SHEEHAN, Astoria, N. Y. Filed June 27, 1925. Serial No. 40,037. 3 Claims. (Cl. 128—327.)

1. A tourniquet comprising a flexible element adapted to be pased about the member to be bound, a twisting handle element through which both ends of said flexible element are passed to give said flexible element a looped

form, and coacting fastener means on said twisting element and on said flexible strand adapted to engage each other for holding the tourniquet in twisted form.

---

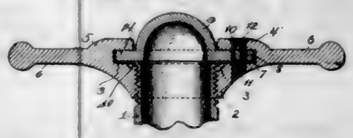
1,566,236. HINGE. ANSOPH SKURDAL, Belmont, Mont. Filed Mar. 21, 1924. Serial No. 700,864. 1 Claim. (Cl. 16—172.)



A hinge comprising a bifurcated plate having one of its edges rolled upon itself, such rolled edge being provided with a cut-out depression, a second plate having one edge transversely curved and having pivotal engagement with the other rolled part, and a leaf spring secured to the last mentioned plate and longitudinally curved and resiliently engaging the first mentioned rolled part whereby to retain the two plates in adjusted position.

---

1,566,237. CLOSURE DEVICE. ALBE CARLTON SPALDING, Fort Monroe, Va. Filed Jan. 11, 1923. Serial No. 612,029. 5 Claims. (Cl. 220—24.)

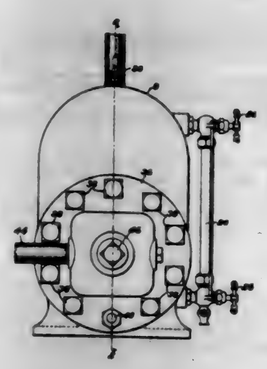


1, A closure for a tubular article comprising a sleeve adapted to fit upon the article and move longitudinally thereon, a cap permanently mounted upon the sleeve in position to extend across the article and movable laterally relative to the sleeve in a plane parallel with a diameter of the sleeve, and means carried by the sleeve to engage and positively clamp the cap at its edge upon the tubular article.

---

1,566,238. STEAM TRAP. JOSEPH E. SWENDEMAN, Philadelphia, Pa. Filed Mar. 13, 1920. Serial No. 365,590. 3 Claims. (Cl. 137—103.)

2. In a steam trap, the combination of a casing having a float chamber provided with an inlet and a valve seat presenting an outlet from said chamber, a horizontally sliding normally closed valve cooperating with said seat, two levers fulcrumed one above and the other below the axis of said valve and connected therewith to slide



said valve horisontally along said axis, one of said levers carrying a float and the other presenting a weight constantly tending to lift said float.

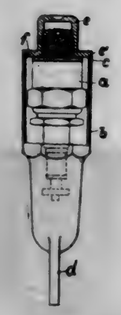
---

1,566,239. TREATMENT OF TRANSPARENT MATERIAL. CHARLES S. SWETT, West Roxbury, and WILLARD E. SWIFT, Worcester, Mass., assignors to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed Aug. 31, 1923. Serial No. 660,442. 6 Claims. (Cl. 91—68.)

1. The herein described process of treating transparent panel material, which consists in subjecting the surface of said material to lubricated friction.

---

1,566,240. PROTECTIVE CASING FOR RESERVE SPARK PLUGS. WILHELM WALTER, Heidelberg, Germany. Filed Feb. 27, 1925. Serial No. 12,184. 3 Claims. (Cl. 206—16.)



1. An emergency spark-plug carrying device adapted to be mounted on a support comprising a casing having an open end for receiving the body of the plug and a closed end adapted for engagement with a support, and a spark-plug carrying cap member detachably fitted to the open end of the casing and also adapted to engage with the support.

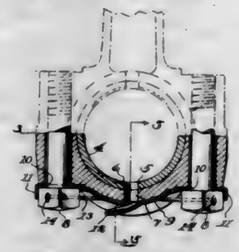
---

1,566,241. PROCESS OF PRODUCING MATTE FINISH. WILLIS R. WHITNEY, Niskayuna, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 28, 1924. Serial No. 716,516. 5 Claims. (Cl. 41—42.)

2. The process of producing a matte finish upon an article having a surface layer containing a substantial proportion of normally shiny organic substance which consists in chemically decomposing said organic substance of the surface.

---

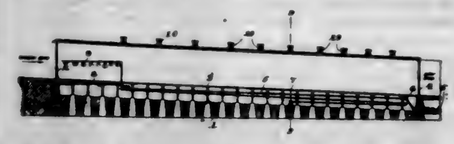
1,566,242. CONNECTING ROD. ALBERT M. WILLCOX, Savannah, Ga. Filed Nov. 20, 1924. Serial No. 751,106. 10 Claims. (Cl. 184—13.)



1. In a connecting rod, a split bearing, studs for securing the bearing together, a plate mounted upon the studs, means carried by the plate for locking the studs in a fixed position, a tongue in the center of the plate, the base of the tongue registering with an aperture in the bearing.

---

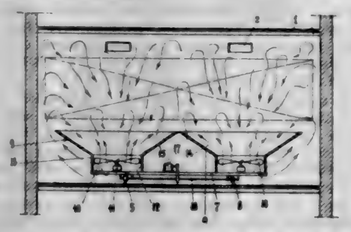
1,566,243. PIPE SYSTEM FOR KILNS. PATRICK M. WILLIAMS, North Wilkesboro, N. C., assignor to Moore Dry Kiln Company, Jacksonville, Fla., a Corporation of Florida. Filed Oct. 15, 1923. Serial No. 668,776. 14 Claims. (Cl. 34—47.)



5. A dry kiln having a heating system therein, a misty vapor spray system located within the kiln below the material being treated, and a second misty vapor spray system located above said first-mentioned spray system.

---

1,566,244. DRYING PLANT. PILADE BARDUCCI, Milan, Italy. Filed Oct. 8, 1923. Serial No. 667,382. 6 Claims. (Cl. 34—19.)

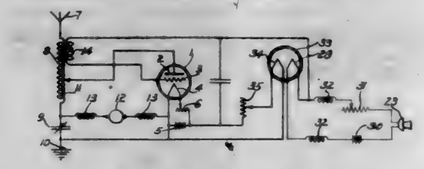


5. In a drying chamber in which the material to be dried is located in the middle zone between the roof and the floor, a travelling carriage, one or more casings carried by said carriage, each casing having a mouth elongated in a direction transverse to the path of travel

of said carriage and opening in front of the space for the material, a second mouth smaller than the first one and joined thereto, and agitating means located in said second mouth.

---

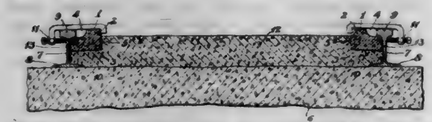
1,566,245. RADIOTELEPHONE SYSTEM. QUINCY A. BRACKETT, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1921. Serial No. 497,949. 5 Claims. (Cl. 250—17.)



3. In a radio device, a vacuum-tube generator, a grid condenesr associated therewith, a grid leak for said condenser, said grid leak including a pair of electron-emitting electrodes.

---

1,566,246. RAILWAY PAVEMENT AND METHOD OF MAKING IT. MATTHEW F. BRAMLEY, Cleveland Ohio. Filed July 18, 1924. Serial No. 726,758. 9 Claims. (Cl. 238—9.)



1. The method of making a railway construction which consists in temporarily supporting elongated rail curbing so as to extend lengthwise alongside of the inner sides of a pair of parallel rails forming a track, and so as to be spaced therefrom, and then supplying an induratable mass of material underneath said curbing.

---

1,566,247. PROCESS OF VULCANIZATION OF CAOUTCHOUC. JAMES M. GILLET, Milwaukee, Wis., assignor to The Goodyear Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 31, 1922. Serial No. 578,787. 15 Claims. (Cl. 18—53.)

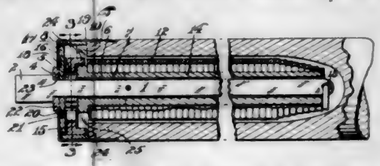
1. The method of making a fibrous material which comprises mixing a relatively small quantity of fibers in a rubber solvent, dissolving a relatively small quantity of rubber in said solvent, precipitating the rubber on the fibers, introducing sulphur dioxide and hydrogen sulphide to said liquid, so straining said fibers from the liquid as to effect a matted formation, and drying the mat.

---

1,566,248. SHADE ROLLER. RALPH T. HENDRICKS and WILBUR C. PATTERSON, Indianapolis, Ind.; said Ralph Hendricks assignor to said Wilbur C. Patterson, Indianapolis, Ind. Filed Aug. 14, 1924. Serial No. 731,971. 4 Claims. (Cl. 156—36.)

1. In a spring shade roller the combination with a shade roller, of a cup secured at one end of said roller to rotate therewith and having radial slots therein, a spear and a ratchet hub on said spear having oppositely and vertically disposed ratchet notches each provided with a straight wall and with an inclined wall, a one piece pawl ring surrounding said hub and having pawls arranged to be dropped by gravity into engagement with said ratchet notches and mounted within said cup, rearwardly extending fingers on said ring operating in said radially disposed notches to prevent the ring from rotating while permitting the same to move vertically relatively to said hub, and a closure cover for said cup.

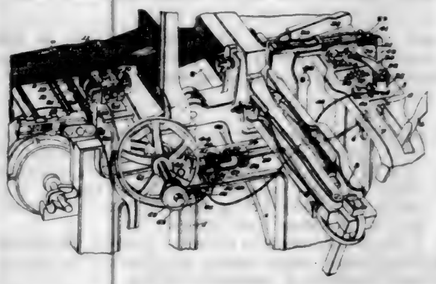
3. In a shade roller the combination with a spear and a dogging mechanism, of a cover cap mounted on the end of the roller and inclosing said dogging mechanism, said cap having a central aperture for the pro-



jection of said spear, a disc mounted on said spear, stationary with respect to said cap, for closing said opening, said cap and disc having relative movement and said disc and cap having annular interlocking parts for the exclusion of foreign particles from said cover.

---

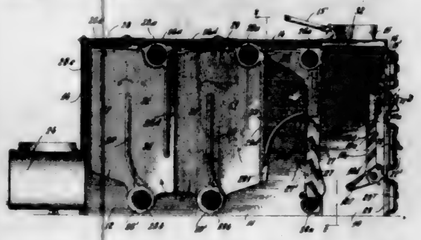
1,566,249. COMBINED WARP AND WEFT STOP MECHANISM FOR LOOMS. HAROLD HOBBER, North Billerica, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 21, 1925. Serial No. 45,014. 10 Claims. (Cl. 139—360.)



1. In a loom, the combination of warp stop mechanism and weft stop mechanism, a controller associated with each of said mechanisms, a single dog adapted to be operatively positioned to stop the loom by either of said controllers, and means actuated by a going part of the loom to actuate the dog when it is operatively positioned by either controller to effect loom stoppage on the backward movement of the lay.

---

1,566,250. BOILER. FRANK B. HOWELL, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 4, 1921. Serial No. 442,369. 15 Claims. (Cl. 110—75.)

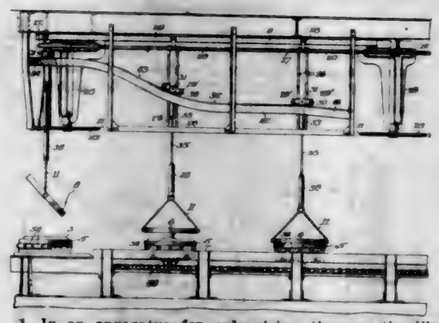


1. A boiler comprising a fuel receptacle, flues, a vertical compartment arranged to the rear of said fuel receptacle substantially coextensive in height therewith and provided near its top with air intake openings, and a partition arranged in said compartment dividing the same transversely to form a combustion chamber and an air heating chamber above said combustion chamber;

said partition having a plurality of discharge openings therein for the passage of heated air into said combustion chamber, substantially as specified.

---

1,566,251. TIRE-VULCANIZING APPARATUS. CARMON A. MYERS, Akron, Ohio, assignor to Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 1, 1918. Serial No. 247,770. 23 Claims. (Cl. 198—19.)



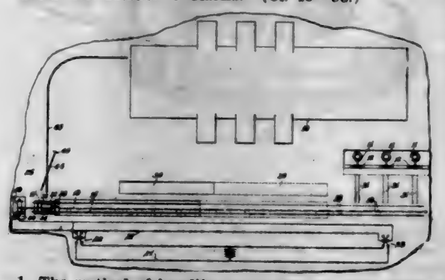
1. In an apparatus for vulcanizing tires or the like, the combination of a series of vulcanizers, a loading station and an unloading station, a conveyor leading from said loading station to said vulcanizers and to the unloading station and means for opening the molds while they are moving and before they reach the unloading station.

6. In an apparatus of the character set forth, an open top vulcanizer in which a plurality of molds may be received, conveying mechanism at the side of the vulcanizer, a mold moving element on the conveying mechanism, and means movable in synchronism with the conveyor to raise and lower the mold lid while the mold is in motion.

8. In an apparatus of the character set forth, an open top vulcanizer, a horizontal conveyor at the side of the vulcanizer, means for moving a mold on the conveyor, a second conveyor above the first conveyor, means to move the two conveyors in synchronism, a lid carrying device of the second conveyor, and means to raise and lower the device during the movement of the conveyor.

---

1,566,252. METHOD OF AND APPARATUS FOR HANDLING CAVE GLASS IN DRAWING OPERATIONS. CHARLES A. SMITH, Independence, Kans., assignor to The National Sash and Door Company, Independence, Kans., a Corporation of Kansas. Filed Feb. 24, 1925. Serial No. 11,116. 9 Claims. (Cl. 49—53.)



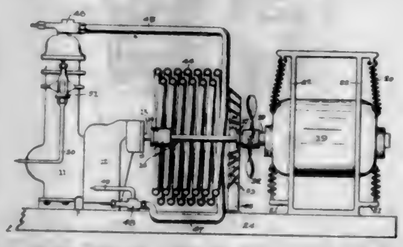
1. The method of handling cave glass in glass drawing operations, comprising the draining of a glass receptacle under the action of heat, the deposit of said glass in a plastic condition into a receptacle, the transfer of said receptacle with the still plastic glass from the draining station to a melting tank, and the deposit of said glass in a plastic condition into said melting tank.

1,566,253. CAPPING HORSE. CHARLES A. SMITH and HERBERT L. HILLYARD, Independence, Kans., assignors to The National Sash and Door Company, Independence, Kans., a Corporation of Kansas. Filed Feb. 28, 1925. Serial No. 12,214. 16 Claims. (Cl. 49—14.)

1. A capping horse for glass cylinders comprising a plurality of carriers arranged in a longitudinal series and each capable of supporting a segregated cylinder section, a transverse fulcrum for each carrier, and a series of fulcrumed beams each supporting a plurality of said transverse fulcrums.

---

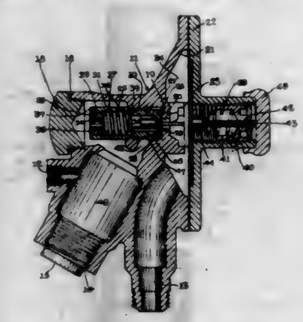
1,566,254. DRIVE UNIT. CHARLES C. SPREEN, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 2, 1923. Serial No. 666,087. 2 Claims. (Cl. 64—99.)



1. In combination, a first device, a second device, a normally rigid shaft drive connecting said devices, means resiliently supporting at least one of said devices to permit translatory movement of said device perpendicularly of the axis of said shaft drive, and means interposed in said drive adapted to permit such movement in any direction and to also permit operation of one of said devices independently of the other device when the operation resisting torque of such other device reaches an abnormal value.

---

1,566,255. REFRIGERATING APPARATUS. CHARLES C. SPREEN, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 13, 1923. Serial No. 668,358. 1 Claim. (Cl. 50—23.)

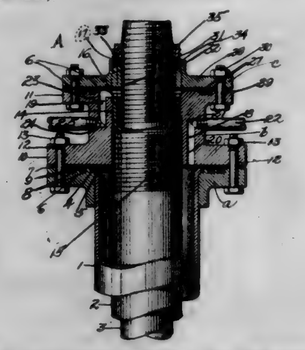


An expansion valve, comprising a diaphragm, a casing member having a portion of appreciable thickness and an aperture through said portion, and having also an inner face concentric with said aperture and formed and arranged to closely engage one face of said diaphragm except over the area of said aperture, a spring disposed

within said aperture having one end engaging the exposed portion of said face of said diaphragm and normally effective to move said diaphragm from said member, an abutment engaging the remote end of said spring, adjustably mounted in said aperture, and itself provided with a bore therethrough, an instrument extending through said bore and engaging said diaphragm and effective to forcibly move said diaphragm from said member, and means arranged to normally overlie said bore and said instrument removable to permit operation of said instrument.

---

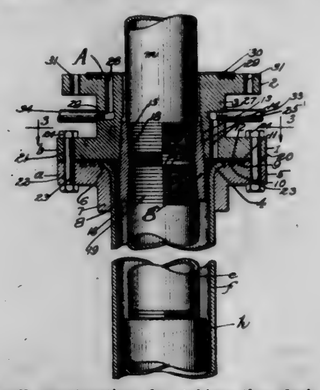
1,566,256. CASING CLAMP. WILLIAM A. TROUT and CHARLES R. BUTLER, Long Beach, Calif., assignors of one-third to Chester A. Rasmussen, Long Beach, Calif. Filed Apr. 11, 1922. Serial No. 551,465. 9 Claims. (Cl. 166—14.)



2. A well construction including the outer casing having at the top a fastening base, a string of tubing extending into the casing and provided at the top with a threaded portion of greater extent than the extent of the normal take up in the slack in the string of tubing, and a supporting member having an adjustable play on said threaded section of the tubing corresponding to the extent of the slack to be taken up therein and adapted, when the slack is removed from the tubing, to be rigidly secured to said fastening base.

---

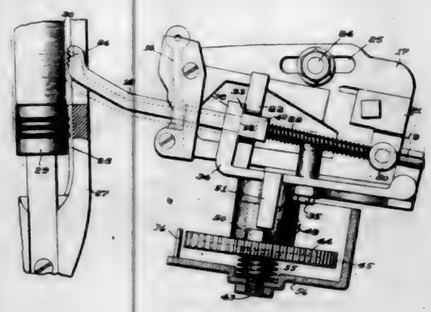
1,566,257. CASING CLAMP. WILLIAM A. TROUT, Los Angeles, Calif., assignor of one-third to Chester A. Rasmussen and one-third to Charles R. Butler, both of Long Beach, Calif. Filed Oct. 15, 1923. Serial No. 668,698. 5 Claims. (Cl. 166—14.)



3. A well construction for taking the slack out of tubing strings and suspending the same in position, comprising tubing engaging members having bores of different diameter and provided with external offset flange portions, means for forming a gas tight joint between said flange portions, and the bores of said members being internally threaded, a member double-threaded interiorly and also provided with external threads whereby adjacent tubing sections may be connected by the internal double threaded portion of said member and then the external threaded portion of said member may be connected with the interior threads of the bore of one of said tubing engaging members.

---

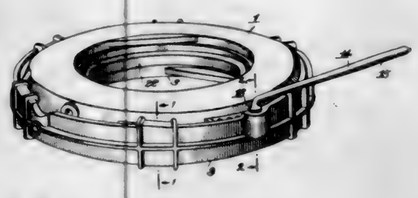
1,566,258. FEELER MECHANISM FOR LOOMS. GEORGE H. WILLARD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 28, 1925. Serial No. 46,534. 12 Claims. (Cl. 139—270.)



1. In a feeler mechanism for looms, the combination of a feeler, a feeler holding detent for holding the feeler in a frontward position, means for causing the feeler to swing laterally into an inoperative position beyond the reach of the filling where it is held by the detent during its periods of inactivity, a lock for holding the feeler from lateral movement in either direction during its periods of inactivity, and means of freeing the feeler from the detent and lock at intervals.

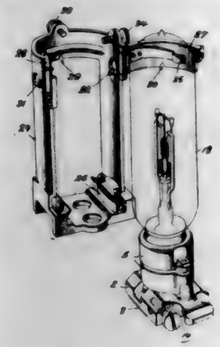
---

1,566,259. TIRE MOLD. ARTHUR REID COLVIN, Bloomfield, N. J. Filed Mar. 10, 1925. Serial No. 14,509. 7 Claims. (Cl. 18—43.)



1. A tire mold comprising upper and lower mold sections, an annular section forming therewith an interior cavity for the reception of a tire to be vulcanized, said upper and lower sections being provided on their peripheral faces with equally spaced, outwardly extending projections, the projections on the upper section being arranged in superposed and staggered relation with reference to the projections on the lower section when the sections are mated, and an annular ring fitting circumferentially about the said upper and lower sections and adapted to engage said projections to lock the sections together.

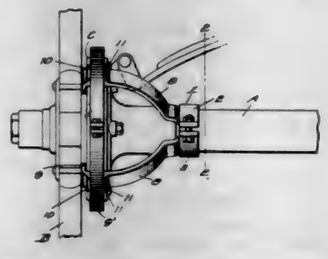
1,566,260. LIGHT-FOCUSING APPARATUS. CROMWELL A. B. HALVORSEN, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 30, 1922. Serial No. 571,966. 11 Claims. (Cl. 88—24.)



5. In combination with an optical system, a lamp, mounting means for said lamp, means for moving the lamp in one direction, means for moving the lamp at right angles thereto, means for rotating the lamp in one plane and means for rotating the lamp at right angles to the first plane.

---

1,566,261. EMERGENCY-WHEEL-SUPPORTING DEVICE. PHILIP LA DELFA, Cuylerville, N. Y. Filed Nov. 7, 1924. Serial No. 748,420. 1 Claim. (Cl. 301—111.)



Means for preventing the lateral displacement of the drive wheel of a vehicle with respect to the axle housing comprising a band adapted to encircle the axle housing, arms extending laterally and diverging outwardly from said band, the outer ends of the arms terminating in inwardly extending fingers, said fingers being adapted to be disposed between the drive wheel and the brake drum associated therewith to permit the drive wheel to rotate, a pair of spaced lugs extending outwardly from each arm adjacent its finger, and a locking band encircling said arms and disposed between the lugs on each arm for preventing the outward movement of the fingers with respect to the wheel and the brake drum.

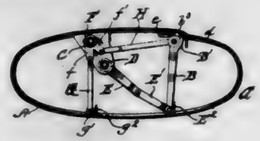
---

1,566,262. HAMPER. FRANK D. LANDER, Jr., Highland Park, Ill. Filed Sept. 28, 1922. Serial No. 591,086. 5 Claims. (Cl. 217—122.)

1. A hamper comprising a bottom having straight sides and curved ends, an elliptical hoop, and veneer panels connecting the sides and ends of the bottom with with the hoop, the major axes of the bottom and the hoop being in the same vertical plane, the ends of the bottom being of less convexity than the ends of the hoop to provide an increased bottom area and to position the connecting end panels to better resist lateral compression.

---

1,566,263. APPARATUS FOR MOLDING HOLLOW CONCRETE WALLS. AXEL G. W. WEDBERG, Floral Park, Long Island, N. Y. Filed May 3, 1920, Serial No. 378,533. Renewed Nov. 22, 1921. Serial No. 517,152. 17 Claims. (Cl. 25—131.)



1. A collapsible form for molding hollow concrete walls embodying a body formed of a substantially continuous shell, and means on the edge portions of said body for limiting the movement of said edge portions so as to preclude a relative separating movement between said edge portions and the formation of an opening or space intermediate said edge portions, in combination with operating means for expanding and contracting said body.

---

1,566,264. WELL-PUMPING MECHANISM. HARRY F. RANDOLPH, Pittsburgh, Pa.; Agnes Porter Randolph, executrix of said Harry F. Randolph, deceased, assignor to Agnes Porter Randolph, Pittsburgh, Pa. Filed Sept. 21, 1922. Serial No. 589,539. 3 Claims. (Cl. 74—14.)

1. In deep well pumping mechanism, the combination with a pumping cable of a drum to which said cable is attached, a rotator power-driven in a constant direction, crank connections between said rotator and said drum whereby the constant rotation of the rotator oscillates the drum in opposite directions whereby the cable is alternately wound up and unwound on said drum, said rotator being provided around its axis with a series of radially disposed and progressively spaced wrist pin connections for varying the throw of the crank connections whereby the arc of the drum's movement may be adjusted.

Patents Nos. 1,566,265 to 1,567,024.

# THE OFFICIAL GAZETTE

OF THE

# United States Patent Office.

Vol. 341—No. 4. TUESDAY, DECEMBER 22, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Dec. 11, 1925.*

*Son Brothers & Co., their assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Yale and Towne Mfg. Co., 9 East Fortieth Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Son Brothers & Co., doing business at 2124 Broadway, San Francisco, Calif., and in Meriden, Conn., under the name of Yale Cutlery Co., No. 58,930, dated December 25, 1906, and the notice of such proceeding sent by registered mail to the said Son Brothers & Co. at the said addresses having been returned by the post office as undeliverable, notice is hereby given that unless said Son Brothers & Co., their assigns or legal representatices, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

## Interference Notices.

U. S. PATENT OFFICE, *Washington, Dec. 5, 1925.*

*Continental Candy Company, its assigns or legal representatives, take notice.*

An interference has been declared by this Office between the application of Hawley & Hoops, of 271 Mulberry Street, New York, N. Y., for registration of a trade-mark and trade-mark registered June 15, 1913, No. 92,571, to Novelty Candy Company, of 346 Claremont Avenue, Jersey City, N. J. The assignment records of this Office show that said trade-mark was assigned to Continental Candy Company, of 37 Wall Street, New York, N. Y., and because of prima facie evidence in the record to the effect that Continental Candy Company is no longer in business, notice is hereby given that unless said Continental Candy Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Dec. 8, 1925.*

*Hudson Condensed Milk Co., Inc., its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of The United Dairy Company Inc., Barnesville, Ohio, for registration of a trade-mark and trade-mark registered February 23, 1915, No. 102,799, to Hudson Condensed Milk Co., Inc., 81 Fulton Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Hudson Condensed Milk Co., Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Hudson Condensed Milk Co., Inc., shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Dec. 4, 1925.*

*Charles C. Copeland & Co., its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Spartan Mills, Spartansburg, S. C., for registration of a trade-mark and trade-marks registered March 19, 1907, No. 61,488, and April 2, 1907, No. 61,700, to Charles C. Copeland & Co., 45 Worth Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Charles C. Copeland & Co. at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Charles C. Copeland & Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Dec. 4, 1925.*

*Fulfashon Hosiery Company, its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Wm. Hahn & Co., Seventh and K Streets NW., 1318 G Street NW., 414 Ninth Street NW., Washington, D. C., and also 37 West Lexington, Baltimore, Md., for registration of a trade-mark and trade-mark registered Sept. 14, 1920, No. 134,651, to Fulfashon Hosiery Company, 288 Fourth Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Fulfashon Hosiery Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Fulfashon Hosiery Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

## Condition of Applications Under Examination at Close of Business December 11, 1925.

| Room No. | (Total number of applications awaiting action, excluding Trade-Mark Division, 39,610; Trade-Mark Division, 1,958. Oldest new case, May 27, 1925; oldest amended, June 1, 1925. The dates given are 1925.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS. | Oldest new application and oldest action by applicant awaiting office action. # DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

NIKAIDO *v.* BRUNI.

*Decided June 24, 1924.*

1. INTERFERENCE—REDUCTION TO PRACTICE—UNCORROBORATED TESTIMONY.

Where an inventor testified that he produced the substance in issue and after noting that its properties were similar to M.'s patented accelerator for vulcanizing rubber he gave it to M., an employee of the inventor's assignee, and M. testified that he made tests of its properties as an accelerator and actually produced vulcanized rubber, and M.'s testimony was not in any way broken down on cross-examination, contained nothing improbable or unreasonable, and he was not in any way impeached, *Held* that there is no known authority for ruling that M.'s testimony is insufficient to establish reduction to practice unless corroborated.

2. SAME—SAME—COMMERCIAL USE.

In order to establish reduction to practice, it is not necessary to show a commercial use.

3. SAME—SAME—SAME.

Where by the use of a novel accelerator properly vulcanized rubber was obtained in a shorter time than with the use of any other accelerator, the fact that it darkened the rubber would not be a ground for holding that the process had not been reduced to practice, although that fact may have been a reason for not putting it into commercial use.

Note.—The application of Nikaido has resulted in Patent No. 1,513,122, October 28, 1924.

Patent interference No. 45,276.

APPEAL from Examiners in Chief.

PROCESS FOR THE VULCANIZATION OF RUBBER.

*Mr. James C. Bradley* for Nikaido.

*Mr. Emil Bonnelycke* for Bruni.

KINNAN, *First Assistant Commissioner:*

This is an appeal by Bruni from the decision of the Examiners in Chief reversing the decision of the Examiner of Interferences and awarding priority to Nikaido.

The invention relates to a process of vulcanizing rubber in which an accelerator is used, the novelty being in the use of a "metallic salt of a dithiocarbamic acid" as the accelerator.

The issue reads as follows:

1. Process for vulcanizing rubber consisting in treating it with sulphur and a metallic salt of a dithiocarbamic acid.

2. Process for vulcanizing rubber consisting in treating it with sulphur and a salt of a bivalent metal of a dithiocarbamic acid.

The party Bruni is entitled to the date of the filing of his Italian application for patent, March 15, 1919, for conception and constructive reduction to practice.

It appears from the testimony of Nikaido that he had a conception of the invention in May, 1918, as he states that he, while conducting some independent investigations, produced an iron salt of a dithiocarbamic acid and after noting its properties were similar to Molony's patented accelerator he gave to Molony some of the salt for the purpose of testing its properties as an acelerator. According to Molony's testimony he made such tests, using this salt, and actually produced vulcanized rubber on June 3, 1918.

As pointed out by the Examiners in Chief, the only question is whether this test is proved to have been made and, if so, whether it actually amounted to a reduction to practice. If it did not constitute a reduction to practice, then Nikaido was not diligent in reducing the invention to practice at the time and immediately after Bruni filed his Italian application.

The Examiner of Interferences held that this test made by Molony of the accelerator which was delivered to him by Nikaido did not amount to a reduction to practice, but at the most was only an abandoned experiment. He based this holding largely on the ground that there were no other tests made of the accelerator, that there was no commercial development of it, and that the conduct of Nikaido and of Molony with reference to the value and utility of the iron salt differed very widely from that with reference to the zinc salt which was later developed by Nikaido and of which a series of tests were made by Molony in 1919. The Examiner of Interferences drew the conclusion that if repeated tests of the zinc salt were necessary to establish the utility of the accelerator then the single test of the iron salt was clearly insufficient. He also referred to a letter from Molony to the superintendent of the assignee of Nikaido, in which it was stated that the iron salt darkened the rubber.

The Examiner of Interferences raised the further question whether, under the circumstances of the case, Molony did not so stand in place of the inventor that his uncorroborated testimony was insufficient, just as the uncorroborated testimony of the inventor would have been.

[1] With respect to the latter question, there is no decision, of which I am aware, which holds that the testimony of a witness, such as Molony, is insufficient to establish a reduction to practice unless corroborated. However this may be, there are the bottle containing the salt of the type used, the sample piece of rubber, and the memoranda on them, as well as Nikaido's testimony that he gave the salt to Molony to test. While in a certain sense Molony is an interested party, he is no more so that any other employee of the assignee of an inventor. His testimony was not in any way broken down on cross-examination, contains nothing improbable or unreasonable, and he has not in any way been impeached. He fixes his dates by memoranda made at the time, he has produced a sample of the rubber which he states was vul-

canized by using the accelerator in question, and he testifies positively that a successful vulcanized rubber was produced.

[2] It is too well settled to need the citation of authority that in order to establish a reduction to practice it is not necessary to show a commercial use. It is sufficient if it be useful for the purpose for which it was intended and that the tests establish that fact. In very many instances the first reduction to practice of an invention is not in the best commercial form.

The date when the test was made is carefully fixed by Molony by contemporaneous records. The witness Betz testifies that he analyzed the sample which was given to him by Molony and which Molony testifies was the sample given to him by Nikaido, a part of which was used in the original test, and he (Betz) found that this sample contained the iron salt of dimethyl dithiocarbamic acid.

It is true that the party in interest, the assignee of Nikaido, continued to use an accelerator which had been invented by Molony for some time after the test of the iron salt in 1918 and that extended tests were made in 1919 of the zinc salt, which subsequently went into commercial use.

[3] These facts, however, are not sufficient to show that the test made by Molony in 1918 was insufficient to establish that the iron salt was a satisfactory accelerator. The fact that it darkened the rubber may have been a reason for not putting it into commercial use, but it would not be a ground for holding that the process had not been reduced to practice if by the use of this accelerator properly vulcanized rubber was obtained and, as Molony states, in a shorter time than the use of any other accelerator of which he had knowledge. The process was a simple one, and it was only necessary to inspect the piece of rubber produced to determine the result.

It must be held, therefore, that Nikaido has established a reduction to practice of the invention in June, 1918, which is prior to the date to which Bruni is restricted—namely, March 15, 1919, the filing date of his Italian application—and that priority was properly awarded to Nikaido.

The decision of the Examiners in Chief is affirmed.

---

EX PARTE CREW LEVICK COMPANY.

*Decided April 27, 1925.*

TRADE-MARKS—"SEALED."

The word "Sealed" is descriptive and is not susceptible of trade-mark protection.

APPLICATION for registration of trade-mark.

ON APPEAL.

TRADE-MARK FOR MOTOR, ILLUMINATING, AND BURNING OILS.

Application filed December 5, 1921, Ser. No. 156,264.

*Mr. Edmund G. Borden* for applicant.

FENNING, *Assistant Commissioner:*

The Crew Levick Company has appealed from the action of the Examiner of Trade-Marks refusing registration of "Sealed" as a trade-mark for "motor illuminating and burning oils for power purposes."

Applicant explains that in the ordinary gasoline selling station the operator may place in the tank any kind of gasoline. When this is done he may represent that he is selling applicant's gasoline, when, as a matter of fact, he is selling gasoline produced by some other company.

In order to avoid this possibility of deception, applicant proposes to place its gasoline in small tanks or cans which may be sealed so as to indicate the genuineness of their contents, the seal being broken when the gasoline is used. For this reason he adopts an appropriate label, copies of which are filed here as specimens, reading "Sealed Trade Mark Crew Levick (on a black diamond) Reg. U. S. Pat. Off. Gasoline." It is clear that applicant employs the word "Sealed" in an appropriately descriptive manner to define a characteristic or condition of its goods. Anyone who incloses goods in a sealed wrapper or container may appropriately refer to those goods as sealed goods.

In *Standard Paint Company* v. *Trinidad Asphalt Manufacturing Company*, 165 O. G. 971; 1911 C. D. 530; 220 U. S. 446, the Supreme Court quoted with approval the circuit court of appeals to the effect—

that no one can appropriate as a trade mark a generic name or one descriptive of any article of trade, its qualities, ingredients or characteristics, or any sign, word or symbol which from the nature of the facts it is used to signify others may employ with equal truth.

In the *Elgin National Watch Company* v. *Illinois Watch Case Company*, 94 O. G. 755; 1901 C. D. 273; 179 U. S. 665, the Supreme Court said:

No sign or form of words can be appropriated as a valid trade mark which, from the nature of the fact conveyed by its primary meaning, others may employ with equal rights for the same purpose.

It has been frequently indicated that a term which at once imparts information is descriptive, and it seems clear that applicant's mark here at issue at once imparts information that the goods are in a sealed container.

The most liberal rule which has been applied to registering marks is that words should be registered if they leave open to everybody else all words useful in describing any quality or property appertaining to the particular goods. The registration of the present mark would not leave all useful words open to use.

It might also be suggested that there is no actual trade-mark use of the present mark under the holdings of *In re The B. F. Goodrich Company*, 313 O. G. 663; 1923 C. D. 260; 52 App. D. C. 261; *Ex parte Keyless Auto Clock Company*, 309 O. G. 223; 1923 C. D. 25; *Ex parte H. H. H. Silk Co.*, 329 O. G. 266; 1924 C. D. 150; *Ex parte Ashaway Line & Twine Manufacturing Company*, 329 O. G. 264; 1924 C. D. 146. See also *Ex parte American Dairy Supply Company*, 312 O. G. 825; 1923 C. D. 34.

I am unable to find the case of the *National Biscuit Co.* v. *Swick*, 121 Fed. Rep. 1007, controlling in this case. There was involved an arbitrarily-selected design associated with words, and the mark as a whole was under consideration. Here the mark consists of the simple word "Sealed," which, as indicated above, is not susceptible of trade-mark protection.

The decision of the Examiner of Trade-Marks is affirmed.

---

## U. S. Circuit Court of Appeals—First Circuit.

GENERAL BAKING CO. *v.* GORMAN.

*Decided January 27, 1925; rehearing denied March 9, 1925; certiorari denied June 1, 1925.*

[3 Fed. Rep. (2d) 891.]

1. TRADE-MARKS—"BOND"—MENDACIOUS ADVERTISING.

Where plaintiff registered the word "Bond" in 1916, and in 1921 advertised that it would offer on the Rhode Island market a new bread which it would call "Bond" bread, made in accordance with the ascertained composite bread-making skill of Rhode Island housewives, and the bread which it actually made and sold there was made in accordance with the formula that it had used since 1915 in other States for bread which it called by the same name, *Held* that the plaintiff had no goodwill or other right in the name "Bond" as applied to bread sold in Rhode Island which it could ask a court of equity to protect.

2. SAME—UNFAIR COMPETITION—CASES OF INFRINGEMENT AND UNFAIR COMPETITION ARE AFFECTED WITH A PUBLIC INTEREST.

Unfair competition, of which trade-mark infringement is but a part, is, broadly speaking, grounded on the right of both dealer and purchasing public to be protected from frauds of which both are victims.

3. SAME—REGISTRATION OF TRADE-MARK DOES NOT AFFECT RIGHT TO ITS USE IN PURELY LOCAL BUSINESS.

Rights in trade-marks are of common-law origin and are always appurtenant to an established business or trade in connection with which they are employed, and the Federal registration of a trade-mark for interstate commerce gives no right to its use in a purely local business, subsequently established, as against a local prior user.

APPEAL from the District Court of the United States for the District of Rhode Island; Arthur L. Brown, Judge.

Suit in equity by the General Baking Company against James H. Gorman. Decree for defendant, and complainant appeals. Affirmed.

For opinion below see 295 F. 168.

*Mr. Julius M. Mayer* (*Mr. F. P. Warfield, Mr. E. W. Leavenworth*, and *Messrs. Mayer, Warfield & Watson* on the brief) for the appellant.

*Mr. James H. Higgins* (*Mr. William H. Camfield, Mr. Walter V. Moriarty*, and *Messrs. Fitzgerald & Higgins* on the brief) for the appellee.

Before JOHNSON and ANDERSON, Circuit Judges, and BREWSTER, District Judge.

ANDERSON, *Cir. J.:*

Plaintiff sought in the court below (295 F. 169) an injunction and accounting for trade-mark infringement and for unfair competition, on the ground that the defendant's sale of "Liberty Bond" bread in Pawtucket, Central Falls, and vicinity, R. I., infringed the plaintiff's alleged trade-mark "Bond." In this court no contention is pressed of unfair competition or for an accounting. But the plaintiff still asserts itself entitled to an injunction.

Jurisdiction rests on diversity of citizenship. The appellant was organized in 1911, and at that time took over and has since operated a bakery in Providence. In what other cities and States it then had plants does not appear. In its Providence plant it manufactured and sold bread under various names, "Butternut," "Mrs. Walker's," etc., but it did not use in Rhode Island the name "Bond" until 1921.

In 1915, it began to use the name "Bond" in Rochester, N. Y., after an advertising campaign like the one carried on in Providence in 1921, hereinafter described. It registered "Bond" as a trade-mark in the United States Patent Office on April 18, 1916.

After similar advertising campaigns, it began in 1916 to sell "Bond" bread in Buffalo, and in May, 1917, in Philadelphia.

In August, 1917, the defendant, acting as the court below found, in entire good faith and without any knowledge of the plaintiff's previous use of the word "Bond" in Rochester, Buffalo, and Philadelphia (three cities only), adopted the words "Liberty Bond" for bread manufactured and sold by it in Pawtucket, Central Falls, and vicinity. Defendant's name and the Statute of Liberty appear conspicuously on the wrapper.

After this adoption of the name "Liberty Bond" by the defendant in August, 1917, plaintiff extended the sale of its bread as "Bond" bread to some 20 cities and expended over $3,000,000 in advertising, apparently all directed to pushing "Bond" bread. But, so far as appears, in each city plaintiff represented its "Bond" bread to be of local genesis (as it did later in Rhode Island), and hence different from the "Bond" bread sold elsewhere.

On January 11, 1921, plaintiff notified defendant that it claimed that his use of the name "Liberty Bond" on bread wrappers was an infringement of its alleged trade-mark "Bond." This was preliminary to introducing "Bond" bread to Rhode Island.

In March, 1921, plaintiff advertised in the Providence newspapers a prize contest among the women of Rhode Island in making bread. It announced that prizes amounting to $1,000 would be awarded to the 121 women who submitted the best loaves of bread and that—

the prize-winning loaves will be taken as a model from which the General Baking Company will produce Bond bread. This Bond bread will be offered to the public after the expert bakers analyze the loaves the prize-winners submit, and copy their ingredients and qualities as modern baking science really can. These prize-winning loaves will be taken as ideals, which the General Baking Company will copy and incorporate in a new loaf of bread to be called Bond bread.

Also:

This will be called Bond bread because it will be guaranteed by the Bond of the General Baking Company, to possess the same pure "home" ingredients, the same homemade taste, the same crust, and the same texture as the best homemade loaves which your committee of well-known Rhode Island women judges will choose. * * *

We will make bread your way. * * *

And every day more and more Rhode Island people are adopting this "child" of those public-spirited women who submitted their homemade loaves.

Thus, and otherwise, plaintiff represented that it would offer on the Rhode Island market a *new*

bread, made in accordance with the ascertained, composite, bread-making skill of Rhode Island housewives, and that "Bond" would mean a guaranty by the plaintiff of conformity to the high standard thus learned from Rhode Island housewives.

The scheme thus advertised sharply contrasts with the usual process of introducing, from without, an old, standardized product, alleged to be better than that in current local use. But such was the plaintiff's scheme for expanding its business in various cities. Its vice president testifies that these methods were used in at least eight or ten cities.

This advertising was wholly mendacious. The bread made and sold in Providence was not modeled on the composite skill of Rhode Island women bread-makers. It was made in accordance with the formula that the plaintiff had use generally, for bread, since 1915. No changes were made in the formula used in Providence, or in any other cities where like bread-making contests were carried on, in order to conform to a standard derived from bread made by the competing women. The bread these flattered women bought was no "child" of their combined skill. It originated in New York, and was of doubtful parentage.

Plaintiff's chief witness testifies:

X. Q. 194. Were these advertisements substantially the same in all those eight or ten cities?—A. I think son.

X. Q. 195. And in each one of those eight or ten different cities you gave the people of those cities the distinct impression that in making this Bond bread you were going to depend on the advice and counsel of the contests of the different housewives that these different localities gave you, didn't you?—A. Yes, sir.

X. Q. 196. And at the same time you had your own formula all through the country, and you were following it previous to that, and you have followed it since?—A. Yes.

[1] On this state of facts, we are constrained to hold that the plaintiff had no goodwill or other rights in the name "Bond," as applied to bread sold in Rhode Island, which it can ask a court of equity to protect. The alternatives are these:

If the Rhode Island "Bond" bread had had the genesis that the plaintiff advertised, the plaintiff would have had no rights in a trade-mark, growing out of its previous use of the mark elsewhere, for in Rhode Island "Bond" would have meant a new bread. As the advertising as to the genesis of the Rhode Island Bond bread was false, it gained no rights in Rhode Island as to the future. See *Worden* v. *California Fig Syrup Co.*, 102 O. G. 623; 1903 C. D. 637; 187 U. S. 516; 23 S. Ct. 161; 47 L. Ed. 282, and cases cited; particularly *Manhattan Medicine Co.* v. *Wood*, 23 O. G. 1925; 1883 C. D. 268; 108 U. S. 218, 224; 2 S. Ct 436; 27 L. Ed. 706. In this case plaintiff was held disentitled to any relief because dishonestly advertising that its medicine was manufactured by Moses Atwood, Georgetown, Mass., when in fact it was manufactured by the Manhattan Medicine Company, of New York City. A fortiori, in the case at bar, the plaintiff is entitled to no protection in a trade grounded upon representations that it was making Rhode Island bread in accordance with the composite skill of Rhode Island housewives, when in fact it was palming off the same kind of product that it had used for five or six years in various other places.

[2] It should never be overlooked that trade-mark and unfair competition cases are affected with a public interest. A dealer's goodwill is protected, not merely for his profit, but in order that the purchasing public may not be enticed into buying A.'s product when it wants B.'s product. In meritorious cases of this kind, the plaintiff is acting, not only in his own interest, but in the public interest. The situation is radically different from that which arises in cases of alleged infringement of a copyright or a patent, under which the rights originate in a monopoly grant from the Government. The existence and extent of such monopolies are therefore, except as they reward and thus promote ingenuity, adverse to the rights of the purchasing or using public. In one aspect, the alleged infringer of a copyright or of a patent is in a fight for the public interest—to make a free and open field. But unfair competition—of which trade-mark infringement is but a part (*United Drug Co.* v. *Rectanus Co.*, 257 O. G. 1082; 1918 C. D. 369; 248 U. S. 90, 97, 39 S. Ct. 48, 63 L. Ed. 141)—is, broadly speaking, grounded on the right of both dealer and purchasing public to be protected from frauds of which both are victims. *Dadirrian* v. *Yacubian*, 98 F. 872, 876; 39 C. C. A. 321. In these cases the infringer works a fraud upon dealer and customer alike; his palming off is piracy pure and simple.

We are therefore driven to the conclusion, apparently reached, although not quite flatly stated, by the court below, that the plaintiff has in Rhode Island no trade-mark right in the word "Bond." What rights, if any, it has elsewhere, is a question not now before us. So far as appears, the plaintiff's Rhode Island trade was entirely intrastate, as was the defendant's. It made and sold bread in Rhode Island. It does not appear to have imported it from outside plants, or to have exported it from the Providence plant. For this, as well as for other fully adequate reasons, it is impossible to attach any significance to its Federal registration of its trade-mark for interstate business.

The general result is that if, as between "Bond" and "Liberty Bond," as applied to the sale of bread in Rhode Island, there be any infringement, plaintiff is infringing upon the defendant's rights, not the defendant upon the plaintiff's rights. If the plaintiff's claim "that 'Bond' and 'Liberty Bond' are deceptively similar" is sound, plaintiff is responsible for the deception.

While the court below was "of the opinion that there is not in fact any deceptive similarity between the labels of plaintiff and defendant, and that the possibility of confusion is slight," we think that question should be left open for any further proceedings found necessary, in the light of competitive experience, to protect the defendant and the purchasing public.

Perhaps it is well to add that, if we assume the facts to be substantially as the plaintiff claims them to be, this case falls within the doctrine of the *Rectanus Case*, supra, and the *Hanover Milling Case*, 224 O. G. 1407; 1916 C. D. 265; 240 U. S. 403; 36 S. Ct. 357; 60 L. Ed. 713, applied by this court in the *Narragansett Dairy Case*, 262 F. 880. The defendant adopted in good faith, as the court below found, the trade-mark "Liberty Bond" as early as August, 1917. The plaintiff made no attempt to sell bread in Rhode Island as "Bond" bread until March, 1921, 10 years after it began operation in Providence. At that time the defendant had a goodwill in its trade-mark, apparently covering Rhode Island. 240 U. S. 426; 36 S. Ct. 365. Plaintiff was a later comer with its "Bond" bread (assuming for the moment that "Bond" bread and "Liberty Bond" bread would cause any confusion in the use), and could not destroy or encroach upon the defendant's goodwill in its trade-mark earlier adopted.

We repeat here what we said in the *Narragansett Dairy Case*, 262 F. 880, 881, referring to the *Rectanus Case*, supra:

> The legally significant facts are, we think, on all fours with the case at bar.

Besides, the plaintiff had, for three years after defendant had put out Liberty Bond bread, known of the use, and had given no warning of its intention of using "Bond" on its Rhode Island bread; on the contrary, its use of other names for 10 years on its Rhode Island output would ground the inference that it had no intention of using "Bond" as a trade-mark in Rhode Island, even if, in 1915, it had used it in New York, and had registered it in 1916 for interstate trade. But its intention, disclosed or undisclosed, was entirely immaterial.

[3] Plaintiff's learned counsel contend that the Federal registration of its trade-mark in 1916 gave it a practically unlimited right of expansion, so that local bakers were thereafter charged with knowledge of its purpose to introduce in their communities "Bond" bread, and were therefore prevented from adopting any trade name which might conceivably infringe upon the "Bond" trade-mark. This contention, on analysis, falls little short of making Federal registration of a trade-mark the equivalent of a patent or a copyright—a far-reaching proposition we can not adopt. Nothing is better settled than that rights in trade-marks are of common-law origin, and are always "appurtenant to an established business or trade in connection with which" they are employed. See *Trade-Mark Cases*, 16 O. G. 999; 1899 C. D. 619; 100 U. S. 82; 25 L. Ed. 550; *Ainsworth* v. *Walmsley*, L. R. 1 Eq. 518, 524.

Rhode Island can not be deprived of the power to protect its citizens in the goodwill of their business by Federal registration of a trade-mark for interstate commerce. Compare the pungent observations of Mr. Justice Holmes in his concurring opinion in the *Hanover Milling Case*, 240 U. S. 425, 426; 36 S. Ct. 357; 60 L. Ed. 713. The defendant has as much right to expand as has the plaintiff. In Rhode Island its rights to "Liberty Bond" or any similar mark on bread are superior to the plaintiff's rights. Registration for interstate use is not even notice of a purpose "to expand" by building local plants as centers of intrastate trade. Even if it were notice, it would have no effect on a right that "grows out of its use, not its mere adoption." 248 U. S. 97; 39 S. Ct. 48. Compare *Waldes* v. *International Manuf'rs' Agency* (D. C.) 237 F. 502, 504.

The result is that, both as matter of law and as matter of fact, plaintiff has no case against this defendant, and the decree below must be affirmed, with costs.

The decree of the district court is affirmed, with costs to the appellee.

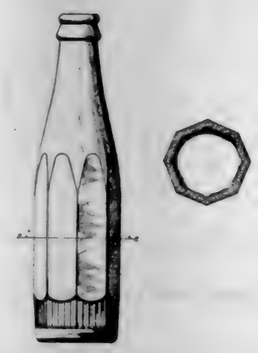
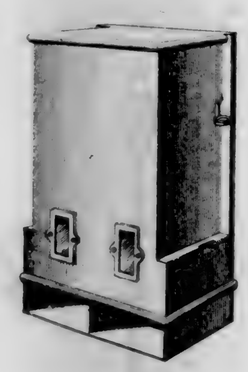
69,091. GLASS BOTTLE. JOSEPH A. NOE, Sharpsburg, Pa. Filed Oct. 2, 1925. Serial No. 14,994. Term of patent 14 years.



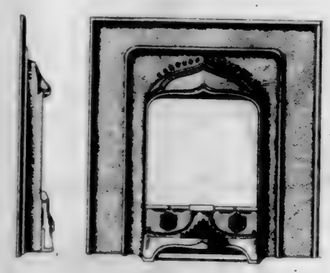
The ornamental design for a glass bottle, as shown.

69,092. DISPENSING CABINET OR SIMILAR ARTICLE. ROXANNA A. NORTON, New York, N. Y. Filed Jan. 15, 1925. Serial No. 12,062. Term of patent 14 years.



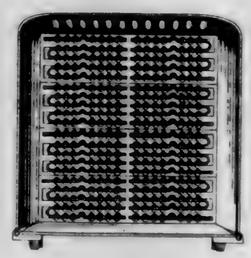
The ornamental design for a dispensing cabinet or similar article, as shown.

69,093. FIREPLACE FRONT. STANLEY D. ROBINSON, Hamilton, Ontario, Canada, assignor to D. Moore Company, Limited, Hamilton, Canada. Filed Oct. 3, 1925. Serial No. 15,013. Term of patent 7 years.



The ornamental design for a fireplace front, as shown.

69,094. HEATING UNIT FOR A FIREPLACE HEATER. STANLEY D. ROBINSON, Hamilton, Ontario, Canada, assignor to D. Moore Company, Limited, Hamilton, Canada. Filed Oct. 3, 1925. Serial No. 15,014. Term of patent 7 years.

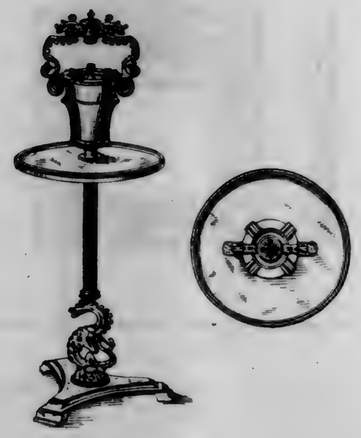


The ornamental design for a heating unit for a fireplace heater, as shown.

69,095. TILE OR SIMILAR ARTICLE. JAMES SCAPAROTT, Butler, Pa. Filed Mar. 26, 1925. Serial No. 12,889. Term of patent 7 years.

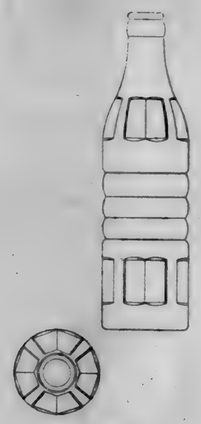
The ornamental design for a tile or similar article, as shown.

69,096. SMOKER'S STAND. ADRIAN C. SCHARFF, Orange, Conn. Filed Oct. 1, 1925. Serial No. 14,984. Term of patent 7 years.



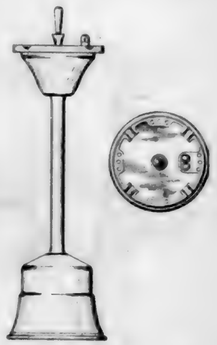
The ornamental design for a smoker's stand, as shown.

69,097. BOTTLE. FREDERICK W. SCHWENCK, Cincinnati, Ohio. Filed Oct. 29, 1924. Serial No. 11,222. Term of patent 3½ years.



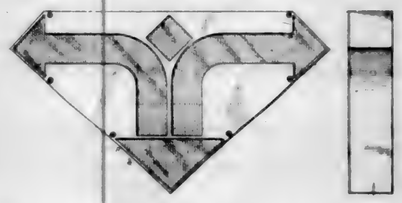
The ornamental design for a bottle as shown.

69,098. SMOKER'S STAND. JOSEPH L. SMITH, Buffalo, N. Y., assignor of one-half to Herbert B. Smith, Buffalo, N. Y. Filed Oct. 8, 1925. Serial No. 15,067. Term of patent 14 years.



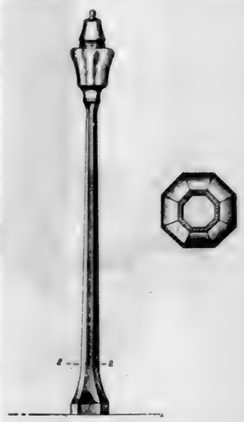
The ornamental design for a smoker's stand as shown.

69,099. TRAFFIC-SIGNAL CASING. OSCAR TERHELL, Los Angeles, Calif. Filed Jan. 15, 1924. Serial No. 8,318. Term of patent 7 years.



The ornamental design for a traffic signal casing, as shown.

69,100. STREET LAMP. LYNN A. VIETOR, Eureka, Calif. Filed Dec. 15, 1923. Serial No. 8,061. Term of patent 3½ years.

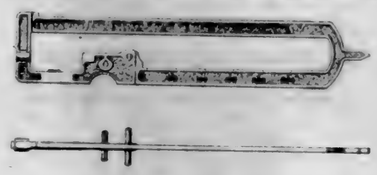


The ornamental design for a street lamp, as shown.

69,101. BANDING FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., a Copartnership composed of William Goldberg and Abe Goldberg, both of Newark, N. J. Filed Mar. 17, 1925. Serial No. 12,747. Term of patent 7 years.

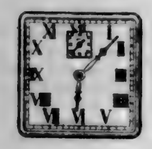
The ornamental design for a banding for lighting fixtures, as shown.

69,102. WEIGHING-SCALE BEAM. MATHIAS J. WEBER, Chicago, Ill., assignor to Continental Scale Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1923. Serial No. 7,564. Term of patent 14 years.



The ornamental design for a weighing-scale beam, as shown.

69,103. CLOCK CASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed June 3, 1925. Serial No. 13,046. Term of patent 14 years.



The ornametal design for a clock case, as shown.

69,104. CASE FOR A MARINE CLOCK MOVEMENT. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed Oct. 20, 1925. Serial No. 15,196. Term of patent 14 years.

The ornamental design for a case for a marine clock movement, as shown.

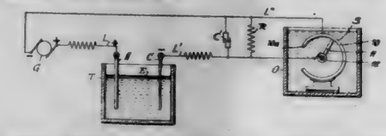
69,105. CASE FOR A MARINE CLOCK MOVEMENT. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed Oct. 20, 1925. Serial No. 15,197. Term of patent 14 years.

The ornamental design for a case for a marine clock movement as shown.

# PATENTS

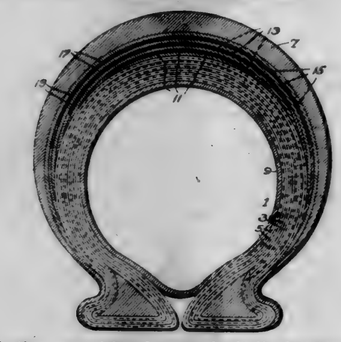
## GRANTED DECEMBER 22, 1925.

1,566,265. PROCESS OF PRODUCING ELECTROLYTIC COPPER. FRANK LINDEN ANTISELL, Perth Amboy, N. J. Filed Jan. 11, 1922. Serial No. 528,426. 6 Claims. (Cl. 204—10.)



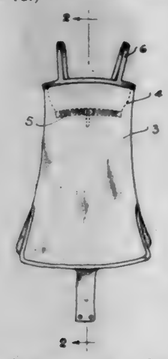
1. The process of electrolyzing cupriferous solutions which consists in carrying out the electrolysis in cycles, the electrolyzing current being impressed during each cycle for a predetermined fraction thereof.

1,566,266. TIRE. CHARLES S. BARRELL, Boston, Mass. Filed Mar. 14, 1921, Serial No. 452,203. Renewed May 21, 1925. 7 Claims. (Cl. 152—18.)



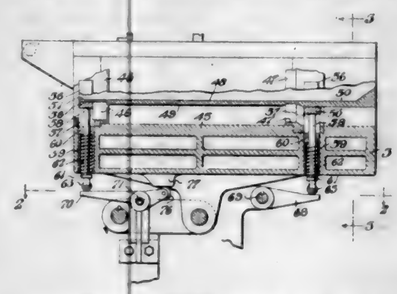
7. A tire comprising layers of vitalized rubber, each having layers of puncture resisting elements therein, and layers of rubber outside of and between the layers containing the puncture resisting elements and vitalized to a greater degree than the latter layers.

1,566,267. COMBINATION UNDERGARMENT FOR WOMEN'S WEAR. MAPEARL CURTIS BEE, New York, N. Y. Filed May 12, 1924. Serial No. 712,500. 1 Claim. (Cl. 2—73.)



A union garment comprising a chemise and a brassière, the fabric of the chemise being extended at the top and folded inwardly and downwardly to form the brassière, the brassière having at its lower edge an elastic insert adapted to fit snugly about the wearer to afford support, together with shoulder straps secured to the brassière and chemise at the fold of the material.

1,566,268. STEREOTYPE PRINTING PLATE. MARTIN W. BRUESHABER, Chicago, Ill., assignor to Goss Printing Press Company, a Corporation of Illinois. Original application filed Mar. 21, 1921, Serial No. 454,001. Divided and this application filed Jan. 21, 1922. Serial No. 530,945. 2 Claims. (Cl. 101—395.)

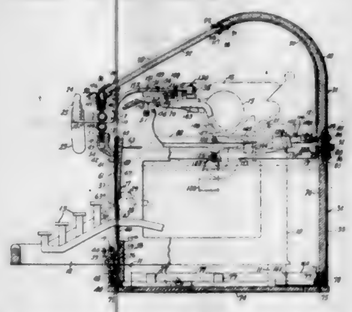


1. A hemi-cylindrical printing plate having two straight edges and two arcuate edges, one end comprising an arcuate tail and the other arcuate end comprising an arcuate riser, the convex side of said tail and riser being curved to fit into concave lifting yokes for facilitating a quick removal of the plate from the matrix.

1,566,269. PRODUCTION OF ALUMINUM CHLORIDE. LOUIS BURGESS, Bayonne, N. J., assignor, by mesne assignments, to himself and Maurice Barnett. Filed July 27, 1921. Serial No. 487,924. 7 Claims. (Cl. 23—93.)

1. The process which consists in subjecting aluminum silicid material to the action of dry hydrochloric acid gas under conditions causing a reaction between the same resulting in aluminum chloride.

1,566,270. TYPEWRITING MACHINE. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 27, 1921. Serial No. 510,725. 21 Claims. (Cl. 197—186.)



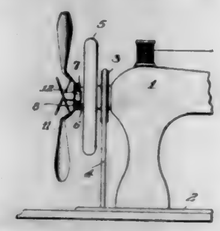
1. A typewriting machine in combination with a sound-deadening casing therefor comprising; an interior chamber for the carriage, of such length that the carriage may travel therein on the machine between its extreme

positions; carriage-release means including a lever swingable about a vertical pivot on said carriage; a front for the casing slotted horizontally and longitudinally of the casing, for movement therealong of the carriage-release-lever with the carriage, said slot having a locally yielding cushion seal, and the release-lever extending forwardly from its pivot to said casing and protruding through said slot to the outside of the casing, and being freely operable longitudinally of said slot to release the carriage, and a hand-hold on said carriage and extending forwardly therefrom to said casing and protruding forwardly alongside of said release-lever so that both may be engaged between the thumb and forefinger.

1,566,271. MEDICINAL PREPARATION. VINCENZO CESA, Hoboken, N. J. Filed Apr. 8, 1921. Serial No. 459,720. 2 Claims. (Cl. 167—9.)

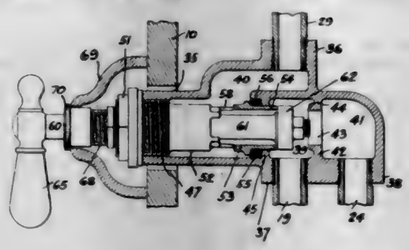
1. A medicinal preparation composed of an albumin comprising the white of an egg in a frothy state, a semi-solid fat and sulphur.

1,566,272. FAN ATTACHMENT FOR SEWING MACHINES. GIACOMO COSTA, Rochester, N. Y. Filed Feb. 21, 1924. Serial No. 694,107. 2 Claims. (Cl. 230—7.)



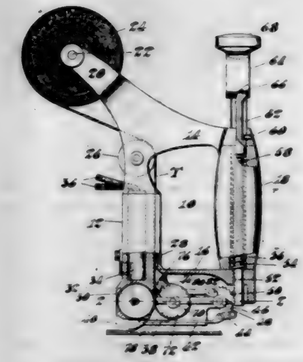
1. A fan attachment for sewing machines embodying a flat central hub plate and fan blades attached thereto said hub plate being provided with opposite laterally arranged converging clips extending axially and thence inwardly and adapted to jam upon the head of the nut on the sewing machine shaft through an applying movement transverse to said shaft.

1,566,273. BATH FIXTURE. SAMUEL GADE, New York, N. Y. Filed Sept. 2, 1925. Serial No. 54,069. 4 Claims. (Cl. 251—22.)



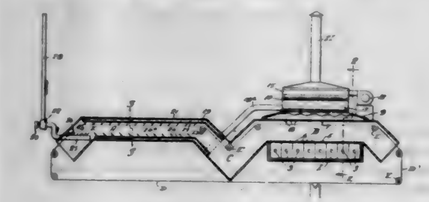
1. In a diverting valve for the purpose specified, a housing having an inlet chamber, an outlet chamber to a shower, and an outlet chamber to a tub, the said chambers being connected with each other by concentric passages, the wall separating the inlet chamber from the said outlet chamber to a shower having an annular recess at its outlet chamber side, and a resilient gasket within the said recess, a bonnet extending into the said outlet chamber to a shower, having an annular shoulder within the said outlet chamber to a shower adapted to compress the said gasket to cause a fluid tight joint between the said bonnet and the said wall, a valve spindle adapted to be reciprocated within the said bonnet and extending into the said inlet chamber, and a valve disc secured to the end of the spindle, adapted to close the passage between the said inlet chamber and the said outlet chamber to a tub, and also adapted to be moved to seat against the inwardly extending end of the said bonnet to close the passage between the inlet chamber and the said outlet chamber to a shower and simultaneously open the passage between the inlet chamber and the said outlet chamber to a tub.

1,566,274. TAPE-APPLYING APPARATUS. PERLEY R. GLASS, Wayland, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 26, 1919. Serial No. 340,785. 18 Claims. (Cl. 154—42.)



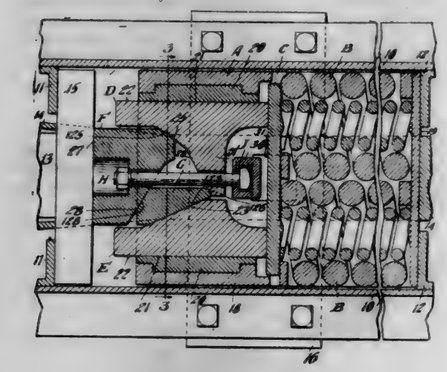
1. In a tape-applying apparatus, a frame arranged to be grasped by the operator for movement over the work and having a pressure surface, means for heating the pressure surface, and means mounted upon the frame but separated from said frame and the source of heat and arranged to carry a supply of tape for delivery between the pressure surface and work, the condition of said tape being changed by heat after leaving the supplying means to prepare it for application.

1,566,275. APPARATUS OR SYSTEM FOR DRYING, BAKING, ETC. JAMES M. HARRISON, Cleveland, Ohio. Filed Dec. 22, 1923. Serial No. 682,355. 9 Claims. (Cl. 34—19.)



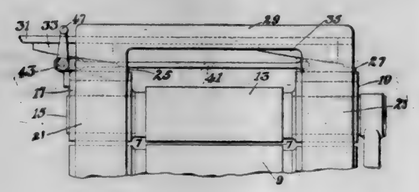
1. A system or apparatus comprising a pair of oven sections communicating in series for the continuous conveyance of articles therethru, means for applying heat to the second oven section, an air heater arranged to be heated by the heated gases passing beyond such second oven section, means for forcing air thru such heater, and means for delivering the same into the first oven section.

1,566,276. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Dec. 22, 1922. Serial No. 608,422. 9 Claims. (Cl. 23—34.)



1. In a friction shock absorbing mechanism, the combination with a friction shell having interior longitudinally extending friction surfaces; of friction shoes co-operable with said shell; a spring resistance; and a multiple part wedge co-operable with the shoes, the parts of said wedge having relatively keen angle wedging engagement with the shoes and blunt angle engagement with each other permitting collapse of the wedge during release, one of said parts of the wedge having also a different angle engagement with a shoe opposed to that shoe with which said part has keen angle wedge engagement.

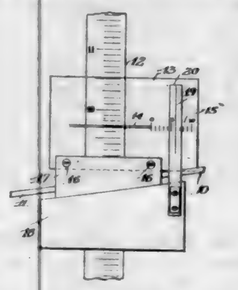
1,566,277. GRADING MACHINE. CHARLES HAROLD HEATHER, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 20, 1925. Serial No. 17,089. 6 Claims. (Cl. 69—11.)



1. A machine of the class described having, in combination, grading mechanism constructed and arranged to grade blanks by a predetermined unit of difference, and readily accessible operator-controlled means for changing the size of the unit.

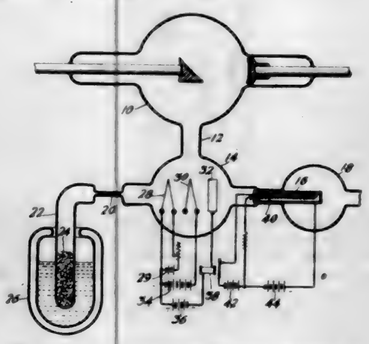
1,566,278. OCULAR MICROMETER. GUSTAVE A. H. KELLNER, Rochester, N. Y., assignor to Bausch & Lomb Optical Co., Rochester, N. Y., a Corporation of New York. Filed Oct. 9, 1923. Serial No. 667,492. 7 Claims. (Cl. 88—2.2.)

1. In an ocular micrometer, the combination with optical means forming an image of a scale to be read, of wedge parts movable one on the other, one of said parts having an index mark and the other a cooperating



subdividing scale, and an index mark on the movable one of said parts adjustable over the image of the scale to be read.

1,566,279. GAS-PRESSURE CONTROL. ROBERT W. KING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1921. Serial No. 436,167. 12 Claims. (Cl. 250—34.)

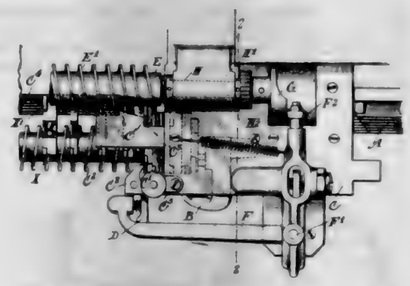


1. The method of regulating the gas pressure in a device, which comprises ionizing a portion of the gas at a rate substantially proportional to the pressure, and supplying gas to said device at a rate controlled by said ionization.

1,566,280. STORAGE-BATTERY GRID. HENRY W. LORMOR, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Feb. 18, 1924. Serial No. 693,498. 7 Claims. (Cl. 136—49.)

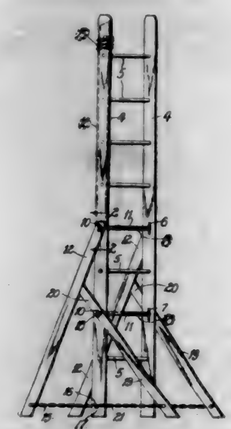
1. A storage battery grid having horizontal paste retaining ribs each rib having a body portion extending downwardly and inwardly from a side of the grid.

1,566,281. TYPOGRAPHICAL DISTRIBUTING MACHINE. LUTHER E. MORRISON, New York, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed May 29, 1925. Serial No. 33,639. 8 Claims. (Cl. 199—42.)



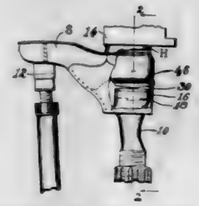
1. In a typographical distributing mechanism, the combination of a set of rotatable matrix conveying screws, means for feeding matrices to the screws, and means for operating the matrix feeding means at such rate of speed as to cause the matrices to be engaged by nonconsecutive convolutions of the screws, for the purpose described.

1,566,282. LADDER. NICHOLAS PELLIGREEN, St. Louis, Mo. Filed Aug. 25, 1924. Serial No. 733,861. 1 Claim. (Cl. 228—64.)



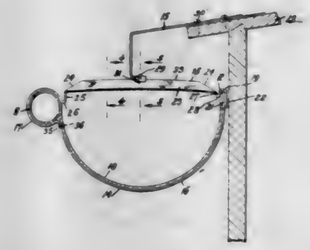
A ladder comprising a pair of side members having rungs therebetween and having a pair of spaced apart longitudinally extending slots in each of said side members, rods extending through said slots, a tube surrounding each of said rods and located between the side members and adapted to serve as a rung, a leg pivotally mounted on each end of one of said rods and located adjacent one of said side members, a second pair of legs pivoted intermediate their ends to the remaining rod and located adjacent the outside of the respective side members, one end of each of said last mentioned legs adapted to contact with an edge of the first mentioned legs for supporting the same, means carried by the rods whereby said legs may be secured to said side members against movement, and flexible means for limiting the spreading of said legs.

1,566,283. LAST SUPPORT. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 6, 1922. Serial No. 592,827. 14 Claims. (Cl. 12—126.)



1. The combination with a last-support, of a continuous lining-protector surrounding the support and movable toward and from a lasted shoe.

1,566,284. GUTTER HANGER. MAX RACHLIN, Brooklyn, N. Y. Filed Sept. 20, 1924. Serial No. 738,884. 3 Claims. (Cl. 108—29.)

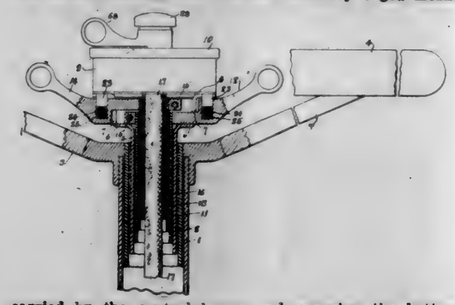


1. A gutter hanger comprising a bar extending transversely of the gutter and provided at its outer end with a hook-shaped section fitting over the bead of the gutter, the opposite end of said bar being provided with a bend adapted to rest on the opposite edge of the gutter, said bend being provided with a slot, a strap member forming a continuation of said hook-shaped section tightly embracing the underface of the gutter and adapted to be drawn through said slot, said bar being of inverted V-shaped in transverse cross-section, its sloping sides being bounded by sloping ends, said bar being disposed wholly above said gutter, one of said sloping ends being extended downwards into said gutter and merging at a sharp angle with said hook-shaped section, and the other one of said sloping ends being also extended downwards into the gutter and merging at a sharp angle with said bend.

1,566,285. SELF-PROPELLED VEHICLE. LOUIS R. RUTHENBURG, Dayton, Ohio. Filed Nov. 20, 1922. Serial No. 602,309. 2 Claims. (Cl. 74—39.)

1. The combination with a fixed tubular member; of a circular switch housing fixed on the upper end of said tubular member, a plurality of tubular members surrounding the first tubular member in concentric relation,

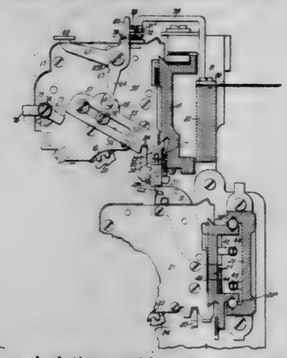
control levers each fixed to one of the last mentioned tubular members and extending outwardly from beneath the switch housing, and friction resiliently urged means



carried by the control levers and engaging the bottom of the housing at points exteriorly of the fixed tubular member.

---

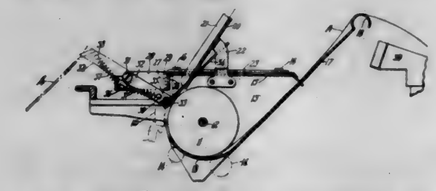
1,566,286. CALCULATING MACHINE. CHARLES E. SMITH, Brooklyn, N. Y., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 16, 1923. Serial No. 675,058. 38 Claims. (Cl. 235—59.)



3. In a calculating machine, the combination with vertical totalizers and a cross-totalizer, of pick-up mechanism including a device associated with each vertical totalizer and shiftable to two positions to render the pick-up mechanism operative or inoperative, and means to prevent said device from being shifted during the computation of a number.

---

1,566,287. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 27, 1924. Serial No. 716,100. 5 Claims. (Cl. 197—133.)

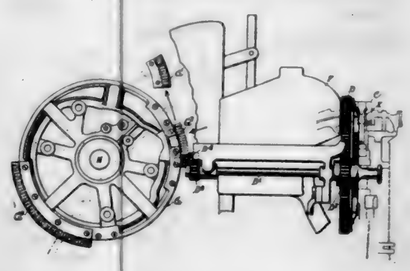


1. In a typewriting machine, the combination with a platen-frame, and a platen revoluble therein, of forwardly extending brackets attached to the ends of said frame, means for independently adjusting each bracket,

a knife extending coincidentally in length with the platen, arms on said knife pivoted to the brackets, and a handle on said knife whereby it may be swung into operative position against said platen or swung outwardly therefrom.

---

1,566,288. TYPOGRAPHICAL CASTING MACHINE. SAMUEL SMITH, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Mar. 21, 1924. Serial No. 700,776. 15 Claims. (Cl. 199—47.)



1. In a slug casting machine, the combination of casting mechanism adjustable to vary the length of the cast slug, and automatic means for effecting such adjustment of the casting mechanism after every other casting operation.

---

1,566,289. COMBINED CAP AND SWAB. FRANCIS J. STODOLA, Jr., Oak Park, Ill. Filed May 28, 1925. Serial No. 32,272. 2 Claims. (Cl. 91—67.2.)

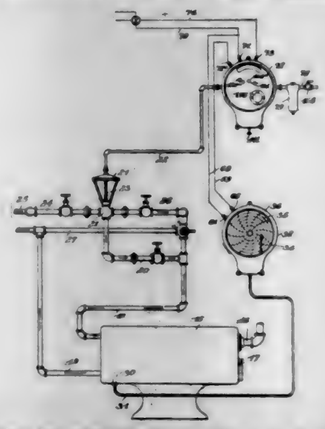
1. A combined cap and swab, comprising a sheet metal cap having a flat end formed with a struck up depression on its inner side, a flat, thin, leak preventing washer contained wholly within the cap and adapted to bear against the inner side of said flat end of the cap, a swab, and a swab holding metal stem extending from said cap, one end portion of said stem extending through said washer and into said depression of the cap and being secured in said depression by solder contained wholly in said depression.

---

1,566,290. AUTOMATIC CONTROL APPARATUS FOR PROCESSING EQUIPMENT. LEWIS B. SWIFT, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Mar. 5, 1924. Serial No. 697,167. 9 Claims. (Cl. 62—2.)

1. In apparatus of the character described, a container, means for supplying thereto a medium for controlling the temperature therein, time control mechanism provided with means for starting the same, signal means operated by said mechanism, a sensitive device

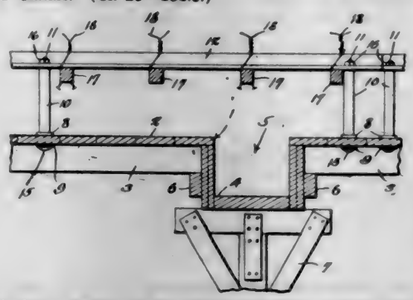
responsive to the temperature in said container and connected with said starting means for actuating the same at a predetermined temperature in said container, and



mechanism for automatically operating said supply means coincidently with the starting of said time control mechanism.

---

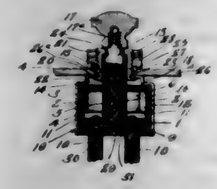
1,566,291. SLEEPER HANGER. GORDON M. TAMBLYN, Denver, Colo. Filed Apr. 7, 1924. Serial No. 704,795. 2 Claims. (Cl. 25—131.5.)



1. In a device of the class described, a floor form, means for supporting the floor form from below, spacers extended upwardly from the floor form and supported thereby, a hanger bar detachably supported on the spacers and located above the floor form, and means for holding sleepers against the lower edge of the hanger bar.

---

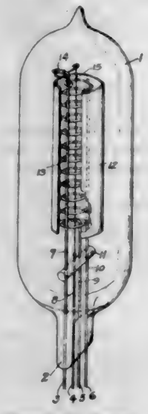
1,566,292. ELECTRIC SWITCH. DON N. THOMPSON, Syracuse, N. Y., assignor to Pass & Seymour Inc., Solvay, N. Y., a Corporation of New York. Filed May 26, 1922. Serial No. 563,881. 3 Claims. (Cl. 200—63.)



1. A switch comprising a cup shaped base having contacts on its inner annular wall, a cover closing the open end of the base, a casing enclosing the top and sides of the base and being open at its bottom, the casing holding the cover of the base in position, a rotary switch member rotatably mounted in the base having resilient terminals for coacting with said contacts and guiding the switch member in its rotary movement, the switch member having a shank extending through the cover and through the casing, said switch member being removable through the outer end of the cup shaped base upon removal of the base from the casing and the cover from the base.

---

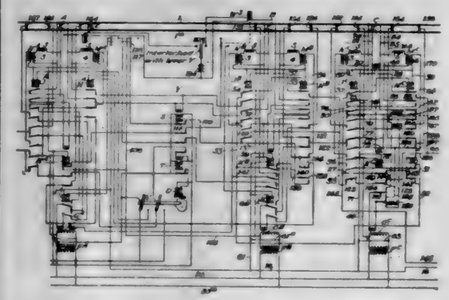
1,566,293. THERMIONIC DEVICE. HENDRIK J. VAN DER BIJL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 4, 1919. Serial No. 321,653. 8 Claims. (Cl. 250—27.)



1. An electron discharge device comprising a glass tube having one end collapsed to form an outwardly projecting flareless stem, a plurality of conductors sealed in said stem and a plurality of electrodes each supported by one of said conductors.

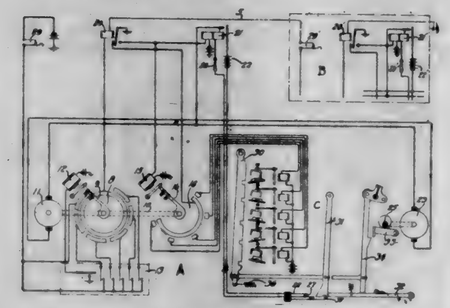
---

1,566,294. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1923. Serial No. 669,740. 35 Claims. (Cl. 246—26.)



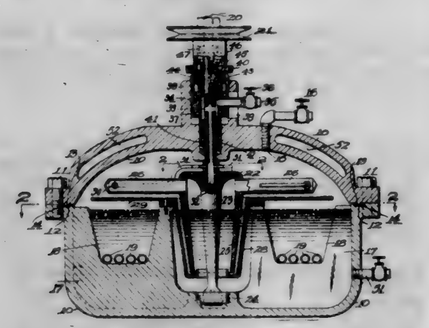
1. Railway traffic controlling apparatus comprising an insulated section of railway track, two directional relays for said section, manually operable means for energizing one or the other of such directional relays at a time but not both of them simultaneously, means controlled by said relays for supplying track circuit current to said section, and means also controlled by such relays for supplying local current to said section.

**1,566,295. PRINTING-TELEGRAPH SYSTEM.** EDWARD F. WATSON, Yonkers, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 17, 1922. Serial No. 595,122. 10 Claims. (Cl. 178—23.)



1. In combination, a line connecting a plurality of stations, recording means associated with said line including shifting mechanism and a motor, a circuit for said motor, normally closed contacts included in said motor circuit, means responsive to impulses from a distant station for closing said motor circuit, and selectively operated means controlled from a distant station for operating said shifting mechanism to permit the opening of said normally closed contacts to thereby open the motor circuit.

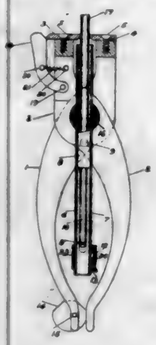
**1,566,296. ROTARY PUMP.** ALONZO W. WHITCOMB, Worcester, Mass. Filed Aug. 16, 1921. Serial No. 492,727. 3 Claims. (Cl. 230—14.)



1. A rotary pump comprising a casing, a member mounted to rotate in said casing and having an inverted cup-like recessed depending projection open at its lower end and enlarged in diameter toward its upper end, arms extending outwardly from said member and having passages connected with said recess, draft tubes communicating with said passages and restricted in their intermediate portion, nozzles associated with said draft tubes and connected to a casing inlet, and a fixed sleeve closely surrounding said depending projection and also open at its lower end.

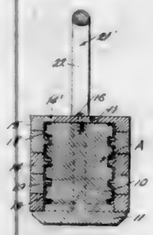
**1,566,297. INSULATED-WIRE STRIPPING AND SCRAPING DEVICE.** RAYMOND A. WILLIAMS, Pittsfield, Mass. Filed Dec. 11, 1924. Serial No. 755,300. 2 Claims. (Cl. 81—9.5.)

1. The combination with a pivoted tool member of the class described having operating handles and comprising stripping jaws, means to secure said jaws to the tool members, a tubular member for regulating the length of the cable to be stripped, a stop within said tubular member, and an extension rod affixed to said stop, said tubular member provided with a plurality of



notches on the outer side, a spring clip slidably affixed to the said tubular member and cooperating with the notches thereon, and an eccentric cam rotatably connected to the tool member to provide means to regulate the size of the wire to be stripped.

**1,566,298. KEYLESS PADLOCK.** ALBERT WILSON, Yuma, Ariz. Filed July 1, 1924. Serial No. 723,553. 1 Claim. (Cl. 70—113.)



The combination padlock comprising a solid cylindrical barrel, having longitudinal grooves therein at diametrically opposite points, equi-distantly spaced longitudinally alined lugs formed on the barrel intermediate the grooves, locking rings rotatably received in the barrel, spaced semicircular ribs formed on the inner faces of the locking rings, a shackle having parallel arms formed with equidistantly spaced notches, the ribs of the rings being adapted to engage in the notches and with the longitudinally alined lugs, a cap plate fitted in one end of the barrel to hold the locking rings in place, the inner face of the cap plate having formed therein a centrally disposed opening, a pin carried by the barrel and arranged in the opening and serving to hold the cap plate against rotation, and a threaded element passing through the cap plate and engaging the barrel whereby to hold the upper end of the latter against the cup plate and thus cause the ribs to contact with the lugs with sufficient friction as to hold the rings against accidental rotation.

**1,566,299. SELF-PROPELLED RAILWAY CAR.** MARTIN P. WINTHER, Kenosha, Wis., assignor to The Sykes Company, St. Louis, Mo., a Corporation of Delaware. Filed May 12, 1924. Serial No. 712,564. 12 Claims. (Cl. 105—62.)

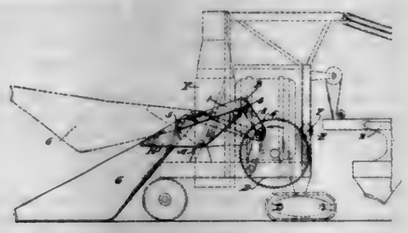
1. A self-propelled car, comprising a main frame and mounted upon trucks and carrying an engine, and a sub-frame yieldingly suspended from said main frame and carrying power transmitting devices in operable

connection with said engine and adapted to absorb and dampen noises and vibration occasioned by the transmission of power.

**1,566,300. PROTECTIVE SHIELD.** LEWIS ALEXANDER and WILLIAM H. H. HASTINGS, Clinton, Ill. Filed Oct. 9, 1924. Serial No. 742,627. 5 Claims. (Cl. 20—1.01.)

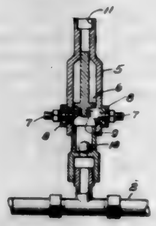
1. In a protective structure of the class described, the combination of means to form a movable shield in front of the position occupied by the bank employee or other person, instrumentalities for controlling the motion of said shield, thereby to render the same operative in the event of an attack by bandits or thieves outside, said shield comprising a plurality of shutters pivoted to turn about parallel axes, spaced apart a distance to cause their edges to overlap when closed, so that each shutter limits the closing movement of the next one, and said instrumentalities comprising an endwise movable bar, springs for connecting said bar to the shutters, operative to both open and close the shutters by endwise motion of said bar, and operative to hold the shutters in open position, so that the springs prevent closing of the shutters when said bar is in one position thereof, and means to actuate said bar to quickly close the shutters, thereby to hold the shutters in engagement with each other to form the shield, whereby one or more shutters may by the yielding action of the spring or springs thereof remain open or partially open without preventing closing of the other shutters, said springs forming a yielding connection between the shutters and bar.

**1,566,301. SKIP-ELEVATING MECHANISM.** RAYMOND A. BECKWITH, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 16, 1924. Serial No. 713,823. 9 Claims. (Cl. 214—130.)



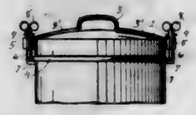
1. In combination, a support, a loading skip mounted thereon, means pivotally connecting one end of the skip with the support, a rotating power device, links connecting the pivoted end portion of the skip with said device, and means acting on one of the links intermediate its connection with the other link and its connection with the skip to convert said link into a lever at a predetermined point in the movement of the skip under the influence of the power device.

**1,566,302. PRESSURE-OPERATED SWITCH.** ALBERT S. BERTANZETTI and SILVIO DE PRANPERO, Fredericktown, Pa.; said De Pranpero assignor to said Bertanzetti. Filed Dec. 4, 1922. Serial No. 604,967. 1 Claim. (Cl. 200—82.)



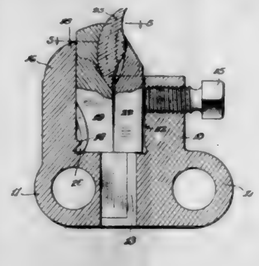
In an oil circulating system for a gas engine, a circulation pipe, a pressure chamber in communication with said circulation pipe, a contact piece adapted to be held inactive under accumulated pressure within the chamber against an opposing force, and a check valve controlling the communication between circulation pipe and pressure chamber.

**1,566,303. ICE-CREAM CAN.** JAMES E. BIRNEY, Grand Rapids, Mich., assignor of one-half to Patrick I. Birney, Grand Rapids, Mich. Filed June 11, 1923. Serial No. 644,623. 2 Claims. (Cl. 220—55.)



1. In combination with a can having a strengthening bead around it near the top, and a cover for said can; a yoke passed over the cover and having cylindrical bearings at the ends thereof, bolts passed through said bearings and having eccentric heads thereon adapted to be made to engage the bead outside of the can and draw the cover firmly upon the can.

**1,566,304. MINING-MACHINE CHAIN LINK AND BIT.** NEWTON K. BOWMAN, Bowdil, Ohio. Filed Nov. 6, 1922. Serial No. 599,316. 7 Claims. (Cl. 262—33.)

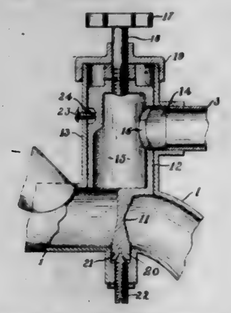


1. In a mining machine, a chain link, a stock carried thereby and provided with a concavely curved seat, a curved cutting tooth fitting said seat, and a clamping bar having one face thereof notched to straddle the tooth binding the tooth between said bar and stock.

1,566,305. METHOD OF MAKING BLUE PRINTS WITH DARK LINES AND WHITE FIELDS. ROLAND C. BROWN, Milwaukee, Wis. Filed Nov. 6, 1923. Serial No. 673,205. 2 Claims. (Cl. 41—46.)

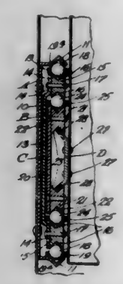
1. The process of making a blue-print with dark delineations and characters upon a white field, which consists in imposing upon a plain sheet, an impression or transfer sheet provided upon its underside with an opaque coating and superposing a drawing thereon, tracing the drawing to produce upon the plain sheet a replica of such drawing for checking purposes and convert the impression sheet into a negative by the transfer of the coating to the plain sheet in the tracing operation, fixing the coating upon the negative by applying a preservative thereto, and printing copies upon sensitized paper by passing light rays through the open lines of the drawing.

1,566,306. VALVE FOR CONTROLLING HEATED GASES TO INTAKE-MANIFOLD JACKETS. JOHN L. BURNS, Syracuse, N. Y., assignor to H. H. Franklin Mfg. Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 26, 1919. Serial No. 347,480. 4 Claims. (Cl. 277—19.)



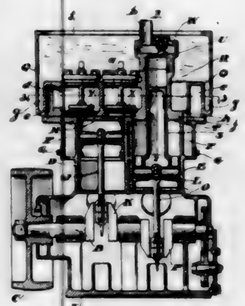
1. In a device of the class described, a casing formed with an outlet port, and an inlet for connection to a feed conduit, and means for controlling the flow of gas thrugh the casing and the port comprising a rotatable member having a deflector arranged to extend into the feed conduit, and means for rotating said member to open and close the port and to change the angle of the deflector, substantially as and for the purpose specified.

1,566,307. DRAWER SUSPENSION. EARL J. CARD and JOSEPH E. TURNER, Jamestown, N. Y., assignors to Art Metal Construction Company, Jamestown, N. Y. Filed Sept. 19, 1921. Serial No. 501,676. 5 Claims. (Cl. 45—77.)



2. In a drawer suspension, the combination of an outer channel member having inwardly facing longitudinal grooves and adapted to be secured to a support, a floating channel slidably arranged in said channel member, and having flanges at its opposite edges, each of said flanges having an outwardly and an inwardly facing longitudinal groove therein, said outwardly facing grooves in said flanges cooperating with the inwardly facing grooves of said outer channel member to form raceways, friction reducing devices in said raceways, an inner channel slidably arranged in said floating channel, and having flanges at its opposite edges, each of said last mentioned flanges having an outwardly and an inwardly facing groove therein, friction reducing devices between the outwardly facing grooves of said inner channel and the inwardly facing grooves of said floating channel, an attaching plate having edges engaging the inner grooves of said inner channel and attached to a drawer and a latch for releasably retaining said inner channel in place on said attaching plate.

1,566,308. VERTICAL COMPRESSOR. ALLAN O. CARPENTER, Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 10, 1925. Serial No. 42,634. 1 Claim. (Cl. 230—32.)



A multi-stage vertical compressor or pump, comprising a base, a low pressure air cylinder mounted on said base and having a cross head guide cylinder formed integral therewith, said air cylinder and guide cylinder being arranged side by side and provided with a water jacket, an air cylinder head extending over both the said low pressure cylinder and guide cylinder and having a high pressure air cylinder formed integral therewith adapted to be located over the guide cylinder, pistons for the cylinders, and a cross head in the guide cylinder connected to the high pressure piston.

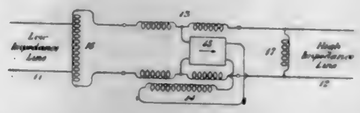
1,566,309. FIBER BOARD. ALBERT L. CLAPP, Danvers, Mass., assignor to Beckwith Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed July 19, 1921. Serial No. 485,977. 15 Claims. (Cl. 92—21.)

1. That step in the process of producing a dry moldable material, which comprises beating out cellulose in the presence of animal matter and water until the cellulose is hydrated to a point of sliminess.

1,566,310. FIBER BOARD. ALBERT L. CLAPP, Danvers, Mass., assignor to Beckwith Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1921. Serial No. 494,638. 2 Claims. (Cl. 92—21.)

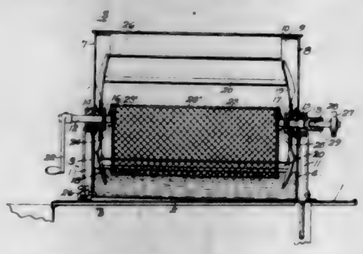
1. The herein described method of making dense hard fiber board, which comprises beating cellulosic material until the fibers are well hydrated, then sheeting the stock on a paper-making machine and drying the same, and subjecting the sheet or portions thereof to heat and high pressure of an order of about 2500 pounds to the square inch.

1,566,311. TELEPHONE-REPEATER CIRCUITS. ALVA B. CLARK, Brooklyn, N. Y., and RAY S. HOYT, Ridgewood, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 3, 1921. Serial No. 504,976. 6 Claims. (Cl. 179—171.)



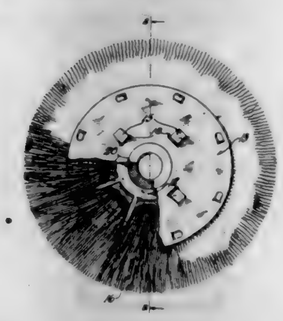
1. In combination, two dissimilar lines, a 21-type repeater connecting them, a network or networks to reduce the impedances of the lines to substantially pure resistances over the essential frequency range, and means to equalize the resultant impedances of the two lines.

1,566,312. WASHING MACHINE. CLINTON T. COATES, St. Louis, Mo., assignor, by direct and mesne assignments, to C. & P. Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 18, 1922. Serial No. 561,895. 5 Claims. (Cl. 68—18.)



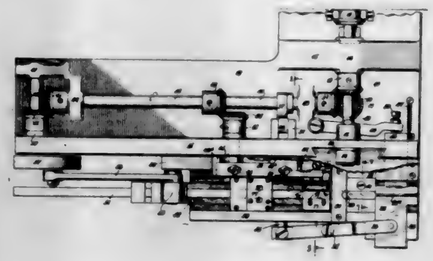
4. A device of the class described embodying therein article holding means, rotatable means surrounding the article holding means, a cover member for said article holding means, means for connecting it to the article holding means, and means connecting the cover means and the rotatable means as and for the purpose specified.

1,566,313. ROTARY BRUSH. IRBIL L. G. CORNELL, Milwaukee, Wis., assignor to The Milwaukee Brush Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 28, 1924. Serial No. 716,429. 2 Claims. (Cl. 15—179.)



2. In a rotary brush, the combination of a spider having a series of bristle-receiving openings near its outer edge, bristles passed through said openings and extending back on themselves and outwardly in substantially radial position, plates secured to the said spider at each side and clamping the bristles between them and the spider, and tongues on said plates extending inwardly beyond the outer edge of the spider to prevent displacement of said bristles in the plane of rotation of the brush.

1,566,314. MACHINE FOR SEALING CONTAINERS. ANTHONY DANIELS, Newark, N. J., assignor to The Perfex Products Corporation, a Corporation of New Jersey. Filed Apr. 9, 1924. Serial No. 705,187. 19 Claims. (Cl. 113—1.)



1. A machine for effecting a closure of a tube end comprising means for cutting and shaping a clip from a metallic strip fed to the machine co-operatively connected for continuous operation with means for clamping the clip over the tube end, and for infolding the clinched clip and tube end portions to form a seam.

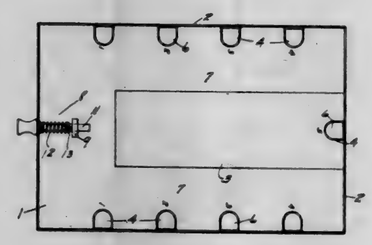
1,566,315. PEDAL PROTECTOR. WILLIAM C. DAUMUELLER, Lebanon, Ill. Filed Sept. 18, 1925. Serial No. 57,172. 1 Claim. (Cl. 74—81.)

A protector for the food pedals of player pianos including a sheet and a holding frame including side and end bars of angular formation, certain of the flanges of the side and end bars lying in the same plane and engaging the margins of the protective sheet, the other flanges of the holding frame overlapping the edges of the sheet and pedal, and means co-acting with one of the flanges and overlaps the margins of the sheet and pedal for securing the frame to the pedal.

1,566,316. SIGN. ANTHONY ELTON DAVIS, Philadelphia, Pa. Filed Sept. 22, 1922. Serial No. 589,760. 2 Claims. (Cl. 40—125.)

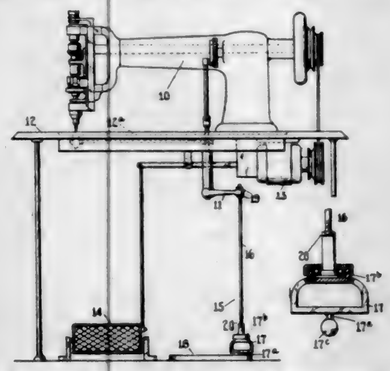
1. A sign of the type specified comprising in combination a rigid metal strip of T-shape cross-section in the form of a rectangular hollow frame and of which the head is disposed outside and is continuous and curved and of which the web ranges inwards and is cut away at the corners and provides a support for sign attachment, and pedestals immovably secured to one edge of the frame.

1,566,317. GAME. WILFRID E. DIEGEL, River Rouge, Mich. Filed July 29, 1925. Serial No. 46,743. 4 Claims. (Cl. 273—119.)



2. A game apparatus, comprising in combination an enclosed rectangular field including differentiated medial and outlying field sections; a plurality of numbered pockets arranged around three sides of the field; an interference triangle for placing upon the said medial section; a ball; a plurality of counters for checking the status of the players; and mechanical means for propelling the ball over the field.

1,566,318. FOOT-GOVERNING DEVICE FOR SEWING AND EMBROIDERING MACHINES HAVING UNIVERSAL FEED MOTION. MORRIS EPSTEIN, New York, N. Y. Filed July 14, 1924. Serial No. 725,817. 10 Claims. (Cl. 112—98.)

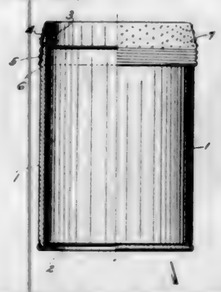


1. In combination, a sewing or embroidering machine having a universal feed motion and a device having foot receiving means adapted to move in a circular path for governing the feed motion.

1,566,319. CONTAINER FORM, EXPANSION JOINTS, AND METHOD OF INSTALLING SAME. ALBERT C. FISCHER, Chicago, Ill. Filed June 19, 1922. Serial No. 569,247. 7 Claims. (Cl. 94—18.)

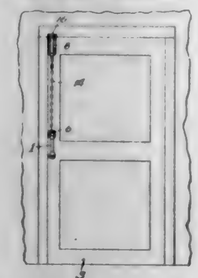
1. The method of installing an expansion joint, which consists in placing in position at the joint to be formed a molding container together with a spacing board in said container, pouring the concrete along side the partition thus provided, while the spacing board is in place, and then removing the spacing board from the container, and molding into said container a bituminous material.

1,566,320. REPAIR KIT. RICHARD W. FOX, Birmingham, Ala. Filed Oct. 25, 1924. Serial No. 745,846. 2 Claims. (152—27.)



1. In a repair kit of the character described, an end closure for a tubular container, which comprises a body portion adapted to engage and seal an end of the container and a wide external flange overlapping the container and perforated to present a roughened external surface, for the purposes described.

1,566,321. DOOR LATCH. PETER FRANTZ, Sterling, Ill., assignor to Frantz Manufacturing Company, Sterling, Ill., a Corporation of Illinois. Filed Sept. 5, 1922. Serial No. 586,129. 9 Claims. (Cl. 292—167.)



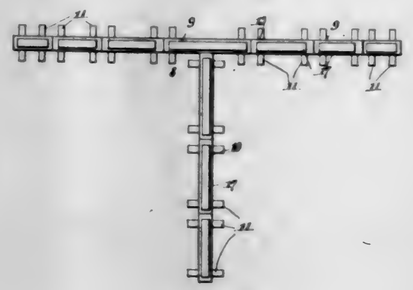
1. In locking means for a door or window or other closure, the combination of a handle member having a hand grip, means whereby said member is rigidly secured to said closure, a reciprocating locking bolt mounted on said closure a distance from and independently of said handle, depending upon the size of the door and the consequent distance between the convenient position for the handle and the effective position for the locking bolt, means to be engaged by said bolt to lock the closure in closed position, and a connection extending the distance from said locking bolt to a point of control adjacent said handle member, so that said locking bolt is controllable by the thumb of the hand in the act of grasping the handle to open the door.

1,566,322. FLOOR BRUSH. CARL C. GRAY, Minneapolis, Minn., assignor, by mesne assignments, to Gopher Brush Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 26, 1923. Serial No. 615,006. 2 Claims. (Cl. 15—195.)

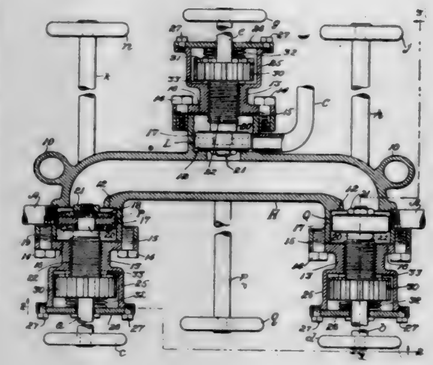
1. A brush structure comprising a head in the form of a channel having closed rounded ends, said head being pressed from a single piece of material and without seams, a clamping bar working in the channel of said head, and brush material clamped in the channel of said head by said clamping bar, the said clamping bar being in the form of a channel having its flanges turned into the channel of said head, the ends of the flanges of the clamping bar being rounded and spaced from the rounded closed ends of the head.

1,566,323. SHEET-MATERIAL-DISPLAY DEVICE. EDWIN T. GRAY, New York, N. Y. Filed Jan. 19, 1925. Serial No. 3,311. 2 Claims. (Cl. 211—14.)

1. In a device of the class described, a frame having an internal channel open at the top, a carrier frame of rectangular shape having a channel in its inner edges, one side of said carrier frame being removable and having a channel to communicate with the channel of said carrier frame, spring arms carried by said cover and extending over the outer edges of the nearest adjacent side of the frame, the said carrier frame having recesses therein to receive said catches, and display forms received within said channels.



1,566,324. VALVE MECHANISM FOR AIR-BRAKE SYSTEMS. JOHN H. HANLON, Somerville, Mass. Filed Aug. 1, 1923. Serial No. 655,049. 18 Claims. (Cl. 303—86.)

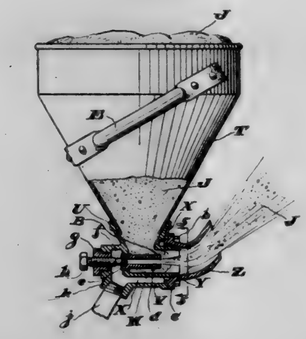


1. In an air brake system, the combination with the train pipe and the branch pipe leading to the air brake mechanism, of a reciprocating valve for controlling communication between said train pipe and branch pipe, and a pair of reciprocating valves at opposite sides respectively of said first named valve for controlling the flow of air through said train pipe.

1,566,325. MORTAR PROJECTOR. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 24, 1924. Serial No. 739,448. 2 Claims. (Cl. 91—45.)

2. A mortar projector including a hopper having a restricted outlet, a chamber at said outlet to receive material by gravity from said hopper, a nozzle, a jet for compressed motive fluid located in said chamber and

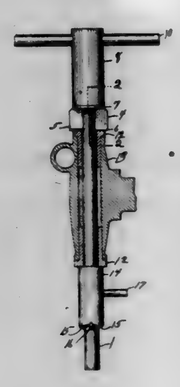
adapted to project material from said chamber into the nozzle, a ring jet for compressed motive fluid adapted to impart additional velocity to the material projected



by the central jet, and a needle valve for regulating the flow of pressure fluid through the central jet in relation to the ring jet.

---

1,566,326. REFACING BUSHING TOOL. WILLIAM JARVIO, Quincy, Mass. Filed May 5, 1924. Serial No. 711,268. 3 Claims. (Cl. 90—12.)

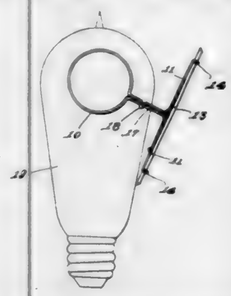


1. A tool of the class described including a stem, a blade rigidly mounted on one end of the stem, a sleeve rotatably and slidably mounted on the other end of the stem and having its outer end in the form of a cam, a removable pin on the stem engaged with the cam of the sleeve, and means for facilitating manual rotation of the sleeve on the stem for adjusting the blade into engagement with the object to be refaced.

---

1,566,327. SHADE. GEORGE JOHNSON, River Rouge, Mich. Filed Dec. 1, 1924. Serial No. 753,350. 1 Claim. (Cl. 240—138.)

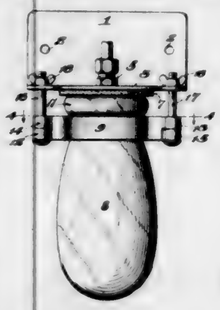
A new and improved article of manufacture comprising a holder formed from a single length of wire and including a U-shaped body portion, the wire forming said body portion being crossed at a point centrally of the said body portion and extending in opposite directions to form angularly shaped wings, each wing including an



offset horizontal portion terminating to provide a hook, and a coil formed on each parallel portion of the U-shaped body as and for the purpose specified.

---

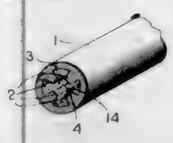
1,566,328. PURIFIER FOR GASOLINE SYSTEMS. ORA H. JUSTUS, Parkersburg, W. Va. Filed June 12, 1924. Serial No. 719,630. 1 Claim. (Cl. 248—65.)



A bottle holder comprising in combination with a support, a clamp including sections formed to engage about opposite sides of the bottle neck and against the bead thereof, an eye at each end of each section, the eyes at adjacent ends of the sections being in register, and a pair of bolts extending through the registering eyes at the respective clamp ends and through the support and having nuts thereon engaged with the support to clamp the bottle mouth against the support, the eyes being formed so that upon removal of either bolt, the clamp sections may be pivotally swung about the remaining bolt as a pivot to release the bottle and while the remaining bolt remains in position to support the clamp.

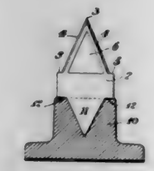
---

1,566,329. FILLED CANDY. WILLIAM B. LASKEY, Brooklyn, N. Y. Filed Apr. 7, 1924. Serial No. 704,598. 1 Claim. (Cl. 99—16.)



A piece of candy in tubular form having flat-faced strength-giving ribs of considerable thickness projecting radially inwardly from the wall thereof, the interior of the candy being filled with suitable filling material.

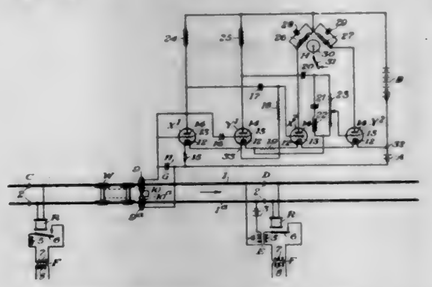
1,566,330. IMPLEMENT FOR UNITING STRIPS OF MATERIAL. ANNA LAUER, New York, N. Y. Filed Apr. 11, 1924. Serial No. 705,776. 1 Claim. (Cl. 28—16.)



An implement for joining the ends of two strips of flexible material comprising a flat pointed knife-blade, shoulders integrally formed on the opposite edges of the blade in horizontal alinment to limit its penetration, an eye in said blade extending upwardly from the plane of said shoulders, the sides of said eye converging toward the point of the blade to form an acute angle in the top of the eye, and a downwardly extending pointed portion on said blade formed to provide shoulders and adapted in combination with said shoulders to secure said blade to and position it on a supporting member.

---

1,566,331. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1925. Serial No. 22,295. 5 Claims. (Cl. 246—63.)

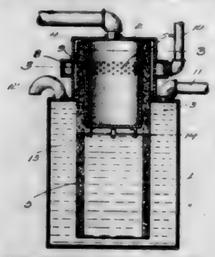


1. Train carried apparatus comprising a pick-up circuit receiving alternating current from the trackway, an induction motor relay, a two-stage amplifier interposed between said circuit and one winding of said relay, a two-stage amplifier interposed between said circuit and the other winding of said relay, and means located between the two stages of one of said amplifiers for displacing the phase of the current supplied to the associated relay winding with respect to the phase of the current supplied to the other relay winding.

---

1,566,332. AIR MOISTENER FOR INTERNAL-COMBUSTION ENGINES. JOE M. LILLY, Norwood, N. C. Filed Nov. 1, 1921. Serial No. 511,973. 2 Claims. (Cl. 261—99.)

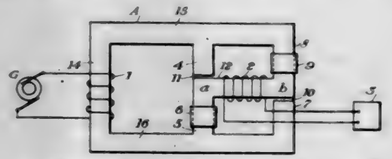
1. A device for the purpose set forth comprising a water tank having its top provided with an opening and an upstanding continuous flange forming a continuation of the wall of the opening, an open bottom casing formed with an outlet at its upper end, said casing mounted on said top, surrounding said flange and having a part of its body portion perforated, a closed bottom receptacle suspended from and having its upper end closed by the top of said casing and extending through said opening into the upper portion of said tank, said receptacle having a part of its body portion perforated, a channel-shaped member surrounding and enclosing the perforated part of the casing and providing a distributing chamber for exhaust gases conducted thereto, and a



tubular wick interposed between said receptacle and casing and depending through said opening below the bottom of the receptacle.

---

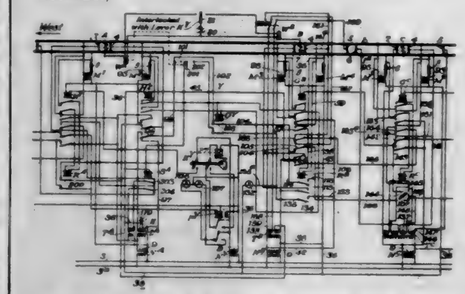
1,566,333. STATIC-PHASE-SHIFTING APPARATUS. SAMUEL M. LUCAS, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 26, 1923. Serial No. 671,048. 8 Claims. (Cl. 171—97.)



1. In combination, a winding on a core, a bridge on said core, means for supplying an alternating electromotive force to said winding to create a periodic flux in said core, a second winding on said bridge, and means for displacing the relative phases of the fluxes in said bridge and said core so that the electromotive force induced in said second winding is out of phase with respect to said first electromotive force.

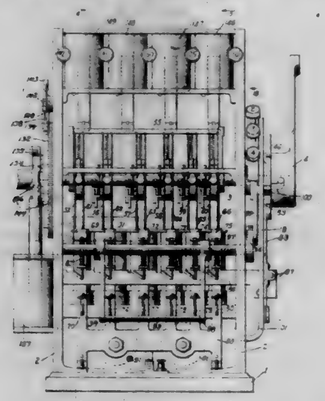
---

1,566,334. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1923. Serial No. 674,058. 20 Claims. (Cl. 246—26.)



20. In combination, a stretch of railway track divided into a plurality of successive sections, a series of directional relays one located adjacent the junction of each two sections, local circuits for each section controlled in part by the associated traffic directional relays, a polarized relay controlled by said directional relays, and locking means for said switch controlled by said polarized relay.

1,566,335. COIN-HANDLING MACHINE. RICHMOND M. McGEE, New York, N. Y., assignor, by mesne assignments, to American Autocashier Co., Inc., a Corporation of Delaware. Filed June 5, 1919. Serial No. 302,021. 19 Claims. (Cl. 133—2.)



3. In a machine of the character described, the combination of a plurality of coin containers, means for ejecting coins therefrom, means for selectively operating said ejecting means comprising a plurality of disks having notches therein, and means for selecting and rotating the disks in accordance with the coin tendered, and means on the ejectors cooperating with said notches to determine the amount of coin to be ejected from said receptacles.

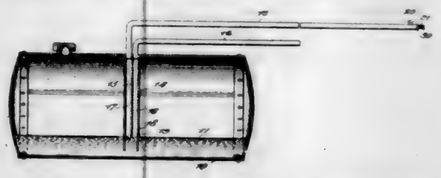
1,566,336. NECKTIE STRETCHER. FRANK P. MARSON, Paterson, N. J. Filed June 5, 1925. Serial No. 35,060. 2 Claims. (Cl. 223—19.)

1. In a device for stretching tubular flexible articles, the combination of a pair of substantially straight levers, arranged side by side and having between their ends a fulcrum-connection with each other adjustable transversely of the levers, said connection being arranged nearer one of the pairs of corresponding ends of the two levers than the other pair of such ends whereby the levers have a pair of corresponding short operating arms and a pair of corresponding long stretching arms, and means, engaged with the short operating lever arms, for securing the levers in different degrees of convergence to each other.

1,566,337. SOUND RADIATOR. WILLIAM H. MARTIN, Chappaqua, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1923. Serial No. 664,988. 7 Claims. (Cl. 179—115.)

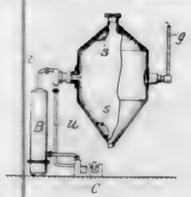
1. A sound radiating member having a crimped surface, said member being secured at one end and having means at the other end for subjecting said member to longitudinal vibrations of speech frequencies, thereby imparting corresponding lateral vibrations to the air, and the length of said member being such that for the higher voice frequencies only a part of the surface of said member will efficiently produce lateral vibrations.

1,566,338. LIQUID-TANK SIGNAL DEVICE. ALFRED F. MAYHEW, Whitneyville, Conn., assignor of one-tenth to Julia A. Monahan, West Haven, Conn., and four-tenths to Frederick L. Williams, New Haven, Conn., and one-tenth to Bernard J. McDonnell, New Haven, Conn. Filed May 7, 1921. Serial No. 467,669. 9 Claims. (Cl. 116—109.)



3. A device as characterized, including in combination, a liquid-tank having a vent, a plurality of passages leading to the interior of said tank, a liquid in the tank being removed therefrom by a pneumatic force compelled through one of said passages while the liquid in the tank remains above a predetermined level in the tank, a signal connected in the other of said passages, a tubular member arranged within the tank said member having a dividing wall defining a plurality of passages which communicate with the first mentioned passages, and an opening in horizontal alinement with the lower extremity of the said dividing wall of said member.

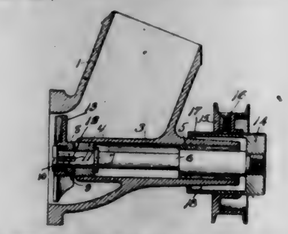
1,566,339. METHOD AND APPARATUS FOR DIGESTING PULP IN ROTATING DIGESTERS. EINAR MORTERUD, Torderod, near Moss, Norway. Filed May 28, 1925. Serial No. 33,580. 2 Claims. (Cl. 92—18.)



2. A rotating digester for wood pulp having an intake and outlet channel for digesting liquid located in one of its trunnions and tubes inside the digester connected with said intake and outlet channels and having their

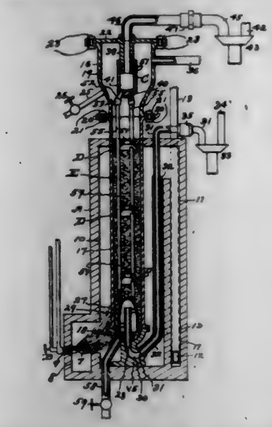
open ends located near the opposite ends of the rotating digester and means for alternately connecting the channels in said trunnion with the intake and outlet tube from the calorisator, mounted outside the digester.

1,566,340. PUMP. WILLIAM M. MYERS, St. Joseph, Mo. Filed Mar. 22, 1923. Serial No. 626,829. 4 Claims. (Cl. 103—89.)



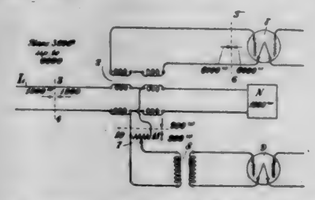
2. In a pump of the kind described, a casing having a passage for water, a shaft bearing in said casing, a shaft rotatable in said bearing and having an abutment which bears against ne end of said bearing and provided with a screw threaded hole in one end, a screw fitted in said hole and having a head which forms an abutment on the shaft, the shaft having a longitudinal slot, a propeller having a hub which bears against the other end of said bearing and which is slidable longitudinally on the shaft, said hub having a pin extending into and slidable in said slot, the propeller having blades disposed in said passage and arranged, when the propeller is rotated in one direction, to tend to force the hub from said bearing, and a coil spring encircling said shaft and bearing at one end against the head of said screw and bearing at its other end against said hub and having strength sufficient to force the latter against said bearing against the thrust of said blades, substantially as set forth.

1,566,341. APPARATUS FOR TREATING HYDROCARBONS. FRED G. NIECE, Cleveland, Ohio, assignor to The International Holding Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 1, 1922. Serial No. 572,119. 9 Claims. (Cl. 196—118.)



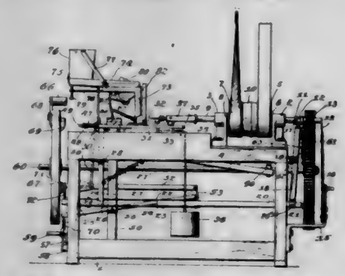
2. Hydrocarbon-treating apparatus comprising a hydrocarbon-cracking receptacle which has a vapor-outlet, a molten body contained in said receptacle and penetrable by hydrocarbons and not vaporizable at the desired hydrocarbon-cracking temperature, an endwise movable upright cylinder arranged at the upper portion of said hydrocarbon-cracking receptacle, means for supplying fluid under pressure into said cylinder from a point externally of the molten-body-containing receptacle, a feed-pipe connected to and movable with said cylinder, and means independent of said pipe and connected cylinder for supplying hydrocarbons into the molten body, said pipe extending into and communicating with the molten body.

1,566,342. MEANS FOR INCREASING POWER CAPACITY OF 22-TYPE REPEATERS. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 27, 1923. Serial No. 648,069. 2 Claims. (Cl. 179—170.)



1. A two element two way repeater circuit comprising a line, an amplifier having its output circuit transmitting to the line through a hybrid coil whose ratio is adjusted to make the impedance looking into the coil large as compared with the impedance looking into the amplifier, a second amplifier having its input circuit arranged for transmitting from the line to the amplifier, and means to make the impedance looking into the input circuit of said second amplifier large as compared with the impedance looking toward the line in order to compensate for the impedance irregularity in the output circuit of the first amplifier.

1,566,343. NUT-TAPPING MACHINE. JOHN V. OSTERHOUT, Bridgeport, Conn. Filed Nov. 25, 1921. Serial No. 517,615. 4 Claims. (Cl. 10—130.)

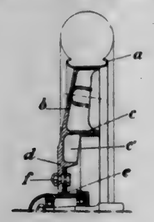


1. In a device of the class described, a shaft carrying a tap, means for rotating said shaft alternately in tapping and reversing directions, a slide, slide advancing means adapted to cause the shaft to rotate in the tapping direction, a cam maintaining the rotation of the tap after the slide is retracted, a spring for reversing the direction of rotation of the shaft, and means including a lever and cooperating latch operable by the advancing movement of the slide to rotate the shaft in the cutting direction.

1,566,344. METALLIC WHEEL FOR MOTOR VEHICLES. HENRI PERROT, Paris, and GERMAIN CALVIGNAC, Levallois-Perret, France. Filed July 24, 1922. Serial No. 577,191. 7 Claims. (Cl. 301—64.)

1. A wheel for motor vehicles comprising a frame in one piece of light metal having a good heat conduction and constituted by a solid central part and spoke por-

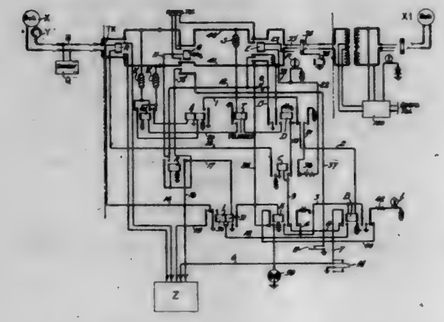
tions of arcuate cross-section, a wheel rim secured to the outer ends of said spoke portions, a brake drum integral with said frame, radial reinforcing ribs integral with said spoke portions and brake drum, and extend-



ing longitudinally toward the inner end of said brake drum, a reinforcing hoop upon the inner surface of said brake drum and means for mounting said frame upon the vehicle axle.

---

1,566,345. TRUNK CIRCUITS. GEORGE H. PETERSON, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 23, 1924. Serial No. 739,396. 23 Claims. (Cl. 179—27.)



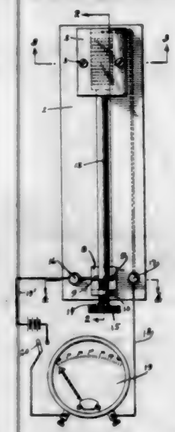
1. In a telephone exchange system, the combination of a trunk circuit terminating in a plug, an operator's telephone set, and means automatically responsive to the insertion of said plug into an outgoing line jack for disconnecting the plug from the talking conductors of said trunk and for connecting the operator's telephone set to said plug.

---

1,566,346. GAUGE ROD. NEIL E. SALSICH, Bethlehem, Pa. Filed Sept. 20, 1922. Serial No. 589,412. 3 Claims. (Cl. 238—50.)

1. The combination, with a gauge rod having an integral rail clip at one end and having its other end threaded, of a movable clip for the threaded end including a bottom U-shaped portion adapted to bear against the bottom of a rail, said U-shaped portion communicating with an aperture extending through the clip, a top flange portion extending upwardly and over the U-shaped portion and adapted to engage the top surface of an outer rail flange, nut means carried by the threaded end of the rod, and means disposed between the clip and the nut means, whereby, when the latter is screwed up, the clips are caused to approach to engage the outer flanges of the rails of a track.

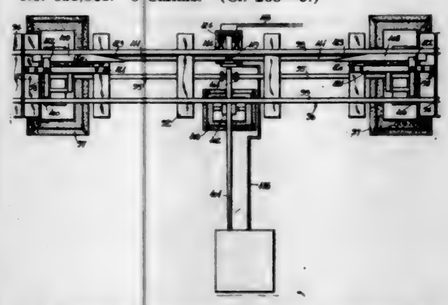
1,566,347. TEMPERATURE-INDICATING DEVICE. ABNER B. SHAW, North Dartmouth, Mass. Filed Sept. 15, 1923. Serial No. 662,944. 3 Claims. (Cl. 201—48.)



1. In a temperature indicator, a supporting member, a rod mounted thereon and disposed parallel therewith, the supporting member and the rod being of materials of different coefficiency of expansion when exposed to heat of the same temperature, a stack of resistor elements resting upon the rod and guided by the supporting member and electric conductors connected with the stack of resistors and rod respectively.

---

1,566,348. WEIGHING MECHANISM. STEPHEN W. SHUFORD, Cowpens, S. C. Filed Apr. 13, 1923. Serial No. 631,841. 6 Claims. (Cl. 265—9.)



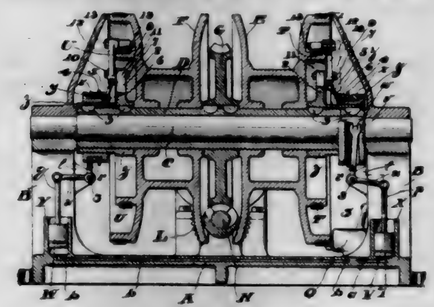
1. A weighing mechanism embodying a yieldable platform, a recording device, means whereby said device is operatively connected to the platform to be set by the depression thereof, members mounted near the opposite ends of the platform and each arranged to be moved in one direction by cars moving on the platform and to be moved in another direction by cars moving off the platform, and means arranged to be operated by either of said members, when it is moved in the first-named direction, for operating said device to make a record.

---

1,566,349. DOUBLE-DRUM HOIST. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 31, 1925. Serial No. 47,270. 4 Claims. (Cl. 254—185.)

1. In a double drum hoist, the combination of a drum shaft, two drums rotatable relatively to said shaft, a reversible motor operatively connected to drive said

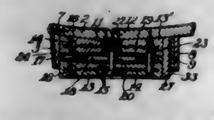
shaft, separate clutches for the drums, a hand operated controlling device for the motor, and individual means controlled by said hand operated controlling device for



alternately actuating said clutches to automatically connect one drum or the other to the drum shaft in accordance with the direction of rotation of the motor.

---

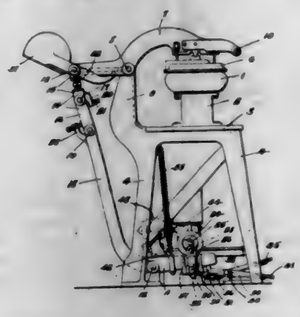
1,566,350. READJUSTABLE CUSHION SHOE HEEL. AURELIUS SMITH, Indianapolis, Ind. Filed Oct. 27, 1924. Serial No. 746,195. 7 Claims. (Cl. 36—39.)



1. A cushion shoe heel including a yielding pad with a convex edge, the pad having a central screw-receiving hole, a corner-forming heel member having a concave side abutting the edge of the pad, and a plate secured to the heel member opposite to the concave side thereof and having an ear thereon to secure it in place.

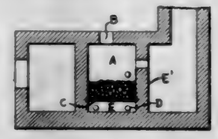
---

1,566,351. PRESSING MACHINE. ALEXANDER J. SOCIA, Syracuse, N. Y., assignor, by mesne assignments, to Liberty National Bank, trustee, Syracuse, N. Y. Filed Oct. 31, 1923. Serial No. 671,997. 5 Claims. (Cl. 68—9.)



1. A pressing machine comprising a frame, coacting pressing elements, one of which is movable toward and from the other, a lever pivoted to the frame and supporting the movable pressing element and actuating means comprising toggle links pivoted together respectively to said lever and to the frame, the link connected to said lever consisting of two parts pivoted together, forming a toggle, the parts of the last mentioned toggle being pivoted together by a stop joint.

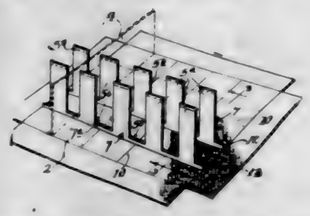
1,566,352. PROCESS OF RECOVERING TIN FROM ORES. JAMES R. STACK, Perth Amboy, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed May 23, 1919. Serial No. 299,237. 5 Claims. (Cl. 75—17.)



1. In the art of separating tin from ores, concentrates and by-products containing compounds of tin, iron and other elements, the process which consists in crushing the ore into relatively small particles, heating the same in a closed receptacle to a temperature above the reducing point of tin and below the reducing point of iron, subjecting the particles to the action of a gas adapted to react chemically with tin oxides and reduce the same, removing the tin liberated by such reaction, and then treating the residue to recover the metals therein.

---

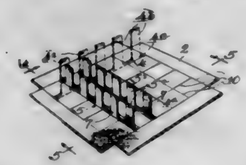
1,566,353. CUSHION-COVER CONSTRUCTION. SAMUEL SUBKOFF, Chicago, Ill. Filed July 24, 1925. Serial No. 45,735. 2 Claims. (Cl. 5—353.)



1. A cushion cover construction comprising top and bottom cover pieces, a plurality of parallelly disposed combs each consisting of a single piece of material initially sewn along one edge to one of said cover pieces and provided with spaced cuts extending from the free outer edge substantially down to said sewn edge, a plurality of partition strips arranged transversely of said combs and sewn to said cover piece along lines passing through aligned cut portions of said combs, said combs and partition strips being substantially of equal height and each sewn along its outer edge directly to the opposite cover to form a continuous strip connecting said covers together.

---

1,566,354. CUSHION-COVER CONSTRUCTION. SAMUEL SUBKOFF, Chicago, Ill. Filed July 29, 1925. Serial No. 46,754. 4 Claims. (Cl. 5—353.)

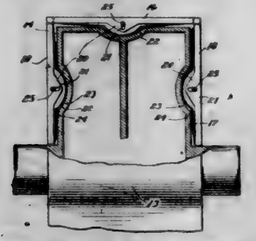


1. A cushion cover construction comprising top and bottom cover pieces, and connecting members therebetween forming rectangular cells, said connecting members comprising a plurality of combs, each consisting of a single piece of material initially sewn along one edge of one of said cover pieces and provided with spaced cuts extending from the free outer edge substantially

down to said sewn edge, said combs being arranged in sets disposed at right angles to each other along lines intersecting the aligned cut portions of both sets of combs.

---

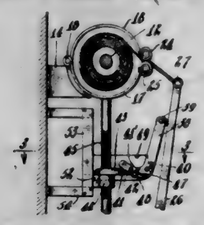
1,566,355. PACKING FOR PUMPS. HENRY M. SUNNES, Chicago, Ill. Filed Jan. 2, 1925. Serial No. 17. 4 Claims. (Cl. 74—109.)



1. In a piston packing in which the line of contact between the moving and stationary surfaces is a straight line, a groove in one of the surfaces, said groove having a recess at one portion, a strip located within the groove and having a bulge projecting into said recess, and a spring located in the groove under the strip, said spring being retained from longitudinal displacement by a portion thereof projecting into said recess.

---

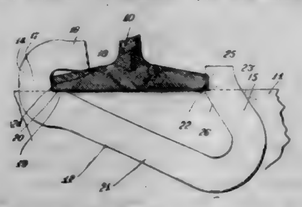
1,566,356. STORE AWNING. LUIGI VEGLIA and FRANK DI GIOVANNI, Chicago, Ill. Filed Jan. 19, 1925. Serial No. 3,277. 3 Claims. (Cl. 156—44.)



1. An awning comprising a roller, an awning proper mounted thereon, a U-shaped swingable frame to which said awning proper is attached at one end, a shaft operatively connected to said roller to rotate the latter by rotation of the shaft, said shaft being screw threaded for a portion of its length, a collar threaded upon the shaft and movable therealong as the shaft rotates, and a lever adapted to be engaged by said collar as the latter moves along the shaft and to engage said awning frame to impart initial downward movement thereto.

---

1,566,357. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1925. Serial No. 11,183. 10 Claims. (Cl. 238—330.)



1. A rail anchor comprising a bar formed at one end with a jaw portion adapted to be moved into gripping engagement with the top and bottom surfaces of a rail base at one side of the rail by a downward swinging movement of the other end of the bar, said last mentioned end being formed with a portion adapted to snap into engagement with the other edge of the rail base.

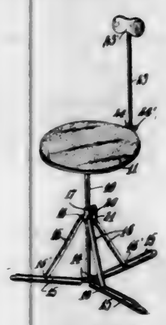
---

1,566,358. DOCTOR FOR PAPER MACHINES. JOHN WHITE, Edinburgh, Scotland, assignor to Vickerys (1920) Limited, London, England. Filed Sept. 5, 1924. Serial No. 736,027. 2 Claims. (Cl. 92—74.)

1. In a paper machine, in combination, a roll, a bar, a blade constituted by an array of fingers adapted to enter into direct contact with the roll surface and individually responsive to irregularities of the said surface, and resilient means separate from the blade and so interposed between said bar and fingers as to urge said fingers towards said roll surface.

---

1,566,359. CAMP STOOL. WALTER WITKOWSKI, Brooklyn, N. Y. Filed Dec. 12, 1923. Serial No. 680,066. 3 Claims. (Cl. 155—137.)



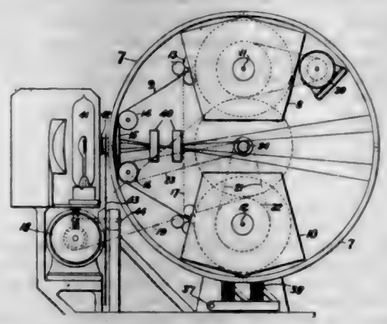
1. A camp stool comprising a seat, a socket element formed on the under side thereof, a leg fitting loosely at its upper end in said socket, strut elements, a sleeve slidable along said leg and connected to said strut elements for adjusting the same in their operative positions, and means adapted to be operated by said sleeve for locking the leg to said socket element.

---

1,566,360. FRAMING DEVICE. SAMUEL BARDY, Philadelphia, Pa., assignor to Bardy Motion Picture Machine Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 5, 1922. Serial No. 566,172. 10 Claims. (Cl. 88—16.8.)

1. A framing device for a motion picture machine having film feeding means, driving means, gearing connecting the film feeding means to the driving means arranged

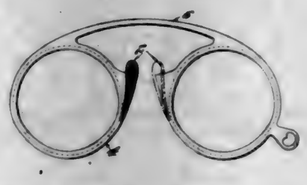
to normally cause both of said means to be rotated in synchronism, means included as an element in said gearing adapted when retarded to cause the speed of the film



feeding means to be accelerated to increase its speed over the speed of the driving means, and means for retarding the movement of said element.

---

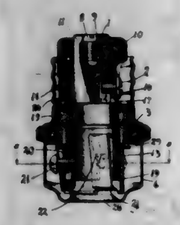
1,566,361. OPHTHALMIC MOUNTING. EARLE J. H. BRATTEY, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 22, 1922. Serial No. 602,622. 7 Claims. (Cl. 88—48.)



1. A guard for an ophthalmic mounting comprising a sheet of non-metallic material having a gripping face provided with a recess, and additional gripping material in the recess, the additional gripping material being of different character from the non-metallic material of the sheet to facilitate gripping action.

---

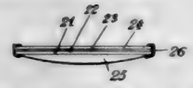
1,566,362. ELECTRIC PLUG. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1920. Serial No. 375,922. 10 Claims. (Cl. 173—322.)



1. A strain relief construction comprising an insulating base having a tubular portion affording a passageway for a wire, a metal sleeve surrounding said tubular portion, and jaws extending into said tubular portion for gripping the wire, and means mounting said jaws on said metal sleeve.

---

1,566,363. AUTOMOBILE SIGNAL. HARRY C. BERENTS, Bellemore, N. Y. Filed Oct. 5, 1923. Serial No. 666,724. 1 Claim. (Cl. 88—1.)



As a new article of manufacture an automobile signal consisting of a base member having a light reflecting surface, a coating of transparent red lacquer applied to said surface, a protecting plain glass placed against the lacquered surface, a rear view mirror placed against the said base member adjacent the non-lacquered surface thereof and a frame encasing all of the aforesaid members.

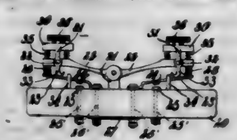
---

1,566,364. SHOE CONSTRUCTION. ROBERT S. BLAIR, South Beach, Conn. Filed May 9, 1919. Serial No. 295,877. 10 Claims. (Cl. 36—30.)

1. In footgear construction, in combination, a heel member, a sole member, and a flat metal spring member having a portion substantially the contour of said heel, positioned thereover and spaced therefrom to cushion shocks, said spring member extending forwardly from said heel portion toward said sole and being transversely curved at a portion positioned between said heel and said sole to prevent deformation of said portion and to support the arch of the foot, the spring member being substantially flat at its point of flexure on a fulcrum adjacent said heel.

---

1,566,365. AUTOMOBILE SIGNAL. VICENTE BOUZA, Highland Park, Mich. Filed Feb. 27, 1922. Serial No. 539,239. 1 Claim. (Cl. 200—169.)



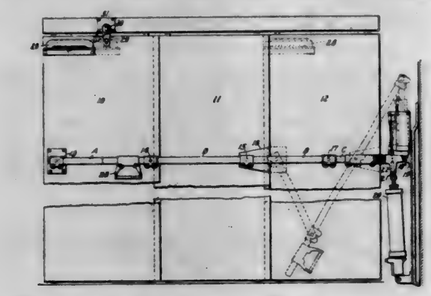
A control switch for a vehicle signal comprising a base, a contact arm pivoted at one end to said base and normally extending along the latter in spaced relation thereto, a contact spring fixed at one end to said base and extending along the latter under the said arm, a bar spaced above the outer end of said arm and extending longitudinally of the latter, a rigidly depending leg on said bar midway between the ends thereof pivotally connected to said arm, a pair of coiled expansion springs located between the bar and arm and spaced longitudinally of the bar one on each side of said leg to retain it in parallel position with respect to the said arm, a hooked element depending from said leg, and an eye on said base adapted to be engaged by said hook element, by moving the bar from the said parallel position, and a contact point carried by said contact spring at a point between the ends of the latter, the said arm being adapted to engage the said spring contact adjacent the free end of the latter to move it to operative position.

---

1,566,366. DOOR-CLOSURE MECHANISM. THOMAS BRADY, East Orange, N. J., assignor to Brady Elevator Equipment Company, Inc., Hoboken, N. J., a Corporation of Delaware. Filed May 2, 1923. Serial No. 636,047. 13 Claims. (Cl. 292—194.)

1. Pawl and rack mechanism comprising relatively slidable members, a rack mounted on one of said mem-

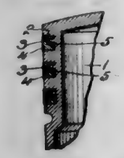
bers, a pawl pivoted on the other member, said rack and pawl being constructed and arranged to prevent relative movement of said members in one direction when the pawl engages the rack teeth, and means carried by the pawl for elevating the pawl above and out of engage-



ment with the rack teeth when one of said members is moving relative to the other member, said means permitting the pawl to engage the teeth when the members are so relatively moved as to move the pawl into such engagement.

---

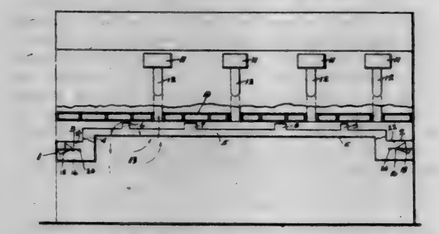
1,566,367. PISTON PACKING. THOMAS E. BRALEY, Wichita, Kans., assignor of one-half to Joel E. Davis, Wichita, Kans. Filed Aug. 6, 1925. Serial No. 48,540. 2 Claims. (Cl. 74—109.)



1. In piston packing, a transversely divided piston ring having an annular channel on its inner side and adapted to be fitted in a peripheral groove in a piston, the inner side of one of the flanges of the channel ring having a beveled bearing surface of annular form which inclines outwardly toward the other flange of the ring, and an inner transversely divided piston ring adapted to be fitted in the channel of the other ring and having one plane side adapted to bear against the piston and having its other side provided with an annular beveled surface adapted to fit said beveled surface of the other ring.

---

1,566,368. VENTILATION SYSTEM. ROBERT B. BRANDL, St. Paul, Minn. Filed Mar. 2, 1923. Serial No. 622,331. 2 Claims. (Cl. 98—27.)



1. In a ventilating system the combination with the walls, roof, and a ceiling of a barn of a longitudinally extending distributing pipe positioned near the center of the barn, intakes at each end of said barn and below said pipe, said pipe being positioned below said ceiling, risers connecting said intakes to said pipe, a plurality of roof ventilators spaced along the length of said barn but at one side thereof, a plurality of vents in said distributing pipe spaced in intermediate relation with said roof ventilators.

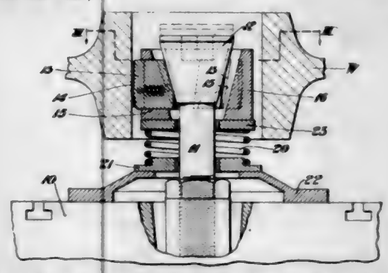
---

1,566,369. METHOD OF MAKING CONVEYER BANDS. JOHN BRANDWOOD, Southport, and THOMAS BRANDWOOD, Bury, England, and JOSEPH BRANDWOOD, Waban, Mass. Filed June 21, 1924. Serial No. 721,579. 1 Claim. (Cl. 140—107.)

The method of manufacturing a conveyer band intended for the purpose of conveying textile materials through dyeing and analogous liquors, which method consists in weaving together a series of spiral coils of nickel alloy, passing the band thus formed onto a beam on which it is rolled, annealing the band on the beam, passing the said band directly from the beam to pressure rollers, and trimming off the longitudinal ends of the now flattened band.

---

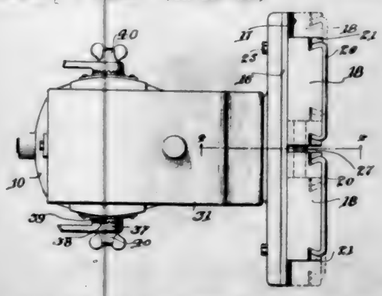
1,566,370. CHUCK. JOHN W. BRISCOE, Ingram, Pa. Filed Feb. 20, 1925. Serial No. 10,631. 7 Claims. (Cl. 82—40.)



1. A chuck for holding a work blank on a work support, comprising in combination, a cage member, radially movable jaws therein, resilient means supporting said cage member, and an element movable relative to said cage member to first force said jaws outwardly into engagement with the work blank and then in a direction to force the work blank toward its support.

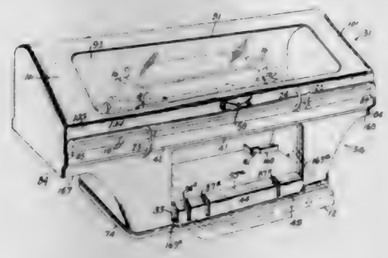
---

1,566,371. SCRUBBING DEVICE. THOMAS A. BROWNRIG, Portland, Me. Filed Sept. 26, 1924. Serial No. 740,003. 6 Claims. (Cl. 15—50.)



1. In a device of the character described, a pair of scrubbing sections, means for intermittently moving said sections away from each other, spring means to return said sections and means for intermittently feeding a cleaning fluid to the scrubbers at the end of their stroke.

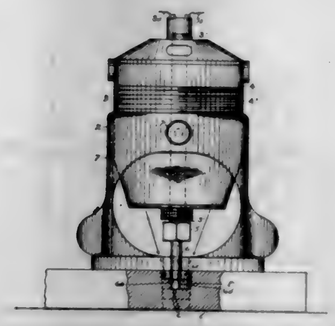
1,566,372. TYPEWRITING MACHINE. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 27, 1921. Serial No. 510,726. 19 Claims. (Cl. 197—186.)



1. In combination, a typewriting machine and a sound-deadening casing therefor; the casing comprising front, rear and side walls in a single casting; a movable cover; the front wall having an opening therein with a continuous periphery of such size and contour that, upon insertion of the machine, in forward and downward tilted position, through the top of the casing when the cover is open, the keyboard extension thereof may be swung outward through said opening; and sound-deadening linings for the walls and cover; and the machine having over the keyboard thereof a sound-deadening front plate, said front plate having an opening in its top portion to expose the types, and a plate insertible in position to close said top opening to complete the closing of the casing, said insertible plate having means to catch upon the typewriting machine to retain itself in position thereon, and the type-writing machine being so positioned in the casing that the front plate of the typewriting machine lies against the inner face of the front wall of the casing.

---

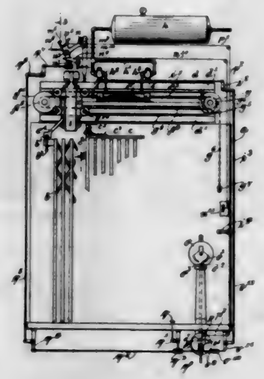
1,566,373. ROUTER BIT. RAY L. CARTER, Syracuse, N. Y. Filed Mar. 18, 1925. Serial No. 16,555. 4 Claims. (Cl. 144—219.)



1. In a router bit, a solid cylindrical body having a normal diameter for the greater part of its length, below said normal diameter said body being formed with a tapered guide portion and below said tapered portion said body being cut away in the line of its axis and at the opposite sides of the opening so formed said body being formed with V-shaped semi-cylindrical spurs, each of said spurs having a sharp cutting edge extending longitudinally and being disposed in the plane of said tapered portion, and the free end of said spurs being round and sharp.

---

1,566,374. ELEVATOR. LOUIS CHABAN, New York, N. Y., assignor to Shur Loc Elevator Safety Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 21, 1923. Serial No. 658,480. 27 Claims. (Cl. 187—52.)



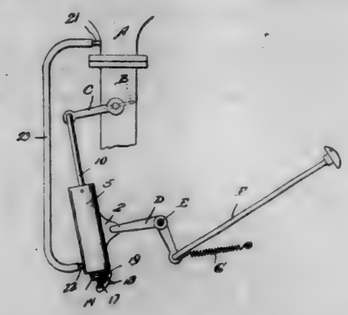
5. In an elevator, the combination of a car, a frame mounted on the car, a reciprocating carriage mounted on the frame, an air cylinder, piston and piston rod mounted on the car, a driving pulley and idler mounted on the frame, a cable having its ends connected to the piston rod and passed about the driving pulley and the idler, a second driving pulley also mounted on the frame in operative relation with the first mentioned pulley, a corresponding idler, a cable passed around the second driving pulley and idler and having its ends connected to the reciprocating carriage, and a manually controlled clutch between the driving pulleys.

---

1,566,375. ROCKER MECHANISM. LOUIS COATALEN, Wolverhampton, England, assignor to Sunbeam Motor Car Company Limited, Wolverhampton, England, a British Company. Filed Mar. 11, 1925. Serial No. 14,673. 1 Claim. (Cl. 308—62.)

A rocker mechanism assembly comprising a fixed shaft, an eccentric bushing carried thereby, said bushing having a longitudinal extension carrying radial ears extending upward on opposite sides of said fixed shaft, means to draw said ears toward each other, a peripheral flange on said bushing, a rocker arm mounted on said bushing and having a portion abutting said flanges.

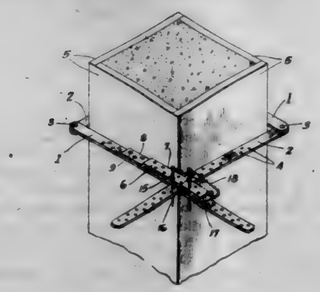
1,566,376. THROTTLE GOVERNOR. ARNOLD L. COUTY, Marshfield, Oreg. Filed Feb. 25, 1925. Serial No. 11,466. 6 Claims. (Cl. 137—153.)



1. A device of the class described for attachment between an accelerator and the operating means of a butterfly valve embodying means for shortening the device operable by suction created in the intake manifold.

---

1,566,377. CLAMPING DEVICE. ANTONIO CURRENTE, West New York, N. J. Filed July 23, 1924. Serial No. 727,692. 5 Claims. (Cl. 144—291.)

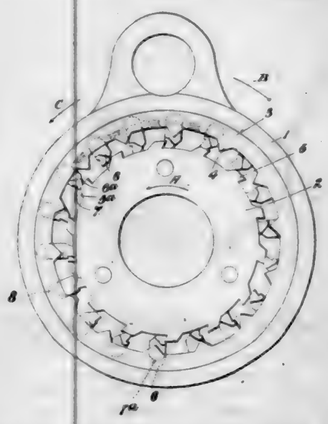


1. A clamp for forms and the like comprising two pivotally connected strips, each having a number of spaced transverse holes therethrough, and a lug carried by one of the strips and having offset ends, each supplied with holes to register with those in the strip so that one of said ends may be attached to one of said strips by means passing through registering holes and thereby positioning the other end along the adjacent strip with the corresponding holes in register and spaced from the strip sufficiently for another strip to be placed therebetween.

---

1,566,378. FREE-WHEEL CLUTCH. JULES FREDERIC DEFORDT, Ixelles, Brussels, Belgium. Original application filed Mar. 21, 1921, Serial No. 454,191. Divided and this application filed June 20, 1922. Serial No. 569,767. 1 Claim. (Cl. 192—46.)

A positive free wheel clutch comprising a pair of concentric wheel members, a plurality of radial pockets in one of said wheel members, a movable tooth slidably mounted in each of said pockets, a plurality of fixed teeth of substantially buttress form on the other wheel member with which the movable teeth are adapted to engage when the wheel members are moved in the fixed wheel direction and by which the movable teeth are moved radially within their pockets in one direction when the wheel members are moved in the free wheel direction, lateral projections on opposite sides of the movable teeth having inclined surfaces, annular members concentric with the wheel members and movable with the wheel member having the fixed teeth, said annular members having spaced triangular projections adapted to engage



the inclined surfaces on the lateral projections of the movable teeth and positively move such teeth radially into the engaging position when the wheel members are moved in the free wheel direction.

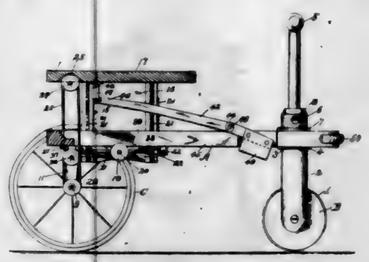
---

1,566,379. PROCESS OF TREATING SULPHIDE ORES AND CONCENTRATES. MICHEL DE KEYSER, Oakland, Calif. Filed July 21, 1922. Serial No. 576,499. 7 Claims. (Cl. 23—175.)

1. The process for treating sulphide ores and concentrates which includes the roasting of the said material to produce sulphur dioxide, the introduction of ozone into the latter and the passing of the mixture through a catalyzing agent.

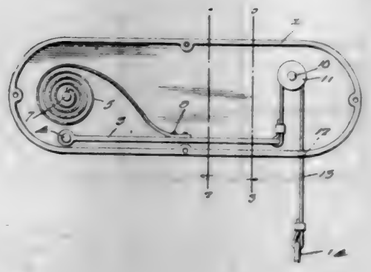
---

1,566,380. GRAVITY MOBILE VEHICLE. ROY K. DENNISON, East Machias, Me. Filed May 6, 1925. Serial No. 28,406. 12 Claims. (Cl. 208—38.)



1. In a gravity mobile vehicle, a body or frame mounted at one of its ends upon a rotatable wheel bearing shaft, a wheel immovably journaled upon one end of said shaft to be turned thereby, a vertically movable seat upon said body or frame, and a flexible connection comprising a cord or rope extending between said body or frame and said rotatable wheel bearing shaft and adapted to be acted upon and moved downwardly by the downward movement of said movable seat to rotate said wheel bearing shaft and thereby move said vehicle in forward direction, substantially as described.

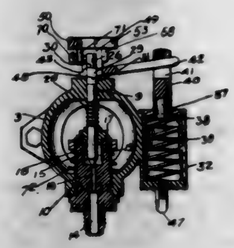
1,566,381. SHOCK ABSORBER. RAYMUNDO DE SOUSA SANTOS, Philadelphia, Pa. Filed Mar. 24, 1925. Serial No. 17,975. 2 Claims. (Cl. 267—19.)



1. In a shock absorber, a casing, a lever fulcrumed in the casing, spring means associated with the lever for holding it in a predetermined position, a pulley mounted in the casing, a strap trained over the pulley and attached at one end to the lever, said casing, adapted to be mounted on the chassis of a vehicle and the free end of said strap adapted to be fixed to the axle of a vehicle.

---

1,566,382. CARBURETOR. ARTHUR DION, Leaside, Ontario, Canada. Filed Apr. 25, 1924. Serial No. 709,014. 3 Claims. (Cl. 261—69.)

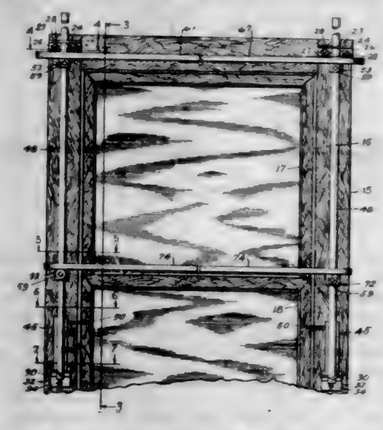


1. In a carburetor, the combination with the carburetor body having a cylindrical fuel chamber located therein having a fuel inlet leading to the bottom thereof and a fuel outlet leading radially therefrom, and a throttle lever, of a sleeve valve slidably fitting the exterior of the fuel chamber and having a perforation adapted to be carried into and out of alignment with the radial orifice, a pin extending upward from the sleeve freely through the top of the carburetor body, a spring tending to force the sleeve upward, and a cam carried by the throttle lever adapted to engage the upper end of the pin to force it downward as the throttle lever is carried to the closed position.

---

1,566,383. SUPPORT FOR WINDOW HANGINGS. GEORGE W. DOVER, Providence, R. I. Filed Apr. 23, 1925. Serial No. 25,287. 9 Claims. (Cl. 156—19.)

3. The combination of brackets adapted to be fastened to a window frame, a shaft slidably and rotatably mounted in the brackets, a holder comprising a sleeve loose on the shaft, a lateral horizontal lug on the sleeve, and ears



upon the extension, a set screw in the sleeve engaging the shaft, and flat suspension rods embraced by the ears and resting on the lug.

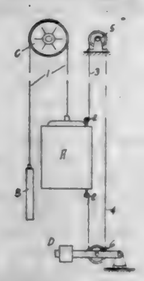
---

1,566,384. MANUFACTURE OF ARTIFICIAL SILK AND THE LIKE FROM CELLULOSE DERIVATIVES. HENRY DREYFUS, London, England. Filed Mar. 10, 1922. Serial No. 542,752. 8 Claims. (Cl. 18—54.)

1. In the dry spinning of artificial threads and filaments from solutions of cellulose derivatives the employment of spinning solutions comprising a volatile solvent and a liquid of a higher boiling point, said liquid of higher boiling point being a solvent of the cellulose derivative and not being a toxic chlorine derivative, whereby the solidification of the filaments is regulated and the spinning of fine deniers facilitated.

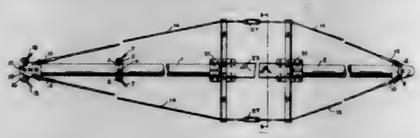
---

1,566,385. CONTROL SYSTEM FOR ELEVATORS. EDWARD L. DUNN, East Orange, N. J., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 15, 1922. Serial No. 607,244. 9 Claims. (Cl. 187—29.)



5. In an elevator system, the combination with an elevator car and a controlling mechanism comprising a reversible reel; of means for driving said reel in unison with the movement of the car, said means comprising a pair of tapes secured to said reel and adapted to spirally wind and unwind side by side in opposite directions thereon, and means for enabling the movement of the car to rotate said reel and respectively wind and unwind the two tapes thereon.

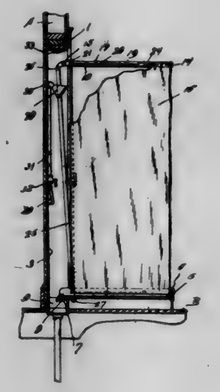
1,566,386. SUPPORTING MAST FOR CONCRETE CHUTES. JOHN P. FABER, Dunellen, N. J., assignor to Ransome Concrete Machinery Company, Plainfield, N. J., a Corporation of New Jersey. Filed Dec. 12, 1922. Serial No. 606,481. 8 Claims. (Cl. 193—1.)



1. In a device of the character described, the combination of a mast proper in two tubular metal sections, end members having sockets for receiving the ends of the sections and a medial connecting device having sockets for the inner ends of the sections composed of pairs of interchangeable members secured together one pair of members being spaced laterally from the inner ends of the mast sections and another connecting them together and carrying the sockets for said ends, said end members being provided with means for connecting the mast with a support, and being interchangeable.

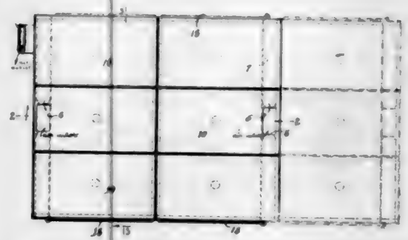
---

1,566,387. DISAPPEARING SHOWER BATH. RALPH D. FIFIELD, Fort Pierce, Fla. Filed Aug. 7, 1925. Serial No. 48,894. 4 Claims. (Cl. 4—146.)



1. In a disappearing shower bath, a cabinet adapted to be set into a wall, a door for said cabinet, a pan pivotally supported at its rear end in the bottom of the cabinet, a rim hingedly supported adjacent its rear end in the upper portion of the cabinet, a curtain supported at its upper edge on said rim, said pan and the rim and the curtain carried thereby adapted to be disposed entirely within the cabinet when in a collapsed position, and means for operatively connecting the pan with the rim whereby said rim will be automatically swung outwardly and upwardly simultaneous with the downward and outward swinging movement of the pan, said means comprising a pair of links pivotally connected at their lower ends to the opposite sides of the pan adjacent the pivoted rear end thereof, the upper ends of the links being connected to the rear end portion of the side of the rim at a point rearwardly of the pivotal support for said rim.

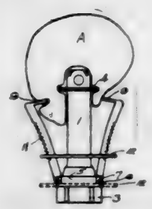
1,566,388. BAKERY PROOF BOX. WALTER L. FLEISHER, New York, N. Y. Filed Aug. 4, 1925. Serial No. 48,176. 5 Claims. (Cl. 107—7.)



1. In a proof box formed of units or sections, each having a plenary chamber at the top thereof, channelled shapes disposed along a vertical wall for framing an air duct and means interposed between the section and the plenary chamber for controlling the communication therebetween.

---

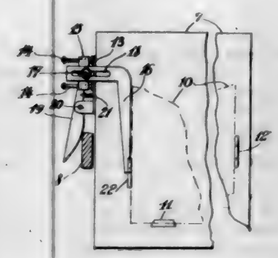
1,566,389. HOSE MOP. THOMAS FRANK, St. Louis, Mo. Filed Oct. 24, 1924. Serial No. 745,650. 4 Claims. (Cl. 15—130.)



1. In combination, a nozzle, arms pivoted at the side of said nozzle, transverse jaws on said arms movable toward each other and said nozzle, said jaws being recessed to partially receive said nozzle and more closely approach each other.

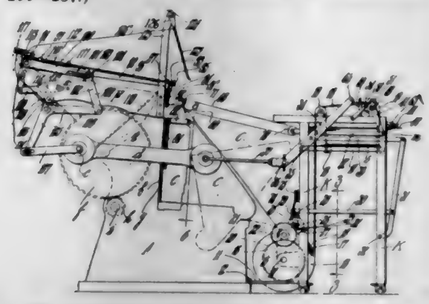
---

1,566,390. SIDE REGISTERING DEVICE. CARL F. FRAUENBERGER, Long Island City, N. Y., assignor to S. H. Rosenberg, Brooklyn, N. Y. Filed Apr. 23, 1925. Serial No. 25,190. 3 Claims. (Cl. 101—414.)



1. The combination with a platen press, the platen and its operating means, of a side registering device comprising a bracket secured to the side of the platen, a side registering member slidably mounted on said bracket, a cam lever for operating said side registering member, said cam lever being operable by the said platen operating means.

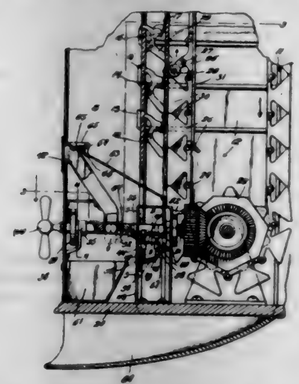
1,566,391. SHEET-HANDLING MECHANISM FOR PRESSES, CREASERS, AND THE LIKE. ELLSWORTH FREY, Springfield, Mass., assignor, by mesne assignments, to S. H. Rosenberg, Brooklyn, N. Y. Filed May 26, 1922. Serial No. 563,830. 4 Claims. (Cl. 101—287.)



1. The combination with a cutting and creasing press having a substantially vertically disposed bed and a platen movable toward and away from the same, of a magazine for sheets to be fed to said platen and means for successively feeding sheets from said magazine to the platen, said magazine and feeding means being constructed as one distinct unit separate from the press and adapted to be bodily shifted at will to completely separate it therefrom, means for detachably connecting said unit to the press in a predetermined position, said feeding means including a swinging actuating lever, and a link connected to said lever, and adapted for detachable connection with said platen, whereby said lever is swung to and fro to actuate said feeding mechanism by the swinging movement of said platen.

---

1,566,392. SANDWICH-VENDING MACHINE. ALFRED J. FULWOOD, Washington, D. C. Filed Apr. 5, 1924. Serial No. 704,484. 3 Claims. (Cl. 211—8.)



1. A vending machine of the class described comprising a casing, a vertical wall in said casing, said wall being provided with a plurality of vertically spaced openings, said openings being arranged in alignment with each other, a plurality of vertically spaced superposed article supporting shelves pivotally connected with said wall, each shelf being provided with a retaining arm, extending in parallelism with said wall, a plurality of superposed latches pivotally mounted upon said wall and having one end projectible through said openings for engaging said arm to maintain the shelves in horizontal position, a partition disposed in spaced parallelism with said wall, said partition being provided with openings through which the opposite ends of the latches normally extend, an endless chain mounted for rotation in said casing, a trip device carried by said chain and cooperable with the last named ends of said latches for disengaging them, and a plurality of shoes carried by said chain and cooperable with the openings in said partition to maintain said latches ineffective.

---

1,566,393. RECOIL CHECK. SAMUEL FURMIDGE, Chicago, Ill. Filed Aug. 13, 1919, Serial No. 317,298. Renewed June 26, 1922. Serial No. 570,936. 5 Claims. (Cl. 267—10.)

1. In combination, a circular member, a split element surrounding the periphery of the circular member, resilient means connected to one end of the split element, and a flexible element attached to the said end of the split element completely wrapped around the periphery of the split element and then crossing the gap between the ends of the said element.

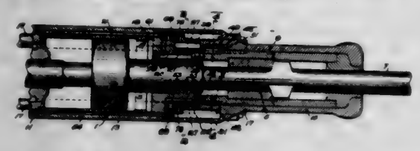
---

1,566,394. CLOTHES TONGS. EUGENIE K. GILDER, Harvard, Idaho, assignor of one-half to A. J. Walsh, Potlatch, Idaho. Filed Jan. 2, 1924. Serial No. 683,873. 1 Claim. (Cl. 68—6.)

In a clothes tongs the combination of a double bar having a closed bent end and a single bar pivoted in the double bar, a bend in the single bar adapted to receive and retain the closed bent end of the double bar and a suspending eye fashioned as a hook at the end of the single bar.

---

1,566,395. DRILLING MACHINE. GEORGE H. GILMAN, Belmont, Mass. Filed Mar. 13, 1923. Serial No. 624,844. 15 Claims. (Cl. 121—7.)

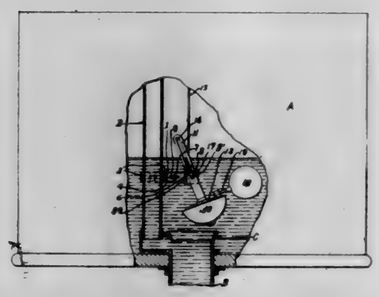


1. In a drilling machine, a rotary chuck, an internal member mounted for reciprocation relatively to said chuck, an external member mounted on said internal

member for reciprocation relatively thereto and transversely to the reciprocation of said internal member, means supporting said external member for gyration, a direct gearing connection between said external member and chuck, and means for causing motion of said members by fluid pressure.

---

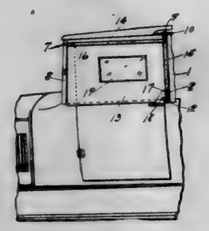
1,566,396. WATER-CLOSET-FLUSHING MECHANISM. ALLEN R. GILMORE, Elkhart, Ind. Filed Feb. 14, 1925. Serial No. 9,092. 4 Claims. (Cl. 4—53.)



1. The combination with a flush tank having an outlet provided with a valve seat and an overflow pipe, of a support secured to said overflow pipe, a tiltable valve movable to and from said valve seat, a stem carried by said valve adapted to engage said support to hold the valve away from said valve seat, when the valve is tilted, and a float by which said valve is tilted to place said stem in engagement with said support.

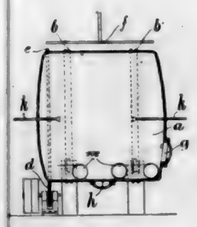
---

1,566,397. DOOR FOR AUTOMOBILE CURTAINS. WILLIAM F. GODFREY, Kearney, Nebr. Filed July 6, 1925. Serial No. 41,578. 2 Claims. (Cl. 296—139.)



1. The described method of forming a flap door in an automobile curtain; consisting in cutting out a doorway from the curtain; sewing stiffening strips at the top and side edge of the opening; extending a metal reinforcing strip through the top stiffening strip and bending the forward end thereof around the windshield post; sewing a metal hook to the said side edge stiffening strip, the said hook being adapted to engage the upper bow of the top frame of the automobile; riveting together the shank of the said hook and the inner end of the said top edge reinforcing strip; hinging a flap door over the said door opening by sewing it by an upper corner of the hinge side to the said top stiffening strip of the doorway; the said flap door having supporting means engaging the door of the automobile.

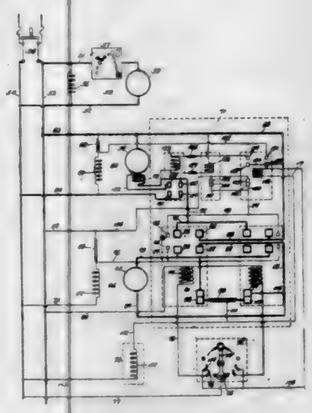
1,566,398. PROCESS OF MANUFACTURE OF CELLULOSE ESTERS OR ETHERS IN A SOLVENT. NICOLAS BENOIT GRILLET, Neuilly, France, assignor to Societe Chimique des Usines du Rhone, Paris, France. Filed Nov. 22, 1924. Serial No. 751,458. 6 Claims. (Cl. 260—101.)



1. A process of esterifying cellusose, which consists in executing the reaction in the presence of a liquid solvent of the desired product in a comparatively large closed vessel, and rotating said vessel thereby to agitate the mixture.

---

1,566,399. ELECTRIC ELEVATOR SYSTEM. GRAHAM B. GROSVENOR, Chicago, Ill., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 7, 1922. Serial No. 541,816. 5 Claims. (Cl. 172—152.)



1. In an electric elevator system, in combination, a direct current generator having a separately excited field, a constant potential source of direct current, means for varying the excitation of said generator field to produce a minimum voltage and a maximum voltage substantially equal to the voltage of said source, a motor for raising and lowering the elevator, connections between said generator and said elevator motor, and automatic means for connecting the armature terminals of both said elevator motor and said generator in parallel across the said source of direct current at a predetermined voltage.

---

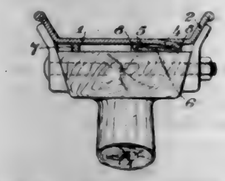
1,566,400. NURSING BOTTLE. MARION H. GUSTINE, Chicago, Ill. Filed Dec. 15, 1924. Serial No. 756,087. 1 Claim. (Cl. 215—11.)

A nursing bottle comprising an outer rigid container, open at one end, said open end being provided with an outwardly extending rounded annular bead, an inner readily removable paper cup provided with a downwardly depending skirt adapted to slip over and extend below said bead, and a rubber cap provided with a nipple, and having a contracted base adapted to be sprung over and to grip said skirt and to crumple the paper thereof, forcing it to engage beneath and snugly within the angle between

the bead and container wall and to form a liquid proof joint at said bead, and firmly securing the rigid container, the rubber cap, and the paper lining tgether, said paper lining also completely protecting said outer container from contact with the contents of the bottle, substantially as and for the purpose described.

---

1,566,401. DETACHABLE RIM. KNUT HALLSTRÖM, Malmo, Sweden. Filed Nov. 9, 1923. Serial No. 673,839. 1 Claim. (Cl. 301—35.)



A detachable rim, comprising, cooperating endless rim sections, each section having cut out portions in its inner edge defining flaps, the flaps being bent inwardly and having tongues at their ends, the edge of each cut out portion in each section being bevelled to correspond with the inward bending of the flaps on the other section, the entire body of each flap of each section, when the sections are placed together to form a rim, being received beneath the bevelled portions of the other section, whereby to leave, on the outer face of the rim, only a longitudinal line of separation between the sections, and a resilient attaching ring received by the tongues.

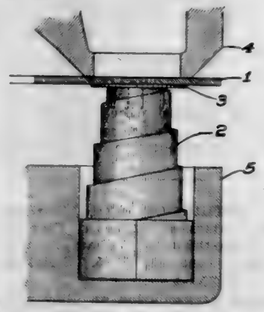
---

1,566,402. CURTAIN POLE. HARRIS L. HESS, Toronto, Ontario, Canada. Filed June 15, 1923. Serial No. 645,559. 1 Claim. (Cl. 156—20.)

The combination with a curtain, of a curtain pole of C-shaped cross section with a longitudinal slot in its concealed vertical face, a roller movable longitudinally in said pole, and its periphery engaging the internal lower surface of the pole, said roller having a central horizontal orifice therethrough communicating with an enlarged concentric recess in the face of the roller adjacent to the outer vertical face of the pole, a curtain supporting member of substantially inverted L-shape having its horizontal leg extending freely through the slot in the pole, being positioned to be out of contact with the lips of such slot and extending through the central orifice in the roller into the enlarged recess therein where it terminates in an enlarged head, and means on the vertical leg of the curtain supporting member for attaching it to the curtain.

---

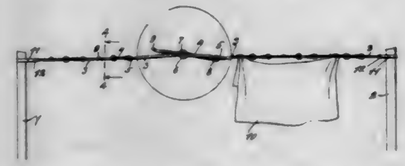
1,566,403. VALVE PROTECTOR. LEON F. HOFFMAN, Franklin, Pa., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed June 6, 1921. Serial No. 475,517. 1 Claim. (Cl. 251—144.)



In a valve organization, in combination, a valve seat, a valve keeper, a valve of the plate type intermediate said seat and said keeper, springs formed of flat material, flat wound in volute conical form, the larger ends of which seat in sockets in said keeper, the smaller or tang ends being adjacent said valve, and protectors for said valve interposed between said valve and said springs, said protectors being of flat sheet material with struck up parts engaging the interior of said springs and providing spaces for the tang ends thereof.

---

1,566,404. PINLESS CLOTHESLINE. WILLIAM C. HOLLAND, Edgewater, Colo. Filed Mar. 10, 1925. Serial No. 14,412. 1 Claim. (Cl. 68—3.)



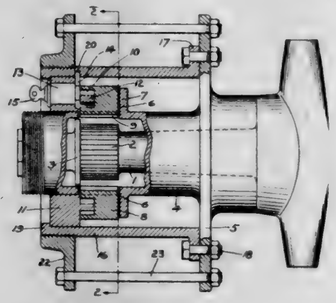
A pinless clothesline comprising a plurality of hingedly connected link sections, each section comprising two links one of which is made in the shape of an oblong ring having a transverse connection intermediate its ends and the other of which is a straight bar having one end connected to the transverse connection of the oblong ring member and the other connected to one end of the corresponding member of the other group.

---

1,566,405. WHEEL-LOCKING DEVICE. HAROLD THOMAS JONES, Vancouver, British Columbia, Canada. Filed July 8, 1924. Serial No. 724,913. 3 Claims. (Cl. 188—31.)

1. In a wheel locking device, the combination with a spindle and a hub therefor, of a toothed wheel secured

upon the spindle, dogs carried by the hub, an annular ring rotatable about the hub and having spiral segments engaging the dogs to move them into and out of engage-



ment with the toothed wheel to lock the hub against rotation about the spindle, and means for locking the annular ring against rotation about the hub.

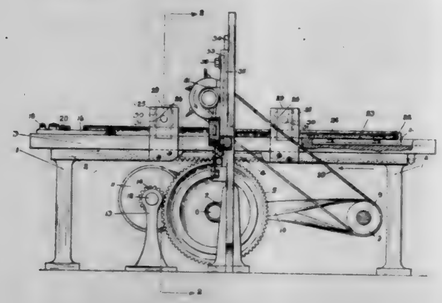
---

1,566,406. METHOD OF PRODUCING AN ALLOY OF COPPER. CHARLES KAZEMER, Cleveland, Ohio, assignor of one-third to William A. Jones, Cleveland, Ohio. Filed June 11, 1925. Serial No. 36,553. 2 Claims. (Cl. 75—1.)

1. A method of producing an alloy which consists in the step of melting copper with glass, reducing the melt to sheets, reducing the sheets in thickness by pressure, re-melting the reduced sheets with an admixture of silver and glass, reducing the melt to a sheet, reducing the thickness of the sheet by pressure, and then reducing said sheets to a workable form.

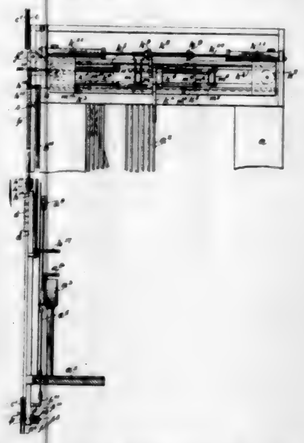
---

1,566,407. PADDLE-MAKING MACHINE. JOHN ROBERT KELBRICK, Peterborough, Ontario, Canada. Filed Oct. 18, 1922. Serial No. 595,353. 2 Claims. (Cl. 144—142.)



1. In a paddle making machine, the combination with the main frame, of a subsidiary cutter shaft carrying frame vertically slidable on the main frame, a pair of shafts independently journalled end to end on the subsidiary frame, a pair of oppositely positioned levers fulcrumed on the main frame, inwardly extending slides connected to their lower ends, their upper ends being pivotally connected to the shafts, means coacting with the inner ends of the slides for intermittently forcing them outwardly in unison, and means on the slides coacting with the subsidiary frame for lowering and raising the latter upon the slides being moved inwardly and outwardly.

1,566,408. ELEVATOR. CHRISTIAN G. LASSEN, New York, N. Y., assignor to Shur Loc Elevator Safety Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 28, 1922. Serial No. 538,525. 40 Claims. (Cl. 187—52.)



5. In an elevator, the combination of a car, a door, a power storage device mounted on the car and operatively connected with the door, a power storage cable fixed at its upper and lower ends at the top and bottom of the elevator shaft, a clutch adapted to effect operative connection between the cable and the power storage device to store power in said device, a cam in operative relation with said clutch to determine the opening or the closing thereof, and a controller handle and operative connections to shift the cam.

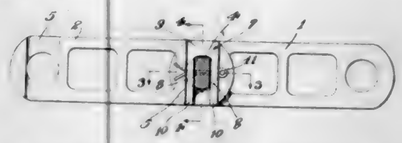
---

1,566,409. IMPREGNATED ELECTRODE FOR FURNACE WORK. HARRY ALFRED LAVENE, Niagara Falls, N. Y., assignor to Acheson Graphite Company, Niagara Falls, N. Y., a Corporation of New Jersey. Filed Feb. 5, 1923. Serial No. 617,176. 11 Claims. (Cl. 204—64.)

1. A porous electrode for furnace work, having a refractory compound in the pores thereof formed by the interaction of two soluble compounds.

---

1,566,410. CHAIN. LEWIS LOMANDO, Hazleton, Pa. Filed Jan. 19, 1924. Serial No. 687,205. 3 Claims. (Cl. 74—32.)

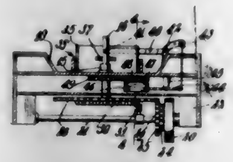


1. A chain including links; a pin connecting the links and having opposed mortises near one end; a detachable U-shaped head having its legs within the mortises, and means passing through the legs and the pin for securing them within the mortises.

---

1,566,411. MECHANICAL TOY. FELIX LUNAR LOPES, Denbo, Pa. Filed Nov. 21, 1923. Serial No. 676,006. 6 Claims. (Cl. 46—45.)

1. A toy comprising a carriage, a carousel element mounted thereon, and means for giving said carousel element a variable rotary movement as the carriage is moved along a surface, said means comprising a shaft, a gear pinion having a one-way operative connection with



said shaft, a pair of gears of different diameters fixed to the carousel element, said gear pinion meshing with one of said gears, and a gear segment fixed to the said shaft and meshing with the other of said gears.

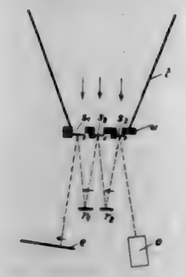
---

1,566,412. METHOD OF MAKING ORNAMENTAL SERVING TRAYS. ROSE LOVINGER, New York, N. Y. Filed May 5, 1925. Serial No. 28,069. 2 Claims. (Cl. 41—22.)

1. A tray comprising a transparent plate, a coat of dark paint covering part of the rear face of said plate leaving transparent the appearance of certain designs at certain predetermined spots, a tin-foil background placed on said paint, a felt cushion carrying said plate, a reinforcing cushion formed in the center of said felt cushion, a wooden bottom, and a frame for the whole to which said bottom is attached, and a pair of handles.

---

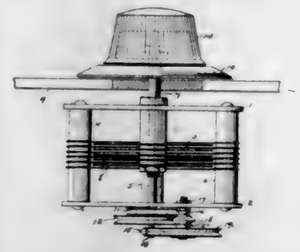
1,566,413. MEANS FOR RECORDING SOUND WAVES. JOSEPH MASSOLLE and JOSEF ENGL, Grunewald, and HANS VOOT, Berlin-Schoneberg, Germany, assignors to Tri-Ergon Limited, Zurich, Switzerland. Filed Apr. 4, 1921. Serial No. 458,633. 11 Claims. (Cl. 274—5.)



11. In acoustic apparatus, the combination of a supporting member, having adjacent openings therein, a plurality of diaphragms covering said openings, exposed to sound waves on one side and having reflecting surfaces on the other side, said diaphragms having different individual frequencies, all of said diaphragms being secured at one side only, and all having parallel axes of rotation, a source of light, and means for directing a beam of light therefrom against the reflecting surfaces of each of said diaphragms in succession, and from the last of said diaphragms to a desired point.

---

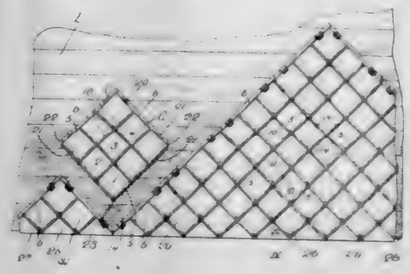
1,566,414. VERNIER CONDENSER. HENRY WILLIAM MEESEL, Newark, N. J., assignor to U. S. Tool Company, Inc., Newark, N. J., a Corporation of New Jersey. Filed June 4, 1924. Serial No. 717,711. 5 Claims. (Cl. 74—7.)



2. In a reduction train for plate condensers the combination of a double faced driving pinion, with a grooved faced wheel in engagement therewith said wheel being formed of elastic discs having marginal flanges and convexed centers and means for concentrically compressing said discs together to reduce their convexities whereby a resilient peripheral bearing face is formed.

---

1,566,415. ROOFING SHINGLE. ROBERT MILLER, Brooklyn, N. Y. Filed Nov. 19, 1921. Serial No. 516,490. 6 Claims. (Cl. 108—17.)



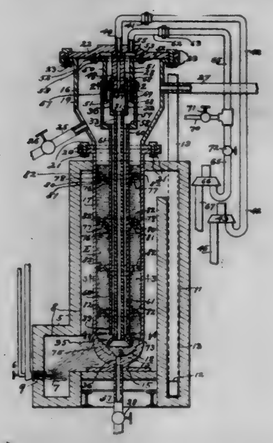
1. A roofing shingle of rectangular shape and being made from sheet material pressed to provide beads extending along the margins of the shingle, the shingle being adapted to be laid diagonally upon a roof, the beads which extend along the lower marginal edges being relatively larger than the beads which extend along the upper marginal edges so that the lower beads of each shingle will fit over and receive the upper beads of previously laid shingles, and means for engaging and retaining the four edges of each shingle in said position.

---

1,566,416. APPARATUS FOR TREATING HYDROCARBONS. FRED G. NIECE, Cleveland, Ohio, assignor to The International Holding Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 17, 1922. Serial No. 575,617. 18 Claims. (Cl. 196—118.)

4. Apparatus of the character indicated comprising a closed receptacle which has a vapor-outlet and contains a molten body penetrable by hydrocarbons and not vapor-

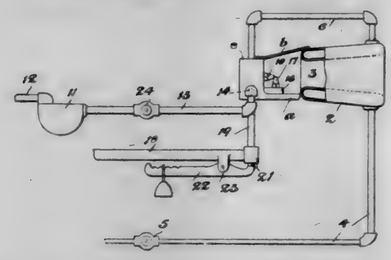
izable at the required hydrocarbon-cracking temperature, an endwise movable upright feed-pipe discharging into said molten body, and an upright feed-pipe arranged in-



ternally of and spaced from the first-mentioned pipe and movable upwardly during upward movement of said first-mentioned pipe.

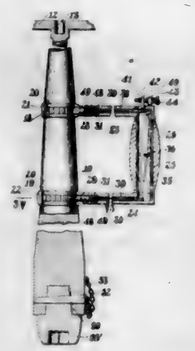
---

1,566,417. OIL BURNER. HERBERT BARCROFT ODELL, Toronto, Ontario, Canada. Filed Sept. 2, 1924. Serial No. 735,335. 2 Claims. (Cl. 158—73.)



2. In a contrivance of the class described, in combination a chambered steam generator having a passage-way therethrough; a distributing head located in front of said steam generator and provided in its upper portion with distinct inlet passage-ways which meet in a common horizontally-disposed outlet passage-way; a fluid nozzle mounted in said last-mentioned passage-way and projecting beyond said head and opening towards the passage-way through said generator; a foot integrally formed with said distributing head and provided with a fuel passage-way therethrough, which communicates with an intake fuel passage-way formed in said head; a vertically-disposed fuel nozzle carried by said foot and opening into the fuel passage-way thereof, and having its discharge end located adjacent the discharge end of said fluid nozzle; an air pipe opening into one of said first-mentioned inlet passage-ways; a safety valve associated with said air pipe; a steam pipe leading from said steam generator and opening into the other of said first-mentioned inlet passageways, the excessive pressure of steam escaping through said air pipe, a fuel-level-control bowl coupled to the fuel intake of said head, and a pan integrally formed with said head and associated with said foot so as to collect any unconsumed oil, the whole arranged to operate as set forth.

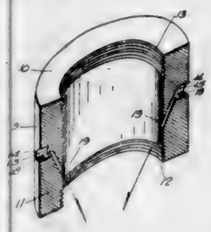
1,566,418. HAND DRILL AND SCREW DRIVER. STANISZLAW OLSZOWIEC, New Waterford, Nova Scotia, Canada. Filed July 28, 1924. Serial No. 728,553. 8 Claims. (Cl. 145—66.)



1. A device of the class described comprising an elongated body member adapted to receive a bit at one end, a pair of oppositely facing ratchet elements spaced along said member, rings freely surrounding said ratchet member, hollow arms projecting from said rings transversely to the said member, a tube rigidly connecting the outer ends of said arms, pawls slidable in the said arms and engaging the said ratchet elements, a rock-lever fulcrumed in said tube, stems connected at their forward ends to said pawls by a lost motion connection and at their rear ends to said lever, and means for setting said lever at different adjusted positions.

---

1,566,419. OIL AND GAS SAVING AND LIFE-SAVING COLLAR FOR OIL AND GAS WELL DRILLING OUTFITS. DE WITT M. O'NEILL and SHERMAN MCKOWN, Yale, Okla. Filed May 14, 1925. Serial No. 30,274. 1 Claim. (Cl. 166—15.)



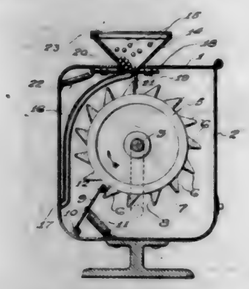
In a device of the character described, a heavy cylin-lindrical collar, means securely connecting the same to a nipple below and a nipple above, the said collar being placed above the usual clamp and the usual collar and below the usual control head of a well drilling outfit, a plurality of larger ports leading from the periphery of the collar to a point midway the wall thereof, a similar plurality of smaller ports leading from the inner end of the larger ports and extending inwardly and downwardly therefrom and through the inner wall of said collar.

---

1,566,420. MOLD COMPOSITION. ALADAR PACZ, Cleveland, Ohio. Filed Oct. 2, 1924. Serial No. 741,274. 11 Claims. (Cl. 22—188.)

1. A composition of matter comprising metallic silicon containing material and a binding material, both in finely divided form, and intimately mixed with each other.

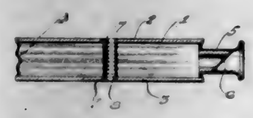
1,566,421. DETONATING TOY. EDWARD G. PATTERSON, Bismarck, N. Dak. Filed Feb. 14, 1923. Serial No. 618,574. 2 Claims. (Cl. 46—46.)



1. In a device as set forth, a housing, a drum rotatable within said housing, and a plurality of radiating teeth upon the perimeter of the drum, said teeth provided with cap receiving recesses, and means operated by rotation of the drum for discharging caps in said recesses, and article dispensing means carried by said housing and operable by rotation of said drum to dispense articles.

---

1,566,422. SOUNDING TOY. EDWARD G. PATTERSON, Bismarck, N. Dak. Filed Feb. 14, 1923. Serial No. 619,034. 1 Claim. (Cl. 46—46.)



A device as set forth comprising a pair of plates, collapsible material connecting the plates together for movement towards and away from each other, a reed arranged to be operated by compression of air between the plates, and a tube supported by the plates with ends open to receive therein an object.

---

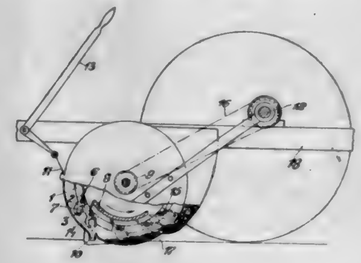
1,566,423. LOCOMOTIVE BED. HARRY M. PELAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 1, 1924. Serial No. 753,277. 21 Claims. (Cl. 105—172.)

1. A locomotive bed comprising side frames, and a cradle extending rearwardly from said side frames and formed integrally therewith.

---

1,566,424. MACHINE FOR SOWING SEEDS. RAIMUND POLESCHENSKY, Windsheim, Germany. Filed May 15, 1924. Serial No. 713,606. 1 Claim. (Cl. 221—135.)

A machine for sowing seeds comprising a hopper, a discharge spout communicating with the lower rear portion of the hopper, a disc rotatable in said hopper, a plurality of picking devices carried by the disc and movable through the seeds contained in the hopper, each of the picking devices including a fixed member carried by the disc having a recessed outer extremity providing a seed receiving cup and a pivoted member having a reduced outer extremity adapted to engage a seed contained in the cup, each cup being so arranged that as it passes through the lower portion of the hopper it is open from below and in the direction of rotation of the disc but closed on top, means normally tending to move



the pivoted member of each picking device in the direction of the fixed member and means for disengaging the pivoted member from the seed incident to the movement of each picking device to a position in vertical line with the seed discharge spout.

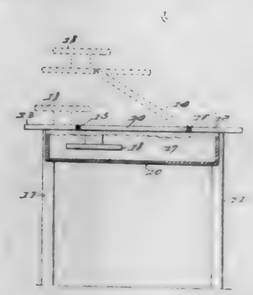
---

1,566,425. 4-NITRO-1-ACETNAPHTHALID-6 (OR 7)-MONO-SULPHONIC ACID. WALTER M. RALPH, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 29, 1920. Serial No. 427,116. 4 Claims. (Cl. 260—142.)

1. The method of producing nitro-acetyl-Cleve's acid, which comprises subjecting acetyl-Cleve's acid in solution in sulphuric acid to nitration with a mixture of nitric and sulphuric acids, and isolating the resulting nitro-acetyl-Cleve's acid in the form of its sodium salt by adding the nitration mixture to sodium carbonate in the presence of water in amount sufficient to effect neutralization, whereby the sodium salt of nitro-acetyl-Cleve's acid is formed and salted out from the solution by the sodium sulphate formed by the neutralization.

---

1,566,426. TABLE. ARTHUR REESE, Buckhannon, W. Va. Filed Oct. 10, 1922. Serial No. 593,531. 1 Claim. (Cl. 45—17.)

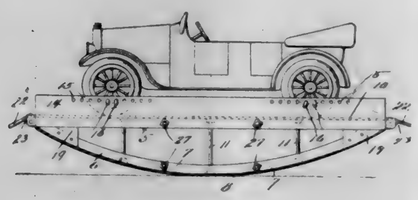


A table comprising a rectangular frame, a top panel fixed to the frame, a second top panel movably mounted with relation to the frame, said top panels, when in position upon the frame, having their meeting edges disposed along the median longitudinal dimension of the frame, strap links pivoted at their ends to the fixed and movable panels at points midway between the side edges thereof and at the ends thereof, and an ironing board mounted upon the movable panel and having

its median longitudinal dimension disposed beyond the points of pivotal connection between the links and the movable panel whereby, when the movable panel is swung upon its pivotal connection with the links to reverse its position with relation to the frame, the said ironing board may be enclosed within the intermediate portion of the frame or may be disposed above the frame of the table and in the vicinity of the edge thereof, the length of the strap links being greater than the transverse breadth of the movable panel whereby the movable panel may be swung between the strap links to position either of the longitudinal edges of the movable panel beyond the same side of the frame.

---

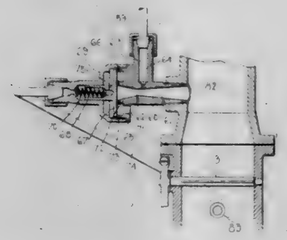
1,566,427. AUTOMOBILE LIFT. JAMES T. RENEAU, New Orleans, La., assignor of one-half to Lawrence E. Coker, New Orleans, La. Filed June 21, 1924. Serial No. 721,556. 5 Claims. (Cl. 214—1.)



1. In an automobile lift of the class specified, the combination of spaced rocker units having regular and continuous lower arcuate components which extend upwardly to and terminate at the ends of the units to form complete rocking base supports the full length of the units, the arcuate components being provided with upper track plates having inner and outer side guard flanges, and freely movable hinged inclines at opposite ends of the units for facilitating the movement of an automobile upwardly onto and downwardly from the track plates at either end of the said units.

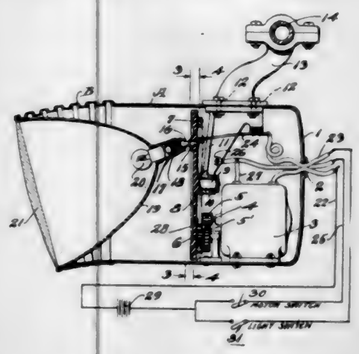
---

1,566,428. VACUUM PUMP SYSTEM. EUGENE C. RICHARD, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 15, 1920. Serial No. 374,177. 14 Claims. (Cl. 158—36.)



1. In combination with the intake passage of an internal combustion engine, a chamber into which fuel for said engine is to be lifted, means for utilizing the suction in said passage for creating a more intense suction for lifting the fuel to said chamber, said means including a valve having a portion normally exposed to atmospheric pressure, and a spring for closing the same, and means associated with the operation of the engine for opening the valve.

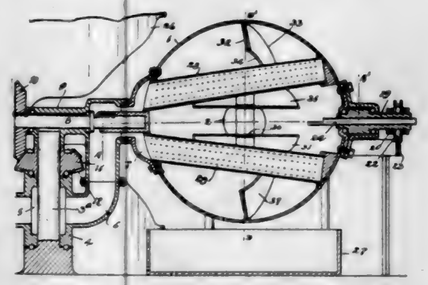
1,566,429. MOTOR-OPERATED SPOTLIGHT. GILBERT GEORGE ROSING, Sandusky, Ohio. Filed May 20, 1924. Serial No. 714,621. 11 Claims. (Cl. 240—41.)



1. In a spot light, in combination, a casing, a light comprising a reflector, a flexible casing element connecting the reflector at one end with said casing, and means connected with the opposite end of the reflector for swinging the latter in a rotary path for varying the direction of light projection by the reflector.

---

1,566,430. GRAIN-ROASTING DRUM. WALTER JAMES RUSSELL, Winnipeg, Manitoba, Canada. Filed Mar. 13, 1924. Serial No. 699,141. 6 Claims. (Cl. 34—5.)



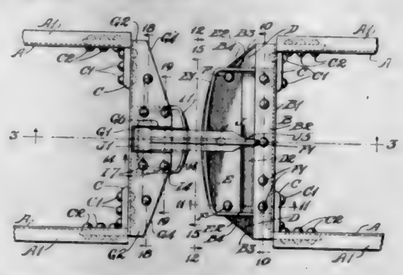
6. In a spherical roasting drum, said drum having the ends thereof rotatably mounted and being provided at the sides with diametrically opposing doors, a wing passing around one-half of the interior of the drum from one side of one door to the opposite side of the other door and a wing passing around the other half of the drum from the latter side of the latter door to the opposite side of the former door, both of said wings being inclined in respect to the drum body.

---

1,566,431. PROCESS FOR PRODUCTION OF YEAST. SØREN SAK, Copenhagen, Denmark, assignor, by mesne assignments, to The Fleischmann Company, New York, N. Y., a Corporation of Ohio. Filed Dec. 14, 1920, Serial No. 430,773. Renewed Nov. 7, 1925. 10 Claims. (Cl. 195—20.)

1. A process of propagating yeast which comprises preparing a yeast-nutrient mash, filtering the same, washing the residue, initiating propagation of yeast with aeration in the wash water, and during the period of propagation substantially continuously adding the original wort.

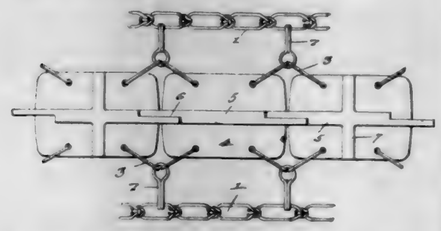
1,566,432. RAILWAY CAR. HUGH W. SANFORD, Knoxville, Tenn. Filed June 7, 1924. Serial No. 718,534. 9 Claims. (Cl. 105—364.)



1. In a railway-car, the combination with side sills, of a plate metal end sill member formed to present an upright back face and to present upper and lower horizontal flanges free from each other and extending from end to end of the sill and away from the car frame, a coupling casting and wood filling located between said flanges, bolts extending through said flanges and casting and wood, and a hinged hook adapted to engage an adjacent end sill structure, substantially as described.

---

1,566,433. ANTISLIPPING TIRE ARMOR. NICHOLAS A. SCHWINDEN, Boise, Idaho, assignor of one-fourth to George W. Carey, Boise, Idaho, and one-fourth to Salvanus A. Ruse, Nampa, Idaho, and one-fourth to Henry Lafayette Tucker and one-fourth to Otto Fred Zurcher, both of Boise, Idaho. Filed Mar. 10, 1924. Serial No. 698,198. 1 Claim. (Cl. 152—16.)

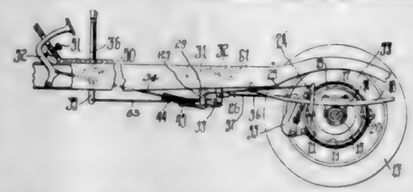


A device of the class described including a plurality of plates shaped to fit about the outside of a tire in end to end relation, and provided on their outer surfaces with longitudinally extending ribs projected beyond the ends thereof, the projected portions being reduced for overlapping the next adjacent plates and lying alongside of each other, and being separate so as be movable in relation to each other, and flexible means connecting the plates.

---

1,566,434. BRAKE MECHANISM FOR MOTOR VEHICLES. ERNEST W. SEAHOLM, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 26, 1920. Serial No. 384,363. 6 Claims. (Cl. 188—217.)

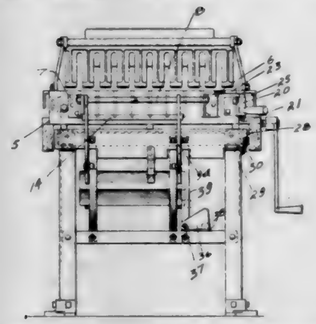
1. Brake mechanism of the class described comprising retarding members adapted to be moved into frictional engagement with rotating brake drums; brake applying mechanism whereby said members are operated; an operating rod one end of which is connected with a brake applying lever, and the other end of which is connected with said brake applying mechanism through a lost motion connection which permits a limited movement of said operating rod before movement is communicated from the same to said brake applying mechanism; equalizing mechanism included in and forming a part of said brake applying mechanism and to which said operating rod is connected; a spring associated with said operating rod and through which movement is transmitted from said rod to said brake applying mechanism



and which spring is normally under compression; and non-yielding connecting means intermediate said operating rod and said brake applying mechanism and through which movement is transmitted from said rod to said brake applying mechanism.

---

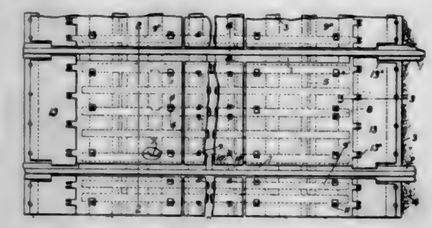
1,566,435. BRICKMAKING MACHINE. DAVID F. SHOPE, Portland, Oreg. Filed Nov. 18, 1924. Serial No. 750,706. 4 Claims. (Cl. 25—41.)



1. A new and improved brick making machine, comprising a frame structure, arms held in suspended relationship with the frame and adapted to being lowered, a counter balance and an end closure supported by the arms, and a hinged cover adapted to being actuated when the arms are depressed to the full lowered position.

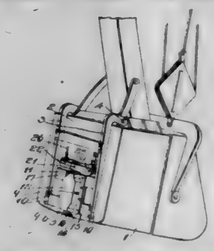
---

1,566,436. ROADWAY CROSSING INTERSECTING RAILROAD TRACK. WILLIAM ADAM SIEGNER, Stratford, and WILLIAM DOUGLAS GRAHAM, Brantford, Ontario, Canada. Filed Feb. 28, 1925. Serial No. 12,444. 6 Claims. (Cl. 238—8.)



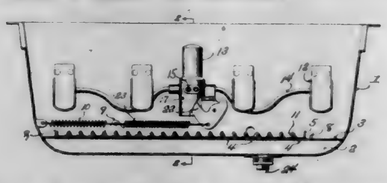
1. The combination with the track rails and supporting ties, of a series of members arranged between and parallel with the track rails, and having horizontally flanged upper ends forming tread bearing means, inverted T bars secured to the ties and extending transversely of the aforesaid members, and having cut-out portions through which the members extend.

1,566,437. DIPPER-DOOR-LOCKING MEANS. JAMES A. SIMPSON, Chicago, Ill. Filed June 23, 1924. Serial No. 721,905. 1 Claim. (Cl. 214—146.)



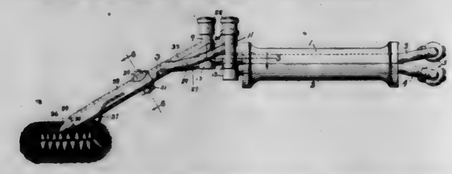
In a dipper bucket, a door hinged thereto at one side, a latch bar, means carried by the bucket and engageable by said latch bar for securing said door in its closed position, a plate secured to said door and slidably engaged by said latch bar, and a member secured to said plate and cooperating therewith to form bearings for said latch bar, said member having a chamber adapted to hold a supply of lubricant.

1,566,438. OIL-PAN CONSTRUCTION. ANDREW SMITH, Milwaukee, Wis. Filed Dec. 5, 1924. Serial No. 754,113. 6 Claims. (Cl. 184—106.)



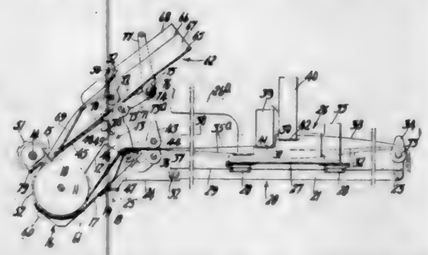
5. An oil pan construction for internal combustion engines comprising a main chamber, a sediment chamber therebelow divided from said main chamber by a stationary apertured partition, a slide mounted upon said partition and having apertures therein adapted to register with the apertures in the partition when the slide is in one extreme position, a spring urging the slide towards aperture opening position, a cylinder carried by said oil pan, and adapted to be connected to a suitable source of oil pressure, a piston mounted within said cylinder, a bell crank having one arm operatively associated with said piston, and a spring connecting the other arm of said bell crank lever with said slide, said slide having a plurality of wedge-shaped ribs interposed between successive apertures, said ribs projecting upwardly and adapted to guide sediment to said apertures.

1,566,439. DISHWASHING DEVICE. HENRY COLLIER SMITH, St. Marys, Ohio. Filed June 12, 1922. Serial No. 567,506. 4 Claims. (Cl. 15—128.)



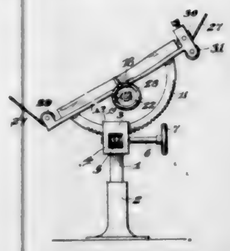
1. In a device of the class described, the combination of a plurality of supply pipes for different kinds of cleaning liquids, valves connected thereto, a spray tube connected to each valve, a third valve connected to one of said pipes, a nozzle connected to the third valve, and a brush attached to the nozzle and surrounding the discharge end thereof.

1,566,440. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1923. Serial No. 616,280. 24 Claims. (Cl. 197—126.)



1. In a continuous billing machine, a revoluble platen around which continuous webs and interleaved carbon-sheets may be fed, feed-rolls to run on the bottom of the platen and spaced to engage the edges only of the webs, a carbon-carrier at the rear of the platen to withdraw the carbon-sheets, from the used section of the webs, means to displace the platen from the feed-rolls to permit withdrawal of the carbon-sheets, means at the rear of the platen for guiding a separate work-sheet between the webs and the platen and between the bottom feed-rolls, so that it may be advanced relatively to the webs without displacing the platen, a collating table at the delivery side of the platen to receive said separate sheet, and feeding means to engage the portion of the separate sheet on said table to advance the separate sheet relatively to said webs.

1,566,441. WEB GUIDE. ROBERT JARVIS SMOTHERS, Holyoke, Mass., assignor to James T. Robinson, Holyoke, Mass. Original application filed Apr. 2, 1924, Serial No. 703,776. Divided and this application filed Dec. 18, 1924. Serial No. 756,779. 5 Claims. (Cl. 271—2.6.)

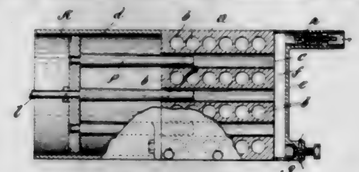


1. A web guide for the purpose set forth, comprising an angularly adjustable web supporting plate, and a pair of web retainers adjustable towards and away from each other and positioned over the upper face of the plate.

1,566,442. ISOTHERMAL AIR COMPRESSOR. CECIL W. STANCLIFFE, New York, N. Y., assignor to Stancliffe Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1923. Serial No. 659,074. 4 Claims. (Cl. 230—6.)

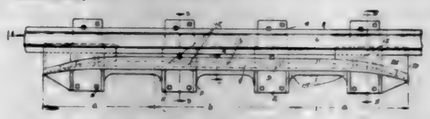
1. An apparatus for the purposes set forth comprising a heat interchanger unit constructed as a block of substantially solid heat-conducting material with a set of passages extending in one direction and a separate set of passages extending in a different direction and arranged intermediate of the passages of the first-named set, a chamber enclosing a gas-receiving space connected to one end of said unit in communication with one set of

passages therein, a fitting at the opposite end of the unit having provisions for conducting gas to and away from said passages, means for conducting a cooling



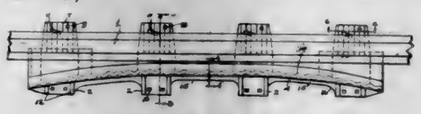
medium through the passages of the second-named set, and a piston working in said chamber toward and away from the unit.

1,566,443. GUARD RAIL. HENRY STEPHENS, Cleveland, Ohio, assignor to The Interstate Railway Supply Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 30, 1923. Serial No. 615,855. 6 Claims. (Cl. 238—19.)



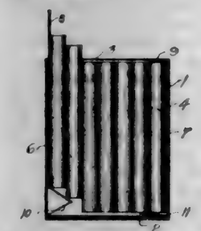
2. A guard rail comprising a series of base plates and a rail of Z-bar shape formed integrally therewith having a continuous vertical web and having its head section projecting toward the running rail, and braces between said rail bar and base plates comprising two compression webs on the outside of said Z-bar and two tension webs on the inside of said Z-bar at each base plate.

1,566,444. GUARD RAIL. HENRY STEPHENS, Cleveland, Ohio, assignor to The Interstate Railway Supply Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 3, 1924. Serial No. 723,997. 8 Claims. (Cl. 238—19.)



1. A guard rail comprising a series of base plates and a rail of Z-bar shape formed integral therewith, braces between the rail head and the base plates, the web of the rail being corrugated transversely to increase the stiffness and the base plates being provided with longitudinally arranged ribs and grooves.

1,566,445. CIGARETTE BOX. FRANK STRINGER, Kellogg, Idaho. Filed Feb. 14, 1925. Serial No. 9,307. 3 Claims. (Cl. 206—56.)

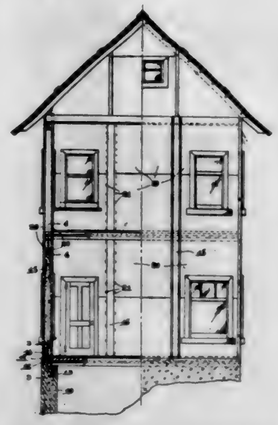


1. A duplex projector-strip for use in cigarette packages comprising a base, side arms and normally flat V-shaped folds at the junction of said base and arms, and foldable pull-tabs at the free ends of said arms.

1,566,446. COIN-CONTROLLED LIQUID-VENDING MACHINE. MATTHIAS T. TANNER, Rich Square, N. C. Filed Oct. 28, 1924. Serial No. 746,389. 2 Claims. (Cl. 194—01.)

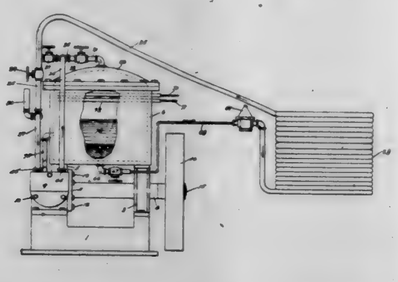
2. In combination with the pump rod of a liquid vending machine, a casing, a plunger adapted for reciprocatory movement in the casing, a lever pivotally mounted on the lower end of the plunger, means for moving the lever into locked engagement with the pump rod, a coin controlled device for holding the means in an engaged position, means for normally holding the lever out of locked engagement with the pump rod, and means for actuating the plunger.

1,566,447. BUILDING CONSTRUCTION. DANIEL L. THERIAULT, Cornwall, Ontario, Canada. Filed Sept. 5, 1923, Serial No. 661,119. Renewed Aug. 19, 1925. 3 Claims. (Cl. 20—4.)



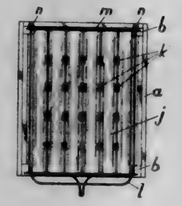
1. Building construction of the character described, comprising, in combination, a foundation wall provided with a metal wall plate having orifices therein, a plurality of stay bolts sunk in said walls and formed with threaded end portions projecting through the orifices in the wall plates, a plurality of I-beams engaging with the stay bolts and extending upwardly to form studs, wooden strips fixedly secured by means of bolts on said I-beams, covering comprising a plurality of steel plates having orifices therein and secured to said wooden strips to form hollow walls, and moisture absorbing means for filling the hollow walls between the studs whereby moisture is absorbed.

1,566,448. ART OF REFRIGERATION AND APPARATUS THEREFOR. JAMES B. THOMPSON and SELDON B. HIBBARD, Portland, Oreg. Filed Feb. 26, 1924. Serial No. 695,233. 9 Claims. (Cl. 62—178.)



1. As an improvement in the art of refrigeration obtained from successive compression and expansion of a refrigerant, the process which consists in collecting and maintaining in static stability within a refrigerative circulating system, two pools composed, respectively, of two liquids of different specific gravities, namely, a heavier refrigerant and a lighter lubricant, said pools being superposed one above the other so that the lighter lubricant floats on top of the heavier refrigerant, promoting a continuous circulation of the refrigerant through said system, compressing and condensing the refrigerant and, when condensed, showering it in liquid form, together with such of the lubricant as it may contain, upon the lubricant pool whereby it may gravitate therethrough without disturbing the static stability of the pools and may effect substantially perfect separation of the lubricant from the circulatory medium, substantially as set forth.

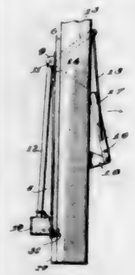
1,566,449. ELECTRIC COOKING GRILL. MICHELE TOCCHIO, Hammersmith, London, England. Filed Sept. 17, 1923. Serial No. 663,152. 9 Claims. (Cl. 219—37.)



6. An electric cooking grill having a frame with transverse brackets at each end, a number of tubes of a non-conducting material, with a conducting wire therein passing in and out near the respective ends, said tubes enclosed in a perforated casing secured at each end by a nut and bolt, a removable corrugated cover with a handle at one end.

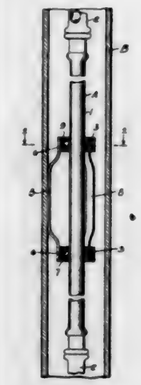
1,566,450. AWNING ATTACHMENT. WILLIAM ANDREW TOMLINSON, Phoenix, Ariz. Filed June 26, 1924. Serial No. 722,559. 4 Claims. (Cl. 156—15.)

1. In a swingably mounted awning, an operating means for said awning comprising a bell crank lever pivotally mounted adjacent the swinging connections of the awning, one arm of the bell crank lever adapted to be movable in an opening of a fixed support, a pivotally mounted lever and a link connecting the lever with the last mentioned arm of the bell crank lever, the other arm of the lever being extended transversely of the awning, means on the outer end of the awning engaging the end



of the bell crank lever, and means actuated by the arm extending over the awning for locking the awning in closed position.

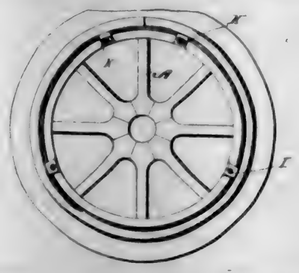
1,566,451. SUCKER ROD ANTIFRICTION MEANS FOR WELL TUBING. FRED B. VAUGHN, Los Angeles, Calif. Filed June 16, 1924. Serial No. 720,303. 2 Claims. (Cl. 308—4.)



1. A guide for a sucker rod adapted to reciprocate in a well tubing, comprising axially split collars spaced axially in the tubing and arranged for reciprocation of the sucker rod through the bores of said collars, antifriction means rotatably mounted in said collars and projecting into the bores thereof for engaging the sucker rod, hinge connections for the split sections of the collars, and circumferentially spaced yieldable arms fixed at their respective ends to the split sections of the respective collars so as to permit opening of the collars for lateral displacement from or engagement with the sucker rod, said arms being adapted for frictional engagement with the well tubing when the collars are closed on the sucker rod.

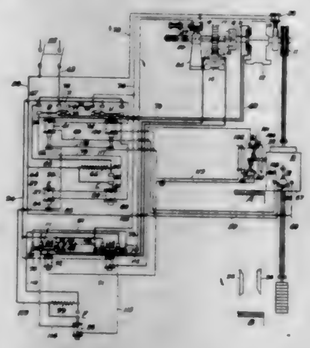
1,566,452. WHEEL WITH DEMOUNTABLE TIRE-CARRYING RIM. JAMES H. WAGENHORST, Akron, Ohio. Filed Mar. 8, 1919. Serial No. 281,489. 3 Claims. (Cl. 301—11.)

1. The combination with a wheel body having a channeled sheet metal fixed rim provided with rim supporting flanges, of a one piece transplit tire carrying demountable rim, clamping lugs rigidly connected to said rim, transverse bolts passing through the fixed rim and through openings in the inner ends of said clamping lugs,



nuts upon said bolts, the openings in the clamping lugs adjacent the split in the tire carrying rim being elongated.

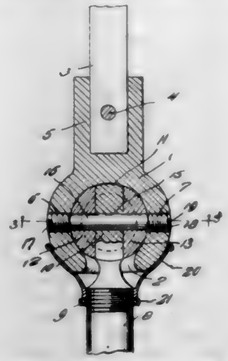
1,566,453. ELECTRIC ELEVATOR SYSTEM. RAYMOND A. WAITE, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 2, 1924. Serial No. 710,519. 6 Claims. (Cl. 187—29.)



3. In an electric elevator system, the combination of a hoisting drum, a main motor connected in driving relation therewith for raising and lowering the elevator, an auxiliary motor for raising and lowering the elevator at a reduced speed, electromagnetically applied and spring released means for connecting said auxiliary motor with said hoisting drum, means for controlling the operation of the two motors and said connecting means, and means operative to prevent the operation of the auxiliary motor and the application of the connecting means therefor, dependent upon the speed of the main motor.

1,566,454. UNIVERSAL JOINT. HENRY W. WAITS, Gainesville, Fla. Filed Oct. 9, 1924. Serial No. 742,574. 1 Claim. (Cl. 64—91.)

A universal joint comprising a socket member having a pair of opposite disposed interior grooves, a shank member, a flat head formed on the outer end thereof, the outer edge of said head being rounded, complementary segmental sections disposed in said socket, each provided with a pair of parallel sides, a flat edge, and an arcuate edge, the arcuate edges being receivable in the grooves, said flat head being adapted to be inserted in said socket between the flat edges of the segmental sections to form a rocker movable in said sockets, said segmental sections and said flat head being provided with registering openings, said socket being provided with threaded openings registered with each other, said openings communicating with said grooves, a locking pin insertible through either of said threaded openings in the

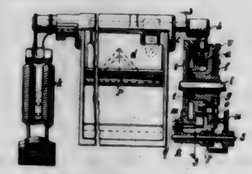


socket, and adapted to extend through the registering openings in the segmental sections and flat head, said locking pin being of a length equal to the diameter of the socket, and plugs threaded into the openings of the socket to prevent the displacement of said locking pin.

1,566,455. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 29, 1923. Serial No. 683,267. 11 Claims. (Cl. 197—126.)

1. In a typewriting composite web machine, a traveling carriage, a revoluble platen journaled therein, a carbon-carrier reciprocable toward and from the platen, web-plies threaded through said carbon-carrier, and means for adjusting the carbon-carrier to locate the carbons and webs in line with various fields of the platen.

1,566,456. MECHANICAL STOKER. ERWIN ALEXANDER WECK, Dolau, Reub, Germany. Filed Sept. 13, 1922. Serial No. 588,016. 5 Claims. (Cl. 110—113.)



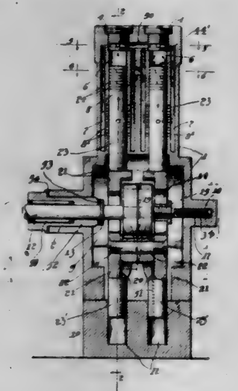
1. In a mechanical stoker of the oscillating spreader type, a spreader mounted to oscillate, means for varying the retractive movement of said spreader for controlling the length of the throw, means for imparting an impelling movement to said spreader, and means for imparting a sudden supplemental retractive movement to said spreader immediately before its discharge movement.

1,566,457. LANTERN GLOBE. CHARLES E. WHALIN, Salt Lake City, Utah, assignor, by direct and mesne assignments, to Whalin Auto Lens & Light Co., a Corporation of Utah. Filed Mar. 21, 1923. Serial No. 626,558. 1 Claim. (Cl. 240—100.)

A lantern comprising a frame in which a globe is mounted and an electric light bulb as its source of illumination; said globe fastened in the bottom of said frame and surrounding said electric light bulb in spaced relation thereto, said globe consisting of five plano-convex integral lenses one forming the bottom of said globe and the other four the sides of said globe integrally formed as as a sphere except at the side nearest the frame, which side is extended and externally threaded for engagement with said frame.

---

1,566,458. FLUID COMPRESSOR. WINFIELD SCOTT WILLIAMS, Chicago, Ill. Filed Dec. 19, 1921. Serial No. 523,388. 21 Claims. (Cl. 230—27.)

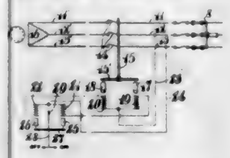


1. In a fluid compressor a cylinder having spaced walls defining a compression chamber and a cooling chamber surrounding said compression chamber, a valve controlled chambered piston reciprocating in said compression chamber and means for reciprocating said piston, said cylinder and piston being provided with coacting ports establishing registering communication between the interior of said piston and the chamber surrounding said compression chamber for all positions of said piston.

---

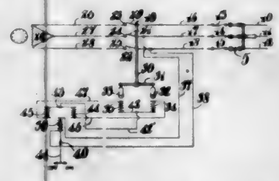
1,566,459. CONTROLLING SYSTEM. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 14, 1923. Serial No. 638,922. 9 Claims. (Cl. 172—179.)

3. In a system of devices for controlling the transmission of power to an electric motor driven mining machine, a plural-part set of motor control devices, one part being mounted permanently on the mining machine and the other being connectible with a power circuit and adapted to remain at a distance from the mining machine while the latter is cutting, said parts being connected only by flexible current conducting means and said second mentioned part comprising all circuit making and breaking devices, and said first mentioned part constituting controlling means for said circuit making and breaking devices.



---

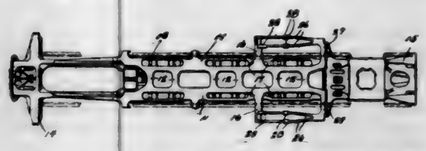
1,566,460. CONTROLLING SYSTEM. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 14, 1923. Serial No. 638,923. 11 Claims. (Cl. 172—179.)



1. In a system of devices for controlling the transmission of power to an electric motor driven mining machine a plural-part set of motor control devices one part being mounted permanently on the mining machine and the other being connectible to the power circuit and being adapted to remain at a distance from the mining machine while the latter is cutting said second mentioned part comprising all circuit making and breaking devices and electro magnetic means for actuating the same, and said first mentioned part constituting means for inducing currents in said electro magnetic means.

---

1,566,461. LOCOMOTIVE FRAME. HARRY R. BARTELL, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 1, 1924. Serial No. 753,294. 15 Claims. (Cl. 105—172.)

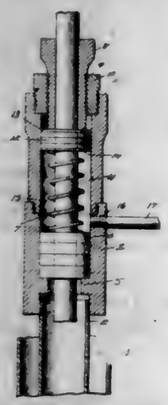


1. A locomotive frame formed in a single piece and comprising side members, a series of transverse members, and brackets extending from said side members for supporting valve gear mechanism.

---

1,566,462. STUFFING BOX. GEORGE S. BASHLINE, Wynona, Okla. Filed Dec. 11, 1924. Serial No. 755,242. 1 Claim. (Cl. 286—16.)

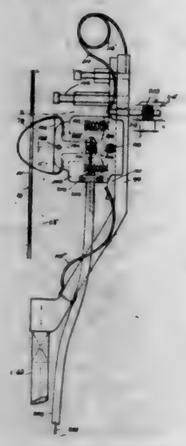
A stuffing box for the piston rod of an oil well comprising a casing including an upper and a lower section, the lower section threaded at its lower end for engaging the upper end of the usual oil well tubing, an annular flange formed on the inner wall of the lower section adjacent the lower end thereof, a bushing threaded in the upper end of the upper section, a sleeve threaded in the bushing, packing rings in said casing adapted to encircle the piston rod and disposed above the flange, additional packing rings in the casing adapted to encircle the piston rod and disposed below the sleeve, a coil spring encircling the rod for holding the packing rings in engagement with the flange and sleeve respectively, said



sleeve providing a means for regulating the tension of the coil spring, said casing having a drain opening provided therein at a point above the lower packing rings for discharging the oil which leaks past the lower packing rings and collects in the casing, the upper packing rings preventing the passing of the oil upward around the upper portion of the rod.

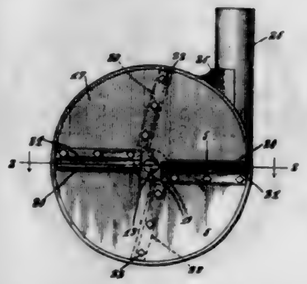
---

1,566,463. FRUIT-PITTING APPARATUS. JOSEPH P. BEAM, Fresno, Calif., assignor to Pacific Pitting Machine Company Inc., Fresno, Calif., a Corporation of California. Filed Oct. 6, 1924. Serial No. 741,870. 22 Claims. (Cl. 146—28.)



1. In a fruit pitting mechanism of the character described, an arched blade mounted on a rocker bar, said rocker bar being pivotally supported for oscillation on an axis extending transversely of the plane of the arch at a point distant from the top of the arch beyond its main axis, and means for oscillating the rocker bar on said first mentioned axis.

1,566,464. SNOW REMOVER. CLARINGTON W. CATTERSON, Endicott, N. Y. Filed Feb. 13, 1925. Serial No. 8,976. 3 Claims. (Cl. 37—43.)



1. An apparatus of the class described, comprising a cylindrical shell held from rotation and provided with a lateral outlet, a shaft extending through said shell, a closure for the open side of the shell and coupled to rotate with said shaft, said closure having radially directed openings, a cutting element attached to said closure externally thereof and at one side of each of the radial openings therein, and a plurality of blades attached to said closure internally thereof extending radially of the shell.

---

1,566,465. TERMINAL CONNECTER FOR SPARK PLUGS. ALBERT CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed May 18, 1921. Serial No. 470,575. 4 Claims. (Cl. 173—269.)

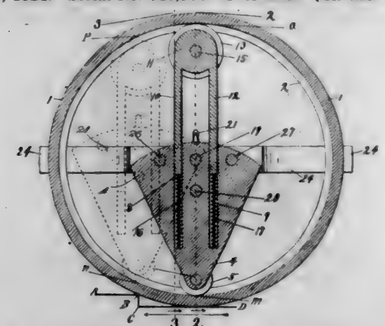
1. A terminal connecter comprising two similar elongated members semi-circular in cross-section so as to together form a tube; fastening elements disposed adjacent one end of each member at the free edge thereof, and which elements are adapted to engage one another to thereby secure said members together; and a lug extending from a side edge of each of said members and located adjacent the other end thereof, and which lug is adapted to engage the adjacent side edge of the other member to thereby prevent sidewise movement of said members.

---

1,566,466. BOOT OR SHOE LACE. WILFRED REYNOLDS CLEAVER, Coventry, England. Filed Dec. 4, 1924. Serial No. 753,970. 1 Claim. (Cl. 24—143.)

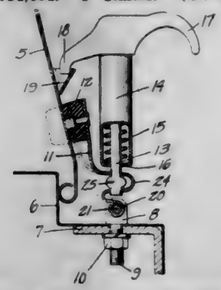
An elastic lace for boots and shoes having each end compressed by the sides of a terminal U-shaped tag, the latter being roughened on their inner sides, an adjustable tag comprising a piece of flat metal with a longitudinal slot being slidably mounted on the said elastic lace.

1,566,467. WHEEL WITHOUT SPOKES. SERGIO FAUSTINO DE CASTRO Y IZNAGA, Habana, Cuba. Filed Nov. 10, 1924. Serial No. 748,964. 5 Claims. (Cl. 305—5.)



5. In a wheel without spokes for vehicles, a loose circular tire provided with lateral inward flanges, a contractible body embodying a sector-shaped stand provided with antifriction rollers which may roll on the lower portion of the inner face of the said circular tire and a forked-piece provided with anti-friction rollers which may roll bearing against the upper portion of the inner face of the said circular tire encased within its lateral flanges, spring means within proper bores made in said stand and bearing against the bottom of said bores and the ends of the legs of the forked-piece; in combination with two horizontal guard-plates secured by their middle portion respectively to the outer and the inner faces of the said sector-shaped stand embracing between them the said loose circular tire to avoid its possible falling off when the car turns sharply.

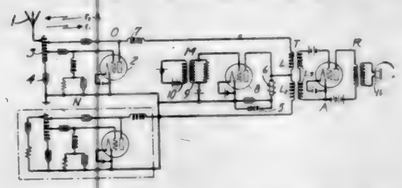
1,566,468. HOOD CATCH. STEPHEN DE ORLO, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 8, 1924. Serial No. 754,604. 5 Claims. (Cl. 292—128.)



1. A hood door latch of the class described, comprising a spring arm having a door engaging block at its upper end, and the lower end of which is pivotally connected with a fixed support; a stem fixedly secured to said arm adjacent the lower end thereof, and extending upwardly from said lower end alongside said arm; and a spring actuated hold down member carried by said stem and movable longitudinally thereupon, and having a hook adapted to engage a fixed abutment carried by a hood door.

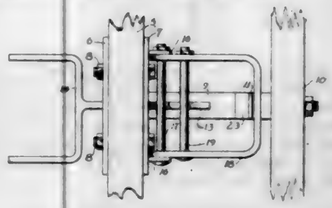
1,566,469. TWO-WAY COMMUNICATION SYSTEM. JOHN F. FARRINGTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,644. 10 Claims. (Cl. 250—9.)

1. A station for two-way communication systems comprising in combination a transmitting circuit and a receiving circuit, including a transmitting and receiving conductor, common means for generating the outgoing high frequency carrier wave and for detecting the incoming modulated carrier wave associated in energy transfer relation with said conductor, a modulating circuit asso-



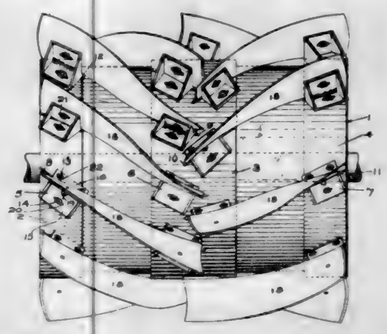
ciated with said means for modulating said high frequency wave, a receiving device, and means conjugately relating portions of said transmitting and receiving circuits, whereby transmission may be effected without interference with reception.

1,566,470. DOOR LATCH AND RETAINER. WILLIAM B. FLATLEY, Watseka, Ill. Filed Apr. 5, 1923. Serial No. 630,119. 1 Claim. (Cl. 292—56.)



In a combined latch and door retainer, a latch having an extension adapted to project through a door, a member on which the extension is oscillatable, a yoke-like handle oscillatably mounted on the said member and having means for pressing against the extension for oscillating the latch, an arm projecting from a stationary member adapted to form an abutment for arresting the door at its open position, and a lug thereon embraced by the yoke-like handle for holding the door in an open position.

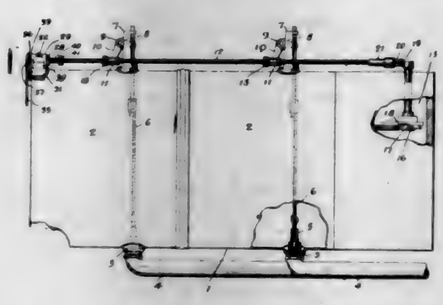
1,566,471. ROTARY PLOWSHARE PULVERIZER. HENRY A. FRETTS, Sacramento, Calif. Filed Jan. 5, 1925. Serial No. 488. 5 Claims. (Cl. 97—215.)



3. In combination with the rotor of a rotary pulverizer, a plurality of ribs arranged exterior the said rotor and carried thereby and provided with spirally arranged grooves, brackets adapted to fit in said grooves, spirally

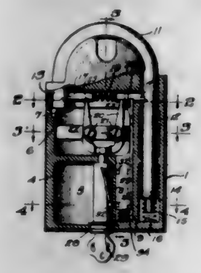
arranged cutters mounted upon said brackets and provided with reversed-curve cutting edges, and means permitting the oblique movement of said brackets in said grooves in effecting the adjustment of said cutters.

1,566,472. VALVE MECHANISM. HARRISON F. FULLER, Indianapolis, Ind., and ARTHUR L. BETTS, Cincinnati, Ohio, assignors to Augustine Davis, jr., Covington, Ky. Filed Sept. 20, 1923. Serial No. 663,785. 8 Claims. (Cl. 137—21.)



2. In a tank having an outlet or outlets and a spring-closed valve or valves therefor, a longitudinal control rod capable of longitudinal and rotary movements, valve connections related to the control rod so as to be operated by the longitudinal movements, operating and holding mechanism operatively related to the rod at its rear part in respect to such movement, and means related to the forward part of the rod so as to be capable of turning the same whereby to effect its release from the mechanism at the rear.

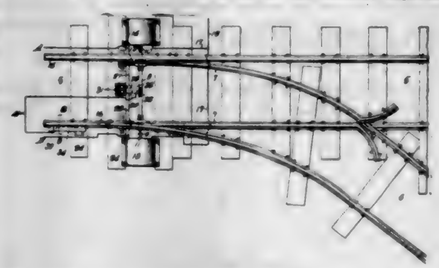
1,566,473. LOCK. LEE D. GIBSON, Dallas, Tex. Filed Oct. 31, 1924. Serial No. 747,108. 4 Claims. (Cl. 70—108.)



1. A lock as described and shown comprising a casing a major locking plunger and minor locking plungers therein, a spiral key with fingers engageable in slots in said major locking plunger for moving said major plunger downward from engagement with one of said minor locking plungers; and means for releasing said minor locking plungers from engagement with the hasp when the key is rotated to move the major plunger.

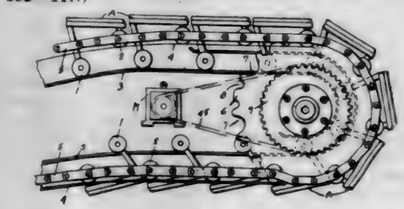
1,566,474. ELECTRICAL SWITCH-OPERATING MECHANISM. EDWARD H. GRIM, Dott, W. Va. Filed Mar. 21, 1925. Serial No. 17,358. 3 Claims. (Cl. 246—232.)

1. The combination with the switch points of a railway switch, of a solenoid for shifting said switch points in one direction, a second solenoid for shifting said switch points in an opposite direction, and means including an element on a vehicle of the railway operable to selectively close the circuit of either desired one of said solenoids while the vehicle is in motion and approaching said railway switch, a normally open current grounding switch operatively associated with a rail of the railway adjacent



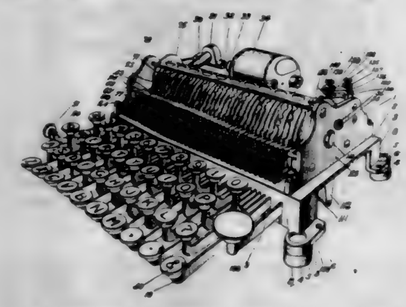
the switch points and movable by the wheels of rolling stock of the railway to closed position, and means operable by shifting of the switch points to connect the operative solenoid to said current grounding switch and simultaneously disconnect the inoperative solenoid from said current grounding switch.

1,566,475. SAFETY DEVICE FOR ESCALATORS. ARTHUR E. HANDY, New York, and SAMUEL G. MARGLES, Brooklyn, N. Y., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 30, 1922. Serial No. 585,956. 7 Claims. (Cl. 192—147.)



1. In combination with the driving mechanism for a conveyor, a brake drum cooperating with said driving mechanism and provided with teeth, and a pawl adapted to engage said teeth for stopping the conveyor.

1,566,476. TELEGRAPH TRANSMITTER. BENJAMIN P. HAYES, Kansas City, Mo. Filed Feb. 26, 1923. Serial No. 621,166. 24 Claims. (Cl. 178—88.)

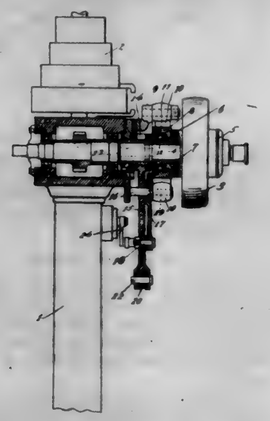


1. A telegraph transmitter comprising a constantly rotatable driving member and a normally inert character member, one movable to operative engagement with the other, means yieldingly urging the movable member to

the operative engagement, a yieldable restraining device for the movable member, shifting mechanism operable on the restraining device to permit movement of the movable member to the operative engagement, a latch for the restraining device, rendered inoperative by the character member as the latter completes an operative phase, and circuit making and breaking mechanism operable by the character member.

---

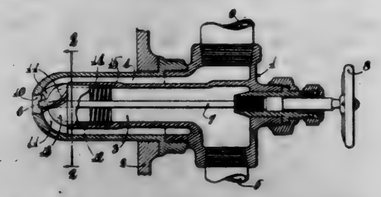
1,566,477. DRILLING MACHINE. WILLIAM G. HOELSCHER, Cincinnati, Ohio. Filed Apr. 6, 1922. Serial No. 550,230. 4 Claims. (Cl. 192—2.)



1. In combination with a machine tool having an operating shaft, an electric switch for a driving motor, a clutch adapted to connect the motor with the operating shaft, a brake for the shaft, and means for operating the brake, clutch and switch from a common handle, for the purpose described, said means being adapted to take a position to close the switch while holding the clutch out of operation and the brake in operation.

---

1,566,478. FUEL-OIL BURNER. WIBBE S. HOFSTRA, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 17, 1921. Serial No. 453,177. 10 Claims. (Cl. 158—76.)

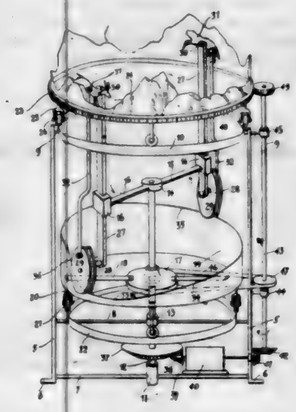


1. In an oil burner, means forming concentric oil and atomizing fluid passages, a resiliently positioned member disposed in said passages and having a restricted oil discharge port formed therein, and means for variably controlling the flow of oil through said port.

---

1,566,479. AMUSEMENT DEVICE. BELA HORVATH and JOHN PETE PAPP, New Rochelle, N. Y. Filed Jan. 12, 1924. Serial No. 685,804. 4 Claims. (Cl. 272—31.)

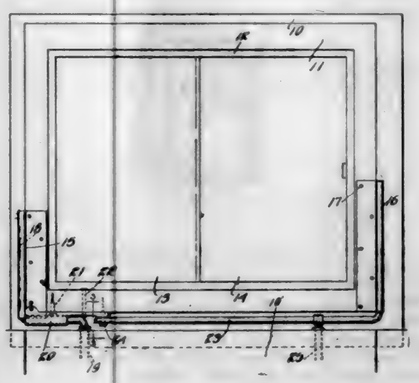
1. In an amusement device, the combination with a cam ring, and a scenic ring and means for supporting them, of a vertical shaft arranged centrally of the cam ring and provided with arms above said cam ring, guide blocks carried by said arms, wheeled bars having reciprocating movement in said guide blocks the wheels for said bars being comparatively heavy and adapted to travel on said cam ring, the upper ends of said bars



extending interiorly of said scenic ring and provided with pivotally engaged animal representations, pitman connections between said wheels and said animal representations to swing the latter on their axes when said wheels revolve on the cam ring, and means for rotating said vertical shaft.

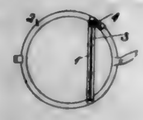
---

1,566,480. CONNECTING MEANS FOR TWO-PART AUTOMOBILE DOORS. MATTHEW B. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Mar. 29, 1924. Serial No. 702,957. 7 Claims. (Cl. 296—45.)



6. A two-part automobile door comprising a permanent lower section, a demountable upper section, a resilient rod having an upright part secured to the upper door section and a body extending along the lower edge of said section, and means for securing the free end of said body to the upper door section in a twisted state to bias the upper end of said upper door section toward the vehicle body, substantially as set forth.

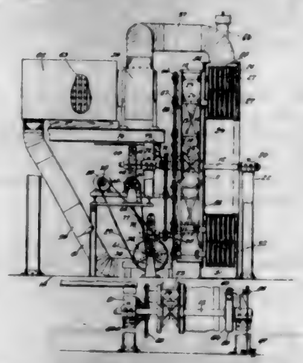
1,566,481. EYE-PROTECTING SCREEN FOR PERSONAL WEAR. JOSHUA KEYMS, Southampton, England. Filed Oct. 22, 1924. Serial No. 745,249. 2 Claims. (Cl. 2—12.)



1. An anti-dazzle device for personal use, comprising a frame, right and left eye pieces on said frame, a vertical bar mounted on an eye piece in its vertical plane and intermediate between its centre and its left hand extremity, a vertical screen hinged to said vertical bar so as to lie in a plane parallel with the axis of vision when the frame is in use.

---

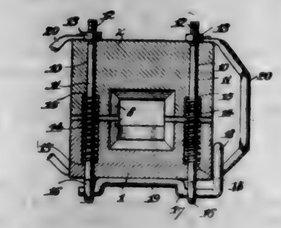
1,566,482. PAINT-DRYING MACHINE. HARRY K. KOPPIN, Jackson, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 8, 1923. Serial No. 623,817. 15 Claims. (Cl. 34—12.)



1. In a device of the class described, a circular carrier, a passageway for enclosing the same, means for rotating said carrier, supports on said carrier, means for moving said support relatively to said carrier, and means for circulating air in said passageway.

---

1,566,483. UNDERREAMER DRESSING BLOCK. GEORGE ELMER KRAMER, Wilson, Okla., assignor of one-sixth to Le Roy Johnston and one-sixth to Edward Turner Sholtus, both of Wilson, Okla., and one-sixth to William Oliver Clay, Wirt, Okla. Filed Oct. 24, 1924. Serial No. 745,724. 2 Claims. (Cl. 76—95.)



1. A block of the character described, comprising two members, each member having tapering recesses in its inner face, removable forms located in said recesses and having tapering walls corresponding with the taper thereof, bolts connecting the members, and means for moving one of said members toward and away from the other member.

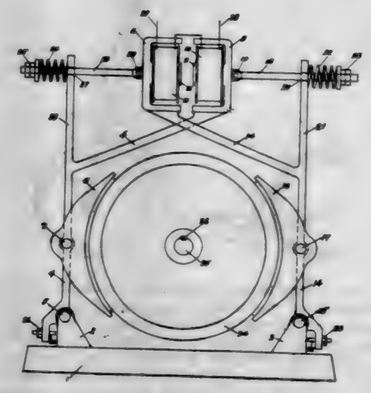
---

1,566,484. INCANDESCENT LAMP. FREDERICK JOHN LAUTERBACH, Brooklyn, N. Y., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Apr. 21, 1919. Serial No. 291,738. 5 Claims. (Cl. 176—39.)

1. In an incandescent lamp, a filament support including a stem, an arbor and a resilient support member joining said stem and arbor, said link being shaped to looped form between said stem and arbor, the loop being positioned with its axial line substantially at right angles to the axis of the arbor.

---

1,566,485. BRAKE. GEORGE W. LAUTRUP, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 15, 1923. Serial No. 680,947. 3 Claims. (Cl. 188—171.)



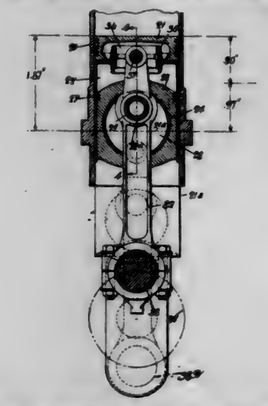
1. Braking mechanism comprising in combination a brake drum, a pair of brake arms, a brake shoe carried by each arm between its ends to cooperate with said brake drum, a pivotal support for each arm at one end and a magnet coil and core rigidly mounted on the other end of each arm for drawing them toward each other and releasing said shoes from said drum.

---

1,566,486. INTERNAL-COMBUSTION ENGINE. ROGER KENNETH LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 14, 1925. Serial No. 15,648. 15 Claims. (Cl. 74—108.)

1. An engine comprising, in combination, a crank shaft having crank pins arranged at 180°, a plurality of cylinders and pistons, a rod for connecting each piston

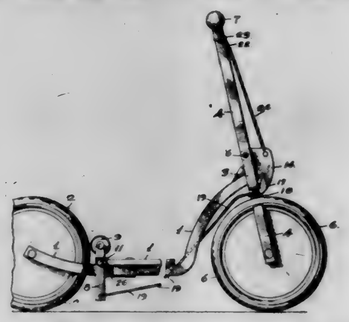
with a crank pin, and means associated with each rod for causing, at each instant of crank rotation, the difference in the inertia forces acting upon the crank



shaft due to the movement of the rods in opposite directions to be offset by a difference in the inertia forces due to the movement of the pistons in opposite directions.

---

1,566,487. BRAKE FOR SCOOTERS AND COASTERS. CHRIS LATTIN, San Francisco, Calif. Filed Jan. 24, 1925. Serial No. 4,529. 8 Claims. (Cl. 188—20.)

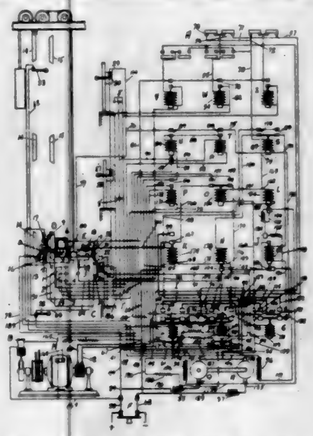


1. As a new article of manufacture, a brake for scooters and coasters of the tandem type comprising a vertically disposed lever pivotally mounted adjacent the rear wheel of said scooter; a brake roller rotatably mounted upon said lever and arranged to engage the tread of said wheel; a sector pivotally mounted upon the fork of the scooter and having an aperture in the free end thereof normally aligned with the vertical pivot of said fork with the body of the scooter; a connecting rod pivotally connected with the aperture at one end and the lower end of the brake lever at the other end thereof whereby rotation of the fork will be prevented from applying the brake; and means mounted adjacent the handle of said fork and operatively connected to the sector to operate the same.

---

1,566,488. SPEED-CONTROL SYSTEM FOR PUSH-BUTTON ELECTRIC ELEVATORS. JACOB D. LEWIS and GEORGE WILLIAM LAUTRUP, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 31, 1922. Serial No. 578,635. 2 Claims. (Cl. 187—29.)

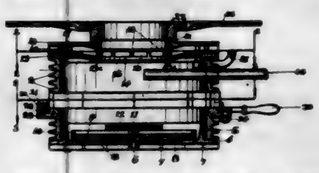
1. In an automatic push button elevator, the hoisting motor, a source of current therefor, a reversing switch, a car leveling switch, and devices which it is adapted to strike and thereupon be closed thereby, and having a winding, adapted to hold said leveling switch out of contact with said devices, a floor switch having a winding, said floor switch adapted upon closing to establish a circuit to the windings of said leveling and reversing switches, a floor controller, adapted to open the cir-



cuit to the windings of said leveling and reversing switches, and a holding switch adapted to hold the reversing switch closed regardless of the opening of said circuit while the hoisting motor is above a predetermined speed, said leveling switch being operative to control the reversing switch to bring the elevator car to a stop level with a desired landing.

---

1,566,489. LIQUID-FUEL BURNER. HARRY C. LITTLE, Larkspur, Calif., assignor to Rotair Burner Corporation, a Corporation of Nevada. Filed June 16, 1925. Serial No. 37,496. 10 Claims. (Cl. 158—91.)

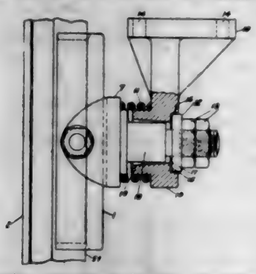


10. A liquid fuel burner, comprising a combustion cylinder having a bottom and a top comprised of two separated plates provided with a central opening, a plurality of openings in the walls of the combustion chamber for admitting air therein, a plurality of tangential projections located on the walls of the combustion cylinder for causing the air admitted through the said openings to assume a tangential course within the cylinder, a plurality of openings located between the two plates of the top for admitting air into the combustion chamber in a tangential direction opposite to the course of the air admitted through the openings in the walls of the cylinder, whereby the tangential movement of the gases generated within the cylinder is arrested at a point in the combustion cylinder before they pass therefrom through the central opening in the top, and means for delivering liquid fuel to the combustion cylinder.

---

1,566,490. GUIDE FOR ELEVATORS. DAVID L. LINDQUIST, Hartsdale, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 27, 1923. Serial No. 671,213. 11 Claims. (Cl. 187—95.)

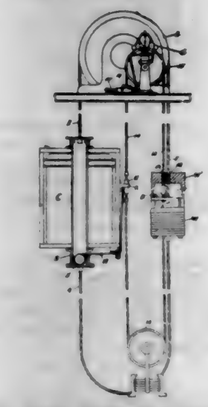
5. A guide for elevators, comprising in combination with the elevator guide rail, a guide shoe adapted to travel thereon, having diametrically opposite spherical surfaces of equal radii from a common center within the guide rail, a member having spherical surfaces concentric with those of the guide shoe and in engagement there-



with for angular movement in any direction about the center of curvature within the rail, and a resiliently yielding pivotal connection for supporting said member from the car.

---

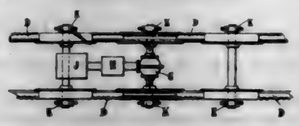
1,566,491. SAFETY MECHANISM FOR ELEVATORS. DAVID L. LINDQUIST, Hartsdale, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 10, 1924. Serial No. 685,345. 11 Claims. (Cl. 187—89.)



5. Elevator safety mechanism comprising in combination an elevator car, a car brake, a brake operating cable, a hoisting cable, a counterweight, and means operative upon the breaking of said hoisting cable to transfer to said brake operating cable a predetermined limited portion of the total load of said counterweight to effect the application of said car brake.

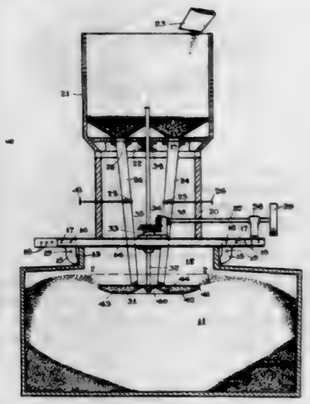
---

1,566,492. RAILROAD-TRACTION SYSTEM. MAXWELL MCGINNESS, London, England, assignor to The Railgrip Syndicate Limited, London, England. Filed June 7, 1923. Serial No. 644,024. 10 Claims. (Cl. 105—30.)



1. For use in a railroad traction system, a locomotive comprising a body, ordinary wheels and a pair of axially movable coaxial V-grip rack-grip wheels located about midway between front and rear pairs of the ordinary wheels.

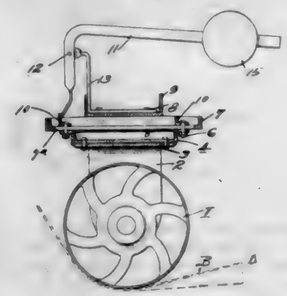
1,566,493. GRAIN LOADER FOR VESSELS OR THE LIKE. ALEXANDER MCKAY, Montreal, Quebec, Canada. Filed Mar. 29, 1924. Serial No. 702,869. 3 Claims. (Cl. 198—128.)



1. A grain loader for the holds of vessels or the like comprising, an adjustable frame adapted to engage with the hatchway, a superstructure mounted on the frame and secured thereto, a hopper mounted on the superstructure, a vertically disposed shaft rotatably mounted in the frame and the superstructure, and adapted to extend below the frame into the hold, a dished disc having ribs extending upwardly from the dished surface said disc being securely attached to the end of the shaft below the frame, and adapted to rotate with said shaft, spouts or pipes depending from the underside of the hopper to guide grain towards the centre of the disc and means for rotating the vertically disposed shaft.

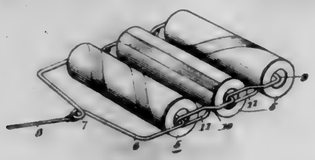
---

1,566,494. BELT TIGHTENER. ARTHUR JACK MCKINLEY, San Francisco, Calif., assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed July 18, 1921. Serial No. 485,725. 3 Claims. (Cl. 64—5.)



1. A belt tightening device including, in combination, a fixed frame provided with guideways, a hanger for the idler, shoes operating in the guideways and to which the hanger is attached so as to be slidable on said frame and suspended therebelow, and means mounted on and above the frame and operative to constantly force the hanger in one direction along the guideways of the frame to maintain the belt in tightened condition; said means including a yieldingly operative arm engaging one of the shoes.

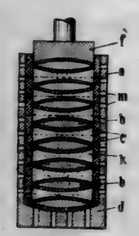
1,566,495. TOY. LOGAN L. MALLARD, Norfolk, Va. Filed Nov. 20, 1924. Serial No. 750,976. 14 Claims. (Cl. 46—48.)



13. A toy comprising a series of cylindrical rollers and U-shaped members mounted in the bores thereof, the arms of each member being loosely linked in engagement with the member of the succeeding roller.

---

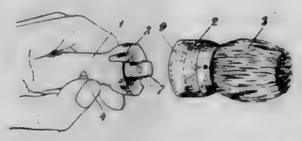
1,566,496. DESICCATING AND COMPRESSING PULPY MATERIAL, PARTICULARLY PEAT. KARL MAUS, Berlin-Charlottenburg, Germany. Filed Apr. 27, 1921. Serial No. 465,033. 25 Claims. (Cl. 44—27.)



2. In a device for desiccating and shaping peat and other pulpy material, means for compressing said material into cakes, means for subdividing the material, and means for submitting the central portion of the subdivided material, and means for submitting the central portion of the subdivided material to a relatively increased compressing pressure.

---

1,566,497. SHAVING BRUSH. PAUL MEYERLIN, Pantin, France. Filed Sept. 12, 1924. Serial No. 737,379. 1 Claim. (Cl. 15—176.)



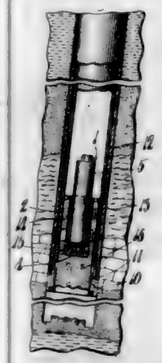
In a shaving brush, the combination of a handle provided with a longitudinal hole, a spindle rotatable in the said hole and provided with a bar extending across the bottom of the said handle, means for rotating the said spindle through a small arc, grooves at the edge of the handle adapted to be covered by the ends of the bar in one position and to be uncovered in another position thereof, a spring adapted to turn the bar into the position where the grooves are covered, a cap like holder adapted to fit over the bottom of the handle and furnished with a brush proper, the said holder being provided with inwardly projecting portions adapted to slide into the grooves in the bottom of the handle and so formed that the bar carried by the handle is adapted to engage them under the influence of the spring, substantially as and for the purposes set forth.

1,566,498. PROCESS FOR MAKING WATERPROOF PORTLAND CEMENT. CHARLES N. MILLER, San Francisco, Calif. Filed February 26, 1924. Serial No. 695,375. 5 Claims. (Cl. 106—24.)

2. The process of preparing waterproof cement which consists in thoroughly incorporating into a cementitious material a mixture of beta naphthol and non-volatile oil.

---

1,566,499. METHOD OF EXPLORATORY DRILLING. JOSEPH S. MITCHELL, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 4, 1924. Serial No. 717,909. 7 Claims. (Cl. 255—1.)



1. The method of determining the inclination of the strata being drilled which consists in inserting a recording instrument in the strata, securing the instrument in position in the strata, and withdrawing the instrument in fixed relation with a section of the strata.

---

1,566,500. INDUCTION HEATER FOR AND METHOD OF HEATING TIRE MOLDS. EDWIN FITCH NORTHRUP, Princeton, N. J., assignor to Ajax Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Filed Nov. 20, 1920. Serial No. 425,439. 46 Claims. (Cl. 18—53.)

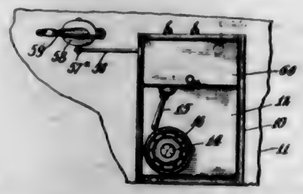
1. The method of integrating successive heating effects from spaced electrical heating devices upon successive molds to be heated which consists in moving the heating devices and the molds to be heated with respect to each other, so as to bring the molds successively within the electromagnetic field of each of said spaced devices.

---

1,566,501. COMBINATION SAFETY DEVICE FOR AUTOMOBILES. MICHAEL J. O'BRIEN, New York, N. Y. Filed Jan. 19, 1925. Serial No. 3,473. 2 Claims. (Cl. 70—127.)

1. An anti-thief attachment for automobiles comprising a series of spaced contacts arranged in pairs forming part of the ignition circuit of the automobile, a slidable bridging element adapted to engage and bridge the contacts of the respective pairs, a collar adapted to freely surround the emergency brake lever of the automobile, a bar connected at one end to the said collar,

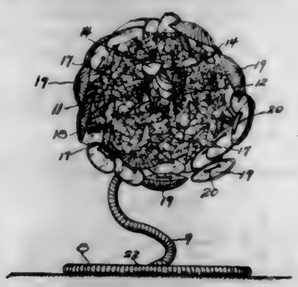
a pin movable with the said bridging element and engaging in an aperture in the said bar to retain the same against movement, and a lock controlling the



movement of the said pin and bridging element, and means preventing complete movement of the said bridging element to operative position when the said pin is engaged with the said bar.

---

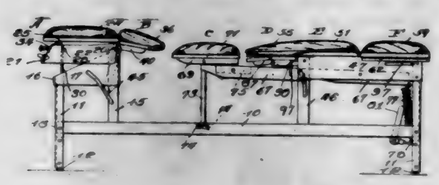
1,566,502. NATURAL-SHELL PERFUME LAMP. HAZEL E. PALMER, Kansas City, Kans. Filed Apr. 11, 1924. Serial No. 705,963. 6 Claims. (Cl. 240—10.)



1. In a perfume lamp having means for heating and lighting said lamp, a plurality of natural shell containers for the liquid to be vaporized, each of said natural shell containers being supported in contact with said heating and lighting means by an arcuate pliable connection, whereby the container may be adjusted toward and away from the heating means.

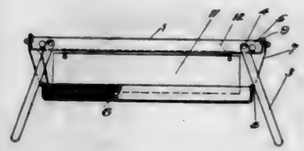
---

1,566,503. CHIROPRACTIC TABLE. EDWARD OVERMAN and EDWARD P. BLANCHARD, Los Angeles, Calif. Filed July 25, 1923. Serial No. 653,697. 5 Claims. (Cl. 128—72.)



1. A chiropractic table having a supporting frame, a head support and a breast support pivotally mounted upon the frame adjacent one end of the head support, the breast support having downwardly extending arms, a spring operatively connected to the arms and resisting depression of the breast support, a cranked shaft mounted upon said frame and extending parallel to said arms and in one position bearing against said arms and resisting depression of the breast support.

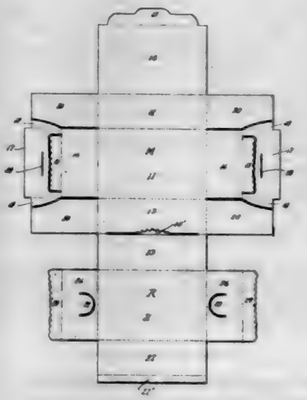
1,566,504. CAMP STOVE. JAMES R. PEARSALL, Rochester, N. Y. Filed June 16, 1922. Serial No. 568,741. 1 Claim. (Cl. 126—30.)



A camp stove comprising a rectangular grill supporting frame, a grill supported on said frame, fenders hinged to the frame to swing inwardly in parallel relation thereto, legs pivoted to the sides of the frame on the outer sides of the fenders to swing into the plane of the frame, a fire basket of shallow construction, rectangular in form, and having a flat bottom, and means for suspending the fire basket from the rectangular grill supporting frame, said means being constructed to space the fire basket from the rectangular frame and to permit the fire basket to be brought into close proximity with the rectangular frame so that the entire stove may be compactly folded.

---

1,566,505. BOX. EDWARD E. PINKERTON, Chicago, Ill. Filed June 29, 1923. Serial No. 648,414. 4 Claims. (Cl. 229—34.)



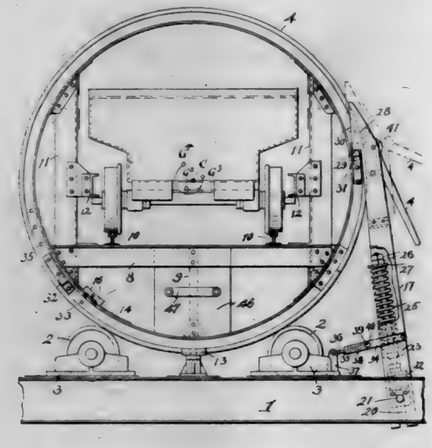
1. A box consisting of a single sheet of material and comprising a main portion with an outer end wall doubled over inwardly, a lace member cut out and extending from said end wall, a reinforcing portion bent inward from said main portion and having an end member inside of said end wall, and lace means on said end member extended beneath said lace member to form a superposed lace effect.

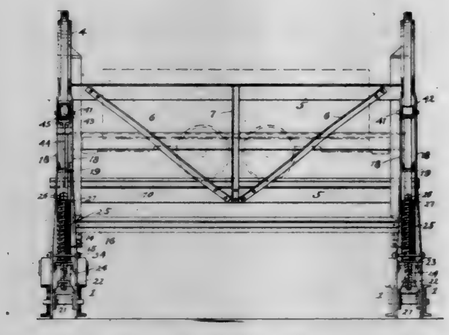
---

1,566,506. TIPPLE. ARTHUR G. REESE, Cleveland, and PAUL H. DOUGLAS, Cleveland Heights, Ohio, assignors to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 11, 1922. Serial No. 560,094. 14 Claims. (Cl. 214—52.)

1. A gravity car tipple comprising a car support mounted for rotative movement about a longitudinal axis and having its center of gravity at one side of said axis, car holding means on said support, a pair of spaced stop lugs secured to said support, a latch having a stop

shoulder engageable with one of said stop lugs to hold said support in car receiving position and with the other of said stop lugs to limit the rotative movement of said





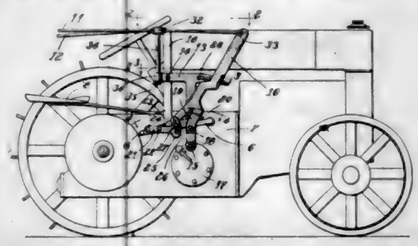
support, said latch acting to stop the movement of the car support in one direction only, and means for releasing said latch from said first lug to permit rotative movement of said support to dump a car thereon.

---

1,566,507. ELECTRIC HEATER. THOMAS C. RUSSELL, Chicago, Ill. Filed June 21, 1924. Serial No. 721,449. 8 Claims. (Cl. 201—67.)

1. In an electric heating device of the class described, the combination of a flat elongated metallic sheath, a resistance element extending through said sheath, a frame bridging one end of said sheath, walls on said frame engaging with the side edges of said sheath, means for drawing said walls into clamping engagement with said edges to thereby clamp the frame in place, said walls being clear of the base of said sheath whereby said sheath may be applied to flat surfaces, terminals on said frame, and connections between said resistance element and said terminals.

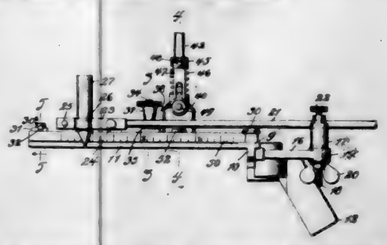
1,566,508. CLUTCH-CONTROL MECHANISM. SWAN A. SANDBERG, Lee Center, Ill. Filed Oct. 12, 1925. Serial No. 61,909. 10 Claims. (Cl. 74—89.)



1. In a tractor, the combination with a clutch pedal, of a single hand lever for operating said pedal by pivotal movement from an inoperative to an operative position, a support for mounting said lever on said tractor, a clutch-engaging and operating element on said lever adjustable thereon for engagement with said clutch pedal with said lever in inoperative position, said element comprising an auxiliary lever pivoted to said hand lever intermediate its ends having its free end for engaging the pedal, and an adjustable clamping member at its other end to cooperate with the hand lever to secure said auxiliary lever in adjusted relation to said hand lever.

---

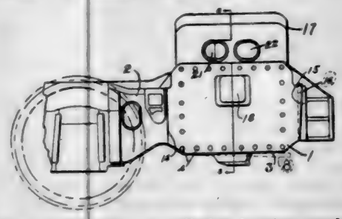
1,566,509. PUNCH-CENTERING MACHINE. ALBERT SCHWANZ, St. Louis, Mo. Filed Feb. 9, 1925. Serial No. 8,035. 3 Claims. (Cl. 33—189.)



1. In combination with a T square, a punch guide slidably secured thereon, a punch slidably secured in said punch guide, a sleeve secured to said punch, a slotted arm secured to said sleeve, a stud secured to said punch guide in sliding engagement in the slot of said slotted arm, a spring positioned on said punch between said sleeve and said punch guide.

---

1,566,510. LOCOMOTIVE FRAME FRONT END. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Nov. 24, 1924. Serial No. 751,892. 14 Claims. (Cl. 105—44.)



1. In a locomotive, a cylinder bearing surface having a vertical rib at one end and an inclined rib at the opposite end, a cylinder frame adjacent to said cylinder bearing surface and between said ribs, and a wedge between said inclined rib and the end of said cylinder frame.

1,566,511. BRUSH. NIELS CHRISTIAN SORENSEN, Chicago, Ill. Filed Aug. 22, 1923. Serial No. 658,677. 2 Claims. (Cl. 15—195.)

1. A brush having a metal head with an integral handle at one end and with projections at the side edges, metal bristles mounted between said projections, a member mounted over said bristles to hold them firmly in position, said projections being bent inward over said member, and means at the outer end of said head clamped over said member to assist said projections to hold said member and bristles firmly in position.

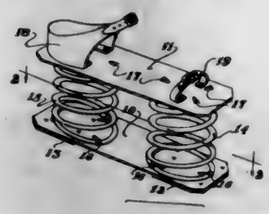
---

1,566,512. LAMINATED COHESIVE INTERWOUND RUBBER TUBE AND METHOD OF MAKING THE SAME. LAWRENCE A. SUBERS, Lakewood, Ohio. Filed May 18, 1921. Serial No. 470,646. 3 Claims. (Cl. 18—56.)

1. The method of forming a flexible resilient tube of balanced resistance to pressure, consisting of forming a layer of rubber by winding a series of bands of calendered rubber free of fabric about a mandrel, the bands of each series being the same length per unit length of tube, and being wound at a predetermined angle to the longitudinal axis of the tube, the bands of each successive series being wound in the opposite direction, the bands of each series being spaced apart a distance equal to their own width so as to cover one half of the surface of the mandrel, and then vulcanizing the same to form a homogeneous structure of rubber.

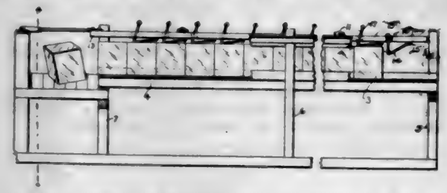
---

1,566,513. SPRING SHOE. THOMAS W. THACKERY, Winnetka, Ill. Filed May 31, 1924. Serial No. 716,974. 3 Claims. (Cl. 272—70.)



1. A spring shoe comprising superposed plates, intermediate springs at the front and back of said plates, means for fastening the uppermost of said plates to the foot, said plates being formed from identical blanks and provided with ears for gripping said springs, said ears on opposite adjacent plates being bent in opposite directions to grip said springs.

1,566,514. ICE-DELIVERING DEVICE. FERDINAND ERNST WEGENER, Sherman, Tex. Filed May 11, 1925. Serial No. 29,862. 7 Claims. (Cl. 198—222.)

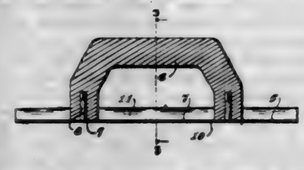


1. In a device of the character described including a closed ice storage chamber and a delivery platform adjacent thereto, the combination of an ice chute in said storage chamber and extending through the wall of said chamber, a swinging door above said chute in said wall, a reciprocable bar above said chute, a series of ice engaging pawls on said bar and means to reciprocate said bar for the purpose described.

6. In a device of the character described, a storage chamber, an ice supporting rack therein, means operable from without said chamber to move the ice longitudinally of said rack, means to receive said ice and discharge it through an opening in the wall of said chamber, and means to close said opening.

---

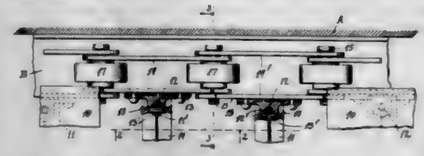
1,566,515. PLASTERER'S FLOAT. JOHN W. AULD, Los Angeles, Calif. Filed June 16, 1923. Serial No. 645,887. 1 Claim. (Cl. 72—136.)



In a plaster's float, a rectangular sheet of metal having square cut parallel side edges, two strips of wood; one for each of said side edges and each strip having a flat bottom surface and a substantially smooth vertically ranging surface intersecting the said bottom surface to provide a defined substantially right angle corner; each of the said strips attached to the smooth upper surface of said sheet of metal with its vertically ranging surface in vertical alignment with the corresponding square cut edge.

---

1,566,516. CONVEYER. ROBERT ELMER BAKER, Bronxville, and LAURENCE SEYMOUR HARBER, Katonah, N. Y., assignors to Joseph Baker Sons & Perkins Company, Inc., White Plains, N. Y., a Corporation of New York. Filed Mar. 28, 1921. Serial No. 456,099. 5 Claims. (Cl. 198—195.)

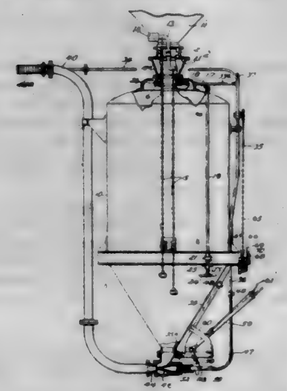


1. A conveyer comprising spaced longitudinal traveling members, cross members each comprising a plate and a central bar perpendicular to the plane of said plate and forked at the ends, lugs projected from said longitudinal members into the forked ends of said bars, and means for connecting said lugs and bars pivotally.

3. A conveyer comprising spaced longitudinal traveling members, cross members connecting said longitudinal

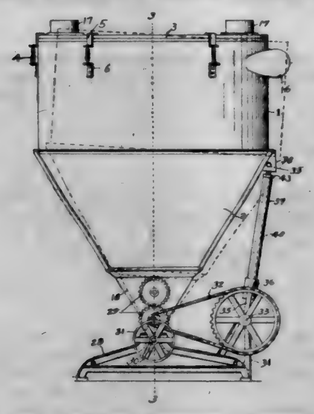
members and including plates having adjacent edges perpendicular to the direction of travel, and anti-warping fingers projected from each of two adjacent plates toward and beyond the near edge of the companion plate.

1,566,517. BLOWING TANK FOR PNEUMATIC TRANSPORT SYSTEMS. LARS H. BERGMAN, Chicago, Ill., assignor to Raymond Bros. Engineering Co., Chicago, Ill., a Corporation of Illinois. Filed May 5, 1923. Serial No. 636,919. 8 Claims. (Cl. 302—53.)



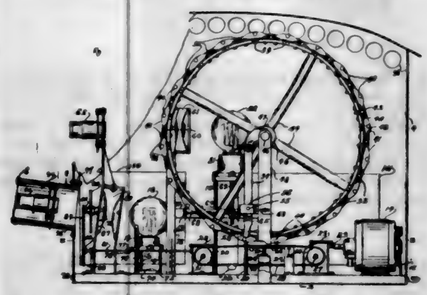
1. The combination with a blow tank for pneumatic conveying mechanism for powdered substances, of a transport line leading from said tank, an air supply conduit, other conduits leading respectively from said first named conduit to the top and bottom of said tank, a conduit leading to said transport line in advance of the entrance end thereof, a valve arranged to selectively connect two of said air conduits, whereby the valve in one position directs air from said supply conduit into the bottom of said tank and in another position directs air from the top of the tank to the said conduit leading to the transport line, and a separately controlled conduit leading from the air supply conduit to the entrance end of the transport line.

1,566,518. DUST SEPARATOR. WILLIAM T. BLANEY, Peterborough, Ontario, Canada. Filed July 7, 1923. Serial No. 650,045. 17 Claims. (Cl. 183—55.)



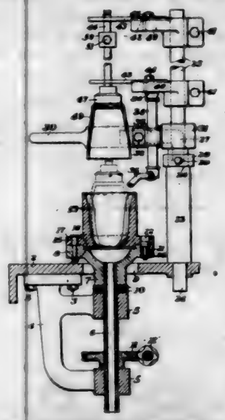
1. A dust separator, comprising adjacent chambers, one of which has an inlet for dust-laden air, the other having an outlet for purified air, a filter member through which said chambers have restricted communication said chambers and filter member forming a unit assembly, and means for oscillating said unit assembly to dislodge dust from said filter member.

1,566,519. PROJECTION APPARATUS. MED A. BLANKENSHIP, Detroit, Mich. Filed Mar. 22, 1923. Serial No. 626,925. 11 Claims. (Cl. 88—27.)



1. A record projection apparatus embodying a record projecting light, a screen for receiving a record as projected by said light, a second light, ray directing means for the second light to avoid interference with the projected record as received by the screen, a shutter for the second light, and driving means for the shutter to effect intermission shadows on the screen adjacent the record.

1,566,520. METHOD AND APPARATUS FOR REFORMING GLASS ARTICLES. HARRY A. BRIDGES and JOHN WM. LAMPARTER, Sapulpa, Okla., assignors to The Bartlett-Collins Glass Company, Sapulpa, Okla., a Corporation of Oklahoma. Filed July 7, 1924. Serial No. 724,580. 7 Claims. (Cl. 49—22.)

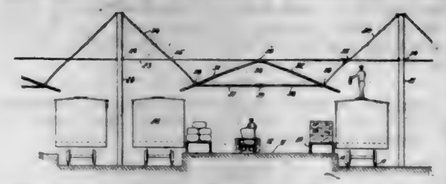


1. In a method of re-forming articles of glassware, the steps consisting in heating the article to be re-formed to soften the same, engaging said article with a shaping surface, producing relative rotation between said article and surface, and supplying a cooling medium to said shaping surface, substantially as described.

1,566,521. FREIGHT SHED. WILLARD C. BRINTON, New York, N. Y., assignor to Terminal Engineering Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 28, 1922. Serial No. 539,888. 9 Claims. (Cl. 189—1.)

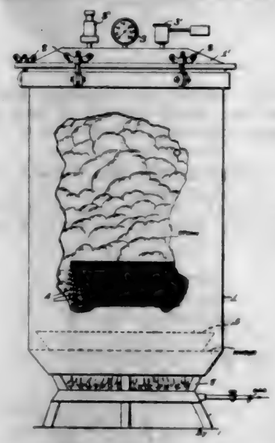
1. The combination of a goods loading platform, a group of railroad tracks on each side of the platform,

a canopy positioned over the platform for protecting goods thereon from the weather, supports for the canopy each positioned between a pair of tracks of one of said



groups of tracks, and truss rods interconnecting upper portions of the supports and secured to the canopy, the connections between the truss rods and the supports being disposed above the major portion of the canopy.

1,566,522. PROCESS FOR CURLING HAIR. REGINALD CARLES, South Portland, Me. Filed Mar. 6, 1924. Serial No. 697,172. 2 Claims. (Cl. 132—31.)

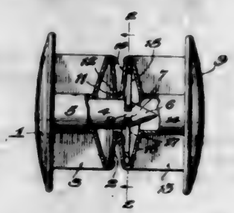


1. The process of curling hair which consists of winding the hair upon a stick or the like, then subjecting the wound hair to the action of steam under relatively high pressure and subsequently removing it from the stick to form curls.

1,566,523. CANDY-BOX HOLDER. JAMES L. COFFEY, Milwaukee, Wis. Filed May 3, 1923. Serial No. 636,329. 3 Claims. (Cl. 211—24.)

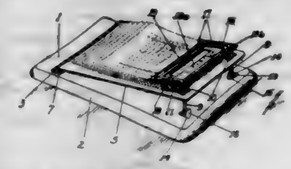
1. A holder for a candy box and a wholly detachable cover having marginal flanges, said holder comprising an inclined body portion with open ends adapted to receive said box, and a frame extending upwardly and rearwardly from said body portion and provided with a rectangular opening corresponding substantially in form and area to the part of the cover bounded by flanges thereof, whereby said flanges are receivable through said opening to support said cover above and in a detached relation to said box.

1,566,524. SEPARABLE CUFF BUTTON. LEONARD DAHLGREN, Attleboro, Mass. Filed Apr. 4, 1925. Serial No. 20,671. 2 Claims. (Cl. 24—100.)



1. In a cuff button, a male and a female member each having an inner and an outer head, said male member having a stem formed with a cone-shaped end, said end being provided with opposed slots between its tip and base to provide a pair of tapered end walls, and a spring device carried by the female member and having parts receivable in said slots, said stem being turnable in the female member whereby upon turning to spread said spring parts by the tapered end walls thereof to cause the spring parts to ride on the tapered end walls and thence on the end of the stem to separate the members, and a web connecting the heads of each member and shaped to hold the members against turning in the buttonhole.

1,566,525. PAPER HOLDER. FRANCIS A. DEELIEUS, Modesto, Calif. Filed Oct. 11, 1924. Serial No. 743,093. 12 Claims. (Cl. 129—85.)

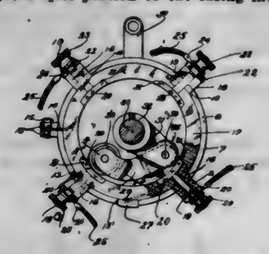


1. A paper holder comprising a base, a paper clamp mounted thereon adjacent one end and projecting upwardly therefrom, a plate cooperating with the clamp and projecting thence downwardly to the base at an angle thereto, means formed integral with the base and plate to form a hinge connection therebetween and spring means acting to force the plate into frictional engagement with the plate and forming the pintle of the hinge connection.

1,566,526. TIMER FOR INTERNAL-COMBUSTION ENGINES. JOHN B. DRAHONOVSKY, Milwaukee, Wis., assignor to Mechanical Production Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 13, 1920. Serial No. 365,546. 1 Claim. (Cl. 200—26.)

A timer, comprising an outer split casing having peripheral slots, an insulating member positioned within the casing and having portions which extend through some of the slots, said insulating member also having a positioning lug which extends through one of the casing slots, spaced fixed contact members mounted on the inner surface of the ring and having shanks which project

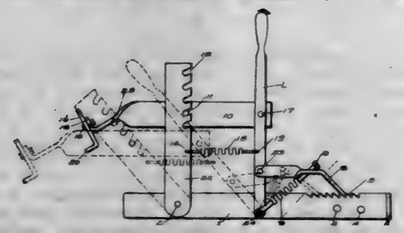
outwardly through some of the extending portions, means for drawing the split portion of the casing into clamping



engagement with the insulating member, and a rotatable contact member within the casing and engaging the fixed contact member in successive order.

---

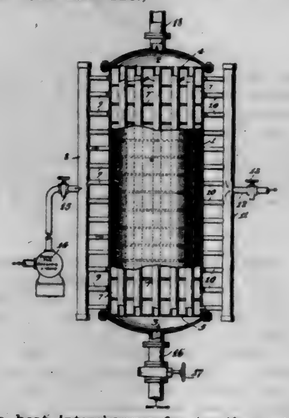
1,566,527. BRAKE-PEDAL-HOLDING DEVICE. EDWARD J. DUEMER, Los Angeles, Calif. Filed Feb. 16, 1925. Serial No. 9,486. 8 Claims. (Cl. 74—81.)



1. In a brake pedal holding device, in combination, a base, a hand lever pivoted to said base, a spring-pressed pawl and ratchet means associated with said lever and said base, a retarding member also pivoted to said base, a cross bar pivoted to said lever, a pin on said cross bar, said retarding member being provided with means for engaging said pin, a spring associated with said lever and said retarding member, and pedal engaging means associated with said cross bar.

---

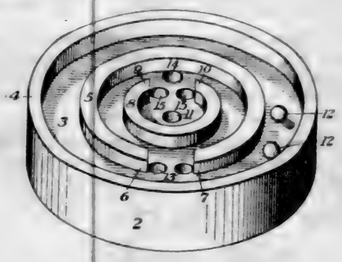
1,566,528. HEAT INTERCHANGER. GUSTAV EGLOFF, Independence, Kans., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 6, 1921. Serial No. 435,321. 2 Claims. (Cl. 257—224.)



1. In a heat interchanger for treating petroleum oils and vapors, comprising a main body portion, a plurality of vertically arranged tubes positioned within the main body portion, means for passing oil through said tubes, said main body portion being provided with a plurality of transversely extending partition members forming a multiplicity of closed fluid receiving chambers, and means for individually passing oil through each of said chambers transversely to the flow of oil through said vertically arranged tubes.

---

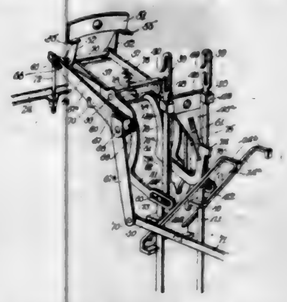
1,566,529. PUZZLE. GEORGE E. A. FAIRLEY, Pittsburgh, Pa. Filed Apr. 10, 1925. Serial No. 22,206. 9 Claims. (Cl. 273—108.)



1. A puzzle, including an iron surface projectile member, and an iron barrier member, at least one of said members being magnetized, substantially as described.

---

1,566,530. TYPEWRITER. MAX GARBELL, Chicago, Ill., assignor, by mesne assignments, to O. D. Jennings & Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1921. Serial No. 441,157. 12 Claims. (Cl. 197—155.)

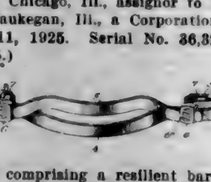


1. In a typewriter having a main frame, a platen, platen carriage, carriage support, type bars provided with a plurality of spaced printing type characters thereon, means for effecting a relative case shift between the type bars and the platen to accord with different printing positions, and an inking ribbon; the combination with a ribbon vibrator; of a vibrator lever; a support pivoted to the main frame and to which the vibrator lever is pivoted, said support being automatically positioned in accordance with the relative case shift positions of the platen and type bars; an operating lever pivotally connected to the vibrator lever, the pivotal axis of said operating lever being substantially in alinement with the pivotal axis of said support whereby the relative normal positions of the vibrator and platen remain substantially constant in all case shift positions; and means for actuating said operating lever.

---

1,566,531. PISTON RING. CHARLES H. GERSTING, Buffalo, N. Y. Filed Jan. 5, 1924. Serial No. 684,658. 1 Claim. (Cl. 74—109.)

In combination: a piston provided with a piston ring groove; a relatively low friction soft non-resilient outer ring disposed in said groove, provided on its outer face with a central annular recess extending the entire periphery of said ring, and provided with a plurality of apertures leading from said recess to the inner face of said ring; and a highly resilient split inner ring disposed in said groove with its outer face engaging the inner



face of said outer ring, effective to hold said outer ring in contact with the cylinder wall, and provided on its outer face with a single central annular recess lying in communication with the inner ends of all of said apertures and extending the entire periphery of said inner ring.

---

1,566,532. PISTON RING. CHARLES H. GERSTING, Buffalo, N. Y. Filed Jan. 7, 1925. Serial No. 953. 1 Claim. (Cl. 74—109.)

In combination: a piston provided with a piston ring groove; a relatively low friction soft non-resilient outer ring disposed in said groove, provided on its outer face with a central annular series of elongated recesses extending the entire periphery of said ring, and provided with a plurality of apertures one opening from each of said recesses to the inner face of said ring; and a highly resilient split inner ring disposed in said groove with the marginal parts of its outer face engaging the two edge portions of the inner face of said outer ring, effective to hold said outer ring in contact with the cylinder wall, and provided on its outer face between said marginal parts with a single central annular recess lying in communication with the inner ends of all of said apertures and extending the entire periphery of said inner ring.

---

1,566,533. AUTOMOBILE BUMPER. WILLIAM J. GROTENHUIS, Chicago, Ill., assignor to Bifex Products Company, Waukegan, Ill., a Corporation of Delaware. Filed June 11, 1925. Serial No. 36,327. 6 Claims. (Cl. 293—55.)

1. A bumper comprising a resilient bar bent to form an impact section having looped ends and rearwardly disposed arms terminating inwardly from the ends of the bumper, and resilient reinforcing members extending transversely between, and connected at their ends to said arms and said impact section inwardly from the ends of the bumper and adapted for adjustment longitudinally therebetween.

---

1,566,534. ALLOY AND ARTICLE PARTIALLY COMPOSED OF SAME AND PROCESS FOR PRODUCING THE ALLOY. ERNST HAAGN, Hanau-on-the-Main, Germany, assignor to The Corporation of W. C. Heraeus, Gesellschaft mit beschränkter Haftung, Hanau-on-the-Main, Germany. Filed Aug. 21, 1924. Serial No. 733,439. 4 Claims. (Cl. 75—1.)

1. An alloy consisting of 80–90% of tungsten, 10–17% of platinum and 1–3% of iridium.

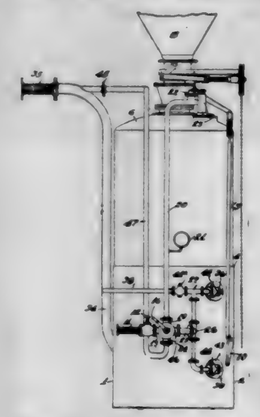
---

1,566,535. WASHBOARD. WILLIAM T. HODGEN, Campbellsville, Ky. Filed Feb. 20, 1924. Serial No. 694,068. 1 Claim. (Cl. 68—29.)

A washboard, including a substantially U-shaped frame having a rubbing surface extending thereacross, and a brand board having its lower end secured to the upper end of said rubbing surface and extending transversely thereof, the upper end of the brand board extending transversely of the bight portion of the frame and beyond and at right angles to the plane of the face of the washboard, said brand board being secured to said bight portion and having its side edges secured to the side members of the frame between the said bight and the upper end of the rubbing surface.

---

1,566,536. TRANSPORT SYSTEM FOR PULVERIZED COAL. FRITZ HOVING, Chicago, Ill., assignor, by mesne assignments, to Raymond Bros. Engineering Co., Chicago, Ill., a Corporation of Illinois. Filed May 22, 1922. Serial No. 562,853. 7 Claims. (Cl. 302—53.)

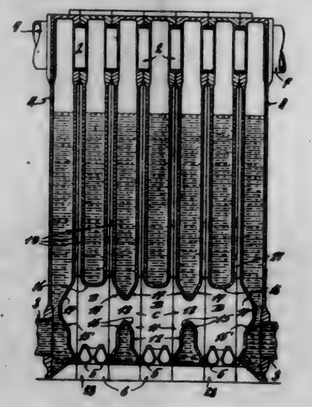


1. In combination, a tank, means for admitting powdered fuel to said tank, a source of supply of compressed air, a control valve, a connection from the source of compressed air to said control valve, a connection from the upper part of the tank to said control valve, a delivery line, a connection from the lower part of the tank to the delivery line, a connection from said control

valve to said delivery line, and branch connections leading from said control valve to various entrance points in said tank, said control valve having ports whereby in one position of said valve compressed air is introduced into the tank at various points and in another position of said control valve the interior of said tank above the fuel therein is connected to said delivery line, said control valve in the latter position also connecting said source of compressed air to said delivery line, the last named connection including a restricted passage through said control valve.

---

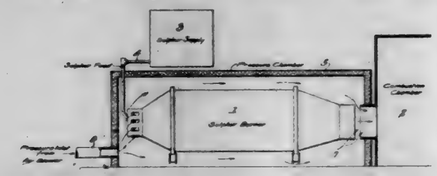
1,566,537. BOILER. EDWIN A. JONES, St. Louis, Mo., and HUBERT L. WHITELAW, Chicago, Ill., assignors to Jesse M. Williams, Webster Groves, Mo. Filed May 20, 1921. Serial No. 471,190. 11 Claims. (Cl. 122—228.)



9. A sectional boiler comprising hollow boiler sections adapted to receive the liquid to be heated, said hollow sections including an intermediate boiler section recessed to form top and end walls of a combustion chamber, a pair of boiler sections between which said intermediate section is interposed, said pair of sections having oppositely disposed side walls exposed in the upper portion of the combustion chamber and converging toward the top of said combustion chamber, said oppositely disposed side walls having lower portions converging toward the lower portion of said combustion chamber, said intermediate boiler section being separated from said pair of sections to provide two vertical flues leading from the first mentioned converging side walls, and a gas burner located in the lower portion of said combustion chamber.

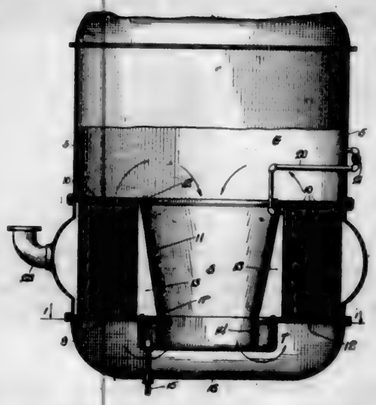
---

1,566,538. SULPHUR BURNER. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 758,221. 3 Claims. (Cl. 23—278.)



1. A sulphur burner comprising a receptacle for sulphur to be burned, having an air inlet opening and a gas discharge opening, a chamber enclosing said receptacle having an air inlet opening and a gas discharge opening, and means for delivering air under superatmospheric pressure into said chamber through its air inlet opening.

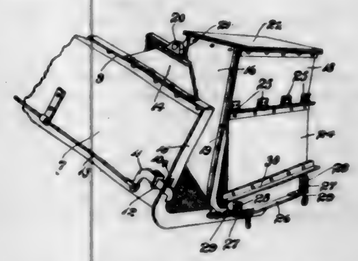
1,566,539. EVAPORATOR. MARTIN J. KERMER, Evanston, Ill. Filed Aug. 15, 1923. Serial No. 657,501. 4 Claims. (Cl. 159—27.)



1. An evaporator comprising a casing containing an evaporating chamber; a deck containing tubes connecting parts of the evaporating chamber separated by the deck; a steam chamber in the deck containing the tubes and separated from the evaporating chamber; a trough in the steam chamber fully open to said steam chamber for conducting water through the steam chamber and located below the tubes and means for forcibly projecting and directing the water thru the trough.

---

1,566,540. DUMPING-BODY CONSTRUCTION. ALONZO KETCHAM, Detroit, Mich., assignor to Wood Hydraulic Hoist and Body Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 24, 1924. Serial No. 701,268. 10 Claims. (Cl. 298—8.)



3. In combination with a tiltable truck body having an open rear end, of a receptacle positioned vertically in the rear end of the body, means for mounting the receptacle on a horizontal axis to turn with respect to the body, a movable closure for the receptacle at the back thereof, and means for latching the receptacle to the body in position for the receptacle to make a closure for the rear end of the body.

---

1,566,541. ELECTRIC-LIGHT ATTACHMENT FOR LEVELS. JAMES C. KIRBY, Minneapolis, Minn. Filed Oct. 10, 1923. Serial No. 667,668. 3 Claims. (Cl. 240—6.4.)

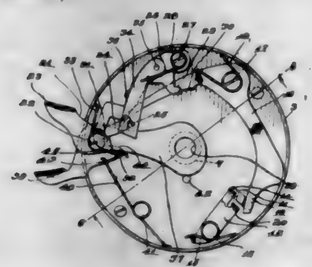
1. A level comprising a substantially rectangular bar having a pocket therein, a bubble-containing tube in said pocket visible from the exterior of said bar, a passage leading from said pocket longitudinally of said bar, said bar having openings therethrough, a recess in

the end of one of said openings with which said passage communicates, grooves in the sides of said opening, and a flash light casing having one end disposed in said

recess and carrying means engaging in said grooves and carrying a lamp whereby light is directed into said passage and pocket to illuminate said tube.

---

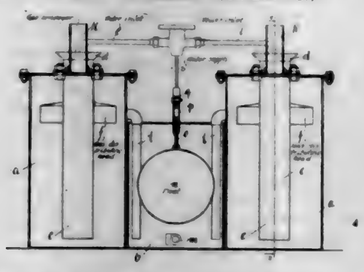
1,566,542. PHOTOGRAPHIC SHUTTER. RUDOLPH KLEIN, Rochester, N. Y., assignor to Ilex Optical Company, Rochester, N. Y., a Corporation of New York. Filed July 16, 1924. Serial No. 726,344. 8 Claims. (Cl. 95—62.)



1. A photographic shutter having a main exposure aperture, a blade having an exposure aperture of smaller size than the main exposure aperture and adapted to reduce the size of the main exposure aperture, shutter blades controlling said apertures, operating mechanism for the shutter blades, detaining means for said operating mechanism for obtaining time exposure, and controlling means for the exposure blade, having connection with the detaining means for holding the latter out of cooperation with the shutter operating mechanism when the exposure blade is shifted out of cooperation with the main exposure aperture.

---

1,566,543. ELECTROLYTIC CELL. ALBERT EDGAR KNOWLES, Heswall, England. Filed Apr. 3, 1924. Serial No. 704,009. 6 Claims. (Cl. 204—5.)



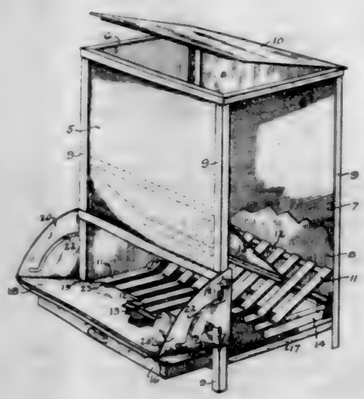
1. Means for automatically maintaining the liquid level in electrolytic cells and for washing the gas evolved therein, comprising liquid containing means, a valve through which liquid is supplied to the said means, means for leading gas into the said containing means below the surface of the liquid therein, an outlet for the gas, a tank, a float in the said tank controlling the said valve for the liquid supply, means for conveying liquid from the said containing means to the said tank, and means for distributing liquid from the said tank to the electrolytic cells.

1,566,544. MOP HEAD. CHARLES E. KREBS, Chicago, Ill. Filed Jan. 26, 1925. Serial No. 4,692. 3 Claims. (Cl. 15—229.)

1. A mophead composed of a grouped plurality of separate lengths of absorbent material, each separate length of material having interlaced strands at its exterior portion, arranged to prevent rapid disintegration of said separate length of absorbent material.

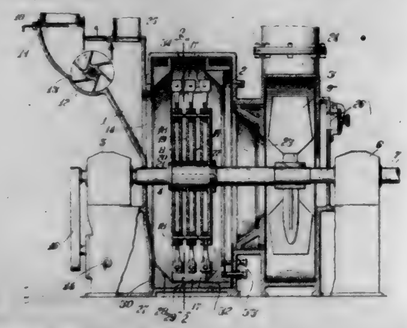
---

1,566,545. VEGETABLE BIN. AUGUST B. LARSON, Indianapolis, Ind. Filed Jan. 12, 1925. Serial No. 1,760. 3 Claims. (Cl. 211—6.)



3. In a bin open at the bottom and top and having a side opening, a slatted platform forming the bottom of the bin, said platform being inclined upwardly toward the back and having a horizontal section projecting to the lower edge of the side opening, a baffle above and directed toward the inclined end of the platform, a removable pan below the platform, a door for said side opening having an inwardly extending apron resting on said platform when in an opened position, vertically extending ends of said door, door supporting pins on said bin, said door ends each having a cam slot therethrough engaging said pins and said cam slots being formed with a central section to permit the door being passed from one position to another, and having an extended slot from each end of the central slot to cause the door to be dropped downwardly as a locking means in both opened and closed positions, and said door apron extending over one end of said pan as a pan locking means when the door is in a closed position.

1,566,546. PULVERIZING MILL. CHRISTIAN M. LAURITZEN, Chicago, and WILLIAM H. VOGEL, Highland Park, Ill., assignors to Raymond Brothers Impact Pulverizer Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1925. Serial No. 12,639. 28 Claims. (Cl. 83—11.)



1. A pulverizing mill comprising a substantially cylindrical beater chamber, a plurality of hammers mounted to revolve within the chamber, about the axis of the chamber, and annular means mounted within the chamber adjacent the sides of the zone within which the hammers operate, for directing material thrown thereagainst, back into the path of the hammers.

---

1,566,547. VIBRATOR. AUGUST F. LUZZI, Houston, Tex., assignor to Milton B. McLean. Filed May 12, 1925. Serial No. 29,674. 3 Claims. (Cl. 128—55.)

1. A vibrator including a U-shaped frame, an anchor with which the frame is connected, a bridge connecting the arms of said frame, a bearing carried by the frame, a shaft having an eccentric wrist which works in said bearing, a massaging member formed of yieldable material into which the free ends of the frame arms are inserted so as to leave a yieldable free portion at the outer end of said messaging member.

---

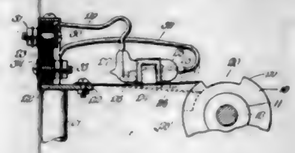
1,566,548. ABDOMINAL SUPPORTER. JOSEPH McDERMOTT, Toledo, Ohio. Filed May 10, 1924. Serial No. 712,464. 2 Claims. (Cl. 128—96.)

1. An abdominal support comprising a continuous integral body embracing supporting wire with the body embracing portions thereof each terminating in two reverse backward bends and then connected, whereby the bends provide a pair of oppositely extending supporting portions doubled back from the proximate portion of the body embracing portions.

---

1,566,549. CIRCUIT-CONTROLLING DEVICE. JAMES M. McMEEN, Westmont, Ill., assignor of one-third to William F. Abbott, Glen Ellyn, Ill. Filed June 19, 1924. Serial No. 721,067. 1 Claim. (Cl. 200—82.)

A circuit controlling device having a movable finger; a spring clip mounted on the finger; a cylindrical casing held on the finger by the clip and arranged to be reversed end for end in the clip; a pair of circuit wires terminating within the cylinder and near one end thereof; a globule of mercury within the casing adapted to close and to open a circuit between said wire terminals; and



a rotatable cam, upon which the free end of the finger normally rests, having a cutaway part, operable to change the altitude of said end of the finger to control said circuit.

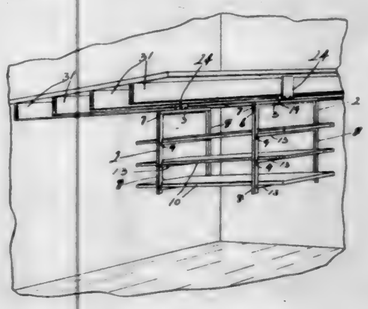
---

1,566,550. RAILROAD TIE. JAMES E. McWILLIAM, North Oxford, Mass. Filed Jan. 16, 1925. Serial No. 2,936. 3 Claims. (Cl. 238—84.)

1. As an article of manufacture, a railroad tie consisting of cement and pieces of wood cut up into short lengths mixed intimately with the cement and located throughout the body thereof in the finished article with the grain extending in all directions therein.

---

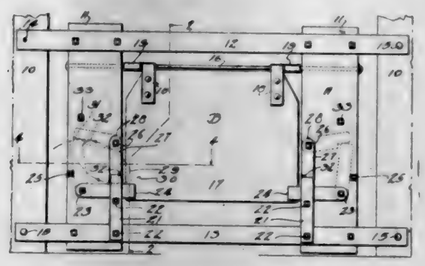
1,566,551. SHELF AND SUPPORT THEREFOR. THOMAS A. MA GHRAND, Philadelphia, Pa. Filed Sept. 13, 1923. Serial No. 662,396. 2 Claims. (Cl. 211—17.)



1. A shelf structure comprising, in combination, a plurality of frames each consisting of a cross bar, a headed pendant attaching member at each end of the cross bar and hangers provided with spaced rests and having slots at their upper ends, the lower portions of said slots terminating in enlarged recesses, said slots and their recesses adapted to register with the headed attaching members for detachably connecting the hangers to the cross bar, shelves engaging the rests of the different frames, a reach bar connected to the cross bars of said frame, and a clamp associated with said reach bar and including a pair of oppositely disposed plates, inwardly projecting prongs on said plates and means to move said plates toward each other.

---

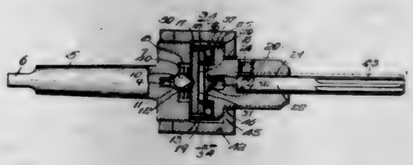
1,566,552. HOG GATE. JOHN A. MANSON and JOHN W. MACKLEM, Battle Creek, Iowa. Filed Nov. 15, 1924. Serial No. 750,179. 4 Claims. (Cl. 119—15.)



1. In a device of the class described, a gateway, a gate hinged at its upper edge in the gateway, stops pivoted on the gateway adapted to swing downwardly toward each other to substantially horizontal positions partially within the path of swing of the gate, keepers receiving the stops in such positions, and pawls pivoted above the keepers, adapted to swing to position locking the stops within the keepers.

---

1,566,553. TOOL HOLDER. OLIVER P. MAISCH, Chicago, Ill., assignor to Scully Jones and Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 19, 1924. Serial No. 687,333. 3 Claims. (Cl. 279—16.)

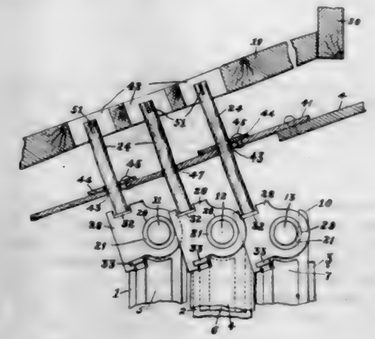


1. In a tool holder, a driving shank having a head, said head having jaw means and an axial depression at its inner end, a driving member having jaw means for driving engagement with the jaw means on said shank and an axial centering depression, a ball member interposed between the shank and driving member and seated in said depressions, a coupling having driving engagement with and motion of translation relatively to said driving member, a collet having driving engagement with and motion of translation relative said coupling, anti-friction means between the driving member and collet, and an adjusting nut threaded upon the head of the driving shank and having an abutment cooperable with the collet.

---

1,566,554. MOTOR VEHICLE. EDWARD J. MALONE, Jr., Montclair, N. J., assignor to Century Engineering Corporation, Newark, N. J., a Corporation of New Jersey. Filed Feb. 14, 1925. Serial No. 9,260. 12 Claims. (Cl. 188—196.)

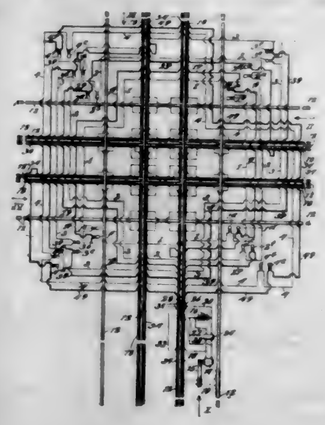
1. A motor vehicle having a compartment for personal occupancy and a casing enclosing speed-controlling mechanism outside of said compartment, means to actuate said speed-controlling mechanism, and devices to adjust said actuating means, said adjusting devices extending through



said casing, and operating means for, and combined with, said adjusting devices and extending into position for operation from within the walls of said compartment.

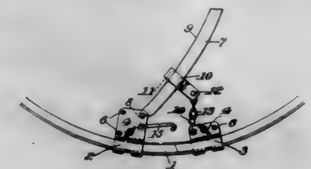
---

1,566,555. ELECTRIC SIGNALING SYSTEM FOR RAILROADS. JOHN J. MILLER, Chicago, Ill. Filed Aug. 9, 1922. Serial No. 580,678. 1 Claim. (Cl. 246—86.)



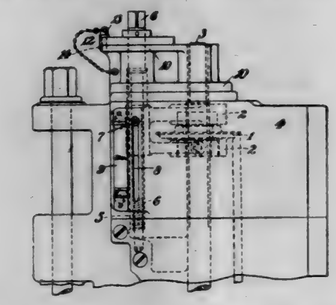
A railway grade crossing signaling system including a track, a third rail parallel with the track, a car adapted to move along the track, electrical generating means on the car and connected to said third rail and operated thereby when the car is in motion, a second third rail parallel to the first third rail, a storage battery in parallel connection with said generator and connected to said second third rail, and similar track and set of third rails crossing the first track, sets of signaling means located on each of said tracks, current conducting means connected to all of one set of said signaling means on one side of said tracks, the current conducting means being connected to one of the third rails and to one of the main rails of the track respectively, a second set of signaling means on said track adapted to be actuated by current directly from the generator and acting in conjunction with the first named signaling means and at practically same position along said track.

1,566,556. RIM REMOVER. MILTON HENRY NEWSPICKLE, York, Pa. Filed Mar. 17, 1923. Serial No. 625,821. 1 Claim. (Cl. 157—1.)



A device of the character described, including grips adapted to be secured to each end of a split rim, a supporting element upon one grip, a plurality of supporting elements on another grip, said elements being arranged in a plane radial to the axis of the rim, a lever handle having a hook shaped end engaging one of said supporting elements and readily detachable therefrom, said lever handle having a serrated upper edge, a slide on said lever handle adjustably engaging said serrated handle edge, a flexible member secured to the slide member and having a hook engaging one of said grips, movement of the handle about its pivot causing relative movement of the grips.

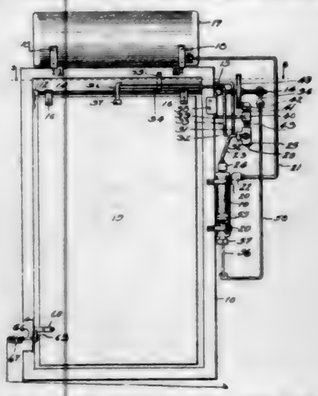
1,566,557. TRIMMING MECHANISM FOR CURVED-STEREOTYPE-PLATE-CASTING MACHINES. THOMAS ROBERT GILLETT PARKER, Altrincham, England, assignor to Linotype and Machinery Limited, London, England, a Company registered under the Limited Liability Company's Acts (1862 to 1900) of The British Imperial Parliament. Filed Jan. 26, 1924. Serial No. 688,640. 3 Claims. (Cl. 29—21.)



1. In plate-trimming mechanism of stereotype plate casting machines, the combination with a saw casing a saw shaft revoluble within said casing and a circular saw axially adjustable along that shaft for trimming plates of different widths, of a yoke movable in a direction parallel to the axis of the saw shaft and between the arms of which the saw is mounted, a screw shaft journalled in and rotatable from the exterior of the casing in threaded engagement with the yoke, a scale on the outside of the casing bearing indications of different operative positions of the saw, and a pointer attached to the yoke and projecting against said scale through a slot in the casing.

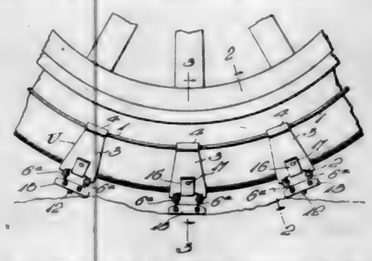
1,566,558. HOG OILER. THOMAS E. PECK and FRANK W. HARRISON, Sioux City, Iowa. Filed June 26, 1925. Serial No. 39,648. 8 Claims. (Cl. 119—159.)

1. In a hog oiler, a gateway, a gate hinged therein at its upper edge for swinging movement laterally of the gateway in either direction, an oil reservoir, a pair of oil discharge pipes having their discharge ends positioned one on either side of the gate, a two-way valve having a connection with the oil reservoir and with the discharge pipes, means controlled by the swinging of the gate for actuating said valve to allow flow of oil from



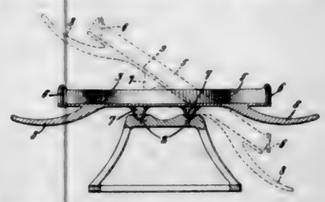
the reservoir to the discharge pipe away from the discharge end of which the gate is swung, and means actuated by the swinging of the gate to pump the oil from the reservoir to said two-way valve.

1,566,559. ANTISKIDDING ATTACHMENT. EDWARD J. PRIME, Groveland, Mass. Filed May 11, 1925. Serial No. 29,577. 3 Claims. (Cl. 152—14.)



1. A traction and non-skidding attachment for a vehicle wheel, comprising a band to surround the wheel, road grippers movably mounted at circumferentially spaced points on said band, and gripper-applying shoes movably mounted on the band and operatively connected with the grippers.

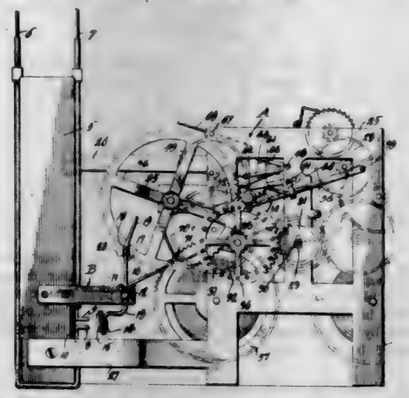
1,566,560. CHANGE TRAY. CHARLES DE WITT RADLIFF, San Francisco, Calif. Filed Nov. 30, 1923. Serial No. 677,874. 1 Claim. (Cl. 133—14.)



A change tray including a support having spaced sockets in the top thereof adjacent opposite ends, a tray removable bodily from the support and having oppositely extending outlet portions projecting beyond opposite ends

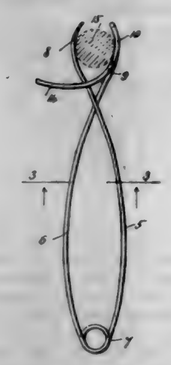
of the support, and projections extending downwardly from the tray and normally seated in the respective sockets to hold the tray in normal position, said projections constituting fulcrums for the tray when either end of the tray is raised or lowered relative to the support.

1,566,561. SWITCH OPERATOR. GEORGE F. RAUCH, Pukwana, S. Dak. Filed Apr. 22, 1924. Serial No. 708,300. 3 Claims. (Cl. 200—35.)



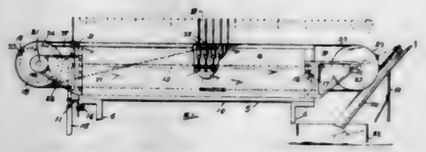
1. The combination with a switch including a pair of spaced contacts, of a switch lever, of means for automatically operating the switch lever, comprising a spring operated wheel, pins carried by said wheel for operating said switch lever, a trip lever, a time wheel operated from said time mechanism, removable pins carried by said time wheel for engaging and operating said trip lever, and a trip arm disposed in the path of and actuated by the trip lever for engaging said wheel for normally holding the same against movement.

1,566,562. HAND GRAPPLES. FRED RIEWE, Pottsville, Tex. Filed July 29, 1925. Serial No. 46,764. 1 Claim. (Cl. 294—99.)



A hand grapple, comprising a pair of opposed spring arms, one arm having a curved gripping jaw at its free end formed of two arcuate parts spaced apart and arranged parallel to each other, one of the said parts being provided with an extension which projects crosswise of the other arm, and the other arm being arranged opposite the space between the said arcuate parts and being provided with a curved gripping jaw having its free end portion flattened to overlap the said arcuate parts.

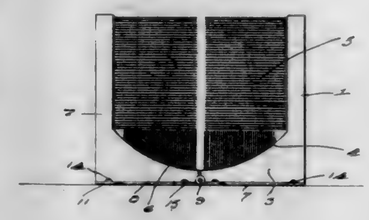
1,566,563. LAMP-STEM-ANNEALING MACHINE. FORREST URBAN ROSS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 27, 1922. Serial No. 577,859. 12 Claims. (Cl. 49—47.)



1. An apparatus for annealing lamp-stems comprising a chamber, an opening disposed longitudinally of said chamber, means for creating a heat-zone within said chamber having a temperature gradient, means adjacent to said opening for automatically conveying stems through said zone and means for supporting stems with their flared portions bridging said opening.

12. An apparatus for annealing lamp-stems comprising a chamber having an aperture at one side thereof, means for creating a temperature gradient within said chamber, an automatically movable stem-support associated with said chamber adapted to engage with flare portions of stems to move them with their axial lines vertical and move the stems to subject portions thereof to said varying temperature within said chamber.

1,566,564. SHOE CLEANER. BUFORD L. BUCKER, Phoenix, Ariz. Filed June 19, 1925. Serial No. 38,262. 1 Claim. (Cl. 15—161.)

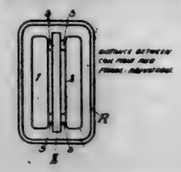


A shoe cleaner comprising a pair of opposed complementary brush heads of substantially L-shaped design, the base portion of each of said L-shaped brush heads having its upper face curved, bristles extending horizontally from the inner opposed faces of the arms of the L-shaped brush heads, additional bristles extending upwardly from the curved upper faces of the base portions of the L-shaped brush heads, securing means for said brush heads, said securing means comprising a pair of base plates secured to the bottom faces of the bases of the brush heads, the inner opposed ends of said base plates being hingedly secured together, said base plates being provided with means for securing the cleaner to a support.

1,566,565. METHOD OF EQUALIZING PAIRS OF SELF-INDUCTION COILS. EUGEN SCHÜRER, Cologne-Mulheim, Germany, assignor to Felten and Guilleaume Carlswerk Actien-Gesellschaft, Cologne-Mulheim, Germany. Filed Mar. 28, 1922. Serial No. 547,494. 1 Claim. (Cl. 178—46.)

Apparatus for equalising the self-induction in the pair of coils for loading four wire telephone lines, comprising in combination a protective induction frame of magnetic material, an annular disc within said frame, two self-

induction coils also arranged within said frame, one on each side of the disc, and iron connectors between the poles of the coils and the disc, said coils being adapted



to be shifted towards one or the other of the longitudinal sides of the frame, whereby the two amounts of duplex self-induction of the pairs of coils can be equalized.

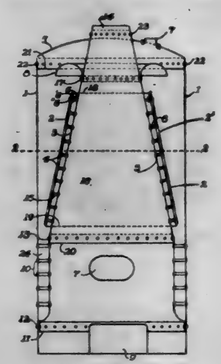
---

1,566,566. RUBBER CEMENT. BENJAMIN P. TAYLOR, Wyoming, Ohio, assignor to Taylorall, Inc., Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 5, 1924. Serial No. 704,490. 19 Claims. (Cl. 87—17.)

14. A new composition of matter characterized by adhesive properties the constituting components of which are caoutchouc latex and furfural constituting a body having the property of incorporating a suitable rubber stabilizer therewith, and a rubber stabilizer.

---

1,566,567. VERTICAL STEAM BOILER. HENRY E. WALLIS, Chicago, Ill., assignor of one-third to A. G. Bush, Davenport, Iowa. Filed May 29, 1922. Serial No. 564,548. 4 Claims. (Cl. 122—159.)

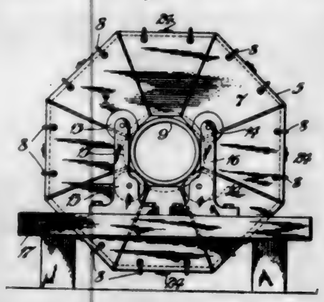


1. In a steam boiler of the vertical type, the combination with a section of the inner shell in the form of a cone frustum, of a skirt sheet of corresponding form secured in position around such portion of the inner shell at a uniform distance, a plurality of longitudinal flanges formed upon the skirt sheet and forming stiffening and strengthening ribs therefor, and staybolts securing the skirt sheet to the inner shell and which cooperate with the skirt sheet to reinforce the inner shell.

---

1,566,568. APPARATUS FOR FORMING CONCRETE SLABS. RALPH WILLIAMS, Richmond, Australia. Filed Dec. 1, 1924. Serial No. 753,262. 2 Claims. (Cl. 20—45.)

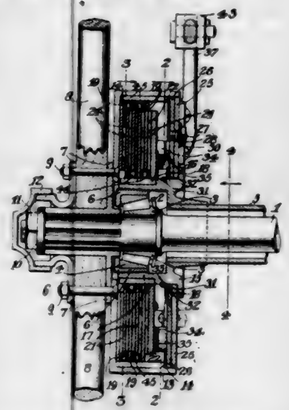
1. Apparatus for forming concrete slabs and the like for architectural and constructional purposes, comprising, a rotatable hollow element, a plate on one end of the element, a boss and stub axle carried by the plate, a bearing and support for the axle, a drive pulley on the axle, a plurality of hinged doors on the other end of the element permitting free access to the interior of the element, a feed drum disposed in the element and having one end projecting outside the element, a flange on the drum, rollers supporting the projecting end of the drum, reinforcing means interconnecting the flanges and the element, angular flanges in the element, a plurality of



moulds formed to be positioned on the inner surface of the element and held in position by the angular flanges, and a plurality of feed openings in that part of the drum which is within the cylinder for permitting feed of material by centrifugal force, from the drum to the moulds carried by the element.

---

1,566,569. AUTOMOBILE BRAKE. ALBERT ANDERSON, Tottenville, N. Y. Filed Mar. 20, 1922. Serial No. 545,139. 12 Claims. (Cl. 188—72.)



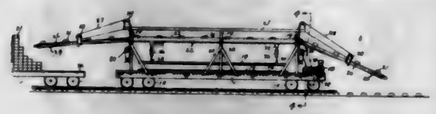
1. An automobile brake comprising, with a wheel and a relatively fixed brake hub, an annular brake drum mounted to turn with the wheel, an annular disc next to the drum and keyed thereto, an intermediate disc slidably keyed to the hub, an annular brake lining loosely mounted between the two discs, an operating disc having a limited revolving movement on the hub, pressure means between the operating disc and the intermediate disc and means to turn the operating disc to press the keyed discs and the brake lining together against the drum.

---

1,566,570. TRACKLAYING MACHINE. LOUIS D. APP, Scappoose, Oreg. Filed Sept. 2, 1924. Serial No. 735,490. 3 Claims. (Cl. 104—5.)

1. A track-laying machine having, in combination, a flat car having a longitudinal rail raceway formed in its deck; live rail-carrying rolls in said raceway; gearing

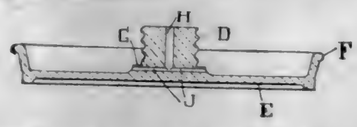
for driving said rolls; hoists for lifting rails from said rolls to the deck of said car; a conveyor over said rails adapted to carry ties transversely with said raceway; an extension conveyor hinged to each end of said first mentioned tie conveyor; means for adjusting the height



of the swinging ends of said extensions; an internal combustion engine for driving said rolls and conveyors and for propelling said flat car; and having vehicles for supplying rails and ties to the receiving end of said machine.

---

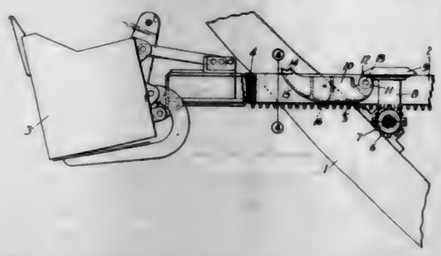
1,566,571. DRINKING FOUNTAIN FOR BIRDS OR DOMESTIC ANIMALS. JOSEPH APPLETON, St. Helens, England. Filed Oct. 2, 1922. Serial No. 591,859. 1 Claim. (Cl. 119—77.)



A liquid supply vessel of the bird fountain type comprising a tall glass jar, a single internally threaded neck on the bottom of said jar, a concave externally flanged glass dish adapted to contain liquid and an externally threaded vertical glass boss integral with and central within said disk and having radial and axial channels for the passage of fluid.

---

1,566,572. SPACER FOR DIPPER HANDLES. HARLEY J. ARMSTRONG, Seattle, Wash., assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed Oct. 1, 1925. Serial No. 59,901. 8 Claims. (Cl. 214—145.)

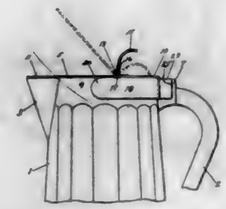


1. In a mechanism of the character described, the combination with a boom comprising two members spaced apart, and a dipper handle extending between said boom members, capable of longitudinal movement and comprising two members spaced apart, of a spacer interposed between those portions of the handle members which lie between the two boom members and held against movement with said handle.

---

1,566,573. LIQUID CONTAINER AND TOP THEREFOR. CHARLES S. BARON, Tiffin, Ohio. Filed May 29, 1924. Serial No. 716,691. 1 Claim. (Cl. 215—63.)

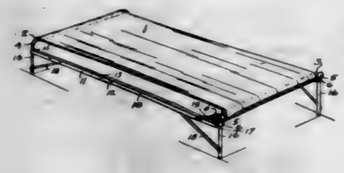
A container comprising a body having an exterior lateral projection adjacent its upper end, a relatively stationary cover section having a depending marginal skirt, of substantially U-shape, embracing the body, a substantially T-shaped slit being formed in said skirt and extending through the lower edge thereof and the portions separated from the body of the skirt by said slit being



bent outward to provide two members, separated throughout their length, engaging opposite sides of said projection on the container body, and a movable cover section hinged to said stationary section.

---

1,566,574. KNOCKDOWN CAMP BED. PAUL W. BERG, Tacoma, Wash. Filed Mar. 8, 1924. Serial No. 697,860. 1 Claim. (Cl. 5—114.)



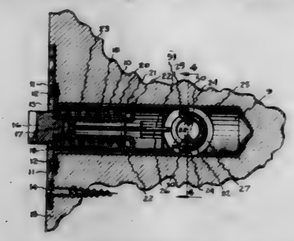
In a knock-down bed, the combination of two vertically foldable side bars; four legs positioned at the ends of said side bars; two radius bars of different lengths swingably attached at their ends to the side bars and to each of the legs, whereby the legs may be swung into operative position at right angles to said side bars at the ends thereof or swung back against and substantially parallel thereto; a cross bar formed with downturned sockets at its ends, said sockets removably fitting over the upper ends of two of said legs; a cross shaft rotatably mounted in fittings having sockets removably fitting over the other two of said legs; removable means for securing one said fitting to said leg; a fabric secured to said cross bar and said cross shaft; a ratchet wheel mounted on the end of said cross shaft adjacent said secured fitting; and a ratchet dog mounted on the side bar adjacent said ratchet wheel and engaging the teeth thereof, whereby when the shaft is rotated to wind up and tighten the fabric, the dog will hold it in tightened condition.

---

1,566,575. CYLINDRICAL-SHELL MORTISE KNOB LOCK. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed July 23, 1923. Serial No. 653,290. 5 Claims. (Cl. 70—91.)

1. A lock of the class described embodying a cylindrical latch housing, a bolt operating member in said latch housing, a bolt secured to said bolt operating member, shoulders formed at the rear end of said bolt operating member, a tubular knob shank extending crosswise of the rear end of said bolt operating member oppositely disposed lugs protruding from said knob shank, the walls of said knob shank being cut away between said lugs on the forward side, a rotatable locking member in said

knob shank, lock controlled means for positioning said locking member in said knob shank, yielding means for holding said locking member in a fixed position in said



knob shank, and a locking tongue on said bolt arranged to project through the opening in said knob shank and to engage with said locking member when said locking member is in a locked position.

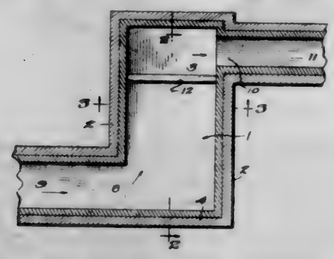
---

1,566,576. POLISH. BERT BUHR, Sumner, Iowa. Filed Sept. 9, 1924. Serial No. 736,787. 3 Claims. (Cl. 134—24.)

1. A polish of the class described consisting of linseed oil, gasoline and skunk oil.

---

1,566,577. COMBUSTION CHAMBER FOR INCINERATORS. HOWARD E. BURNS, Dallas, Tex. Filed Aug. 24, 1925. Serial No. 52,016. 2 Claims. (Cl. 110—82.)



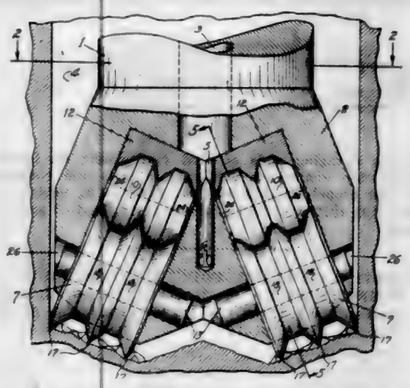
1. In a device of the character described, a supplementary combustion chamber having side walls and front and rear walls, said combustion chamber being provided with an inlet opening arranged in one of said side walls adjacent the front thereof and adapted to communicate with a furnace, said combustion chamber being further provided with an outlet opening arranged in the other side wall adjacent the rear and extending upwardly from the bottom of said chamber to a point spaced from the top thereof, and a baffle wall arranged transversely of said combustion chamber intermediate said openings and extending upwardly from the bottom of said combustion chamber to a point substantially in horizontal alinement with the top of said outlet opening.

---

1,566,578. DRILL. ANTHONY E. CARLSON, Los Angeles, Calif. Filed Dec. 26, 1922. Serial No. 608,913. 7 Claims. (Cl. 255—71.)

4. In a drill, a head, a rotary cutter journaled in the lower end of said head, a bearing block detachably mounted in said head and provided with a bearing recess in its lower side, and a roller fitting in said recess, against the lower side of which roller the upper side of said cutter bears.

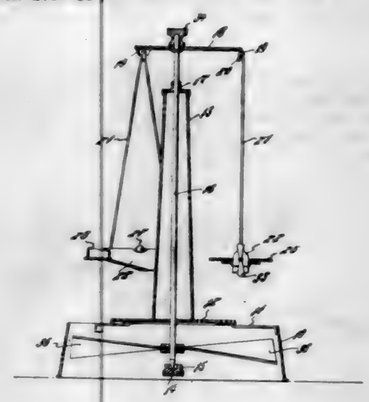
7. In a drill, a head, a pair of rotary cutters formed with annular spaced cutting edges, said cutters being journaled in the lower end of said head with their axes inclined downwardly from the axis of the head and with the inner cutting edges of the cutters adjacent each other at their lower sides at the axis of the head, a second pair of rotary cutters formed with spaced annular



cutting edges, said latter cutters being journaled in the lower part of the head with their axes inclining upwardly from the axis of the head and with their inner cutting edges adapted to circumscribe a circle adjacent the outermost cutting edges of the first pair of cutters.

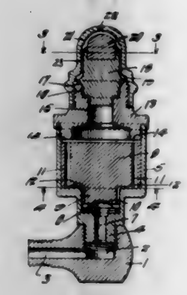
---

1,566,579. TOY. HENRY CLAUS, East Northport, N. Y. Filed July 17, 1925. Serial No. 44,305. 1 Claim. (Cl. 272—31.)



A toy of the character described comprising a hollow base, a beam mounted within the base and including a centrally disposed cup bearing intermediate its length and upon its upper side, a disk supported upon the upper portion of the base, a tower extending vertically and centrally above and connected to the disk a vertically disposed shaft extending within the disk and having its lower free end journaled within the cup bearing carried by the beam, a triangular plate carried by the upper free end of the vertically disposed shaft and having its respective corners in downwardly disposed apertured ears, supporting arms formed from lengths of wire and forming looped portions intermediate their length and pivotally secured within the apertured ears, a plurality of radially disposed fan blades fixed to the vertically disposed shaft within the base, and objects in the form of minature airplanes suspended and carried by the lower free ends of the supporting arms.

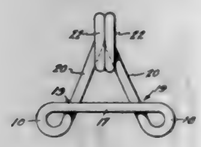
1,566,580. AIR VALVE FOR RADIATORS. WILLIAM J. COOK, Charlotte, N. C. Filed Apr. 2, 1925. Serial No. 20,178. 3 Claims. (Cl. 137—122.)



3. In a radiator air valve, the combination of an air valve base, a cup-like casing mounted on the base, said casing having a passage in communication with the passage through the air valve base, a float seated in the aforesaid casing, a cover detachably secured to the casing and positioned in spaced relation to the float, said cover having a passage therethrough, a cap detachably secured to the cover, the cap having an opening therethrough, an upper float member contained within the cap and seated on the cover member, the aforesaid upper float having a soft metal packing member mounted thereon and positioned to seal the opening in the cap when there is sufficient pressure in the valve to raise the upper float.

---

1,566,581. TIRE-CHAIN SIDE LINK. CORDIE S. COORDES, Hartley, Iowa. Filed July 24, 1925. Serial No. 45,746. 4 Claims. (Cl. 24—237.)

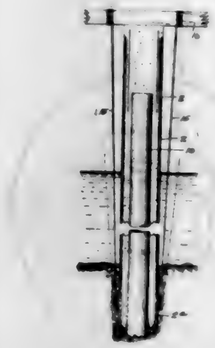


1. A tire chain side link to be used in a tire having cross chains and side chains, said link comprising an intermediate portion adapted to lie longitudinally of the side chains and to form a part thereof, a closed side chain loop at either extremity of the intermediate portion, for the reception of side chain connecting links, cross chain arms forming continuations of said side chain loops and converging together laterally of the intermediate portion, and cross chain loops formed at the ends of said cross chain arms, the side link having generally the shape of a triangle with the loops at the vertices thereof and the cross chain arms and intermediate portion forming sides thereof and disposed substantially in the direct lines of strain between the loops when the link is subjected to diverging stresses applied to said loops.

---

1,566,582. CONCRETE-INCASED PILE. CARLOS E. CORTES, Martinez, Calif. Filed Feb. 20, 1922. Serial No. 537,702. 2 Claims. (Cl. 20—100.)

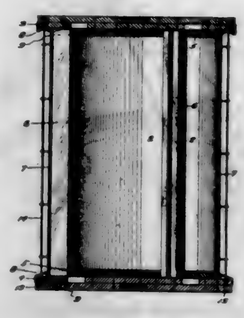
1. In a protective covering for a pile, a concrete cylinder provided on its lower edge with an inwardly extending flange having an inclined upper surface, an annular metallic element, V-shaped in cross section



engaging said surface and adapted to partially close the joint between the pile and the cylinder and a canvas gasket engaging said element and sealing said joint.

---

1,566,583. CONCRETE FORM. CARLOS E. CORTES, Martinez, Calif. Filed May 10, 1922. Serial No. 559,706. 6 Claims. (Cl. 25—128.)



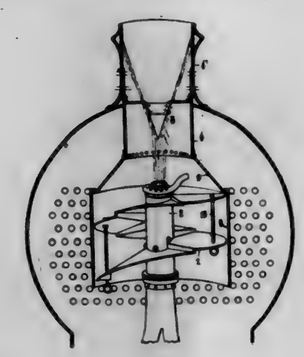
2. A collapsible concrete form comprising end plates having marginal mold sections having holes therein, a collapsible core disposed between said end plates and behind said marginal sections, the surfaces of the marginal sections and the core being contiguous, means connecting the core and the end plates to hold the core in expanded position and reinforcement overlying the surface of the core and having members extending through the holes in the marginal sections.

---

1,566,584. SPARK-EXTINGUISHING APPARATUS. VICTOR DALLEMAGNE, Paris, France. Filed Aug. 28, 1923. Serial No. 659,792. 5 Claims. (Cl. 110—168.)

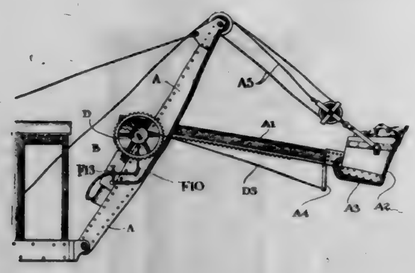
1. A spark extinguisher, comprising a baffle adapted to be mounted on the exhaust pipe of a locomotive, a frusto-conical member located above the baffle and adapted to be attached to the stack of the locomotive, said member having an annular circumferential track at its lower

end, and an open-ended drum located below the frusto-conical member and enclosing the baffle, said drum having a continuous lateral flange or rim at its upper end provided with roller-carrying members engaged with said track to suspend the drum therefrom.



---

1,566,585. POWER SHOVEL AND DREDGE. GEORGE R. DEMPSTER, Knoxville, Tenn. Filed Jan. 20, 1922. Serial No. 530,627. 11 Claims. (Cl. 214—146.)

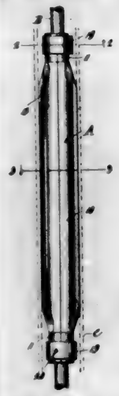


1. In an apparatus of the kind described, the combination with a dipper-supporting structure comprising a boom and a dipper stick shiftable endwise on said boom, and a dipper supported on said stick and comprising a closing member to be released for discharging the load, and rotary means for shifting the dipper stick endwise on the boom, of a cable having one end in operative relation with said closing member, means concentric with the axis of said shifting means for taking up and paying out said cable approximately synchronously with the endwise movements of the dipper stick, and an operator-controlled motor concentric with said axis for pulling said cable for actuating said closing member, substantially as described.

---

1,566,586. SUCKER-ROD GUIDE. JACK C. DODSON, Mexia, Tex., assignor to Mexia Planing Mill Company, a Copartnership composed of L. J. Ingram, Jack Dodson, and John W. Swann. Filed Sept. 11, 1923. Serial No. 662,144. 6 Claims. (Cl. 308—4.)

5. A guide for sucker rods comprising a cylindrical body having a longitudinal bore intersecting opposite ends of the body, said body having reduced end portions with annular shoulders at the bases of the reduced end portions, said body being divided into longitudinal sections, and a clamping device embracing each reduced end portion for clamping the same upon a sucker rod.



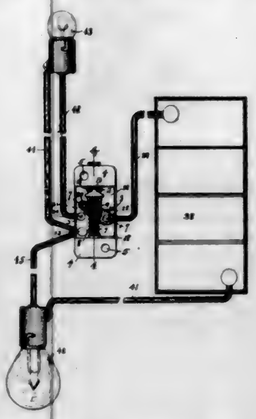
---

1,566,587. PROCESS OF SLAKING LIME INTO LIME PUTTY. DAVID A. EVANS, Kansas City, Mo., assignor, by mesne assignments, of fifty-one one-hundredths to The Evans Lime Putty Company, Kansas City, Kans., a Corporation of Kansas. Filed Dec. 1, 1924. Serial No. 753,179. 4 Claims. (Cl. 23—188.)

3. The process of curing lime putty which consists in allowing water to settle through the putty mass, and filtering the excess water as it discharges from the bottom of the mass.

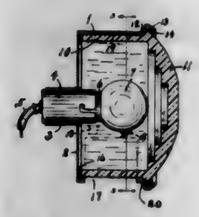
---

1,566,588. SWITCH. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds and Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Oct. 21, 1922. Serial No. 595,993. 11 Claims. (Cl. 200—59.)



1. A switch comprising a slidable stem and supports therefor, an insulating plate parallel to the line of said stem, a pivot and two stationary contacts carried by the plate, a movable contact mounted on the pivot, an arm on the stem and a pin at the end of the arm engaging in a hole in the movable contact, and a spring to return the stem to normal position and to press the movable contact against said plate.

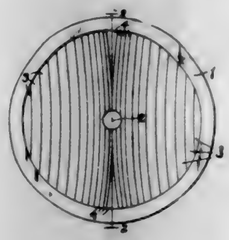
1,566,589. TAIL LAMP. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds and Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Nov. 17, 1922. Serial No. 601,497. 1 Claim. (Cl. 240—803.)



In a lamp, a glass member comprising in integral formation a lens and a tubular wall portion, a metal shell housing the said wall portion and having a bore larger than the outside diameter of the said wall portion, the metal shell having a window opening therein, and a light reflecting band disposed between the metal shell and the tubular wall portion, on the side of the lamp opposite the window opening.

---

1,566,590. REFLECTOR. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds and Jones Corporation, Detroit, Mich., a Corporation of New York. Original application filed May 8, 1922. Serial No. 559,204. Divided and this application filed May 3, 1924. Serial No. 710,770. 10 Claims. (Cl. 240—41.)

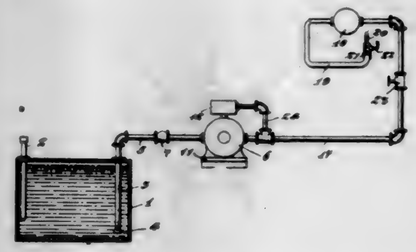


1. A paraboloidal reflector composed of a group of panels on each side of the center of the reflector, the panels on each side of the center of the reflector being substantially parallel to each other, each panel being transversely convex toward the general focus of the reflector and its transverse curvature at each point being the same as that of the general curve of a parabola at that point but in the opposite direction, the edges of the panel being convex toward the general axis of the reflector.

---

1,566,591. AUTOMATIC DISPENSING DEVICE. CHARLES A. GOLDSMITH, Collingswood, and JOSEPH F. MONTAGUE, Camden, N. J. Filed Oct. 11, 1924. Serial No. 743,150. 1 Claim. (Cl. 103—25.)

A gasoline dispensing device comprising a storage tank for liquids, a pump connected with said tank, an electric motor directly connected with the pump, a pressure switch, a discharge pipe connected with the pump, a by-pass connecting the discharge pipe with the automatic switch, a valve in the discharge pipe for controlling the flow of liquid from said pipe, said motor being connected with a source of current, and a circuit connecting the motor with the switch whereby upon a predetermined pressure of the liquid in the discharge pipe and in the by-pass the switch will be opened for cutting off the motor, the valve in the discharge pipe provided with a stem, a spring acting on the stem for maintaining the valve closed, a crank adapted to be manually operated for engaging the stem and moving the valve to open position for controlling the flow of liquid from the discharge pipe and for releasing pressure in the by-pass for causing automatic operation of the switch.



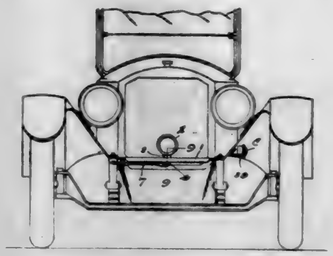
---

1,566,592. BELT DRESSING. ADAM GONDERMAN, La Verne, Calif. Filed May 1, 1925. Serial No. 27,310. 2 Claims. (Cl. 134—15.)

1. A belt dressing comprising one quart of extra heavy lubricating oil, two pounds of rosin and three ounces of bees wax.

---

1,566,593. AUTOMOBILE SEARCHLIGHT. JAMES WALTER GRAHAM, Nelsonville, Ohio. Filed Jan. 13, 1925. Serial No. 2,222. 2 Claims. (Cl. 240—61.)



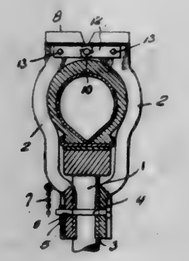
1. In a motor vehicle, a bar extending across the front of the frame thereof in front of the radiator, a search lamp supported at the center of the bar, means for permitting the lamp to be moved about a vertical axis, a bell crank on the bar, links connecting the same with the bell crank, a casing enclosing the rack bar, a shaft journaled in the casing, a toothed wheel thereon engaging the rack bar, a second shaft journaled in the casing, bars connecting the two shafts together, an arm on the second shaft, a foot pedal, means for connecting the pedal with the arm so that the depression of the pedal will rock the shaft to cause the toothed wheel to move the rack bar, springs associated with the parts for holding the lamp in a straight position and the pedal bar in raised position and switch means associated with the rack bar for extinguishing the bright lamps of the vehicle when the foot pedal is depressed to turn the search lamp.

**1,566,594. FISHING REEL.** MILTON B. GRAHAM, Windfall, Ind., assignor to Graham Reel Company, Windfall, Ind. Filed Jan. 26, 1924. Serial No. 688,849. 2 Claims. (Cl. 242—84.5.)

1. In a fishing reel of the class described, a reel proper, a stationary outer drum, a stationary inner drum, an arm pivoted at one of its ends to the reel proper, a brake shoe on said arm capable of swinging into engagement with the outer drum by the centrifugal force caused by the rotation of said reel, and a spring counter-acting the centrifugal force and holding the shoe in engagement with the inner drum when said reel is rotated at a comparatively slow rate of speed or if stationary.

---

**1,566,595. TRACTION-INCREASING ATTACHMENT FOR MOTOR-VEHICLE WHEELS.** ADAM H. GROSZ, New Orleans, La. Filed Oct. 10, 1925. Serial No. 61,747. 1 Claim. (Cl. 152—14.)

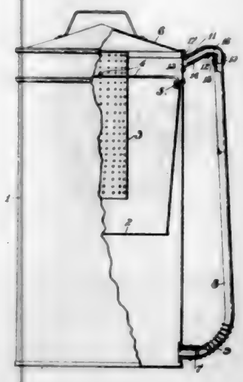


In an attachment for increasing the traction capacity of a wheel, the combination of members having on the inner sides of the outer portions alined apertured knuckles, a bolt removably arranged in said knuckles and hingedly connecting said members together and having circumferential grooves adjacent to one of its ends, and locking bars one to each member pivotally connected to the side of the member, said bars having near their free ends notched portions seated in said grooves of the bolt.

---

**1,566,596. SIRUP PERCOLATOR.** JAMES C. HARDESTY, Indianapolis, Ind. Filed July 10, 1925. Serial No. 42,857. 4 Claims. (Cl. 221—25.)

1. The combination with an open topped sirup receptacle having a cover therefor and a draw off opening, of a nozzle seat secured to the side wall of said receptacle at the upper end adjacent a drip opening in said side wall of said receptacle, a draw off conduit connected with said draw off opening and a hook shaped nozzle at the



end of said conduit arranged when in inoperative position to engage said seat and close said drip opening to the atmosphere.

---

**1,566,597. HOSE NOZZLE FOR GASOLINE PUMPS.** GERALD J. HARMAN, Los Angeles, Calif. Filed Sept. 30, 1924. Serial No. 740,799. 4 Claims. (Cl. 221—100.)

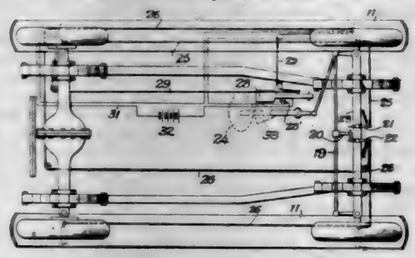
1. A nozzle of the character referred to including in combination, a flexible tube provided at one end with attaching means, a coupling member for detachably securing said flexible tube to a supply hose, and a supporting element on said coupling member, said coupling member being interchangeable with different flexible tubes, whereby the latter can be discarded when worn out without loss of said coupling member.

---

**1,566,598. AUTOMOBILE SIGNAL.** EDWARD J. HAWKINS, Rome, N. Y. Filed May 17, 1923. Serial No. 639,538. 2 Claims. (Cl. 116—36.)

1. In vehicle signals, the combination of the link bar of a steering mechanism of a vehicle, an arm secured

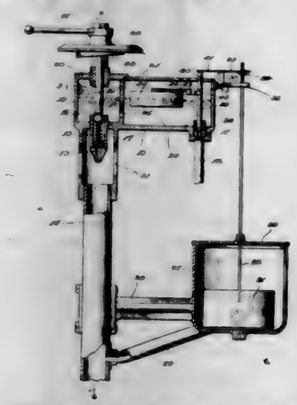
to the bar, levers pivoted adjacent to the arm, uprights having semaphore arms at each side, a cord from each



lever to a different semaphore arm, a brake lever, and a third semaphore arm operated by the brake lever.

---

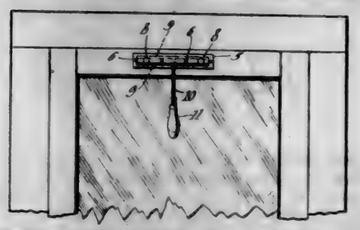
**1,566,599. FLUID REGULATOR.** WILLIAM L. HIGGINS, Buffalo, N. Y. Filed July 7, 1922. Serial No. 573,261. 3 Claims. (Cl. 137—68.)



2. In a fluid regulator, a fluid receptacle having inlet and outlet ports each provided with a valve, a pipe line into which the outlet port discharges, means for closing the inlet valve comprising a closed cistern having a conduit in communication with the pipe line, a float in the cistern, and elements connecting the float with the inlet valve whereby the inlet valve is adapted to be closed upon the float rising in the cistern actuated by the back flow of the fluid into the cistern caused by the consumption of the fluid in the pipe line being smaller than the discharge into it from the outlet port.

---

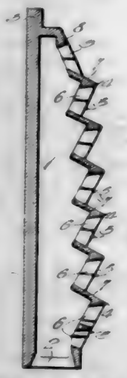
**1,566,600. DEVICE FOR OPERATING WINDOW SASHES.** JAMES J. HILL, Ewing, Ill. Filed Feb. 12, 1925. Serial No. 8,797. 1 Claim. (Cl. 268—4.)



A window operator including in combination, a plate, a pair of laterally extended pins formed on the plate, and arranged in spaced relation with each other, heads on the pins, a stick including an elongated head and a handle portion, said head adapted to be moved into engagement with the pins at points behind the heads to move the plate and sash supporting the plate vertically, and said plate having openings to receive securing screws.

---

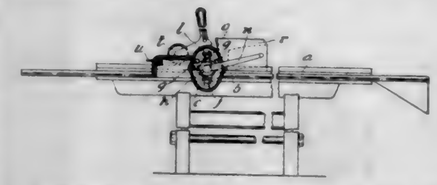
**1,566,601. RADIANT.** GEORGE A. HOFFMAN, Mansfield, Ohio, assignor to The New Method Stove Company, Mansfield, Ohio. Filed Mar. 26, 1925. Serial No. 18,524. 6 Claims. (Cl. 126—92.)



1. A radiant comprising a hollow body provided with openings at spaced points in its front wall, and internal deflectors over said openings for directing flame and products of combustion inwardly away from said openings and inducing the entrance of air therethrough.

---

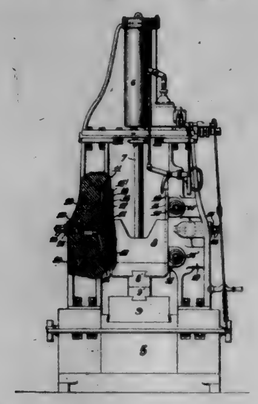
**1,566,602. APPARATUS FOR SPREADING MOLTEN TOFFEE OR OTHER LIKE SUBSTANCES TO A UNIFORM THICKNESS.** WILLIAM HOUNSELL, Birmingham, and THOMAS CARBY FILLERY, Hawkshurst, England. Filed Mar. 27, 1923. Serial No. 628,051. 8 Claims. (Cl. 107—22.)



1. Apparatus for spreading molten toffee and other like substances to a uniform thickness, comprising a table with a plane surface on which the substance is delivered, toothed racks along said table, a carriage with pinions for engaging said racks, and an adjustable spreader on said carriage in the form of an inclined blade for engaging the substance on the table and levelling it as the blade is moved along the table by the carriage.

3. Apparatus for spreading molten toffee and other like substances to a uniform thickness, comprising a table with a plane surface on which the substance is delivered, downwardly directed toothed racks along said table, a travelling carriage arranged across said table and comprising carrier plates at each side, rods for rigidly connecting the carrier plates across the table, a supporting roller on each carrier plate bearing on the back of the toothed racks, a gear wheel and a pinion in mesh therewith in each carrier plate, means for rotating said gear wheel, an axle connecting the said pinion to a pinion engaging said rack and an inclined blade on said carriage for engaging and spreading the substance placed on said table.

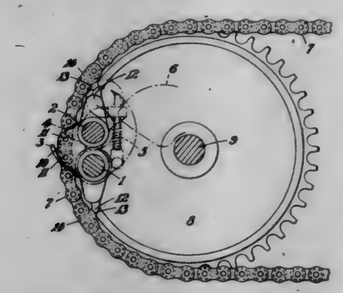
**1,566,603. DROP-HAMMER GUIDE AND ADJUSTMENT.** EDWIN B. HUBER, Chambersburg, Pa., assignor to Chambersburg Engineering Company, Chambersburg, Pa., a Corporation of Pennsylvania. Filed May 24, 1920. Serial No. 383,610. 4 Claims. (Cl. 78—37.)



2. In a guide for drop hammers, a drop hammer side frame having a pocket, a guide adapted to lie wholly within the pocket or to project therefrom for guiding purposes, a longitudinal beam reinforcement for the back of the guide; a retaining device for the guide secured to the reinforcement and independent transversely movable and removable adjusting means for the upper and lower parts of the guide.

---

**1,566,604. SHEET-DELIVERY MECHANISM OF PRINTING MACHINES.** JOHN WALLACE JAKEMAN, Altrincham, England, assignor to Linotype and Machinery Limited, London, England, a British Company. Filed May 22, 1924. Serial No. 715,038. 5 Claims. (Cl. 271—79.)

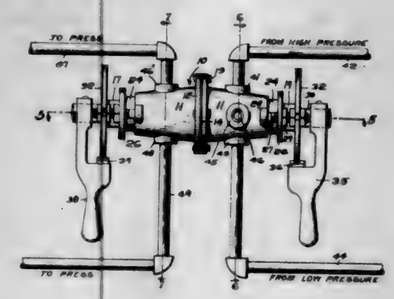


1. In sheet delivery mechanism of printing machines, the combination with a travelling chain and a gripper shaft carried in a bracket attached to the chain, of an abutment on the bracket so located as to engage a link of the chain other than that to which the bracket is attached, only when the chain is deflected from a straight path.

---

**1,566,605. VALVE STRUCTURE.** WILLIAM JAMISON, West Homestead, Pa. Filed July 22, 1925. Serial No. 45,325. 5 Claims. (Cl. 277—69.)

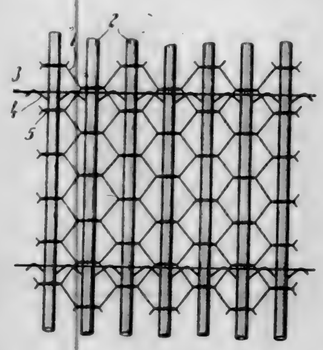
2. A valve structure comprising a pair of casing sections which are tapered and increase in diameter inwardly, means for connecting the inner ends of the casing sections, one casing section having a plurality of pressure inlet openings and a pressure release opening and the other casing section having a plurality of outlet openings, a tapered valve body increasing in diameter inwardly and mounted to turn in the first named casing section and having a port to co-operate with the inlet openings and release opening, a second tapered valve body increasing in diameter inwardly mounted to turn within the second named casing section and having a radial port to co-operate with the outlet openings, the inner ends of the valve bodies being open and in communication, stems connected with the outer ends of the valve bodies, thrust plates slidably engaging the stems and adjustably connected with the casing sections, and means to turn said stems.



5. In a valve structure, a casing provided with a tapered valve seat, a tapered body mounted within the casing and having a stem extending to the exterior of the casing, a thrust element having a swiveled connection with the stem to permit the same to rotate and to shift the stem inwardly and outwardly with respect to the casing, and adjustable means connecting the thrust element with the casing and adapted to move the thrust element inwardly and outwardly with relation to the valve casing and to lock the same against longitudinal movement at a selected adjusted position.

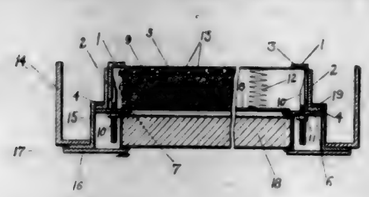
---

**1,566,606. LATHING.** KARL MARTIN JOHANSSON, Stockholm, Sweden. Filed Mar. 25, 1924. Serial No. 701,772. 1 Claim. (Cl. 72—116.)



A wire lathing comprising a wire netting, the wires of which are rigidly connected to each other at the crossing points, a plurality of reed pipes, and means connecting the latter to the netting consisting of under threads running on the opposite side of the netting in relation to the reeds, and upper threads alternately running over the reeds and through the meshes in engagement with the under threads.

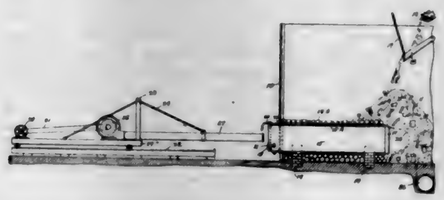
**1,566,607. AIR FILTER.** ANDERS JORDAHL, New York, N. Y. Filed Apr. 25, 1924. Serial No. 708,998. 10 Claims. (Cl. 183—47.)



1. An air and gas filter comprising a main frame; and a plurality of filter units mounted in said frame, one of said units being removably supported, and comprising a pair of screens, a filter medium between said screens, and means for regulating the degree of compression of said filter medium, so that said unit may be cleaned as a self-contained unit when removed from the main frame.

---

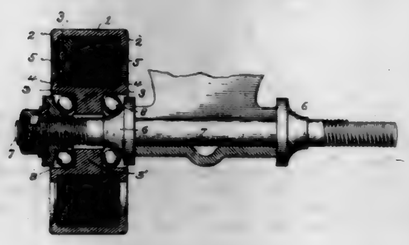
**1,566,608. REFUSE BURNER.** ARCHIE E. KRUSE, Portland, Oreg. Filed Sept. 22, 1924. Serial No. 739,070. 5 Claims. (Cl. 110—1.)



1. In a refuse burner, the combination of a water-cooled tube; a blower; and a nozzle on said blower adapted to be moved co-axially into said tube.

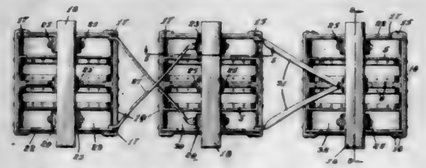
---

**1,566,609. ROLLER FOR ROLLER SKATES.** HANS G. LARSEN, Chicago, Ill. Filed Oct. 10, 1924. Serial No. 742,820. 1 Claim. (Cl. 208—181.)



In a roller for roller skates and the like, the combination of a rigid tread member of a plate form having inturned holding flanges at its respective margins, a hub member formed with peripheral holding collars complementary to the inturned flanges of the tread member and with an inner annular collar mid-way the length of its bore, and a semi-elastic intermediate member held in place solely by said flanges and collars.

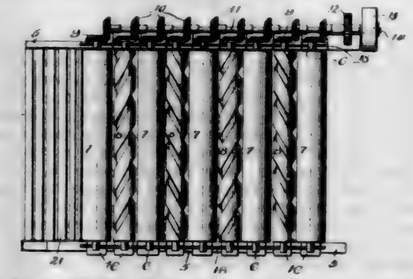
**1,566,610. LOG-HAULING SLED.** BERNARD LEBLANC, Lac Frontiere, Quebec, Canada. Filed July 22, 1924. Serial No. 727,538. 2 Claims. (Cl. 280—15.)



1. A log hauling sled comprising a body portion having a relatively narrow longitudinal bottom, sloping portions extending therefrom, side portions formed at the edges of said sloping portions, a runner secured to said bottom, and a steady bunk placed across said bottom and resting on the sides thereof.

---

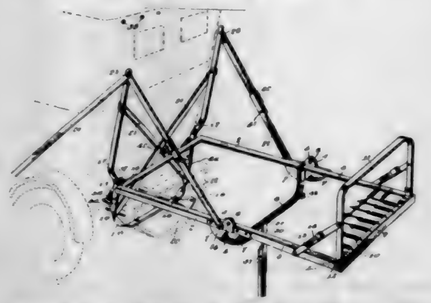
**1,566,611. FRUIT-CLEANING MACHINE.** CHARLES H. LISTER, Thonotosassa, Fla. Filed July 30, 1924. Serial No. 729,079. 5 Claims. (Cl. 146—202.)



1. In a machine of the class described a series of cylindrical brushes arranged to convey fruit transverse their axes, certain of said brushes being of substantially smaller diameter than others and the bristles on said smaller brushes being disposed spirally thereon to turn fruit longitudinally of said brushes.

---

**1,566,612. AUTOMOBILE BED.** EDWARD VINCENT LOUSTALOT, Franklin, La. Filed Dec. 18, 1924. Serial No. 756,730. 3 Claims. (Cl. 5—119.)

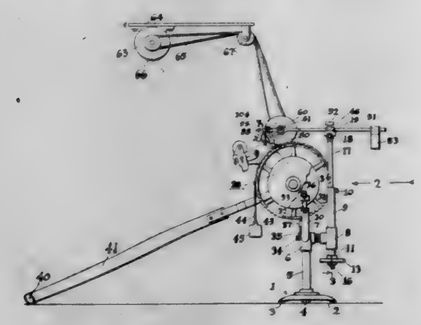


1. A bed of the character described comprising a frame consisting of a plurality of sections, hinges connecting the sections permitting folding the frame, a fixed support, and compound hinges connecting one of the sections with the support, said hinges comprising plates pivoted both to the section, and to the support, and having lugs to engage the support to limit an extending movement of the hinges preparatory to folding the frame section next to the support.

1,566,613. VALVE. CHARLES H. MCDONALD, Bartlesville, Okla. Filed Nov. 3, 1922. Serial No. 598,803. 1 Claim. (Cl. 103—229.)

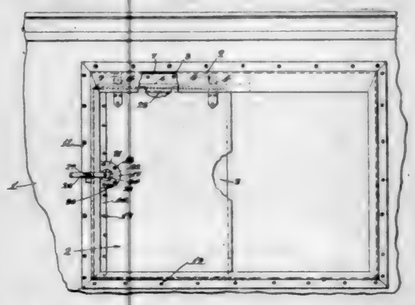
A standing valve comprising an elongated integral body portion having a smooth cylindrical bore extending downwardly from its top throughout the greater portion of its length, the lower end of said body portion having a smooth cylindrical bore of greater diameter than that in the upper end of said body portion, a valve seat arranged in said lower bore, a valve normally engaging said seat, a transverse pin extending through said lower bore above said valve to limit the upward movement thereof, a cage arranged above said body portion, a valve seat arranged between said cage and said body portion, and a valve arranged in said cage and normally engaging said last named seat.

1,566,614. LAWN-MOWER SHARPENER. RASMUS H. MADSEN, Hollywood, Calif. Filed Sept. 24, 1924. Serial No. 739,590. 8 Claims. (Cl. 51—247.)



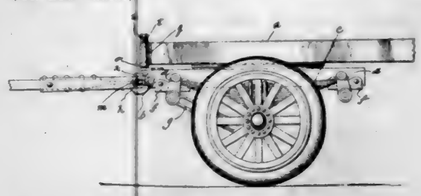
6. In a lawn mower sharpener, an adjustable support for a lawn mower, an adjustable track connected to the support, a base slidingly mounted upon the track, a bearing crosswise of the base, a bar slidingly mounted through the bearing, a set screw for holding the bar in adjusted position, a counterweight upon the rear end of the bar, a grinding wheel frame extending forwardly from the bar, a grinding wheel in the grinding wheel frame, a split bearing mounted upon one end of the track, a bearing sleeve crosswise of the split bearing, a bolt extending through the bearing sleeve, spring washers upon the bolt, one of the washers being against the end of the bearing sleeve, a sprocket wheel upon the bolt between the washers, a nut upon the bolt for adjusting the tension of the spring washers, a chain connected to the bar and extending over the sprocket wheel, and a weight upon the lower outer end of the chain.

1,566,615. BOX-CAR-DOOR OPENING AND CLOSING DEVICE AND FASTENER. ROY W. PACE and JACK E. WILLETT, Los Angeles, Calif. Filed June 21, 1923. Serial No. 646,816. 9 Claims. (Cl. 268—6.)



1. A sliding door construction, comprising in combination a plate having the main portion adapted to be secured to a structure, an upturned edge spaced from the main portion, having apertures therethrough forming a rack, the upper surfaces of the edge forming a track, a door having wheels operating on the track, a vertical shaft having a pinion engaging the rack, a worm wheel mounted on the vertical shaft, a work gear mounted on a horizontal shaft transverse of the door and a crank loosely mounted on the end of the horizontal shaft and means to operatively connect the crank to the horizontal shaft to thereby operate the door.

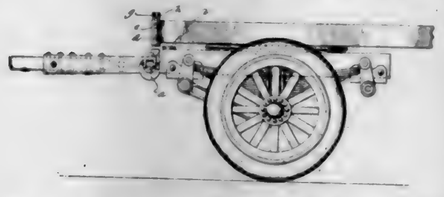
1,566,616. TRAILER DRAWHEAD. FREDERICK MALCOLM REID, Detroit, Mich., assignor to Fruehauf Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 21, 1925. Serial No. 10,746. 7 Claims. (Cl. 280—33.5.)



1. In a trailer, the combination of a gear frame having gusset plates at the forward corners, a trailer frame to which the gear frame is swiveled, and a draw head for the gear frame, comprising a relatively strong casting secured to the front of the gear frame and extending from one gusset plate to the other and serving to make the front of the gear frame a solid unit.

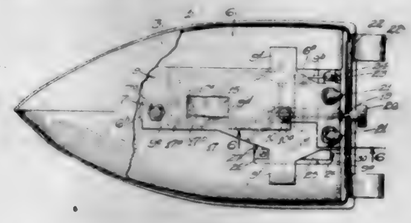
1,566,617. TRAILER LOCK. FREDERICK MALCOLM REID, Detroit, Mich., assignor to Fruehauf Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 21, 1925. Serial No. 10,747. 4 Claims. (Cl. 280—33.5.)

1. A center lock for vehicles, having in combination an upper member, a lower member, with two members arranged to have relative movement with respect to each other, a bolt guide housing on the one member, a table provided with a center keeper socket on the other member, a sliding bolt guided in the bolt guide and tending to project into the keeper socket when lined up there-



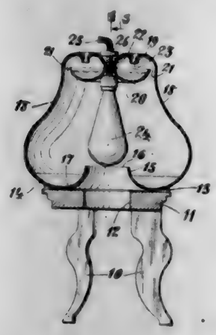
with, and means connected with the outer end of the sliding bolt and operating in direct connection with the bolt guide housing to either release the bolt for automatic projection into the keeper socket or else to set the bolt against projection into the keeper socket.

1,566,618. AUTOMATIC ELECTRIC FLATIRON. MARTIN S. RUNSVOLD, San Diego, Calif. Filed Aug. 11, 1924. Serial No. 731,314. 15 Claims. (Cl. 219—25.)



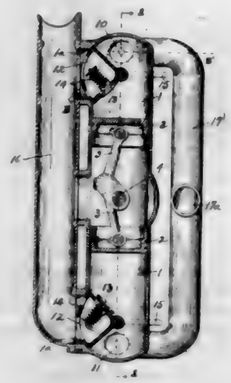
1. In a heating apparatus, a support and a pair of heat controlled, mutually shiftable members supported at their one ends on said support and adapted to be suddenly shifted when shifted beyond a dead line relatively to their means of support.

1,566,619. FLYTRAP. HUGO G. A. SCHLOSSARECK, Yonkers, N. Y. Filed July 28, 1925. Serial No. 46,536. 1 Claim. (Cl. 43—122.)



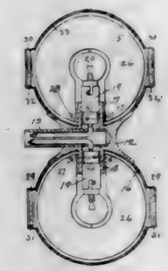
A fly catcher comprising a colored transparent globe having annular interior channels in its upper and lower portions, said channels to contain liquid, hollow nipples leading from the top of said globe to the channel in its upper portion, said globe having a relatively large opening in its base and a smaller opening in its top interjacent the respective channels, an electric lamp enterable through the bottom opening, the cord of said lamp passing through the top opening, means on said cord to suspend the lamp, and a stand for supporting the base of said globe.

1,566,620. AIR COMPRESSOR. CHARLES B. SCOVILLE, Jr., Pasadena, Calif. Filed Oct. 1, 1923. Serial No. 665,846. 3 Claims. (Cl. 230—27.)



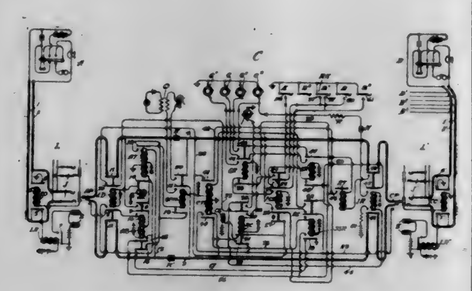
1. In an air compressor, a cylinder, a piston working therein, an outlet check valve, a pivoted gate valve to open said cylinder to the atmosphere, and a check valve set within said gate valve and moving therewith and operating as an inlet check valve when said gate valve is closed.

1,566,621. AUTOMOBILE SIGNAL. MYRAH H. SENECHAL, Portland, Oreg. Filed May 12, 1924. Serial No. 712,759. 2 Claims. (Cl. 177—329.)



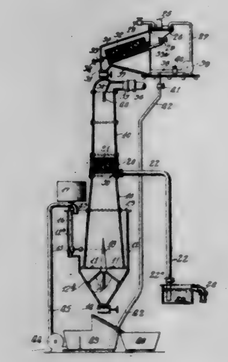
2. A signaling device comprising a casing open at its ends; a frame supporting said casing having a tubular lamp socket holder formed integrally therewith and projecting into said casing; a socket and lamp in said holder; a band clamp secured around the base of said socket holder, said clamp providing a support within the casing for a partition; a partition having a cutout portion to clear the lamp and its socket and holder; a tubular support arm received within the concave frame; means for securing the tubular arm in position; and translucent closures for the ends of the casing.

1,566,622. TELEPHONE SYSTEM. WILLIAM G. SHULL, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 28, 1921. Serial No. 503,777. 11 Claims. (Cl. 179—35.)



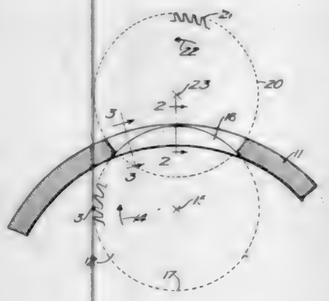
5. A telephone system including a party-line and a party-line ringing key having an end spring common to a number of cords, a relay for operatively associating said key and said line, another relay for causing the restoration of said first relay to effect the dissociation of said key and said line, said last relay controlled by the end spring of said key.

1,566,623. DEVICE FOR TREATING MATERIAL. PHILIP A. SINGER, Glen Ellyn, Ill. Original application filed Sept. 22, 1922, Serial No. 589,954. Divided and this application filed Sept. 12, 1924. Serial No. 737,225. 9 Claims. (Cl. 23—270.)



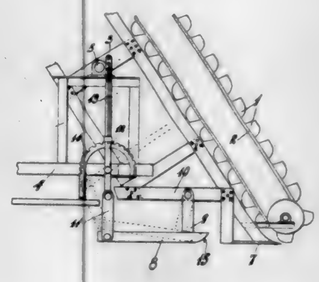
1. In a treating device, the combination of a substantially vertically disposed treating receptacle, means for continuously feeding material to be treated into the upper portion of the receptacle, means for continuously withdrawing treated material from the lower portion of the receptacle, means for introducing a treating liquid into the receptacle, means for inducing a partial vacuum in the upper portion of the receptacle, and means for discharging such liquid from the receptacle at a predetermined height therein which is at a material distance below the place where the material is fed into the receptacle.

1,566,624. METHOD OF FORMING DOUBLE-CUT PIPE. EDWARD M. SMITH, Los Angeles, Calif. Filed Apr. 16, 1923. Serial No. 632,571. 15 Claims. (Cl. 29—163.5.)



1. A method of producing a slotted pipe which comprises: forming a portion of a slot by means of a cutter situated inside the pipe; and completing said slot by means of a cutter situated outside of said pipe.

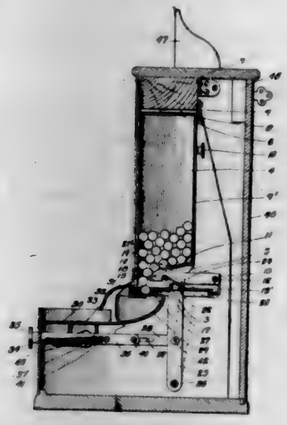
1,566,625. DEPTH REGULATOR FOR SCRAPING AND SURFACING MACHINES. CHARLES A. SPEARS, Oakland, Calif. Filed Nov. 8, 1924. Serial No. 748,608. 4 Claims. (Cl. 37—86.)



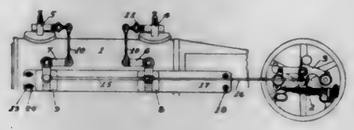
1. The combination with a surfacing machine having forwardly extending bucket excavators, a frame extending rearwardly therefrom, a shoe adapted to rest on the ground and having the forward end pivotally connected to the frame, and having its rear end connected to said frame by a handle pivoted thereto, and a link pivoted to the end of the handle and to the end of the shoe whereby the shoe may be tilted in reference to the frame of the excavator.

1,566,626. VENDING MACHINE. ALBERT H. STEELE, Kansas City, Mo. Continuation of application Serial No. 436,027, filed Jan. 10, 1921. This application filed Jan. 28, 1924. Serial No. 688,970. 4 Claims. (Cl. 211—8.)

1. A vending machine comprising an article containing chute, a cross bar for pivotally mounting the chute, a delivery slide below the chute, a pivotally mounted agitator having forwardly extending hooked arms for normally engaging the cross bar to support said arms, and inverted V-shaped projections on the slide for raising the agitator arms from the cross bar.

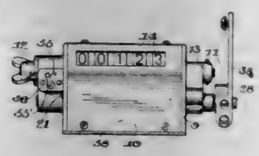


1,566,627. VALVE GEAR FOR STEAM ENGINES. ROBERT C. STEVENS, Erie, Pa. Filed Mar. 30, 1922. Serial No. 548,101. 3 Claims. (Cl. 121—165.)



1. In a steam engine, a cylinder, inlet valves on said cylinder near the ends thereof, an engine shaft, a supporting member fixed at one end to said engine and extending lengthwise said cylinder, the other end of said member slidingly supported with relation to said cylinder, a pair of rockers carried by said member and operatively connected to said engine shaft, and valve-actuating devices including links connecting said rockers and said valves respectively.

1,566,628. COUNTER. EDMUND C. STOSICK, Milwaukee, Wis., assignor to Durant Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 24, 1923. Serial No. 664,492. 1 Claim. (Cl. 235—91.)



In a register having number wheels mounted on a shaft and zero setting means connecting said wheels and shaft for setting said wheels to zero on the turning of said shaft, the combination with said shaft and the casing of the register, of a resetting handle on said shaft, a key-controlled locking pin mounted in said casing and in locking engagement with said handle to lock said shaft against resetting and against movement during registering.

1,566,629. SPRING SUSPENSION DEVICE. ARTHUR J. STRETCH, Seattle, Wash. Filed Feb. 16, 1925. Serial No. 9,451. 1 Claim. (Cl. 267—17.)
